I know that you are very largely interested in the question of immigration, and that you now have a bill pending before Congress. It would seem to me that there is an odd relationship between your bill, which absolutely excludes the Japanese, and the La Follette seamen's bill, which welcomes the wholesale desertion of Japanese sailors in American ports. I should be very much obliged to you if you could give me further information as to how it is proposed to handle Japanese sailors who, under this law, disregarding the legal obligations under which they ship, desert and leave their ships in American ports. The sailor is not looked upon as an immigrant in the true sense of the word, yet to-day the Bureau of Immigration and the Department of Commerce keep a very watchful eye upon all alien seamen entering the United States and see to it that they depart within a reasonable period.

This bill, as stated by the framers and, it would seem to me, by the terms of your letter openly advocates the prime necessity of persuading seamen of foreign vessels to desert their ships in American ports without fear of arrest; in other words, this is a great virtue in the proposed law, because, having persuaded these seamen to desert, they or others can only be reshipped at the going wages out of American ports; hence an increased wage for the seamen. I offer no objection to an increased wage for seamen; in fact, I would like very much to see the seamen receive all the wages that their calling entitles them to, and that they should be treated, so long as they behave themselves and attend to their duties, as all worthy men in any calling should be treated. There is no question about the attitude of this paper on that point. But it seems to me a most undignified position for this country to assume that it should desire the passage of drastic exclusion laws prohibiting the Japanese from entering the United States, on the one hand, and, on the other hand, to pass a law urging and abetting the same class of proscribed people to come into the United States under the guise of deserting seamen. Now, how do you propose to handle this class of immigration? Apparently, provided the Japanese Government did not interfere, this would open the way for unlimited Japanese immigration, or else a still more pitiful condition would prevail, in that this Government should have passed a law to induce the people of a proscribed race to desert their ships and, having persuaded them to come on shore, should then say to them, "Now, you are up against another law of this country, and we propose to put you in a corral and keep you there until your owners take you back aboard your ship at the wages which we think you should be paid." Surely, Mr. RAKER, you would not put this country in such a deplorable situation before other nations of the world, and I ask that you should go further in your analysis than you have in deciding the case of the two merchants on Grant Avenue, in order to appreciate this peculiar situation.

With all due regard to what I have set forth, there is one point which perhaps has escaped your attention, and that is that the Japanese Government has a very drastic criminal law in regard to Japanese

seamen deserting their ship in a foreign port, and every seaman which the United States under the La Follette bill persuaded to desert his ship in an American port would, on his return to his native land, be subject to trial and imprisonment for breaking the laws of his own country. So I am inclined to think that the only way you will be able to get the Japanese sailor off his ship, under the La Follette bill, will be to recognize not merely the inducement to come ashore and enter the Government corral until reshipped, but the inducement that he can desert his ship, enter the United States, and remain in the United States as long as he sees fit, which will perhaps be forever, in view of the fact that he is a criminal under the laws of his own country.

This will not pertain to any other nation than the Japanese, and, as I have stated before in other articles appearing in my paper, and which I now state again as a matter of fact, Japan is the only nation that can comply absolutely with the language test of the La Follette bill—can comply with all the terms of the bill—without any difficulty and can maintain their low rate of wage regardless of all the conditions of this proposed law. No nation by law can bring about the abrogation of the contracts of purchase or initial conditions of competition which you set forth as pertaining to the merchants on Grant Avenue.

It may be a desirable thing to pass this bill and bring about the result which the shipowners and operators fear—that is, the entire disappearance of the American flag from the foreign trade—if for no other reason than that it might force this country to a realization of the true conditions. Either the people do or do not want or need an American mercantile marine, and if they need one the only way they can get it is to pay a bounty similar to that all other nations have paid to accomplish the same end—and there seem to be some pretty wise men connected with other nations.

In closing, I take the opportunity to note that you felt a great pleasure in the last Congress in voting for a bill which gave the American shipowner an opportunity to buy his vessel abroad for the foreign trade or in the same market and for the same price with his competitor. Isn't it really difficult to understand that Congress, in attempting to raise the wages of the seamen of the world, through the La Follette bill, also deemed it advisable to pass a bill offering an inducement for American money to be spent for ships built with foreign workmen, in foreign shipyards, and deprive American workmen and American shipyards of that money? Yet there is a strange relationship here. There are no American seamen to-day, and it is proposed to raise the wages of the foreign seamen of the world just exactly the same as that bill proposes to rehabilitate the American merchant marine by putting the expenditure of American money in the hands of the foreign workmen. Is this legislation for the American and the American workman, or is it legislation for foreign interests, which owe no allegiance whatsoever to this country? Please think this over, Mr. RAKER, for, while as yet apparently no American capital has been lured by this bait to build American ships in foreign shipyards, the day may come when it may do so, and this country and its interests will be deprived of the expenditure at home of large sums of money.

This publication stands for Americanism and all that helps America. It desires only a frank criticism of those things which it believes to be injurious to our own enterprises, and in that great unprotected field—foreign commerce—not so much in the original cost of the ship as in the daily cost of operation, lies its fundamental economic existence.

Yours, very truly,

PACIFIC MARINE REVIEW,
Per J. S. HINES.

Hon. JOHN E. RAKER, M. C.,
House of Representatives, Washington, D. C.

—

MARCH 12, 1914.

Mr. J. S. HINES,
Publisher Pacific Marine Review,
24 California Street, San Francisco, Cal.

MY DEAR MR. HINES: Your letter of March 4 advising me that you would send me the March number of the Pacific Marine Review at hand. Will be pleased to receive and read the same. The letter of March 2 was received. There are many matters in your letter worth deep consideration and requiring most careful and thoughtful consideration. The question of deserting Asiatics is one of much importance. Understand the bill provides for this, but if it does not, will see to it. Will take the subject up later and advise you as to my views.

Greatly appreciate your thoroughness on this subject, for you speak as one who has given it much study and investigation.

With kindest regards, I am,

Yours, most truly, JOHN E. RAKER, M. C.

These letters have been printed in the Pacific Marine Review in April, 1914, issue.

I am inserting in this same connection the report to the President of the United States, submitted by Mr. Andrew Furuseth, of San Francisco, Cal., after his resignation as commissioner from the United States to the International Conference of Safety of Life at Sea, which met in London, England, November 12, 1913. This report is as follows:

SAFETY OF LIFE AT SEA.

WASHINGTON, D. C., *January 12, 1914.*

Mr. PRESIDENT: On December 22 I sent the following cable:

"To the PRESIDENT OF THE UNITED STATES,
"*Washington:*

"Commission to-day considered committee reports. They contain provisions reducing existing standards of safety. Being true to safety, I can not sign any convention containing them. I tender my resignation, to be effective at once."

In surrendering back to you the commission and in explanation of my action, I beg to submit the following report:

The conference was divided into five committees, as follows: Committee on certificates, committee on safety of construction, committee on wireless telegraphy, committee on safety of navigation, committee on life-saving appliances, and the committee on revision, to which latter committee was assigned the duty of preparing the convention in accordance with the report from the other committee.

The main part of the rules of the conference was one vote for each nation. The rule in the committee on which I served—the committee on life-saving appliances—had representatives from all the different nations represented. Under its rules of procedure the chairman stated the proposition in the agenda, and when they received a second they were open for discussion. Amendments or substitutes could only be considered if submitted by one nation and seconded by another. The voting was, as in the general conference, one vote for each nation. The work of the separate committees, except the committee on revision, to which the other committee reports were submitted, had been finished on the 20th, and the conference had taken a recess until January 8. On the 22d our commission met for a preliminary examination of the reports from the different committees.

The report from the committee on life-saving appliances contains several distinct reductions in the existing legal or statutory standards of safety. British law, promulgated January 17, 1913, to become effective March 1, 1913, reads in part as follows:

"RULES FOR FOREIGN-GOING PASSENGER STEAMERS, INCLUDING EMIGRANT SHIPS.

"RULE A.—A ship of this class shall carry lifeboats in such number and of such capacity as shall be sufficient to accommodate the total number of persons which is carried, or which the ship is certified to carry, whichever number is the greater."

The report of the committee on life-saving appliances provides approved lifeboats for 75 per cent of all persons on board, using the following language:

"If the before-mentioned lifeboats do not provide accommodations for at least 75 per cent of the persons, then additional lifeboats, of either class 1 or class 2, shall be provided, so there is accommodation for at least 75 per cent of all persons.

"(c) Accommodation shall be provided either in lifeboats of class 1 or class 2 or by pontoon rafts of approved type and construction for all persons."

The British law, dealing with the manning of life-saving appliances issued by the board of trade, 1911, determines the number of seamen in the deck department of emigrant ships and passenger vessels coming under that designation The schedule is based upon the cubic feet capacity of boats (carrying capacity of boats) and determines that four out of every five of the deck crew shall be "bona fide able-bodied seamen" or men of higher rating; that is to say, men of greater experience and holding positions on board ship as a result of such greater experience and higher skill. The manning of lifeboats adopted by the committee on life-saving appliances provides that—

"(a) For each boat or raft required to be carried on the ship efficient boat hands must be carried in accordance with the following scale:

"If the boat or raft is capable of carrying 60 persons or less, 3 efficient boat hands; 61 to 85 persons, 4 efficient boat hands; 86 to 110 persons, 5 efficient boat hands; 111 to 160 persons, 6 efficient boat hands; 161 to 210 persons, 7 efficient boat hands, and 1 additional efficient boat hand shall be carried for every extra 50 persons which the boat is capable of carrying.

"(b) An 'efficient boat hand' shall be defined as a member of the crew who has been trained in launching, lowering, and detaching lifeboats, and in the use of oars, and has proved himself qualified to handle lifeboats. Efficient boat hands shall be able to understand and answer the orders relating to lifeboat service and duties. Efficient boat hands shall have a certificate as such, which certificate shall be issued under the authority of the administration."

The "efficient boat hand" may come from the deck force or deck department; from amongst the firemen and coal passers—the engineers' department, or from amongst the cooks, stewards, or waiters—the stewards' department. They need not understand the language of the officers of the vessel. The rule was deliberately so drawn that the orders of the officers could be transmitted through interpreters. This is in distinct opposition to the standards laid down by our courts, who have held in the case of In re Pacific Mail Steamship Co. (C. C. V. 64, p. 410) that a crew which does not understand the orders of the officers is so inefficient that it forfeits the vessel's right to limitation of liability under our law. It is further in distinct opposition to the action of the House of Representatives in the Sixty-second Congress and the action of the Senate of the United States in the special session of the Sixty-third Congress, where it was enacted that 75 per cent of the crew of a vessel in each department thereof must understand the orders of the officers of such vessel. The number is a further reduction of the legal standard in this, that the present presumption of law is that all the crew of a lifeboat shall be efficient and the crew of a lifeboat is, according to its size and carrying capacity, from 7 to 11, or more. The report provides that there shall be lifeboat drills in harbor at least once every fortnight. The report of the committee on life-saving appliances in dealing with old ships provides:

"(a) A boat or raft which has been accepted by the administration of a contracting state on board an existing vessel may be accepted in place of a lifeboat or life raft, respectively, until the 1st of January, 1920.

"(b) The requirement that pontoon lifeboats shall have the bottom and deck made of two thicknesses with textile material between, and the full amount of freeboard specified for boats of this type need not be insisted upon until the 1st of January, 1920.

"(d) The requirement that all boats and davits shall be of sufficient strength to enable them to be safely lowered when loaded with their full complement of persons and equipment, and the requirement that the davits must be fitted with a gear of sufficient power to turn out the boat against a list need not be insisted upon."

New vessels are defined as vessels whose keels are laid three months or more after the date of ratification of the convention; so that existing vessels may continue to carry their present life-saving appliances and a crew of a lower standard than the one accepted to-day.

The report from the committee on wireless telegraphy reads, in part, as follows:

"(a) All ships engaged in international trade and having on board 50 persons or more, including both passengers and crew or either, shall be fitted with a wireless telegraphy apparatus.

"(b) Provided always that each of the signatory States may, if the route and the conditions of the voyages are such as to render a wireless installation unreasonable or unnecessary, exempt from this obligation—

"(i) Ships which do not go more than 150 sea miles from land during their voyages.

"(ii) Ships which do not regularly or usually have 50 or more persons on board, but which take on board for a part of their voyages cargo hands: *Provided*, That this exception shall not be granted to ships trading from one continent to another or going outside the limits of 30° north and 30° south."

On the question of keeping a constant watch, vessels having 25 or more passengers and an average speed of 15 knots or more, or vessels of an average speed of 13 knots and having on board 200 persons or more and on a voyage extending 500 miles between two consecutive

ports, shall keep a constant watch. Others are regulated in a different way; that is to say, they need not have two skilled wireless operators. This is in direct opposition to our law, approved June 23, 1912, which provides in an act to amend an act entitled "An act to require apparatus and operators for radio communication on certain steamers," approved June 24, 1910:

"That from and after October 1, 1912, it shall be unlawful for any steamer of the United States or of any foreign country navigating the ocean or the Great Lakes and licensed to carry, or carrying, 50 or more persons, including passengers or crew or both, to leave or attempt to leave any port of the United States unless such steamer shall be equipped with an efficient apparatus for radio communication, in good working order, capable of transmitting and receiving messages over a distance of at least 100 miles, day or night. * * * The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated."

To this our law has the following proviso:

"*Provided*, That on cargo steamers, in lieu of the second operator provided for in this act, there may be substituted a member of the crew or other person who shall be duly certified and entered in the ship's log as competent to receive and understand distress calls or other usual calls indicating danger, and to aid in maintaining a constant wireless watch so far as required for the safety of lives."

The report of the committee on certificates contains, in paragraphs 7 and 8, the following:

"7. Each signatory State shall accept the certificates of the other signatory States for all purposes covered by the convention as of force equal to that of the certificate issued to its own ships.

"8. A vessel holding the above-mentioned certificate shall be subject to control by the officials in ports of other signatory States in so far as those officials may ascertain that there is a valid certificate on board, and, if necessary, that the conditions of her seaworthiness conform substantially to her certificate so as to enable her to go to sea without danger to her passengers and crew."

As I understand these clauses, our surveyors' rights on foreign vessels in our ports will be, under ordinary conditions, limited to ascertaining whether the vessel has an international certificate and, if so, that it is not too old. As I understand the existing conditions, it is that foreign vessels coming to American ports must come up to the same standard as laid down for American vessels unless exemptions have been made by domestic law. In other words, that those things are now under the control of our own Government and that these quoted sections in the certificate will surrender that power and make it a matter of international treaty. I do not undertake to pass any opinion upon whether this is in contravention to our instructions, but it seems to me to be so. As a result of the above-quoted facts, and what I understood and now understand to be the facts, I followed the dictates of my conscience and tendered my resignation in order that I might come back here to report the matter to you.

I accepted the appointment in the belief that our own commission would respect and stand for such actions dealing with safety at sea as were part of our law and as had been determined by the House of Representatives in the Sixty-second Congress, and by the United States Senate in the extraordinary session of the present Congress. After being informed of my appointment, I received a document purporting to be instructions to the American delegation concerning efficiency of officers and crews of vessels and dealing with efficient men to handle the boats. I at once submitted a communication to the Secretary of Commerce, in which I tried to analyze these purported instructions, finally stating that I could not accept them as instructions. His answer was that they were not instructions but tentative suggestions. Later on I received from Commissioner Chamberlain three documents marked "Confidential." They are records of preliminary meetings between representatives of Great Britain and Germany and Great Britain and France, and a memorial of instructions from the Imperial Government of Germany to its delegates. In the very hasty examination of the same that it was possible for me to make prior to my departure I found that they, in so far as boats and men to handle them were concerned, corresponded with the so-called tentative suggestions for the instruction of the delegates of the United States. In the committee on life-saving appliances of the conference I quickly found that no changes would be made from the agreements tentatively arrived at in the preliminary conference between those nations. In the second meeting of our delegation, on November 12, it was determined that—

"No member of this commission shall advocate in subcommittee or in full conference any proposition upon which the sense of the commission has not been ascertained nor any proposition not sanctioned by the majority vote of the commission."

I had tentatively determined for myself the principles that I would follow, and I had intended to distribute the following statement to at least the English-speaking members of the committee on life-saving appliances:

"Bear in mind, when a ship is lost, the shipowner may make a profit, the owner may get more than the value of his ship, the merchant may lose nothing, but may, and very often does, get more than the value of the cargo back. In the same way the underwriter averages his losses, and on the whole makes a profit on the insurance of the ship out of his premium.

"JOSEPH CHAMBERLAIN.

"Limitations of shipowners' liability was unknown to common law.

"During the time preceding the enactment of limitation of shipowners' liability the shipowner was responsible in damages to the traveler or shipper or their heirs for any loss of life or injury to life or loss or injury to property other than arising out of 'acts of God' or 'acts of public enemies.'

"The shipowner might lose his all by wrongful act, neglect, or default if he failed in furnishing a vessel seaworthy in all respects in her hull, tackle, apparel, furniture, and crew.

"Thus safety of life and property at sea had for its support one of the dominating forces in individuals and associations, that of self-interest and self-preservation.

"In Great Britain the laws of 1854, in the United States the laws of 1851 deprived safety of this powerful support and it became necessary to enact laws providing for inspection of passenger vessels, in order that the traveler might have some consideration.

"The limitation of shipowners' liability began in Great Britain in the time of George II, and was extended under George III. It then dealt chiefly with collision, and had applications to freight only. In 1854 it was extended so as to have application to life and injury. Liability was then limited so that no more than £15 per registered ton could be collected from the owners of the vessel; in 1862, the liability was reduced to £8 per registered ton in case of freight; but liability for loss of life and injury sustained was left at £15, which is the total liability in any case.

"Limitation of shipowners' liability in the United States was enacted on March 3, 1851, amended on June 26, 1884, and further amended to the so-called Harter Act on February 13, 1893.

"Laws providing for inspection and regulation of emigrant ships were enacted in 1854 in Great Britain.

"In the United States the inspection law was passed in 1871, the passenger act in 1882.

"Laws are not enacted in either country except to meet and comply with a somewhat general demand and then only to deal with some recognized evil and the enactment of these laws signify the recognition that something must be done to assist the conscience of the shipowner since his self-interest has been so much reduced.

"The laws dealing with emigrant and passenger vessels were general in both countries, and the power to make rules under the general laws were conferred in Great Britain upon the board of trade, in the United States upon the Bureau of Inspection.

"The power to make laws having been delegated, any rules or laws made and obeyed would very largely act as a bar to any accusation of wrongful act, negligence, or default, and thus tend to an election on the part of the shipowner to refrain from using the limitation of shipowner's liability and to stand trial under the 'common law.' He may at any rate try one case, denying negligence, and if he loses he may seek shelter of limitation of liability in the rest. Laws or rules adopted must therefore be sufficient to guarantee reasonable safety or the shipowner will be able to shed responsibility while safety is diminishing.

"After the enactment of 'inspection laws' and 'the passenger acts' it was found that whenever the rules were not sufficiently effective and definite—when the standards adopted were not sufficiently high—they served no practical purpose in securing safety but were used by shipowners as a shield against claims for damages and both the Parliament of Great Britain and the Congress of the United States from time to time laid down some additional principles, established new or higher standards, and extended the powers of their departments vested with power to make regulations.

"Up to the enactment of the passenger act the number of passengers to be carried was frankly based upon tonnage in so far as it was not based upon discretion arising out of possible loss to the owner. The passenger act of Great Britain defined the meaning of the words 'emigrant ship' in paragraph 268 of 'merchant shipping acts,' and of 'passenger steamer' in paragraph 267 'merchant shipping acts,' and then based a number of passengers upon the deck space with the proviso that there should be no more than two passenger decks, and that the deck next below water line should be the lowest passenger deck.

"A further proviso was attached that a limited number of cabin passengers, based upon the tonnage of the vessel, might be carried in the cabins or deck houses. The cabin passengers were provided with 36 clear superficial feet of space, and it was provided that no one should be considered a cabin passenger unless such space was allotted to him. All others were considered as steerage passengers, and they were to have 15 clear superficial feet on the upper passenger deck or 18 clear superficial feet on the lower deck; the height between these decks must not be less than 6 feet, and under certain conditions the passengers on the lower passenger deck were provided with 25 clear superficial feet.

"The law providing that no passengers should be carried on more than two decks was repealed in 1906 to such extent as to make it read 'no passengers on more than one deck below the water line,' thus leaving the shipowner to have as many passenger decks as might be consistent with stability. All passenger decks are measured in the tonnage, so that the number of passengers to be carried is still based upon the tonnage.

"The passenger act of the United States provided for a minimum height between the decks, and that 21 superficial feet should be measured for each passenger on the lowest passenger deck or 18 superficial feet on other decks. The number of passenger decks was always left at the shipowner's discretion, but the equivalent of 1-ton space was allotted to each passenger.

"It will be seen that the principle underlying the regulations as to the passengers is 'tonnage.' The same rule of 'tonnage' has been followed as to life-saving appliances.

"It is respectfully submitted that there is, or ought to be, a fundamental distinction between 'cargo' and 'passengers,' and that no vessel should be permitted to take any more passengers than she can carry safely, with health and reasonable comfort.

"No passenger vessel should be permitted to go to sea unless she has the proper appliances for the safety of passengers in case of disaster to the vessel herself. The best built vessels will, under certain conditions, float but a few hours, the only safety under these conditions consists in boats in which the passengers can take refuge while waiting assistance, and the boats themselves are of little or no value unless the vessel is provided with a crew which can lower these boats, take them away from the ship's side, and, with proper appliances, can manage them in rough seas.

"Of course it is perfectly well understood that there are times at sea when boats can not be used, because they can neither be lowered nor managed after they are in the water. Those conditions, however, are rare; they are, in the true sense, the 'act of God,' and should have no consideration in any discussion or in any regulations dealing with 'safety of life at sea.'

"They are a condition in which the handiwork of man and the powers of man are of no avail.

"It is notable in the legislation of both countries that shipowners have resisted new and specific legislation as long as the public would in any way tolerate such resistance; but, step by step, as disasters proved the necessity for them, beyond any peradventure, specific rules have been made for the building and the interior arrangement of the vessel, for the engine and boilers, and for such life-saving appliances as were calculated to be used by single individuals for the purpose of flotation for a very short time; boats and men to handle them had received no real consideration up to the loss of the *Titanic*. There had been many serious disasters at sea, but they had not produced that earnestness of feeling which compels action.

"The development has now reached the point in which the question is of life-saving appliances that are to be used by several at one time, for a longer period, and of the manning and management of those appliances.

"Safety demands that boats and men to handle them be based upon the number of passengers as distinct from tonnage. Up to the present it has been a question of tonnage and the property interests involved.

"Shipowners are resisting the present demand for 'boats for all,' because it will reduce the number of passengers that may now be carried. Boats occupy room which could otherwise be occupied by passengers. They resist it for the further reason that boats predicate skilled men

to handle them, and this means additional expense. Boats reduce earning capacity; men increase expense.

"It is true that the owner will shift the expense on to the traveler and shipper by higher rates, but he now permits the public to believe that the vessels are thoroughly seaworthy both in their hull, equipment, and manning; he points to the certificate of inspection, and discreetly keeps silent about its real meaning. To insure reasonable safety the certificate should really mean what it suggests to the average reader; otherwise it should state that this particular vessel is exempt from the rule of 'boats for all,' and 'efficient men to manage the boats' when boats and men are needed.

"If it be deemed proper to exempt certain vessels from the rule of 'boats for all' and some real seamen in each boat, the fact should be clearly placed on all the passenger tickets sold for such vessels, and should be further plainly stated in all the advertisements issued by or on behalf of the vessel.

"The prospectus should tell the truth, and if the passenger then chooses to go in such a vessel he would do so with his eyes open. He would not be paying for reasonable safety under the mistaken idea that the Government had examined and certified the vessel as properly equipped with life-saving appliances and seamen for the efficient handling of same.

"The element of safety dependent upon self-interest having been swept away by the law, the law must furnish an equivalent in some other law that shall give at least equal safety and shall be equally binding upon all shipowners."

Under the resolution adopted by our delegation I felt that I might follow these principles for myself, but that I had no right to submit them to members of the committee unless I first obtained the permission of our delegation. I had already sufficient reasons to believe that I would not obtain any such permission, and on November 26 I was instructed as follows:

"Definition: An efficient boat hand shall be a man trained in the launching, lowering, detaching, and handling of lifeboats and the use of oars, and shall also have served at least one year on vessels navigating the ocean, bays, sounds, or large inland seas or lakes. Efficient boat hands shall be able to understand and answer the orders of the officers relating to lifeboat service and duties. The efficient boat hand shall have a Government certificate as such. Crews shall be drilled with lifeboats, at fire quarters, and in closing bulkhead doors, under regulations prescribed by the administration concerned."

The chairman of the commission, the Hon. JOSHUA W. ALEXANDER, opposed this instruction as being contrary to safety and the position taken by the Senate, the House of Representatives, and the Secretaries of Commerce and Labor. I supported him to the best of my ability, but the instructions were driven through mainly by the insistence of Commissioners Chamberlain, Uhler, and Bertholf, and upon a vote eight of the commissioners voted in favor of these instructions, two—Commissioners Alexander and Furuseth—in the negative. Having in mind the rules in the committee and in the conference I realized that I would not be permitted to even defend the position taken by the Senate, the House of Representatives, and the Secretaries of Commerce and Labor, and I felt that I ought to resign then. I so informed the chairman of our commission, who suggested that I continue. I did so with the purpose of taking every legitimate opportunity to oppose both the tentative propositions in the agenda and the instructions of our own delegation. I consulted with some members of the committee itself, and they advised me that I would have some opportunity to place before the committee the position which I explained to them and which I held to be the right point of view. My action after that is described in the following statement which I wrote and submitted to our commission as a short review of the proceedings of the committee on life-saving appliances:

"The loss of the *Titanic* crystallized the feeling that something must be done; the people demanded action on part of the separate nations. The shipowners, especially in the Atlantic passenger trade, met the public demand by furnishing 'boats for all.' The British Board of Trade, prior to the *Titanic* disaster, had formulated and issued rules for the manning of 'emigrant ships' under which the 'deck hands' must be men of the rating of able seamen and determine the number of 'deck hands' to be carried, not more than one in five of whom might be ordinary seamen. On January 17, 1913, the board of trade issued regulations, to become effective March 1, 1913, dealing with 'foreign-going passenger steamers, including emigrant ships,' as follows:

"'A ship of this class shall carry lifeboats in such number and of such capacity as shall be sufficient to accommodate the total number of persons which is carried, or which the ship is certified to carry, whichever number is the greater.'

"It will be seen that these regulations, issued in response to popular demand, are based upon the safety of life, and take very little thought of either tonnage or dividends. This is changed by the committee on 'boats and davits,' as will be seen from a synopsis of the report.

"The committee on boats and davits—on life-saving appliances—on which I have been an humble member, has had under consideration the questions of appliances for launching of boats (davits), the number and kind of boats, the manning of the boats, the means of preventing, detecting, and fighting fire, and the organization of the ship's crew, for the purpose of making the rules effective.

"The committee determined that boats for 75 per cent of persons on board would be sufficient, and that the remaining 25 per cent should be provided with rafts. I urged upon the committee that this would very likely lead to panics; that it is a reduction from present standard laid down by law, at least in Great Britain; that there was no reasonable certainty that the crew and the men from the steerage would be willing to accept the rafts; it might result in the men with the physical strength using it to take the boats and leave the other persons to do the best they could. This argument was of no avail, and upon a vote being taken by nations it resulted in the United States and Norway voting against rafts and all the other nations for them.

"I then suggested that the absence of 'boats for all' should be placed on the tickets in the advertisements for passengers and on the vessel's certificate, in order that the passenger might choose for him or herself between the vessels which had 'boats for all' and those that had not. To this I could get no second and no support even in our own delegation on the committee, and it was ruled out. Sir Normal Hill was granted the opportunity to explain why no support was given. The substance of his statement was that such application would prejudice the passengers against such vessels, and believing that rafts were under certain circumstances more efficient than boats, it would be 'wrong for them to sanction any action calculated to deter the traveling public from sailing in vessels which are equipped by the most effective means of saving life.'

"Why under those conditions there should be only 25 per cent of rafts permitted, and why the traveling public should not be informed, I am not able to understand. To me it suggests that if rafts are the most efficient means of saving life, why carry boats? And why would not vessels equipped with rafts be chosen by the passengers?

"On the question of manning of boats the committee adopted the following as a definition of an 'efficient boat hand':

"'(b) An "efficient boat hand" shall be defined as a member of the crew who has been trained in the launching, lowering, and detaching lifeboats, and in the use of oars, and has proved himself qualified to handle lifeboats. Efficient boat hands shall be able to understand and answer the orders relating to lifeboat service and duties. Efficient boat hands shall have a certificate as such, which certificate shall be issued under the authority of the administration.'

"Having thus determined the kind of men who are to be depended upon to manage boats, the committee determined the number by specifying that a boat having less than 60 persons shall have 3, less than 85 shall have 4, less than 105 shall have 5, less than 160 shall have 6, and less than 210 shall have 7 efficient boat hands. This is a distinct reduction of the present standard, because courts have held that all the men in the boats must know their duties and understand the orders of the officers.

"On this question of the manning of the boats our delegation had met, and after lengthy discussion had by vote 8 to 2 adopted the following to be submitted to the committee, viz:

"'An efficient boat hand shall be deemed to be a man trained in the launching, lowering, and handling of lifeboats, and the use of oars, and shall also have served at least one year on vessels navigating the ocean, bays, sounds, or large inland lakes. Efficient boat hands shall be able to understand and answer the orders of the officers relating to lifeboat service and duties. The efficient boat hand shall have a Government certificate as such.'

"This was submitted by Mr. Uhler and met with strong opposition. After some discussion I entered the strongest protest I could by stating that as a practical sailor I could not agree to either the American or English propositions, that the proposals are not tending to safety. 'It is not an improvement; it is in fact a lowering of the standard that already exists. * * * Germany, Austria, Italy, and France are not interested, because their men are trained in the navy. * * * If I had a vote which I could use, I would cast it against the whole proposition, because as a sailor I knew it meant lowering of the standard of safety,' and I closed by stating:

"'A hundred years ago, before the days of insurance and limitation of shipowners' liability, the shipowner demanded four years' experience in those whom he considered qualified to take care of his property; now he considers a few trials enough to save life.'

"It was, however, of no avail. The one year was stricken out. The understanding of orders is so modified that the orders may come through an interpreter, and the Governments may delegate the issuance of a certificate to the master of the vessel. It is, indeed, difficult to understand who else, unless national legislation shall intervene, can have any authority to interfere between the master and the seaman, since no standard is laid down for the master or the inspector. By what is 'efficient' to be measured? Who is to do the measuring? The work is private work, and the employer will, in the absence of definite law, be the judge of the efficiency; but that is the situation now. Hence, the only change is to set up a standard which, while dependent upon the shipowner, must result in screening him from any responsibility to the traveler, either under the common law or the limitation of shipowners' liability. To me this is safety of dividends, not of life.

"If the same general terms had been used about boats and davits, this might be understood, upon the theory that uniformity is not important or even desirable; but in the matter of davits the rules are most specific. In new vessels they must have gear which will permit them to be swung out against a list of 15° and must be strong enough to permit boats to be lowered with their full complement of persons and equipment, and this must be ascertained by real tests. Most minute rules are laid down about boats and their equipments and rafts and their equipments. The committee did not only determine their carrying capacity, their freeboard, their stability, and buoyancy, but how these qualifications shall be ascertained. The leaving of the qualifications of the human element to the discretion of the master and owner was therefore deliberate. Safety was not permitted to place serious duties upon the owner.

"When it came to determining what should be considered new vessels it was naturally determined that vessels built or building at a specific date should be classed as old; vessels built after such date as new.

"With reference to old vessels, it was determined that they may continue to carry their present accepted boats and rafts until 1920; that the requirements on new vessels that pontoon boats built of wood shall be double bottom and deck, with textile between, in order to prevent leaking, need not on old vessels be insisted upon until 1920, and that the requirements that davits shall have gear to turn them out against a 15° list and be strong enough for boats to be lowered with full complement of persons and equipment need not be insisted upon in old vessels.

"The rules are to apply in ocean passenger vessels going 200 miles or more from shore. Passenger vessel is defined to be a vessel carrying more than 12 passengers from a port in a contracting State to any port outside the contracting State, and that it be left to each contracting State to specify what vessels it considers 'ocean going.'

"When it is remembered that the average age of a vessel is 20 years the resolution about davits is most interesting. It recognizes, first, that davits are not now of sufficient strength; second, that alterations would be too expensive. Nothing but the consideration of expense could dictate either this resolution or the resolution that boats held unsafe might be carried for another six years. Of course with the men to be carried as 'efficient boat hands' boats matter very little. Lifeboats are, when properly manned, real life-saving appliances; when manned by men who are not real seamen they are of no value.

"The shipowners insist upon being permitted to get their men from anywhere, regardless of previous experience or even knowledge of the language of the officers, and the committee, taking care of the shipowners' interests, agreed with the shipowners. I do not in the least question their sincerity; the point of view was that the safety would thereby be best subserved; but my experience as a sailor makes it impossible for me to agree to the action which resulted, and safety at sea depends more on the human element than on any other factor. The drift from the sea on the part of strong and courageous men will continue and safety will continue to diminish."

It was intended as reasons why our commission should not agree to the action taken in the committee on life-saving appliances. When I sought to read it to our commission that privilege was denied, not by a formal vote, but otherwise. The chairman stated that he

certainly wanted to read it. Those who objected stated that I might file it with the commission. I did so, and verbally submitted my resignation to the commission, upon which I was informed that I could only resign to the President of the United States, whereupon the meeting took a recess for dinner. I then wrote and sent the telegram in which I tendered my resignation to you. At the reconvening of the commission the same evening I handed a copy of the telegram to the chairman, Mr. Alexander, settled up as far as expenses were concerned with the commission, and then stated that I was going back to the United States on Saturday. If the commission paid my fare, I would go in the cabin. If not, I would pay my own fare and go in the steerage. The chairman, Mr. Alexander, at once issued orders for my fare from London to New York.

I was moved to take this action, first, because the committee reports had been submitted; second, because under the rules of the conference it could not be reached by any protest unless it came under authority of a national delegation; and, third, because it was perfectly plain to me that the majority of our delegation would determine to give support to the reports of the different committees. Being entirely out of sympathy with action such as I have described and others of less importance which I have not mentioned, by remaining I could do nothing except wait until the convention was to be signed. I could then have withheld my signature and made a report on my reasons for so doing. I felt that in the interest of safety of the lives of passengers at sea I might accomplish more by returning to the United States and submitting my report to you.

There was, of course, another alternative. I might have given serious consideration to the fact that freight vessels will not come under these rules and that smaller and medium-sized passenger vessels will carry sufficient of a deck crew to furnish two able seamen or men of a higher rating for the boats under that section of the seamen's bill which provides for the general manning of vessels, a matter which the committee on life-saving appliances had not touched except by stating that they should be efficiently and sufficient manned. But it appeared to me that even to consider such a proposition would be to sacrifice the lives of passengers and that it would be treason to the mission upon which I had been sent.

Mr. President, I may, in my ignorance, have violated some of the rules or proprieties governing such a mission, but I had to follow my conscience and do what I did.

Respectfully submitted.

ANDREW FURUSETH.

To the PRESIDENT OF THE UNITED STATES.

Appraisal and Investigation of the Pere Marquette by the Interstate Commerce Commission.

EXTENSION OF REMARKS
OF
HON. LOUIS C. CRAMTON,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

Monday, April 27, 1914.

Mr. CRAMTON. Mr. Speaker, in the course of my remarks in this House in connection with the proposed Alaska Railroad bill, February 5, 1914, I called to the attention of this House for the first time the need of an investigation of the Pere Marquette Railroad, its financial history, its present physical condition, and the nature of the service it is rendering to the public. Thereafter, on February 11, 1914, I introduced House resolution 409, which calls for the most thorough and complete investigation of a railroad property that has yet been attempted. That resolution is as follows:

Resolved, That the Interstate Commerce Commission investigate the Pere Marquette Railroad Co. and report to the House all the facts and circumstances concerning—

(a) The character of the service now being given to the public by the said Pere Marquette Railroad Co. and its receivers, and if there is failure to render reasonable service, the reason or reasons for such failure.

(b) The present physical condition of the equipment and other tangible property of the said company.

(c) The extent to which property and human life are endangered by lack of proper equipment or by lack of proper care and use of equipment.

(d) The extent to which inefficient or incompetent men are employed in the maintenance and operation of the railroad of the said company.

(e) The present financial condition of the said company, the amount of its debt, both funded and unfunded, the circumstances and conditions attending the issuance of its stocks and bonds, the extent to which such issues of stocks and bonds resulted in benefit to the said company.

(f) The financial transactions of the said company and its receivers, past and present.

(g) All the facts and circumstances leading up to the present condition of the said company and the existing receivership.

(h) The names, capitalization, and bond issues of all railroad and bridge or other companies controlled by said Pere Marquette Railroad Co. or its receivers, how acquired, the time of such acquisition, and all facts or circumstances involved in such purchase or control.

(i) The remedies that said commission would suggest for any improper or undesirable conditions that may be found to exist.

(j) What legislation, if any, is necessary to insure proper performance of its functions by the said public-service corporation.

(k) What legislation, if any, is desirable in view of the facts presented by the report upon the investigation herein provided for.

NEED FOR THE INVESTIGATION.

That resolution was referred to the Committee on Interstate and Foreign Commerce, before whom I appeared March 7, 1914, in support of the resolution. In the course of that hearing I spoke in part as follows:

"The Pere Marquette Railroad is peculiarly a Michigan railroad. It operates in Michigan 1,800 miles of lines, running into almost every part of the Lower Peninsula. The business welfare and the industrial development of the State are in an especially large degree dependent upon the proper discharge by it of its functions as a common carrier. For some time this great railroad system has not been giving the service the State has a right to expect from it, and of late this failure has been constantly greater in degree. It has reached a point where this failure has become a serious menace to the progress of the State.

* * * * * * *

"The resolution that I have introduced and which is now pending before this committee proposes a thorough and complete probe of the affairs of the Pere Marquette Railroad Co. It proposes that this investigation shall be conducted by the Interstate Commerce Commission, a permanent, impartial, nonpartisan board of experts. There is no other authority with equal facilities for making such an investigation, or with equal ability, derived from training and experience, to conduct it, and there is no other body whose report of facts would be received by the public with as great confidence in its accuracy and impartiality. The people of Michigan are to-day being fed bales of figures put out by anonymous officials and allies of the Pere Marquette and purporting to show either that the road is giving proper service and making money at it under present conditions, or that it is on the rocks physically and financially because of the evils of governmental regulation. In either song we find the same chorus, "Let the public keep its hands off and we will all be happy."

* * * * * * *

"I believe that the situation is serious enough and that the interests of the public which are at stake are important enough to warrant this thorough investigation by an impartial authority into the affairs of this public-service corporation, so that the public may be reliably informed as to the actual facts and may know how to proceed for the proper protection of its own interests and with due regard to the demands of justice for all parties in interest.

* * * * * * *

"There are, in my judgment, two things wrong with the Pere Marquette, both of which must be corrected before the road can be expected to play its proper part in the development of the State. First, it is grossly overcapitalized with oceans of water in its liabilities. Second, a great competing railroad system—the Michigan Central—has had a too potent voice in its management. To become a really great railroad system and really a public-service corporation the water must be squeezed out of its liabilities and it must be given a management whose first and only concern shall be the welfare of the Pere Marquette Railroad Co. and of the State of Michigan.

* * * * * * *

"To perform all of their present obligations the management of the Pere Marquette Railroad Co. must render proper service to the public, pay their employees wages in keeping with the times, and pay interest and dividends on more than $110,000,000. In order to do this, their attorney says that the 2-cent fare law must be repealed and freight rates advanced 40 per cent. Before the constantly rising tide of bond issues reaches any higher point is it not desirable that there be a thorough investigation of the situation in order that the people of Michigan may know authoritatively about how much of that $110,000,000 interest and dividends should be paid upon?

* * * * * * *

"The State of Michigan is vitally concerned in this matter. I believe I am justified in saying to you that with scarcely an exception they desire this investigation. It can not embarrass any program for the upbuilding of the Pere Marquette that can stand the daylight of publicity. It will sound the death knell for any schemes of financiers who may desire longer to play football with the Pere Marquette and the industrial interests of Michigan. It will give the people of Michigan reliable information for their consideration in connection with the appeals of the railroad for relief from taxation and regulation. It will place at the disposal of the Federal court a comprehensive view of the situation which will be of great assistance to it in its handling of the receivership. It will place in the hands of the Interstate Commerce Commission that complete survey of the Pere Marquette problem that will better enable that body to aid in its solution."

Later, after conference with members of the committee and with the chairman of the Interstate Commerce Commission, I addressed the following letter to Chairman Harlan:

APRIL 18, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR MR. HARLAN: With reference to House resolution 409, a copy of which I inclose herewith, and which provides for a thorough investigation of the Pere Marquette Railroad by the Interstate Commerce Commission, and which I discussed at some length with you yesterday.

Inasmuch as I am satisfied that you have not available at this time either the funds or the men with which to carry on this proposed special investigation in addition to the other work which you now have before you, I have given thorough consideration to the provisions of the physical-valuation law under which the Division of Valuation is now being organized and will soon proceed.

As this statute provides for the careful appraisal of all of the property of the railroad lines as well as for a complete financial history of the various companies and their predecessors, the information desired by the people of Michigan as to the Pere Marquette will in the course of time be furnished thereby through the regular work of investigation of your Division of Valuation.

The present situation of the Pere Marquette property, however, is such that it is important that that information be available at the earliest date possible, consistent with the accurate and thorough completion of so great a task.

Accordingly I hereby request of your commission that an order be entered designating the Pere Marquette Railroad as the first property in its district to be taken up by the Division of Valuation, and that in connection with the prescribed work of appraisal and investigation of such property all the information called for by House resolution 409 be ascertained so far as it may be practicable.

Herewith I hand you the favorable indorsement of this request by the Committee on Interstate and Foreign Commerce of the House of Representatives.

Permit me to take this opportunity to thank your commission for the attention that you have already given to the matters covered by House resolution 409. Especially I wish to thank you for the results accomplished in the way of improved freight and passenger service by the force of six inspectors detailed to make an examination of the road, with special reference to the question of freight and passenger service. Some recent improvement in this service is no doubt largely due to the work of these inspectors.

Thanking you for your consideration and courtesy in this connection, I remain,

Yours, very respectfully, LOUIS C. CRAMTON.

ACTION BY THE HOUSE COMMITTEE.

The request which I made in this letter was supported by the following resolution by the Committee on Interstate and Foreign Commerce of the House:

"*Be it resolved*, That resolutions Nos. 422 and 409, for the investigation of the Chicago, Rock Island & Pacific Railroad Co. and the Pere Marquette Railroad Co., together with copies of the hearings thereon, be referred to the Interstate Commerce Commission with the request that special investigations by the passage of these resolutions may be avoided and a duplication of work and expense be saved by giving preference to these two railroads in the proceedings under order of the commission to make physical valuation and ascertain conditions of stocks and bonds in accordance with existing law. This committee requests that in view of the representations as to the urgency of these investigations that the Interstate Commerce Commission, through the physical valuation board, shall make these investigations as a part of the work of valuation and shall do so commencing at once and proceeding as rapidly as possible * * *."

ORDER BY INTERSTATE COMMERCE COMMISSION.

I am very glad to be able to state that this request has been favorably acted upon, and the Interstate Commerce Commission has entered the following order providing for the desired investigation of the Pere Marquette Railroad Co.:

[At a general session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 24th day of April, A. D. 1914. James S. Harlan, Judson C. Clements, Edgar E. Clark, Charles G. McChord, Balthasar Meyer, Henry C. Hall, and Winthrop P. Daniels, commissioners.]

No. 6833.

IN RE PERE MARQUETTE RAILROAD CO.

The Interstate Commerce Commission, having been requested by the Committee on Interstate and Foreign Commerce of the House of Representatives to investigate and report to the House of Representatives concerning the character of the service, physical condition of the equipment and property, financial history, transactions, and practices of the Pere Marquette Railroad Co.:

It is ordered, That a proceeding of inquiry and investigation be, and the same is hereby, instituted into and concerning the several matters and things set forth and referred to in the preceding paragraph of this order.

It is further ordered, That this proceeding be set for hearing at such times and places, and that such persons be required to appear and testify or to produce books, documents, and papers, as the commission may hereafter direct; and that the investigation be carried on in the meantime by such other means or methods as may be deemed appropriate.

And it is further ordered, That a copy of this order be served upon the Pere Marquette Railroad Co. and the receivers thereof.

STATEMENT BY CHAIRMAN HARLAN.

With reference to this order, Chairman Harlan, of the Interstate Commerce Commission, has made the following statement:

"The Interstate Commerce Commission has instituted two proceedings of inquiry and investigation—No. 6833 and No. 6834, the former relating to the Pere Marquette Railroad Co. and the lattter to the Chicago, Rock Island & Pacific Railway Co. Hon. LOUIS C. CRAMTON, of Michigan, introduced in the House of Representatives a resolution providing for an investigation such as has been ordered by the commission into the affairs of the Pere Marquette Railroad Co., and Hon WILLIAM R. GREEN, of Iowa, introduced a similar resolution providing for an investigation of the affairs of the Chicago, Rock Island & Pacific Railway Co. and affiliated companies.

"These resolutions were referred to the commission by the House committee with a view to determining whether the commission should conduct these investigations through its Division of Physical Valuation, thereby saving a duplication of labor. As a result of the conferences had with the commission, the House committee, instead of recommending the passage of said resolutions by the House of Representatives, requested the commission to proceed with them as a part of the work of physical valuation, and the investigations above mentioned were accordingly instituted by the commission.

"Both of the roads mentioned have been the subject of some criticism, and it is understood that the resolutions and the proposed investigations thereunder are deemed to be matters of considerable public importance by the House committee. The commission proposes to make a thorough investigation in each instance, will take up the work at an early date, and will prosecute it to completion as rapidly as may be possible in connection with the other important matters now pending before the commission."

We are accordingly assured that the Interstate Commerce Commission will institute and report "concerning the character of the service, physical condition of the equipment and property, financial history, transactions, and practices of the Pere Marquette Railroad Co.," and that the commission "will take up the work at an early date and will prosecute it to completion as rapidly as may be possible."

THE PHYSICAL VALUATION.

Inasmuch as this investigation will be conducted under the physical-valuation act, approved March 1, 1913, the following provisions of that act as to the scope of the appraisal and financial investigation are of interest:

"SEC. 19a. That the commission shall, as hereinafter provided, investigate, ascertain, and report the value of all the property owned or used by every common carrier subject to the provisions of this act. To enable the commission to make such investigation and report it is authorized to employ such experts and other assistants as may be necessary. The commission may appoint examiners who shall have power to administer oaths, examine witnesses, and take testimony. The commission shall make an inventory which shall list the property of every common carrier subject to the provisions of this act in detail, and show the value thereof as hereinafter provided, and shall classify the physical property, as nearly as practicable, in conformity with the classification of expenditures for road and equipment, as prescribed by the Interstate Commerce Commission.

"First. In such investigation said commission shall ascertain and report in detail as to each piece of property owned or used by said common carrier for its purposes as a common carrier, the original cost to date, the cost of reproduction new, the cost of reproduction less depreciation, and an analysis of

the methods by which these several costs are obtained, and the reason for their differences, if any. The commission shall in like manner ascertain and report separately other values, and elements of value, if any, of the property of such common carrier, and an analysis of the methods of valuation employed, and of the reasons for any differences between any such value and each of the foregoing cost values.

"Second. Such investigation and report shall state in detail and separately from improvements the original cost of all lands, rights of way, and terminals owned or used for the purposes of a common carrier, and ascertained as of the time of dedication to public use, and the present value of the same, and separately the original and present cost of condemnation and damages or of purchase in excess of such original cost or present value.

"Third. Such investigation and report shall show separately the property held for purposes other than those of a common carrier, and the original cost and present value of the same, together with an analysis of the methods of valuation employed.

"Fourth. In ascertaining the original cost to date of the property of such common carrier the commission, in addition to such other elements as it may deem necessary, shall investigate and report upon the history and organization of the present and of any previous corporation operating such property; upon any increases or decreases of stocks, bonds, or other securities, in any reorganization; upon moneys received by any such corporation by reason of any issues of stocks, bonds, or other securities; upon the syndicating, banking, and other financial arrangements under which such issues were made and the expense thereof; and upon the net and gross earnings of such corporations; and shall also ascertain and report in such detail as may be determined by the commission upon the expenditure of all moneys and the purposes for which the same were expended.

"Fifth. The commission shall ascertain and report the amount and value of any aid, gift, grant of right of way, or donation made to any such common carrier, or to any previous corporation operating such property, by the Government of the United States or by any State, county, or municipal government, or by individuals, associations, or corporations; and it shall also ascertain and report the grants of land to any such common carrier, or any previous corporation operating such property, by the Government of the United States, or by any State, county, or municipal government, and the amount of money derived from the sale of any portion of such grants and the value of the unsold portion thereof at the time acquired and at the present time, also the amount and value of any concession and allowance made by such common carrier to the Government of the United States, or to any State, county, or municipal government in consideration of such aid, gift, grant, or donation.

"Except as herein otherwise provided, the commission shall have power to prescribe the method of procedure to be followed in the conduct of the investigation, the form in which the results of the valuation shall be submitted, and the classification of the elements that constitute the ascertained value, and such investigation shall show the value of the property of every common carrier as a whole and separately the value of its property in each of the several States and Territories and the District of Columbia, classified and in detail as herein required."

The action of the Interstate Commerce Commission in ordering an immediate consideration of the Pere Marquette by the Interstate Commerce Commission Division of Valuation will secure for the people of the State of Michigan within several months an authoritative statement of what the Pere Marquette property is worth to-day and a thorough investigation of its stock and bond issues. Under the physical-valuation law, under which the division is operated, a complete appraisal of the 250,000 miles of railroad in the United States is to be made. It is expected that this work will require five or six years to complete. The country is divided into five districts, and in each of these there will be about 50,000 miles of railroad to appraise. In the regular course of things it would have been several years before the Pere Marquette would have been reached.

REORGANIZATION IS INEVITABLE.

The present conditions surrounding the finances of the road are, however, such that a reorganization is inevitable. When the reorganization occurs I want it to be such that the interests of the people of Michigan will be protected. For instance, should the underlying bond owners foreclose and sell the road for the amount of their holdings, about $32,000,000, the stockholders and other bondholders would lose. In that event the public should profit by this squeeze out of surplus liabilities, rather than the underlying bondholders. No one should be permitted to buy in the road at a low figure and still, by some financial sleight of hand, be able to still hold out $110,000,000 as the real liabilities.

PUBLIC WILL NOW GET THE FACTS.

Officials of the road are making constant and insidious appeals for lower taxes, higher passenger rates, and higher freight rates, and are at the same time holding down the wages of everybody they employ except the receivers. They are putting out all sorts of claims and excuses for their manifest failure of service and deplorable financial condition. In order that the people of Michigan may intelligently and fairly pass upon these demands it is imperative that the public have at hand complete and reliable information as to the present value of the Pere Marquette and as to how much of its liabilities represent value. The action of the commission in taking up the work in accordance with that request will make undesirable the expenditure of Pere Marquette funds in the appraisal the receivers have engaged Dean Cooley to make. While Dean Cooley is of the highest standing and integrity, that appraisal would have been paid for by the Pere Marquette, and would not have been made under the impartial conditions which will surround the work of the Interstate Commerce Commission.

I hope that foreclosure proceedings and other reorganization steps will await the conclusions of the Interstate Commission's investigations, but whether they do or not the public can well afford to await this report before passing judgment on the appeals for higher rates and lower taxes. The people of Michigan desire to deal fairly with this great public-service corporation. They are entitled to know the facts, and now they are in a fair way to obtain them. When they have obtained them they will be in a position to act both intelligently and fairly. It will then also be necessary for the carrier management to deal fairly with the great interests of the people it serves.

Importation of Convict-Made Goods.

SPEECH
OF
HON. GEORGE R. SMITH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 18, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 14330) to prohibit the importation and entry of goods, wares, and merchandise made in whole or in part by convict, pauper, or detained labor, or made in whole or in part from materials which have been made in whole or in part or in any manner manipulated by convict or prison labor.

Mr. SMITH of Minnesota. Mr. Chairman, I am in hearty sympathy with this legislation. We can not help but recognize the fact that there are a great number of defectives in this world who need more or less care and attention. These must be supported, either in whole or in part, by the municipality, State, or Nation.

The purpose of the legislation under consideration is to require foreign countries to take care of their own defectives and unfortunates, and to prevent the products of the labor of inmates of foreign prisons, hospitals, and other corrective institutions from entering into competition with the free labor of this country.

It is one of the duties of every Government to take care of its own unfortunates. Every individual citizen must bear his share of the burden. Every Government endeavors to reduce the cost of caring for the inmates of its own institutions by requiring them to perform labor, so as to become as near self-sustaining as possible. The products of this labor of defectives, whether it be the work of convict or other institutional labor, is sold to help defray the cost of maintaining the institutions in which the makers are confined.

It is unfair to permit the products of this restrained labor in foreign lands to be sold in this country in competition with the products of our own individual free labor. Our own citizens have to support our own defectives. When our own labor is required to compete in this country with foreign convict labor a double burden is placed upon our own free laborer. Not only must he contribute his share to the support of our own institutions directly, but through the displacement of his own products by the products of foreign convict labor he is required to reduce his own earning capacity in order to relieve foreign countries from the obligation resting upon them to care for their own indigent and criminal population.

The purpose of the legislation under consideration is to require foreign countries to take care of their own defectives and

unfortunates. If we do not pass some such legislation as this, we would be inviting the Governments of foreign countries to send to us in the shape of manufactured products the means of assisting in taking care of their own dependents.

There is nothing generous or charitable about this legislation. It is simply justice. All that this legislation contemplates is fair treatment for free labor. There is no equality or justice in competition of free labor, either with this foreign dependent labor or with the contract convict labor that exists under the systems in vogue in 27 States of the Union.

One of the great problems presented to the American people for solution is how best to utilize the time and labor of convicts so as to make better men of them and at the same time avoid bringing their products into competition with the products of free labor. It is admitted on every hand that the convict must be kept employed at some useful occupation; but just how to keep him employed and what to do with his products are all-important questions.

The Federal Industrial Commission, as a result of four years of investigation, recommended a bill similar to House bill 1933, which passed the House on March 4, 1914. If this bill becomes a law, as I hope it will at an early date, it will prevent convict-made goods from being marketed outside of the State in which produced. It has been estimated that 65 per cent of the convict-made goods placed on the market are sold outside of the State where manufactured or produced. Forty-nine per cent of all the goods manufactured by prison labor are produced under this system. The average daily wage for this contract labor, with an 80 per cent efficiency, is 65 cents. This would approximate a wage of 80 cents a day if the efficiency were 100 per cent. In addition to this the employer of this prison labor is furnished with light, heat, and guards, and in most cases with space. It needs no argument to show that competition with this 80-cents-a-day labor by free laborers having families to support is impossible. This contract-labor system is one of the oldest prison labor systems and by all odds the worst.

The Cause of Humanity Demands Quick, Positive Action to Establish Peace and Prevent Further Bloodshed in Colorado.

EXTENSION OF REMARKS
OF
HON. JOHN R. FARR,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, April 25, 1914.

Mr. FARR. Mr. Speaker, immediate action on the part of the Government is necessary to prevent further bloodshed in the mining districts of Colorado, where the most intolerable and shocking conditions have for months prevailed. Law and order have disappeared. Open warfare exists between State militia, mine guards, and the miners, with the result that not only a large number of the combatants have been killed or injured, but that many helpless women and children have lost their lives under the most abhorrent circumstances. The cause of humanity and the welfare of Colorado and the entire country demand quick, positive action to establish peace in Colorado and prevent further bloodshed.

I have received numerous petitions from the United Mine Workers and other organizations and telegrams from individuals in my district protesting against "the outrageous treatment of the striking miners and their families." The petitioners have requested me to convey these protests to the President of the United States. Accordingly, on April 22 last, expressing appreciation of the tremendous responsibility now on the President's shoulders, due to the Mexican trouble, and the prayer that God would give him the strength and wisdom to bear it with credit and success, I communicated to the President the protests of these organizations, with "the hope that you may be able to use your good offices to prevent further bloodshed and bring peace and order to that unhappy community."

SONS OF VETERANS, SCRANTON, PA., PROFFER SERVICES.

Mr. Speaker, I have the honor and great pleasure to present resolutions unanimously passed by Lieutenant Ezra S. Griffin Camp, No. 8, Sons of Veterans, Scranton, Pa., numbering 400, commending President Wilson and proffering their services in the defense of the honor and the glory of our flag. As a member of Camp 8, I heartily commend their action and rejoice in the spirit of patriotism that prompts them, as it did their fathers, to do battle for our glorious country.

The following are the resolutions which were adopted:

Whereas in the providence of God it has become necessary for the Government of the United States to use the force of its Army and Navy in the present crisis of the Mexican trouble, and as we, the sons of veterans, sons of Union soldiers and sailors who fought in the War of the Rebellion, are organized for the perpetuation of the principles for which our fathers fought: Therefore be it

Resolved, That we, the officers and members of the Lieutenant Ezra S. Griffin Camp, No. 8, Sons of Veterans, of Scranton, Pa., in a meeting assembled, do heartily renew our pledges of allegiance to the Government of the United States.

Be it further resolved, That we commend our President, Woodrow Wilson, for the Christian fortitude, masterful diplomacy, and farsighted patriotism with which he has guided the destiny of the Republic under the trying conditions arising from the contending forces in Mexico.

Be it further resolved, That we, the officers and members of the Lieutenant Ezra S. Griffin Camp, No. 8, Sons of Veterans, do hereby tender to the governor of the Commonwealth of Pennsylvania our services in the defense of the honor and the glory of our flag.

Respectfully submitted.

WALTER SCHANZ.
CHARLES W. BLUME.
CHARLES F. MILLER.

Unanimously adopted at a regular meeting of the Lieutenant Ezra S. Griffin Camp, No. 8, Sons of Veterans, United States of America, held April 21, 1914.

C. B. MILLER, *Commander.*
L. SCHANZ, *Secretary.*

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,
Friday, May 1, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, as there is a lull in Mexico and public attention is again being turned toward the legislation pending to repeal the present law in regard to the Panama Canal tolls, I desire to insert an article upon that question. It is interesting and entertaining. In classic phrase, its author shows the duplicity and hypocrisy of the Democratic Party as demonstrated by their party platform and by their present performances. It shows how a platform can be made, and was made, to catch the votes of those who oppose "subsidy" and those who favor "subsidy," of those who were against the "interests" and those who favored "sane business" methods. It is written by one who has long believed in the Democratic faith as exemplified by Jefferson, Jackson, and Cleveland, but who can not march under the banner of Wilson and Bryan inscribed with surrender to the British interests and to the transcontinental railroads. It is as follows:

"THE LITTLE PLANK."

Politics make strange bedfellows. Seldom before has any one subject furnished a better opportunity for securing votes than the promise of "free tolls through the Panama Canal."

Unappreciated by the general public, but well understood by vote manipulators, free tolls was a ship subsidy in disguise and was used for all it was worth in the Democratic platform and campaign. Then it was known as a war measure against the transcontinental railroads. Though it was in conflict with other well-known Democratic principles, it was possible of explanation and repudiation later, should occasion arise where that course would be profitable. Such conditions have arrived.

All previous attempts through congressional legislation to secure ship subsidy had failed.

During the last campaign ship subsidy, presented under a different name, "free tolls," enabled the Democratic spellbinders to secure the farmer's vote by representing it to be a help to him to market his products at reduced expense and increased profits through free use of the canal. Mortgages would be paid off, mansions would replace his shacks, labor would be plentiful, and mid seasons could be spent leisurely in Europe clipping coupons. There was to be no fooling this time; no molasses traps for flies; campaign promises were to be kept by the "keepers of the people" before and after election at the rate of one hundred cents on the dollar, gold.

To the enemies of railroads was promised an immediate post-election opportunity to inflict a "knock-out blow" through free-toll ship competition and exclusion from canal use.

To those favoring ship subsidy was promised that their efforts, hopes, and dreams of years was to become, through the help of their former opponents, an accomplished thing, shorn of the opprobrious term "ship subsidy." No fooling; no molasses. Take it from me, no Wall Street tricks in this platform.

Was ever a more astute plan laid and gotten away with by any set of politicians for tickling voters and closing their eyes and reason to true conditions?

Three little bugs rolled in a rug—the farmer, the railroad enemy, and the ship-subsidy advocate—contentedly gnawing on the same warp and woof, for light, the "New Freedom."

All went well until one day
Sir Lionel Corden came this way,
Opened Pandora's mystic box,
Then stole away like a sly old fox.

—

The platform, 'pon which the mighty stood,
Having gained the votes for which 'twas writ,
Must now in cold dishonor shrow'd
Be cast in oblivion's deepest pit.

—

From o'er seas comes a commanding call,
Support your President; support him, all.

National honor? Voters ponder, Congress ponder; surrender all for some one's honor?

Railroads in Alaska.

SPEECH
OF
HON. MILES POINDEXTER,
OF WASHINGTON,
IN THE SENATE OF THE UNITED STATES,
Tuesday, January 20, 1914.

The Senate had under consideration the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes.

Mr. POINDEXTER. Mr. President, it is not my purpose to occupy the time of the Senate in a detailed description of the resources of Alaska. The distinguished Senator from Montana [Mr. WALSH] and my colleague [Mr. JONES] have placed in the RECORD statistics which carry almost incontrovertible proof of the enormous extent and value of the products of this greatest of all the Territorial possessions of the United States.

I do not regard this question as one which concerns alone by any means the comparatively small population which now inhabits the Territory. It concerns in the most vital way all the people of the Pacific coast of the United States, and it is also intimately connected with the interest of the entire country, both directly and indirectly. With the increase of population of the United States—I think some 16,000,000 during the last census period—when we consider that we have been accustomed to have the new generation as they appear upon the scene given the opportunities afforded by a new country and new land upon which they may settle, with the incidental development of cities in which they may take their part in the beginning of society, it is manifestly a matter of vital concern that the only great area of public land which is left should be so governed and developed under such conditions that this equal opportunity which in times past has been the glory of our land may be preserved in Alaska.

The question of a Government railroad in Alaska involves a development of that Territory, and a development so that opportunity will be afforded to settlers who wish to go there and take their part in its benefits. Railroads would be built, undoubtedly, as the Senator from North Dakota [Mr. MCCUMBER] has said, if the Territory and its resources should be thrown open to the exploitation of great syndicates, whose capital gives them an advantage in such exploitation; but when it is developed under those conditions the fruits which will come from the development will not be enjoyed by the people, whose property it now is, but they will be monopolized by the favored few who do the exploiting.

I will not speak, Mr. President, of the $400,000,000 of wealth which has come from Alaska to add to the luxury and the comfort of most of the capitals of the world—to contribute to the enjoyment of the great houses of San Francisco, Seattle, and New York—a mere moiety of which if it had been spent in Alaska would have been able to produce there all the comforts of civilization, with its power to overcome the adverse conditions which have been described in that northern climate, for a permanent population, who would have their homes there, who would have reared their family altars there, who would build their churches and their universities.

The object which this Congress should have in the disposition of the Territory is to encourage, as far as possible, the use of this great wealth in the Territory itself—to make it not only possible to support a permanent population, but to attract it, so that Alaska may come to rival the northern countries of Europe, which are inferior to it in resources and yet support on far less area some 12,000,000 people.

The debate over this bill is a repetition of the debate which occurred some 40 years ago when the effort was being made to secure aid from the Government in the form of donations of public land for the construction of a railroad from Lake Superior to Puget Sound. The attack which was made upon the land grant proposed for that great transcontinental railroad, put forward in a satire of Proctor Knott in his famous Duluth speech, and which failed to accomplish its purpose, in 1871, is being repeated here by the Senator from North Dakota [Mr. MCCUMBER] and the Senator from Wyoming [Mr. CLARK], who, notwithstanding the object lesson, supported by the experience of their own States and the development of the great West, have their eyes blinded to the possibilities of this newer West.

I have in my hand a little book which was put out by the Chamber of Commerce of Duluth, which is almost as amusing in the serious manner in which they seek to overcome the humor and satire of Proctor Knott's remarks upon that "zenith city of the unsalted sea" by a sober statement of the population of Duluth and the post-office receipts as Proctor Knott's speech itself was; but it is pertinent as showing the shortness of vision which has characterized every step in the progress toward the settlement of our great domain.

It is just as true in regard to Alaska as it was when Proctor Knott, with reference to the territory which would be opened up by the Northern Pacific Railroad, said that no one, of course, would have the hardihood to rise in his place and say that all of that land would not produce enough to support a grasshopper outside of the pine bushes which grew upon it. His idea, expressed in that satire, was as far from the actual truth as the disparagement by the opponents of this bill of the agricultural possibilities of Alaska and of the timber and the mineral wealth of the 570,000 square miles of the earth's surface which it covers. One would think from their account that it was not worth the price of a Government railroad, which I will now attempt to show is necessary, if we are to escape private monopoly under the modern conditions which have developed since 1871. With the growth of the combinations of private capital and with the ability through modern inventions to monopolize transportation and to control through transportation for private purposes great areas of the public land and to levy upon the resources of that land all that the traffic will bear, a Government railroad and Government competition afforded thereby is the only way in which this Territory can be developed so that the people will get the fruits of the development.

Mr. President, the proposition to aid or to construct by the Government a railroad for the purpose of developing new lands for settlement and for opportunity for our increasing population, discussed here as though it were a new one, is not different in principle from the grant to our Pacific railroads. I want to call attention very briefly to the extent of those grants, not only a vision of the great area of land which was given them—every alternate section within a space of 40 miles upon each side of their track in the then Territories and within 20 miles upon each side of their track in what were then States—but the value in money to those railroads of these grants, which was sufficient to pay for the construction of the road and without which the West would still be unsettled and partly, no doubt, unexplored, instead of being, as it is and has been for a generation, the granary not only of our own country but of a large portion of the world.

In 1883 Proctor Knott himself submitted a report from a committee of the House of Representatives dealing with the extent of the aid which the Government had given to the Northern Pacific Railroad, and while the Duluth speech has been remembered—it is always true that something which amuses and delights the fancy finds lodgment in the memory of men—his more serious work, conveying information, has been forgotten. I want to read briefly from it, because it has a direct bearing upon the principle of the bill now pending in the Senate—governmental activities in railroad building:

In 1874 the company, in its report to the Department of the Interior, made an itemized statement of the amounts it had expended up to that date in surveys, construction, equipment, etc., in which it appears that the actual construction of 530 miles of the road then built had cost $14,446,356.54, and that the "general and incidental expenses during construction" had been $635,454.71, making a total of $15,081,811.25, or $28,456.24 per mile; and this, it will be remembered, was prior to the crash which took place in the fall of 1873, when labor and material commanded higher prices than they have since. But deduct this $15,081,811.25 from the $51,019,402.99 which the president of the company reports as the total amount expended in the construction of 1,203½ miles of completed and 170 miles of graded road and there will remain $35,937,591.74, from which deduct, say, $2,550,000, probable cost of grading the 170 miles, and there will be left $33,377,591.74 as the cost of the remaining 673½ miles, or $49,558.41 per mile. By referring to the report it will be seen that the total amount expended up to the completion of the first

530 miles was only $21,353,416, or $40,289 per mile, including $1,108,278.05 for surveys, $2,728,980.09 for "auxiliary and connecting rail and water lines," $2,434,346.25 for equipment, and $635,454.71 for "general and incidental expenses during construction," whatever that may mean. Yet if the president's estimate is correct the simple construction of the 673⅛ miles which have been completed since has cost $9,000 more, mile for mile, and that, too, under far more favorable circumstances so far as the prices of labor and material are concerned. Why this should be so the company has failed to explain, and perhaps can not explain. Assuming, however, that "the truth lies between the two extremes," the cost would be $33,407.65 per mile—$80,585,732.75 for the whole line of 2,409½ miles.

To aid in the construction of this road, Congress granted to the company, on certain conditions, 57,920,000 acres of land, of which the auditor in the report already referred to says, according to the latest estimates, 42,500,000 will be available to the company; and the President, in his answer to the committee, remarks with seemingly some surprise that "the discovery has been made during the present session of Congress that the value of the grant, as a whole, is in the neighborhood of $100,000,000."

In this, however, the President is mistaken. Whether the value of the grant was ever considered chimerical, the undersigned do not know, but the fact that it is worth $100,000,000 or more was discovered long ago. The auditor reports that the company has sold up to June 30, 1880, 2,600,000 acres for $9,000,000, and adds: "The value of the company's lands, vested and unvested, may be reasonably estimated at $2.50 per acre; so that the lands unsold are worth, say, 39,900,000 at $2.50, $99,750,000." Which would be $108,750,000 for the whole.

Mr. President, that is what has been done for the Northern Pacific Railroad. That is the value which was placed upon those lands in 1883. It will not be denied to-day that that was a wise policy, notwithstanding the objections which were made to it at that time and the criticisms which have been made of it since. I do not think it will be denied that, on the whole, the disposition of these lands by the Pacific railroads has been wisely administered; that the sale of them for low prices, encouraging settlers upon them, has been in the interest as a whole of the Nation—developing its wealth. And to the wealth which the railroads received for this land grant, as disclosed in this report of 1883, must be added the scores of millions of dollars which have been derived from the sale of timberland, which are now invested in timberland still held by these railroads, and still regarded by this country as legitimate encouragement, under the conditions then existing, of the development of transportation in its great territorial area.

Why should there be a different policy with regard to Alaska? Conditions have changed so that it is not expedient and it is not practicable to encourage the development of a railroad in Alaska by the donation of public lands. It is not expedient, because the great areas of the public land have been exhausted coincident with the increase of population and the demand for land; and they should be conserved; they should be held by the Government, and either patented or leased or otherwise used under conditions which would save them from the monopoly that otherwise would inevitably ensue; but, it not being practicable or expedient to encourage the building of a railroad in Alaska by the donation of public lands, it does not follow that railroads should not be built, and that the Government should not encourage the building of such railroads. The only other means by which the Government can secure the opening up of that country to permanent habitation by the development of transportation is by the building of the railroads by the Government itself.

Not only, Mr. President, have conditions changed with reference to the control of the public lands, with reference to the ability of private parties to monopolize transportation and to monopolize the resources of the country, but conditions have changed with reference to the attitude of the country toward governmental activities in what, in times past, were considered private affairs. Public opinion, the most intelligent instrument by which men can be guided, is very different to-day with reference to Government railroads, Government control of transportation, and Government ownership of transportation from what it was from 1871 to 1883, when the great parliamentary war was fought for the railroads to the Pacific Ocean across the great prairies and the Continental Divide. At that time it was considered dangerous for the Federal Government to enter into such activities; it was objected to as socialistic; and it was a long time after that before we had brought ourselves to the point of realizing that these great agencies of transportation were not private affairs, but were public functions, and brought ourselves to realize that the effort to control and regulate them was not something foreign to the Government, but was the duty of the Government.

Those issues have been fought out and worked out through 25 years of gradual development. The Interstate Commerce Commission has become one of the great tribunals and administrative agencies of the Government, devoted to the control and direction of railroads and transportation, its rates, and its conditions. Such control is not different in principle from going a step further in those peculiar circumstances which, from a business standpoint, may warrant it—the peculiar situation which exists in Alaska—and owning and operating, directly by the Government, transportation, which is the very lever controlling the conditions of existence in that country.

Mr. President, there is a great copper mine that illustrates one of the varied resources of Alaska, at Kennicott, on one of the tributaries of Copper River. Its location can be seen on the map which hangs on the wall of this Chamber. I have seen it in operation; I have seen its ore, richer than was ever before dreamed existed—almost pure copper. The values for great quantities of that ore run as high as $75 a ton. It has lain there for thousands of years; it was worthless, and it would be worthless to-day if it were without transportation. That copper mine is owned by the Guggenheims.

Now, suppose, Mr. President, to reverse the situation which actually exists in most of the affairs of Alaska, that a person who had no interest in the mine should build a railroad to that copper mine and control the transportation which would be essential for the hauling of its $75 ore 132 miles to a seaport; the ownership of the copper mine would immediately become subordinate to the ownership of the railroad, and the man who controlled transportation could reap out of the proceeds of that mine whatever the mine was able to pay; and such will be the condition of the owners of mines, of the owners and promoters of any enterprise in Alaska, with reference to those who control and own the transportation which is necessary to get their product to market. Mr. Guggenheim in some way persuaded Mr. Morgan to build this railroad. With the relations between the mine and its ownership and the railroad and its ownership I am not acquainted, but I presume there is a community of interest. I do know that the rates upon the railroad are based upon the value of ores. Whoever has had the hardihood to go into the Copper River country and undertake to develop a mine has been confronted, when he attempted to get its product to market, by the demand of the Copper River & Northwestern Railroad Co. for a careful estimate of the value of the ore and how much it will yield, and the tribute of all that the traffic will bear, all that the mine can stand, is then paid to this privately owned road. If there is anything left, it has further to be levied upon and to pay its remaining tribute to the Smelting Trust, through whose hands it is necessary to go before it is converted into money.

The development of Alaska, of its mines, and of its coal is of no concern to the public unless the public can get some benefit from that development. A good deal has been said about locking up coal mines in Alaska. I want to speak briefly for a moment of some of the physical characteristics of those coal fields, but at this point I only want to say that, so far as I can see, the only benefit from a public standpoint that can be derived from opening these coal fields will be a cheaper price of coal to the consumers of coal. The only way in which that can be secured is by a transportation system which is beyond the control of any private monopoly. It is conceded on all hands that conditions in Alaska are such that it is impossible that private competition should ever produce a railroad to compete with the monopoly which heretofore has controlled all of the business and all of the interests of that Territory. That is the situation which confronts Congress in determining whether or not a transportation system owned, controlled, and operated by the Government shall be authorized by this act.

It is said, in pursuance of the objection and the obstruction which at every stage of the opening up of our country have met the efforts of those who are seeking to develop it, that there are no agricultural possibilities in Alaska; that its coal is worthless; that it is an inhospitable, unattractive, uninhabitable land. Why, Mr. President, it is washed by a tropical current which, in its mighty sweep around the great gulf of Alaska, laves its shores with the tepid waters of the Philippine Islands and makes there a climate which is as mild and as genial as that of this Capital City. Other harbors are there open the year round, and lands where the growing season is not three months, as was said by some Senator on the floor yesterday, but five and six months, and where agricultural produce is already being raised and being sold in the Seattle market.

I was talking this morning with a gentleman whose training tends toward accuracy of statement, whose powers of observation are trained by scientific employment, and he told me that in the vicinity of Fairbanks, a portion of Alaska which I have not personally visited, where he was a year or two ago, he saw the finest gardens that he ever saw in his life; that he saw growing there the finest celery which he had ever seen; and that the crop which he saw growing at the time he was there

was the second crop which had been raised upon the land that season.

As said before, this great Territory has an area of 570,000 square miles, and of course it has many varieties of climate. There are glaciers; there are barren granite mountains; there is the frozen north; but that very variety, that changing topography, from its warm coast, passing through a great range of mighty mountains, then into a vast alluvial river valley, with hundreds of miles of level land, and then farther on into the northern extension of the Rocky Mountains and on to the Arctic plains—that very variety must inevitably produce, with its changing altitudes, with its control of the currents of the air by the successive mountain ranges, favorable conditions for the habitation of a permanent population and for the growth of vegetation upon those soils which have been brought down from the heights by the erosion of centuries.

Of course no man has seen all of Alaska, and the disposition in this debate and elsewhere is to speak of it from the standpoint of some little particular area which has been observed. It is a land of infinite variety, of changing and opposite conditions, and no man who attempts to form a conclusion without taking that into account can arrive at a just judgment in regard to its merits.

It lies there in the form of a mighty crescent, the southern shore line some 4,000 miles in extent, and not, as is commonly supposed, with a great range of snow-covered mountains immediately upon the coast, but with a great area full of the most valuable agricultural land lying between the coast and the Alaska Range. Then there is the range, in which here and there are deep clefts, through one of which it is proposed to build a railroad. Beyond is one of the greatest navigable rivers of the world, with 2,000 miles of transportation, which would be tributary to the northern terminus of the proposed railroad. Beyond that are the Rocky Mountains, or the Endicott Mountains, as they are called there, with their mineral wealth, out of which on the Cadanian side came the wealth of the Klondike, and beyond that, even on the Arctic shore, great deposits of unknown extent, although known to be very great, of valuable coal, an entirely distinct field from those fields which have been the subject of controversy in the discussion of this bill and in the efforts which have been made heretofore to save Alaska from the grip of monopoly.

The proposition to construct this railroad, Mr. President, is simply a continuation of the fight which has been going on, led in large part by the Delegate from Alaska in the House of Representatives. I want to pause here long enough to say that the people of Alaska should embalm his name and memory in some imperishable monument, because no man with more courage, with greater ability, with greater fortitude and character could have represented them in the Congress of the Nation. To his efforts are due to a large extent the fact that that great principality is not to all intents and purposes the private property of a great modern syndicate of commercial and industrial enterprise. To his effort is due the fact that the people of Alaska have now free self-government in their local affairs. To his effort is largely due the knowledge, which the world is gradually absorbing, of the needs and of the resources of that country. He has not come here, Mr. President, as a suppliant asking for charity, nor insisting that the Nation should enter upon this enterprise through benevolence, but he has urged the development of Alaska as a part of a just public policy, which concerns every State and every inhabitant who is interested in the welfare of his country. The good effect of it will be felt not only as an object lesson in the conduct of these same agencies in other parts of the country, but materially and directly, through the material benefits which will come to the country from the free and beneficial development of the coal and of the mineral wealth and of the timber and of the fisheries of Alaska.

To speak a little further of the material features of this Territory, I do not think the great value of agriculture in Alaska—and it can not be exaggerated—consists in furnishing material for transportation or in furnishing food for the world, but it consists in the fact that because those conditions do exist there men can live in comfort and find the food which is necessary to sustain them. The reason I emphasize the agricultural possibilities of Alaska is because they make it habitable. They make possible a condition which I hope some day to see in that country—the development of communities and municipalities which shall be the chief center of the interest of the inhabitants of Alaska.

It is not only in Alaska that modern conditions have developed a tendency toward absentee landlordism and absentee exploitation. The whole continental United States is more or less a sufferer from that spirit of modern luxury and modern wealth. It is difficult to estimate the millions of dollars which those who have benefited by the development of our own natural resources carry to Europe every year and spend in permanent residence in Paris, London, and other capitals. That is an injury to us. The condition under which the gold of Alaska, its furs, its whales, its salmon, and its mineral resources, have been carried away to build palaces in other parts of the world is simply a phase of a modern condition which is very general in its application. I hope, however, to see the time come—and that is why, as I say, I emphasize the nature of the soil and the agreeableness of the climate—when the people who are concerned in Alaska will have their permanent homes there, just as much as the 12,000,000 people who inhabit Finland and Norway and Sweden and Denmark have their hearts' interests, their permanent homes, the education of their children, the attainment of success and honor, and the comfort of their people in those countries.

It will not be the agricultural products of Alaska that will justify the building of a railroad to haul them. The population who will be enabled to live there, and who will concern themselves in other industries, will be the justification for the construction of this railroad. A great deal of the tonnage of a railroad in Alaska will come from the ores of its mines; some of it will come from its timber, but the greater portion of it, in my judgment, will come from coal. Not only will the coal be used to smelt the copper and other ores of Alaska, but it will be used by the Government itself, for its Navy and its Army, and by the people of the entire Pacific coast in manufacturing enterprises and for domestic use.

So I believe, and shall attempt to point out a little later on, that when we are about to provide for the construction of a Government railroad in Alaska we should at the same time provide a system upon which its coal mines should be developed, and that this question which has vexed and harried our political campaigns for a great many years should be settled now while one branch of the question has the attention of Congress.

It was said, particularly by the Senator from North Dakota [Mr. McCUMBER], that the coal of the Bering River field, as proven by a test which was recently made on the cruiser *Maryland*, was of very inferior quality. In the first place, of course, it is obvious to anyone looking at the matter from a practical standpoint that one cruising test of the coal of a great area covering some 144 square miles of high-grade coal, or, in the Bering River field alone, 50 square miles, is perfectly inadequate to determine the question whether or not there is in that great area a sufficient quantity of coal of the proper quality to supply the needs of the American Navy on the Pacific Ocean. It seems to me it would require a great many tests and the taking of coal from different parts of the field.

Instead of making any such tests, a number of men were taken up there late in the season, the coal was taken out from a single point on one of the veins, together with a great deal of rock and shale, put into sacks, stacked upon the ground, and left there all winter, subject to the vicissitudes of the Alaskan winter. The following season it was carried to Controller Bay, left there to be overflowed by the tide, and then some of it was taken, without any facilities whatever for screening it or taking out its rock and waste matter, and one test was made under the boilers of the cruiser *Maryland*. Upon the basis of that test it is claimed that the coal from this field is useless for the purposes of the Navy or as steaming coal.

It is perfectly obvious that no such conclusion could be justly reached upon any such test. The expedition was under the control of the Bureau of Mines. I take the liberty of reading, as part of my remarks, a letter of this date from the Director of the Bureau of Mines, which will throw some light upon the value of the test on the cruiser *Maryland*. It says:

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE DIRECTOR, BUREAU OF MINES,
Washington, January 20, 1914.

Hon. MILES POINDEXTER,
United States Senate.

MY DEAR SENATOR: In reply to your inquiry concerning mining in the Bering River region, the coal tested on board the cruiser *Maryland* during the summer of 1913, and other matters, I beg to report as follows:

The point selected for obtaining this sample was on a single claim—the Tenino claim—on Trout Creek. This coal was taken out during October and November of 1912, and lay in sacks at the mine until the spring and summer of 1913, when it was carried down Bering River and delivered on board the cruiser *Maryland* for test.

The selection of this site was decided upon after a considerable amount of preliminary investigation in different parts of the field. Nevertheless the limited extent to which excavations have been made into the different coal outcrops in different parts of this field made it difficult to decide upon what might be considered the most promising location.

In excavating the sample of coal—about 800 tons—to be tested on board a naval vessel, the coal was taken as "run-of-mine" coal, no special effort being made to select the best and leave the other coal behind. The screens taken with the expedition for separating out the

slate or "bone coal" were lost by the sinking of a barge off Controller Bay, and the miners, therefore, had neither screens nor any washing apparatus for separating the small carbonaceous slate or dirt from the coal, and hence a considerable quantity of such material was unavoidably left in the coal brought out for test.

I have had no detailed information concerning either the method of testing or the results of the tests made of this "run-of-mine" coal on board the cruiser *Maryland* or of the washed coal at Annapolis, except that I understand that the results of the tests on the *Maryland* showed only about 40 per cent of the efficiency, and the test of the washed coal at Annapolis only about 75 per cent of the efficiency of Pocahontas coal. I understand, furthermore, that while this coal proved satisfactory from the standpoint of being a smokeless coal, the low efficiency which it showed, as compared with Pocahontas coal, was due mainly to the large percentage of ash resulting from the large amount of carbonaceous slate and other earthy material with the coal, and to the fact that this ash formed a slag on the grate bars which interfered with the draft.

The result of these tests should not be considered as a basis for condemning the Bering River coal field, for the reason that the black shale and other material could have been removed easily by washing; and the fact that while the site from which this sample was selected was chosen with care the coal field is undeveloped, very few excavations into the beds of coal have been made, and therefore there is not only the possibility but the probability that many other beds of coal in this field if opened up to any extent would prove to be as promising or more promising than was this particular opening.

The introduction of screens and washing equipment would provide an easy and cheap method of separating the slate and dirt from the coal in ordinary commercial operations. The fact that this particular sample of coal, even after washing, produced in the furnaces a slag on the grate bars which stopped the draft and reduced the efficiency of the coal can not be considered as evidence that the ash in the coals from other beds, even near-by beds, in this field would behave in a similar manner. I have known of a number of cases in other coal fields where of two beds of coal located near each other, one could not be used in certain furnaces because the ash formed a slag on the grate bars and the other could be used as a high-grade coal in furnaces with a forced draft and high temperatures, because its ash did not form a slag on the grate bars.

For these reasons the fact that the tests on board the cruiser *Maryland* did not show the coal from this particular claim to be satisfactory for the purposes of the Navy can not be considered as indicating that all the coals in the Bering River region are unsuited for use on board the ships of the Navy or ordinary commercial ships. On the other hand, it is certain that there is in the Bering River region a large amount of coal suitable for ordinary commercial purposes, and coal of a higher grade than can be obtained elsewhere on the Pacific coast, except in the Matanuska coal field.

The washing of most of the coals in the Bering River field will probably be necessary, but an ample supply of water and favorable climatic conditions in the Bering River coal field will reduce the cost of this washing to from 15 to 30 cents per ton of coal.

In the Matanuska coal field there is a large quantity of high-grade coal which will probably not require washing. The explorations made in that field for the Bureau of Mines during the summer and autumn of 1913 indicate the probability that the Navy Department will be able to secure in that region a supply of high-grade coal ample for all its future needs. A sample consisting of 900 tons of coal from one of the most promising outcrops of coal in the Matanuska field was excavated during September and October last, and this coal is being brought down to navigable waters during the present winter season. It will be ready for test on naval vessels early in the summer of this year.

There is also to be found in the Matanuska coal field a large quantity of high-grade coal suitable for coking and ordinary commercial purposes.

In response to your inquiries concerning the areas of the Bering River and Matanuska coal fields I beg to report that the explorations made up to date indicate an area for the Bering River coal of something more than 50 square miles and for the Matanuska coal field of probably 75 square miles, making a total of 125 to 150 square miles for the two fields.

This area may seem small as compared with some of the larger coal fields in the States; but I may call attention to the fact that the anthracite coal fields in Pennsylvania, aggregating an area of less than 400 square miles, have been producing from fifty to ninety million tons of coal yearly for many years, and may be expected to yield from 80,000,000 to 100,000,000 tons of coal yearly for nearly a century more.

In addition to the Bering River and Matanuska coal fields there are, as you know, in Alaska a number of large areas of lower grade or lignitic coals which will serve a useful purpose in connection with the development of local industries.

In response to your inquiry with reference to agricultural possibilities in the interior of Alaska, I may say that while I have not given special study to that phase of Alaskan development, yet I have seen in the valleys of the Yukon and the Tanana Rivers, as in the vicinity of Fairbanks, considerable patches of wheat, oats, and barley, where these crops had matured and had been harvested, where the potato crops were as fine as I have seen in any country, and where the yield and qualities of cabbage, celery, turnip, and other market garden vegetables were superior to those I have seen in any other country.

It is almost unbelievable to persons who have not traveled through that far northern territory as I have done, even up to the Arctic Circle, that on those lands where the ground may be frozen to a depth of several hundred feet, and which may be covered with a considerable thickness of moss; this moss may easily be burned off, and the warm sunshine of those long Alaskan summer days will thaw out this frozen ground and make it not only possible but practicable to grow these splendid crops during the next and succeeding years.

After traveling through the great interior of Alaska for several thousand miles, I became convinced that the possibilities of agricultural development in a large part of that region are fully as great as, only a few years ago, we believed the possibilities of agricultural development to be in what are now our great Western States.

Respectfully,

J. A. HOLMES, *Director.*

For a great many years the experts of the Geological Survey have been examining the coal fields of Matanuska and of Bering River, and have made far more exhaustive examinations and tests of these coals than it was possible for the Navy Department to make in this experiment on the cruiser *Maryland*. The reports of the Geological Survey have been printed, and I wish to call attention briefly to the quality of the coal in the Bering River field as reported by this scientific bureau of the Government.

In a report by Mr. G. C. Martin, a geologist in the Geological Survey, speaking of the coal found at the same place from which the coal was obtained for the cruiser *Maryland*, in Bulletin No. 335 of the Geological Survey, on page 82, he says:

> The coking qualities of the coal from the 33-foot bed on Trout Creek were tested by the writer in the summer of 1905 in the following manner: A hot wood fire was built in a pit dug for the purpose, and lump coal gradually added until about 600 pounds of coal was burning. Then about a ton of slack and lump coal was added.

He then describes the manner in which he made the test, and says:

> The resulting coke was firm, strong, porous, and had a good ring and luster. The test showed conclusively that an excellent coke can be made from this coal by proper treatment.
>
> The coal from the 8-foot bed on Carbon Creek * * * was tested in 1906 in the same manner.

In the same report it is stated by Mr. Martin, and it is also stated by Mr. Brooks, of the Geological Survey, that the coal of the Bering River field and of the Matanuska field is fully equal to the best eastern coals from the Pocahontas and Georges Creek fields for steaming purposes.

As to the commercial value of this coal, on pages 111 and 112 of the same report it is stated:

> It may be seen from these tables that the Bering River anthracite has no equivalent among the coals now being mined on the Pacific coast and that it compares favorably with Pennsylvania anthracite. It ought to be put into the San Francisco and other Pacific coast markets at a cost far below that of eastern coal, in which case it should have no difficulty in entirely supplanting the latter.
>
> The Bering River semibituminous—like part of the semibituminous coal from Matanuska River—is also better than anything that is being mined in the West. These coals are the equivalent of the Pocahontas, New River, and Georges Creek coals of the East, and are eminently adapted for use on warships and for other purposes for which a high-grade, pure, "smokeless" steaming coal is required; and for these purposes will command a considerably higher price than any coal that is now being mined on the Pacific coast, or, if offered at equal prices, should readily drive the latter from the market.

The report then goes on to speak further of the excellent coking quality of the coal.

That is from the report of Mr. G. C. Martin. Because such an attack has been made upon the quality and value of this coal, I wish to take a moment to call attention further to the report of Mr. Brooks, found in Bulletin No. 442 of the Geological Survey. On page 54 of that report he speaks of the amount of coal contained in the Bering River field and in the Matanuska field. That, also, of recent months is a part of this propaganda of depreciation which has set in. Only since the effort of the Alaska Syndicate to acquire these coal fields was checked and stopped has the amount been attacked and denied, as well as the quality.

Tonnage estimates of Alaska coal, as given by Mr. Brooks of the Geological Survey, Bulletin No. 442, are as follows: Total low grade—I will not read in detail the report—11,483,000,000 tons; a grand total of low grade and high grade of 15,104,000,000 tons in the surveyed coal fields alone; while on page 55 of his report Mr. Brooks estimates the minimum coal resources of Alaska, including the unsurveyed fields, at 150,000,000,000 tons. The entire coal area of the Bering River and the Matanuska fields is approximately 400 square miles. The area of the anthracite coal fields of Pennsylvania is only 100 square miles, and that has nevertheless been sufficient to furnish fuel and power for the great railroad systems and industrial enterprises of Pennsylvania for 100 years, and it is estimated that it will be sufficient to furnish power and fuel for those enterprises for a hundred years more.

The depreciation of Alaska, of the quality of its coal, of its agriculture, of its timber, and the extent of these resources is the same as the depreciation which any man who is seeking to acquire a valuable property makes of that property which he is about to buy. It was only a few years ago when, through the control of the railroads of Alaska, or one railroad of Alaska, and of all the shipping, and a monopoly which had been arranged for the control of the coal fields, that the same men who now claim that the coal is of no value and that there is very little of it there were proclaiming to the world that it was the best coal in the United States, and that its extent was unlimited. The same men who were booming then are knocking now, and just as soon as the United States should desist, if it should desist, from the effort to establish conditions there under which there would be competition and a fair opportunity for the people to get some of the benefits of these great resources, the same interests having acquired control through the control of transportation, which is the agency which gives them control of the

fuel of Pennsylvania and of West Virginia, would be telling the world of the value and the extent of the coal of Alaska which they would put upon the market, and put upon the market how? Not at a lower price than the people of the Pacific coast can now buy coal, but at the same price or at no appreciable diminution of cost.

All the difference between the present extortionate prices of coal in Seattle and San Francisco and those prices which ought to come from an economical mining of Alaskan coal would go to enrich the coffers of the Alaska Syndicate, already rich enough.

Mr. President, if this Napoleonic plan—I speak without any feeling whatever, because I have nothing but the most dispassionate interest in it—of the Alaska Syndicate to control Alaska had succeeded they would have been without doubt the richest people in the world. It is said that John D. Rockefeller and his brother and some of his associates in the Standard Oil have great fortunes and are the richest people in the United States, but if the plans of the Alaska Syndicate had succeeded, if they had been able to monopolize the coal lands of the Bering River and of the Matanuska and the copper ores of the Copper River country, and to control the fisheries and the transportation in that Territory, it would have been impossible to compute the wealth which they could have extracted from that great principality.

The purpose of this bill is not to deny the Alaska Syndicate an opportunity to reap whatever their business genius may entitle them to in Alaska, but it is to confine them to a reasonable profit, to a reasonable share of these riches which the Nation needs for all its people.

Now, Mr. President, aside from lowering the price of coal, which will come from the settlement of this question between monopoly and competition in Alaska, to the domestic consumer of coal and to the enterprises which need it to run the wheels of their machinery, as to the United States Government itself, looking upon this question as a means of operating direct governmental agencies, the ships of the Navy Department, in 1913, used on the Pacific Ocean 111,000 tons of coal and paid for it $8.04 a ton. I venture to say that coal which is delivered from Pocahontas on board ships in the harbor of Norfolk, Va., at $2.70, once a working system has been developed, once the organization is completed and modern facilities for mining have been established in the coal fields of Alaska, a coal which is reported by Mr. Brooks and Mr. Martin to be as good as that coal which the Government receives at Norfolk could be delivered upon the ships of the American Navy at Controller Bay at as low a price as the coal which they now purchase at Norfolk.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER (Mr. SHEPPARD in the chair). Does the Senator from Washington yield to the Senator from Oregon?

Mr. POINDEXTER. I yield.

Mr. CHAMBERLAIN. I understood the Senator to say that 111,000 tons were used by the Navy. I think if the Senator will examine the evidence before the committees he will find that the amount is very much in excess of 111,000 tons per annum. I think it is estimated now at about 160,000 tons per annum, and it is estimated that upon the completion of the Panama Canal three or four times that quantity will be required.

Mr. POINDEXTER. The statement which I have was furnished to me by the Navy Department yesterday. Other than that I can not vouch for it. I take it for granted that it is a more or less careful estimate. That is only the coal that is issued to ships.

Mr. CHAMBERLAIN. I will say that in the testimony of Secretary of the Navy Meyer he estimated it at about 160 000 tons a year, and some of the evidence shows a larger amount, with our present small fleet in the Pacific; and if the fleet happens to be transferred to the Pacific side, as is very likely when the Panama Canal is completed, the Senator himself can see that the amount will be very much increased.

Mr. POINDEXTER. That is undoubtedly true; but the exact amount is not material. The material point is that there is a large amount used, that the price which is paid for it is exorbitant, and that that price inevitably would be reduced, in my judgment, at least, as much as $4 per ton. I make the statement upon a comparison of estimates made by those who have examined all the conditions. I believe that this coal could be mined and delivered on the seaboard at $4 a ton in comparison with the $8 a ton which the Government is now paying. Whether it is estimated that 111,000 tons a year are required, according to the statement furnished me by the Navy Department, or 160,000 tons, according to the estimate which the Senator from Oregon speaks of, the saving to the United States Government from year to year is an item so large in comparison with the small amount which would be necessary to open a coal mine and get the coal to the ships of the Navy that from a business standpoint and from that motive of economy which every wise legislator should have, it is absolutely conclusive in favor of the Government mining its own coal and transporting its own coal over its own railroads to supply its needs, not only for the Navy but for the Army.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield further to the Senator from Oregon?

Mr. POINDEXTER. I yield.

Mr. CHAMBERLAIN. Even a more serious proposition than that, I will say to the Senator, is the fact that the coal which is transported from Norfolk or Baltimore to Mare Island and other coaling stations of the United States is carried in foreign bottoms. Some of the witnesses spoke of the seriousness of the situation which might confront us if we suddenly became in antagonism with some of the powers whose vessels we now use. For instance, I think most of this coal is transported in British registered ships, and it costs us $2 per ton more to carry it in our own bottoms, but we have not the ships to transport it. One of the witnesses testified that if an emergency arose where we would have to use our own ships to bring the coal around to the Pacific, it would absolutely paralyze the commerce of this country.

Mr. POINDEXTER. Mr. President, the War Department expended $394,657 in 1913 for coal on the Pacific coast and in Alaska, entirely outside of the coal which was consumed in the Orient and on the Pacific Ocean. If we estimate, as I think it can properly be estimated, that that coal which the War Department used on the Pacific coast and in Alaska alone is furnished by the Government itself from its great deposits which have already been so thoroughly surveyed and mapped out and are so accessible to deep water, that cost will be cut in half and a saving of $200,000 a year for coal alone in those two localities by the War Department would be effected.

Mr. President, I spoke on yesterday about the report which had been made as to the manner in which this coal was obtained for making a test on the cruiser *Maryland*. In view of the importance that has been attached to that test, which I think is very largely exaggerated, it seems to me that these statements ought to be incorporated in the RECORD, in order that all the conditions surrounding the mining of this coal and the trial of it on the cruiser *Maryland* should be understood by anyone who regards that as important proof as to the quality of the coal. I have here an affidavit from two or three of the men, who describe themselves as practical miners, who were engaged in this work, and in a way it corroborates the statement which I have already read from the Director of the Bureau of Mines, in which he points out the difficulty of getting, under the circumstances existing in the Bering River at the present time, without transportation and without mining machinery, any fair sample of coal as it would be gotten from a coal mine in Pennsylvania or anywhere else where the mines were thoroughly developed, because it is impossible to separate it from the shale and the rock. The coal vein alternates with the shale and rock, which makes it impossible even for experts to distinguish it from coal, and without the proper sort of screen—which they did not have or which they had lost in the voyage to the mines—it would be impossible to separate the coal from the rock. Here is what these miners say:

To whom this may concern:

We, the undersigned, hereby certify that we were members of the Government expedition which went into the Bering River, Alaska, coal field in the spring of 1912, and that we assisted in mining and loading 750 tons of coal (and rock) for the naval test on the cruiser *Maryland*. Under the supervision of R. Y. Williams, of the Bureau of Mines, coal and rock was indiscriminately loaded together. No attempt was made to separate the coal from the rock at any time during the process of loading. When a miner protested against the manner in which the coal was being loaded, Williams ordered him to hold the sack while he himself loaded it. In another instance where a miner, upon discovering that a portion of the seam he was working produced coal of a very inferior quality as a result of getting too near the croppings, informed Mr. Williams of the fact and was ordered to load the stuff. Williams said he would add some good coal with it and it would be all right. At one time one of the chutes caved up to the surface. The cave consisted of a large quantity of rock and shale, mixed with a sprinkling of coal. The mixture was all loaded into sacks and became a part of the shipment. As practical coal miners of many years' experience we are unanimous in our opinion that the Bering River coal is the best we have seen, and there is an abundance of it.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from New Hampshire?

Mr. POINDEXTER. I yield.

Mr. GALLINGER. I will ask the Senator, first, who Mr. Williams was, who had charge?

Mr. POINDEXTER. He was an employee of the Bureau of Mines.

Mr. GALLINGER. I think we ought to discipline the Bureau of Mines. We appropriate money very liberally for that bureau. It looks to me as though that was not a proper procedure on the part of their representatives.

Mr. POINDEXTER. I do not think so myself. I agree with the Senator from New Hampshire. It seems to me that it is a matter, especially when so much significance is attached to it on a great measure such as is now pending here, which ought to be at least further investigated. The affidavit which I have read is not all the evidence, by any means, that I have on the subject. I will say that in addition I have a statement of greater length and greater detail from a resident of Katalla, who assisted in that work, with whom I am acquainted and in whose veracity and also intelligence I have a great deal of confidence, and he corroborates the description given by these miners.

Mr. GALLINGER. There is one feature of it, however, Mr. President, that puzzles me somewhat, and that is why the men, whoever they may have been, representing the Government making the test of this coal for ships of the Navy should not have at least reported that the coal was not of a good quality, that it was mixed with shale and other ingredients that ought not to have been submitted for the test. I wonder that they did not do that.

Mr. POINDEXTER. It may be that they will. I do not think they have published a report yet, and consequently I can not say what they will have to say in regard to that.

Now, as to the difficulty which was described in the statement from the Director of the Bureau of Mines of separating even where an effort was made or when an effort shall have been made of freeing the shale from coal, I want to call attention to the nature of the coal vein at the particular place where this coal was taken from that was used in the *Maryland* test. The hanging wall was shale. Then there was a vein of soft shale of 5 feet 7 inches, then a vein of coal of 2 feet 3 inches, then a vein of shale of 7 feet, then of coal of 2 feet 6 inches, then of shale, then of coal, and so forth, alternating through a large number of veins of coal and shale. The cross cuts disclosing those various veins were made at three different places, and the veins of coal were much thicker in some of the other cross cuts than they were in the one about which I have just read. In one place the vein of coal was 16 feet 9 inches in thickness. They seem to have been separated at other places and to have been interspersed with shale.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Oregon?

Mr. POINDEXTER. I yield to the Senator from Oregon.

Mr. CHAMBERLAIN. The Senator speaks of Mr. Williams as having been employed by the Bureau of Mines. I do not know in what capacity he acted, but as a matter of fact an act was passed by Congress and approved October 22, 1912, appropriating $75,000 for the purpose of the Alaskan coal investigation. In pursuance of that appropriation and the authorization conferred by it, the Secretary of the Navy issued an order to Dr. J. O. Downey, who was a passed assistant surgeon in the United States Navy, to take charge of the investigation, and he employed the man, as I understood the matter.

I do not know why a physician should have been appointed by the Secretary to carry out the purposes of the act, but he was appointed, as a matter of fact, and I have not been able to ascertain that he had had any experience in this line of work. It does seem to me that better results might have been obtained if some man who had made it a specialty had been appointed to do that work. He was really a medical officer, but he had charge of the expedition. I state that to the Senator because I do not understand that Mr. Williams was at the head of the expedition. On the contrary, it was Dr. J. O. Downey, passed assistant surgeon of the United States Navy, a young man.

Mr. POINDEXTER. If a doctor was in charge of it, that might answer the question of the Senator from New Hampshire as to why they did not report specifically that shale was mixed with coal. There is no reason why a doctor should be able to tell coal from shale, even after the experiment was made; but, as a matter of fact, while I suppose Dr. Downey represented the Navy Department in this expedition, the mining of the coal was under the control of the Bureau of Mines, and while Dr. Downey may have had some nominal authority there, I do not think he had anything to do with the actual mining of the coal.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from New Hampshire?

Mr. POINDEXTER. I yield, Mr. President.

Mr. GALLINGER. I had forgotten the fact that we had appropriated $75,000 for this specific purpose. I simply was cognizant of the fact that we have always responded to almost any request that has been made of us in reference to the Bureau of Mines, a bureau in which we all feel a very deep interest. It seems to me it is inexcusable that with $75,000 at the disposal of the bureau we should not have had complete tests of the coal made, so that we would know definitely and absolutely what the quality of it is.

Mr. POINDEXTER. We ought to have, Mr. President; I agree with the Senator from New Hampshire entirely; but I call his attention to the fact that the work of the Bureau of Mines is not completed yet. They did not spend anything like this amount of money, I imagine, in the Bering River field. As is stated by him, although I am not informed as to that, they are now getting out coal from the Matanuska field. They have mined it and are having it brought down by Jack Dalton to the town of Knik, whence it can be shipped.

Now, Mr. President, there is some objection to this bill because of its indefinite nature and the wide discretion that is given to the President of the United States under it, and undoubtedly a very wide discretion is given him. The bill I think in all of its vital parts might be written in one sentence, in which it would be provided that the President of the United States shall construct a railroad from a port on the south coast of Alaska to the Yukon River and should either operate or lease it. But there are some reasons for that, Mr. President. I would have it otherwise. If my choice were able to prevail in any degree whatever, I would prefer that Congress should mark out in the legislation the general location of the railroad. But if that were undertaken we would have upon our hands almost a civil war between various towns along the Alaskan coast, each one ambitious to be the terminus of the Government railroad, and it is doubtful whether we would be free ourselves from these warring factions to form any conclusion upon which a beginning of this great enterprise could be made.

There are various avenues over which the administration may travel in carrying out the great powers conveyed by the bill. It can buy railroads already constructed. It need not build at all. It can build railroads at various places. It can build a coal road only and solve the coal question, or it can build a railroad connecting the coast with the interior of Alaska and solve not only the coal but also the transportation questions.

Some attention has been called already, and I have made some observations, as to the financial importance to the United States of mining and supplying itself with coal from its own coal beds, saving $500,000 a year or more, depending upon the exact conditions, which it is impossible to calculate, as to just how much would be saved by that course if the Government should take it. It is quite significant in that connection to consider what I think is the indisputable fact that the Government can build a coal road and reach one of these great coal mines by covering a distance of 25 miles connecting the coal mine with a valuable harbor.

When the great controversy between the Alaska Syndicate and those who were seeking to break the monopoly of that syndicate over Alaska came to a crisis, the Alaska Syndicate was on the point of extending their Copper River Railroad into the Bering River coal field. What men think can best be determined by their action. What they regard as the quality and value of this coal and this coal field can be determined by the fact that they had already made a contract with the Cunninghams by which the Cunninghams were to turn over their entries in the Bering River field under certain arrangements between them, and the Alaska Syndicate was to mine the coal and pay them a certain royalty for it. At that time the question in regard to Controller Bay became an important one. There has been a great deal of confusion about that subject. It is due, to a large extent, to the fact that a great many of the statements with regard to Controller Bay do not relate to Controller Bay at all but relate to Katalla Bay, which is near by. This campaign of disparagement of Alaska and its resources, which has been instituted by those who are seeking to stop the Government from its activities there, in one of its forms is an attempt to convince the public that Controller Bay is not a valuable harbor or a possible harbor. Yet for years maps made by the Coast and Geodetic Survey, showing the depth of the water in that harbor, and the common knowledge of everybody who has visited it, who has seen the great protecting islands lying between it and the Pacific Ocean, demonstrate to a man who has the least expert knowledge of navigation that that is a safe harbor, with ample depth, and with ample room for the handling and the navigation of ships, being protected from the

storms of the Pacific by Kayak, Kanak, and Wingham Islands, which form a crescent around it. From that harbor it is only 25 miles to the Bering River coal fields, over a flat river bottom the greater part of the way, and the plan which has been made by these private parties—whose business sagacity is ordinarily better than that of the Government—was to build a coal road, to lay ties and rails upon this grass, to put the cars upon the road, to open a gravel pit, and to ballast the road.

Their estimate, according to the report of the engineers, was that this could be done in one season—one Alaskan summer—and that it could be done at a cost of less than $1,000,000. Allowance, of course, will have to be made, in addition to that, for the development of terminal facilities, warehouses, wharves, and so forth, if this system is to be a complete one, for the requirements and operation of Government ships. But one course, which is feasible and which probably will be undertaken if the agents of the administration take proper advantage of the situation under this bill should it pass, would be to solve the coal question of Alaska and the Pacific coast by the expenditure of not more than $3,000,000 in building this coal road from Controller Bay to the Bering River fields, putting the Bering River coal into the ships of the Government throughout the Pacific and offering it to the people of Seattle and other Pacific coast cities in competition with the extortionate prices which they now pay for this necessary commodity.

Another course which is possible under this bill would be for the Government to acquire the Copper River & Northwestern Railroad and to extend it some 350 miles from its terminus, at Chitina, to Fairbanks, on the Yukon River. Objection is made that the Government would then be at the mercy of the syndicate which owns the Copper River & Northwestern Railroad; and I undestand it is proposed by the committee to offer an amendment to the bill that if the Government should build an extension of any existing line it should be required to acquire the existing railway from the private parties who now own it.

Mr. President, while this is not the proper time to discuss the administration of the powers proposed to be granted by the bill, it seems to me fit and proper to say here that the proper policy of the Government, when this bill passes, should be to add to the transportation systems of Alaska some railroad in addition and competing with those which it now has, and not simply to acquire and substitute itself for the present owners of the lines already established.

What Alaska needs is not private monopoly nor Government monopoly, but it needs competition. It needs Government competition as a regulator of transportation and Government competition as a regulator of the prices charged for coal. If the Government should extend the Copper River & Northwestern Railroad 350 miles from Chitina to Fairbanks, I doubt the advisability of inserting in this bill a requirement that the Government should acquire the Copper River & Northwestern Railroad. Let them operate their own railroad. They have, no doubt, been already amply rewarded for what they have expended in the development of the Copper River country. The proceeds from that great copper mine, I understand, last year were something like $4,000,000; the exact figures are not important; but they have that mine; they have expended their money in this road; it is a public-service corporation; and what the Government should do is not to turn around and reimburse the Alaska Syndicate for the money which it has spent in the building of a railroad on Copper River, but it should build a competing line and at the same time should use its governmental power to regulate public-service corporations and to see that these people render service to the public at reasonable rates for the franchise which they obtained and for the benefits which they have already reaped from their mines and through the resources which they have developed.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Oregon?

Mr. POINDEXTER. Certainly.

Mr. CHAMBERLAIN. The Senator from Washington does not understand that there is any provision in this bill or in any proposed amendment whatever requiring the President to purchase any established line there now, does he?

Mr. POINDEXTER. No; but it permits him to do so.

Mr. CHAMBERLAIN. It permits him to do so, yes; but if he does not do so, if he sees fit not to do so, either because he thinks it inexpedient to do it or if he finds that he can not get one of the established lines at a reasonable figure, he has still power to go ahead and do what the Senator now suggests—establish a competing line.

Mr. POINDEXTER. I am only discussing the alternatives which are possible under this bill; and in order to say that, if it were possible—which, of course, it is not possible—for any Senator to have a bill framed which meets with his individual views, I would prefer a bill which specifies these things about which I infer the Senator from Oregon entertains somewhat the same views that I do—he may or he may not—rather than leaving it and all of its possibilities undetermined, with the consequent agitation and controversy which is bound to come up later on. Even if the Government should complete the Copper River Railroad, in my judgment, it would not be necessary to take the public money and buy that railroad, which cost something like $18,000,000. Of course, if the Government should seek to acquire it, a valuation will be placed upon it very much in excess of $18,000,000; but it is perfectly possible for the Government, if it should conclude to develop that system—and the Government should proceed as any business man would proceed, so far as the selection and construction of its lines are concerned, altogether separate and apart from those great questions of public policy which concern another phase of the Government's activities—to operate this Chitina and Fairbanks line in connection with the privately owned roads without paying $18,000,000 to the Alaska Syndicate, which it has expended for this white elephant which is now on its hands.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Oregon?

Mr. POINDEXTER. I do.

Mr. CHAMBERLAIN. I may say in that connection—and I believe I may speak for the committee when I say it—the committee was not disposed to agree with the suggestion, at least in the report of the Alaskan Railway Commission, to provide for a line in connection with the Cordova & Northwestern, or any other established line; in other words, the committee believes that the Government itself ought to own the lines, either by purchasing one of the lines established and extending the Government's line into Fairbanks, or, if that be not feasible, then to itself build a line. It was not deemed advisable to enhance the value of private interests up there, so far as railroads were concerned, and then place ourselves in a position where the rate situation would not be controlled by the Government. The Government ought to absolutely control it, whatever is done in the premises.

Mr. POINDEXTER. There is no question about that, and that is exactly the point which I am making, that the Government ought to build an independent line; and it is manifestly a great deal better, if the Government were going to expend money for railroads in Alaska, that, as a result of that, we should have two railroads instead of one. The Government should build a new railroad; we would have that, and we also should have the service of the railroad already constructed; whereas if the Government repays this private interest for a road that is already constructed, they will have their money and the people will have only one railroad. Of course, it would be under Government control, and in that sense would be a great improvement; but it would in no way compare with the advantages to the transportation of Alaska and all the conditions which surround the people of Alaska and the benefits which would come from having two railroad systems, one up the Copper River, and the other one over the only other feasible competing line from Seward, over the old Alaskan Northern route, extending from that up the Susitna River, through Broad Pass, and on to Fairbanks, a distance of 391 miles.

That road from Seward, should it be constructed, would pass across the mouth of the Matanuska River, and a branch extension of some 65 miles from the crossing of that river would tap the Matanuska coal fields and furnish means for bringing the coal of the Matanuska fields to a harbor and to shipboard at the head of Cook Inlet. It would not be necessary to haul coal from Matanuska across Kenai Peninsula and over two divides of mountains in order that it should reach the terminus of the railroad at Seward.

So far as a coal road and the shipping of coal are concerned, it could be put on board ship and transported to any part of the world or to any city on the Pacific coast from the head of Cook Inlet, the only haul necessary being water grade and a down grade along the valley of the Matanuska River from Chickaloon, in the Matanuska coal fields, to Knik Harbor, at the head of that arm of Cook Inlet. That road, at the same time, would go through a land which is not that which has been described here as characteristic of Alaska at all—a land of fertile soil, not covered with moss, as the Senator from Wyoming [Mr. CLARK] says. He, of course, views everything from the standpoint of Wyoming land and Wyoming climate, and therefore, of course, is inclined to look with disfavor upon other regions of the earth. I have a very high regard for Wyoming, and I remember a great many criticisms and a great deal of pessimism as to the possibilities of the 6,000 feet altitudes and the wind-swept

barrens of Wyoming; but the development of that State, while it has been far ahead of any predictions that were made in regard to it, has not been so fast nor so fruitful as the development of Alaska will be if a railroad should make it possible.

The lands which a railroad from Seward up the Matanuska and up the Susitna would open up are not frozen lands; they are as fertile as any lands in the world, if one can judge by the appearance of them. The soil, which has been eroded from the great mountain ranges by the action of glaciers and by storms, has been piled up, not simply in level river flats but in great rolling areas of unknown and unlimited depth.

There is not any doubt that this country, with land of that kind and with coal and timber available for fuel, can support as great a population as the countries in the north of Europe—Finland, Norway, Sweden, and Denmark—to which I referred a moment ago, and which are far less in extent and less in natural resources than Alaska. I had a statement here as to those countries which I do not seem to have just now, but their combined area is only 450,000 square miles, while that of Alaska is 570,000 square miles. They are no more affected in their climate by the Gulf Stream than the climate of Alaska is modified by the Japan Current; they export no grain, and yet they support a population of over 12,000,000.

Mr. DILLINGHAM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Vermont?

Mr. POINDEXTER. I yield to the Senator from Vermont.

Mr. DILLINGHAM. I should like to inquire if the Senator, in his investigation of Norway and Sweden, has ever found that there exists in those countries great areas of subterranean frost, which have been there during the ages which have passed since that condition came to Alaska? If the Senator has read the Government reports, he has found that the frost in Alaska extends to bedrock; that it has been there probably for a million years; and that the bodies of animals have been taken out in a good state of preservation. In speaking of the agricultural areas of Norway and Sweden, I am wondering if the Senator has taken that condition into consideration in making the contrast.

Mr. POINDEXTER. Yes; I have particularly taken it into consideration. I am not ready to admit that——

Mr. NELSON. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Minnesota?

Mr. POINDEXTER. I yield to the Senator from Minnesota.

Mr. NELSON. I have listened day after day to a comparison of Alaska with Sweden and Norway, and I have been surprised at the ignorance which has been manifested in that respect. There is no comparison between the climatic conditions of Sweden and Norway and those of Alaska. Take the Bering Sea from Dutch Harbor up to the pass between the two continents. From about the 1st of November, or earlier, to the 1st of June it is all a landlocked sea of ice. No vessels can get up to Nome until along about the last of June or the 1st of July. Now, if you will examine as to Norway, you will find that every harbor on the coast of Norway clear around North Cape is open the whole year round, through the effects of the Gulf Stream and the hot current that comes up from the Mediterranean. Every harbor along the whole coast clear up to North Cape and away beyond the Arctic Circle is open during the entire year. So no proper comparison can be made between the climatic conditions of Alaska and those of Sweden and Norway. When you get across the Baltic, over in Russian Finland, you will find the climate gets a little colder; but even there it is not so cold as is Alaska.

Mr. POINDEXTER. Well, Mr. President, of course I would not undertake to discuss minutely with the Senator from Minnesota the conditions of Norway and Sweden; but I think he will admit that those countries are no more prolific in the articles which it is argued here Alaska can not produce than is Alaska itself. I do not understand that Norway exports wheat or that Sweden is a great grain country; certainly Finland depends only upon its cattle and its butter industry, and the same thing is true even of Denmark. So that it is perfectly possible for the millions of people—2,431,000 in Finland alone—to exist there and to develop a great civilization, even though it should be true, as is claimed here in regard to Alaska, that it can not produce wheat. I do not admit that Alaska can not produce wheat.

I want to say this in regard to the question of the Senator from Vermont [Mr. DILLINGHAM] as to the frozen nature of the soil of Alaska: It has been demonstrated that, whether frozen or not frozen, in its natural condition where it is settled and where it is cultivated it produces crops. The clearing away of the grasses and the moss, which it is true in the interior of the country cover the ground, and allowing it to come in contact with the sun with the long, brilliant days of the Alaskan summer, thaws out whatever frost there may be near the surface to a sufficient depth, and to more than a sufficient depth, to produce the most bountiful crops, some of which I have described from observers who are very careful in their statements.

Mr. DILLINGHAM. Mr. President, will the Senator allow me?

Mr. POINDEXTER. I yield to the Senator.

Mr. DILLINGHAM. What the Senator has said is undoubtedly true; I observed it myself when I was in Alaska; but the expense of clearing the land and reducing it to a condition where the crops of which he speaks can be raised is something enormous and something that would hardly be undertaken by any person who was simply going to open up a farm under ordinary conditions. Therefore all the soil that has been under cultivation and put into agricultural use in Alaska has been near to the mining camps, where exorbitant prices are charged for all the supplies that come in, and where, as a result of that, they are able to secure prices for their products which enable them to take off the tundra and prepare the soil for cultivation, but even there cultivation is very much limited. There is a certain class of vegetables produced in the garden that grow luxuriantly. I remember my farmer friend from Minnesota [Mr. NELSON] saw lettuce growing, and he said "What magnificent cabbage that is." I have never seen finer cabbages, I have never seen finer lettuce, and I never ate more delicious radishes than I found produced under those conditions; but beyond the hardy vegetables—those that require the moisture which comes from the subterranean ice fields—you are limited in what you can get from the land.

Now, what I want to say to the Senator is this: I have in my hand the annual report of the Alaska agricultural experiment station, operating in that territory right around Fairbanks, from which territory come all of the exhibits that are in room 115 of the Senate Office Building. All of the farm exhibits there, or almost all of them, come from the section around Fairbanks and the Tanana Valley. Here in this report of the experiment station for 1911 it is said:

> A careful estimate of the cost of clearing and putting the land in fit condition for the first planting indicates it did not exceed $200 per acre. In estimating the cost of the two crops, allowing 6 cents a pound for seed and $7.50 a day for labor, it will not exceed these figures, which include the cost of clearing.

Then a table is given of the expense of clearing the land and raising the first two crops of potatoes:

> Clearing and breaking, $200 an acre; plowing and cultivating, $50; seed, $90; planting, $20; digging and sacking, $140—

Giving the total cost of the crop as $500 per acre. That is in the official report of the experiment station, and that indicates the enormous expense that attends the clearing of this tundra, which has been accumulating for a million years, made up of moss, decayed vegetable matter, bunch grass, and swampy materials. It is frozen in the winter; but in the spring, when the long days come and the sun shines upon it, it thaws and breeds mosquitoes in a volume which no one not familiar with the conditions would ever dream of. I remember when the Senator from Minnesota and myself arrived on a boat at the most famous garden that exists on the Yukon River, that of the Holy Cross Mission, we were met by the priests, who had veiling drawn over their hats in the form of a bag and buttoned under their throats, and who wore gloves and gauntlets. When they came to meet us they brought us the same kind of veils, because without them it was utterly impossible to go ashore without being eaten up by the mosquitoes. That was because the tundra covers all the area of Alaska, and it has to be removed before one can reduce that land to cultivation. I did not, however, mean to inject this matter into the Senator's speech.

Mr. POINDEXTER. Mr. President, the State of New Jersey probably never would have been settled if the people had refrained from going there on account of the mosquitoes. Vermont may not have any mosquitoes, but Vermont has not very much arable land, and yet it is one of the thriftiest and wealthiest States in the Union. But I want to say this——

Mr. DILLINGHAM. If the Senator will allow me, I did not mention mosquitoes as being an objection, if people like mosquitoes, but simply to show the vast area of that tundra which produces them and which must be removed before you can reduce the land to cultivation.

Mr. POINDEXTER. Of course, Mr. President, there is no doubt that what the Senator says in regard to the conditions which he saw there at that particular place is true, but the Senator is entirely mistaken in saying that that is a universal condition in Alaska. That is the case over a large portion of

the Yukon Valley; but it is not only in that garden—which the Senator has described and which was so luxuriant and so beautiful and where they raise such phenomenal lettuce and cabbage—that men have made a success in farming, and at the Government experimental stations, but private farmers in many places in the Yukon Valley have overcome these difficulties.

Mr. DILLINGHAM. And they have overcome them, if the Senator please, more particularly in the Tanana Valley and in the neighborhood of the city of Fairbanks than in any other place. It is from there that the very fine specimens which are on exhibition here have been brought, and it was in relation to that very section that I have given the cost of removing the tundra and putting the land under cultivation, as taken from the report of the bureau.

Mr. POINDEXTER. It was enormously expensive and required a great deal of fortitude and immense perseverance to clear the lands of Ohio and Indiana, and probably cost as much to the pioneers who went upon those lands and reduced them to cultivation and to habitable places as it would to clear farms even in the Yukon Valley in Alaska, which has not the dense forests and the stumps with which not only one generation, but sometimes two or three generations, had to contend before they could get what we see in Ohio now. But the moss which the Senator describes can be burned off the ground, and when it is burned off it allows the sun to exert its genial influence upon the fertile soil and produces what the Senator has seen there and what he has just described and what is possible not only in that place, but in a great many other places.

The Senator, perhaps, has not been up the Susitna Valley and up the Matanuska River. There are hundreds of thousands of acres of land there on which there is no moss and on which, if not wheat, oats or barley, perhaps, could be grown, or certainly hay. Certainly, too, the industry of dairying and of producing valuable herds of cattle, which is carried on so successfully in Scandinavian countries, could be carried on in Alaska. There is nothing in the climate which prevents it. The natural grasses grow there higher than a man's head.

If I should be asked to select a crop which probably could be raised in commercial quantities in Alaska for export to outside markets, I should say it would be hay. It can not be denied that it is a wonderful grass country. I am at a loss to understand why timothy and other valuable hays can not be grown where these natural grasses grow so profusely and so rankly. They are known to be hardy. There is nothing in the climate there which would interfere with it, and the soil is so fertile that it would inevitably produce most valuable crops.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER (Mr. THOMPSON in the chair). Does the Senator from Washington yield to the Senator from North Dakota?

Mr. POINDEXTER. I yield.

Mr. McCUMBER. What has the Senator to say with reference to a report made at one of the agricultural experiment stations up there that the average men who have farms in this valley could not raise enough of the natural hay to feed one span of horses? That is the report that comes from the Agricultural Department, and it bears directly upon this hay proposition.

Mr. POINDEXTER. Has the Senator that report?

Mr. McCUMBER. I think I have it right here.

Mr. POINDEXTER. I say there is nothing to be deduced from that, because Mr. Georgeson—I think he is a Dane himself, or is from one of those Scandinavian countries—is an enthusiast about the agricultural possibilities of Alaska. He is in charge of the Government experiment station there. I know that the Agricultural Department, through its representatives in Aalska, does not take the position that Alaska is incapable of agricultural development, but, on the contrary, reports that it has tremendous possibilities in that respect.

Mr. McCUMBER. Will the Senator permit me to quote further just one short paragraph from Mr. Georgeson's report?

The PRESIDING OFFICER. Does the Senator from Washington further yield to the Senator from North Dakota?

Mr. POINDEXTER. I yield, if it is not too long.

Mr. McCUMBER. It is very short indeed. It is from the report of Prof. Georgeson, and is found on page 49 of the Annual Report of the Alaska Agricultural Experiment Station for 1911. He says:

> Imported feed (hay and oats) usually sells in Fairbanks at $90 and upward a ton. The writer challenges the many reports that are continually appearing in eastern papers, magazines, and other current literature, calling the public attention to the supposed vast areas of meadowland in the Tanana Valley, which are calling forth innumerable letters of inquiry.
>
> It is true that travelers often see small meadows and short stretches of good grazing, but when we consider the great area comprised in the Tenana Valley we lose sight of the few scattering grass spots. There are probably not a dozen of the 200 or more homesteaders in the valley who can cut enough wild hay on their homesteads to winter a team. Nearly all homesteads, however, do afford some grazing for four or five months in the year.

That does not seem to accord, at least, with the view of the Senator as to the great hay possibilities of that country—I mean in regard to the natural grass.

Mr. POINDEXTER. I do not think there is anything in that report that is incompatible with what I said. I was speaking of timothy and other hays which could be grown on land after it is improved. The object of Dr. Georgeson in issuing that report was to combat the inflated ideas of enthusiasts about natural conditions there, which it is the policy of the department to do, not only in regard to Alaska, but in many instances it has done it in my own State in regard to the value of apple lands and the money which can be made in raising apples. There is nothing said there which would indicate that this can not be made a hay-producing country.

Furthermore, the part of Alaska to which I was referring when the Senator interrupted me was not the Tanana Valley at all, but was the Susitna Valley and portions of the Matanuska Valley, where it is perfectly evident that quantities of hay could be raised if the effort were made to raise them.

Of course, a man can not go up into Alaska and begin to make money on a farm as soon as he goes there. Probably for many years, however, he would be doing as well as the pioneers did who settled up the United States, and even better than they did.

Mr. DILLINGHAM. Mr. President——

Mr. POINDEXTER. I yield to the Senator from Vermont.

Mr. DILLINGHAM. I think both of my friends are right in a certain degree about this matter. The wild grass of Alaska—the redtop, as it is called—is a nutritious grass and, if it can be properly cured, makes a fair quality of hay. The difficulty is in curing it. It is an expensive process, as in many instances it has to be placed up on stilts, where the air can circulate beneath it as well as over and through it.

I think the experiment in Alaska that has proved most successful in securing forage has been in growing oats, which do not come to a head, but which are mowed and made into hay when perhaps they are in the milky stage. I think that is the view of Prof. Georgeson. I notice that in his report for 1912 he says:

> A few acres were seeded to timothy two years ago. The grass survives the winters, but it has not proved a success. This year it was too short to cut. The land has never been fertilized, nor was it cultivated after the clearing, but seeded directly to grass. These facts are partly responsible for the slow growth, but it is well enough to point out that timothy does not do as well as one might expect from the vigorous growth of isolated plants which have started along trails where hay has been carried.

In the preceding part of the report he expresses the view I have already advanced, that oat hay can be very successfully cultivated, and that under proper conditions the native grass can be cured.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from New Hampshire?

Mr. POINDEXTER. I yield.

Mr. GALLINGER. If the Senator's contention is correct—and I have no means of disputing it—that Alaska can be made a cattle country, where that industry can be engaged in profitably, I can see that the cultivation of hay would be a very important consideration, for the reason that their somewhat long and cold winters would require that the stock should be fed. I do not believe, however, that hay raised in Alaska can become a profitable product for export. I say that largely for the reason that automobiles do not eat hay, and even in our northern States hay is now becoming somewhat of a drug on the market. In addition to that, we have reduced the duty on Canadian hay, which will give us an added supply.

Mr. POINDEXTER. Hay will always be, I believe, a very valuable product. Of course, if the Senator from New Hampshire could demonstrate that hay is not going to be valuable, there would be nothing in my suggestion, but I think it will always be a valuable farm product.

As I stated some time ago, however, the essential thing in Alaska so far as agriculture is concerned is not that it should raise hay or anything else to export to the markets of the world, but that it should raise products which will support the people who live there. Anyone who stops to reflect on what this country has gone through in every stage of its material development, it seems to me, will be convinced that Alaska is capable of doing that.

The truth, probably, is between the two extremes. A man makes the statement that Alaska has agricultural possibilities,

and it is immediately assumed that he is painting visions of an El Dorado there of valuable agricultural products, and an attack is made on it which would leave the impression that it will produce nothing. The fact of the case is that it will produce the means of sustaining life, but it will do it only as a reward for perseverance and industry devoted to the conditions there to bring them under the control of men.

Mr. President, the Government should go into this enterprise, and it will inevitably, because it is the only solution of these problems. While the railroad enterprise will involve the expenditure of money, and probably it is the only one which will involve the expenditure of money, in my judgment it is only one of a number of enterprises which the Government must inevitably engage in if it is going to develop in Alaska a working system of public enterprise which will solve the problem of private monopoly. The additional enterprises, instead of costing money, will be that portion of the entire project which will yield financial returns to the Government for the money which the railroads will cost.

I refer primarily to the development of the coal mines. There is no agriculture, there is no timber, there is no adequate quantity of mineral ores, at least along certain lines, which will furnish sufficient material to make a railroad profitable; but if the Government develops the coal mines of Alaska, and so secures material for transportation, the railroads will become profitable, not only in the earnings of the railroads themselves but in the amount of money which the Government will save in its own departments which use coal on the Pacific.

If the Government is going to complete this system, the time to plan for it is when it begins the Alaska project, because not only will the people on the Pacific coast and in Alaska need coal, as well as the Government for its present uses, but the Government will need coal in increased quantities as soon as it begins this work.

The Government must have coal to carry on the work of the construction of a railroad. It must have coal to operate the locomotives on its railroad after it has been constructed. There is no reason that I can see why the coal problem should not be solved now, as a part of the governmental activities in Alaska.

Some indication of the cost which the Government will be under for coal incident to the construction of a railroad in Alaska is found in the figures of the Panama Canal Commission. The Panama Railroad, which is practically a Government concern on the Isthmus, in 1912 used 61,000 tons of coal, and in 1913 it used 64,000 tons of coal. Of course the Government railroad in Alaska, being a much larger affair, in all probability, and longer, would consume a much larger quantity of coal. In the construction of the canal the Government used 371,000 tons of coal in 1912, and 344,000 tons of coal in 1913.

It is quite interesting to contemplate the cost of the coal which was consumed by the Government in the work of constructing the Panama Canal. This coal on the cars at Colon, on the Atlantic side, was valued at $4.34 a ton. It was delivered on the United States warships, at Colon, at $5.94 a ton. At Panama, just across the Isthmus, on the United States war vessels, coal cost $7.75 a ton. On other warships, and on tramp steamers not belonging to the United States, it cost $9.19 a ton. This shows the disproportionate price of coal on the Pacific coast and on the Atlantic coast, even at the Isthmus of Panama.

If the Government of the United States should expend its money either to build or to acquire a railroad in Alaska, and then turn it over to some private corporation to operate under a lease, the transportation problem of Alaska would be left in exactly the same situation in which it exists to-day. The Government now has the power to regulate transportation, to fix rates, to regulate and to control service; yet the conditions with which the Interstate Commerce Commission has to contend, the amount of work which it has to do, and the limitations which are placed upon its powers have demonstrated that not only in Alaska but even in the United States it is incapable of administering the plenary power which exists in the Government so as to prevent discrimination and monopoly in transportation. It has not been able especially to do it in Alaska. If it can not be done through the power, unlimited in extent, which the Government has over transportation, it can not be done in the form of any lease which may be drawn up to a private party to operate a railroad built at the expense of the people of this country.

Suppose we should pass a bill under which the President should repay to the Alaska Syndicate the money they have expended on this railroad, which probably has proved unprofitable to them, because it has not been extended to the Yukon River, and the Government then should complete the system, pay out the money necessary to build it 350 miles to the Yukon, and then give it back to the Alaska Syndicate to operate at a profit. The probabilities are that they would ask the Government to give them a bonus, because they could not operate it at a profit otherwise. I do not think the people of this country would submit to such a perversion of the funds of the Treasury as would be accomplished by that course, if it should be taken under the plenary powers given in this bill. So I think the clause of the bill which permits the President to lease any line which may be constructed should be stricken out, and the bill should be peremptory in its requirement that the road, when it is built or acquired by the Government, shall remain a Government road, and shall be operated by the Government.

Mr. GALLINGER. Mr. President——

Mr. POINDEXTER. I yield to the Senator from New Hampshire.

Mr. GALLINGER. I unhesitatingly agree with the Senator on that proposition. It seems to me that if the Government is going into the business of building railroads the Government ought to operate those railroads. It is the only way in which we will get a fair test as to the relative desirability of providing Government ownership and operation of public utilities. Whatever my action may be upon the bill when it is finally voted upon, I certainly shall support the proposition to strike the leasing provision from the bill as it now stands.

The Senator is kind to yield, and while I am on my feet I wish to make one further suggestion. A little while ago the Senator said that the Government was not under obligations to purchase the existing road, but that the Government might parallel that road and go into competition with it. I think the Senator will agree with me that if the existing road can be acquired upon just and fair terms it would be better than to have two lines competing for the comparatively small business there will be in Alaska for a good many years to come. If it is to become profitable at all, it seems to me it can only become profitable by having one line given whatever business there may be.

Mr. POINDEXTER. If the Government should build its road to the Yukon, the road that is there at present, of course outside of the White Pass & Yukon road, which is largely on Canadian territory, would not be able to compete with the Government, because there is a gap of some 350 miles between its terminus and the Yukon.

So far as the competition is concerned I anticipate that for some years to come, in all probability, aside from the transportation of coal, it will not be a very profitable railroad operation, either by the Government or by a private party.

As to paralleling the road that is there at present, I have no compunction about paralleling it, because it happens that the people who have built that road—not out of railroad operation, but out of Alaska itself, and partly in connection with the railroad—have reaped ample rewards and are reaping them. Even if they had not, they happen to be people who have reaped out of financial and business conditions in this country so much profit that any petty loss they might suffer through the action of the Government in paralleling their railroad in Alaska is not one which will cause the American people any grief, nor one which will cause them any suffering. They have built their railroad and they would still keep it.

The Government railroad could not compete with that railroad at all, because it is confined to the Copper River country, unless, of course, the Government should build up the Copper River.

It is perfectly evident that wherever the Government constructs its railroad it will tap a coal field in Alaska. Business acumen, and the necessities of construction and operation, would compel that. So we are confronted with the proposition that if the Government builds a line from Controller Bay into the Bering River coal field, or if the Government builds a branch line from the mouth of the Matanuska River into the Matanuska coal fields, as it must do so far as this bill is concerned, there would be the Government with a Government railroad operated by the Government. I am very glad indeed to have the concurrence of the Senator from New Hampshire in the proposition that it should be operated by the Government, and not leased; and yet the Government, in the coal field, with its line of transportation, would have no authority to mine the coal and ship it out over its own road.

It seems to me that if we have come to the point where it is necessary—and we have come to that point—for the Government to intervene in order to solve the transportation problem of Alaska a Government coal mine there is necessary, not as a separate proposition but as a part of this railroad project, to furnish coal in construction and to furnish it in operation and to supply its existing needs. When it has done that it ought not to hesitate, upon proper terms and conditions, and as the best means of preventing a monopoly of coal, to allow the

public to acquire it from the Government at its coal bunkers along the coast of Alaska.

There is another thing for which this bill does not provide. Although I shall support and am urging the bill without it, I think it is inevitable that it will be adopted as a part of this project. That is, that the railroad should not be left detached from the United States in some Alaskan port, with the Government depending upon private steamship lines for transportation, but that the Government should put on its own lines of steamships and connect the railroad with the great centers of population on the Pacific coast, particularly the city of Seattle.

The need for Government ships, so contrary to the previous habits of thought of the people of this country, has been demonstrated by the action of the Government in putting on its own line of ships to the Panama Canal. There is no reason why that line should not be enlarged and extended with a sufficient number of ships so that when the Panama Canal is opened they may go through the canal, continue their voyage up the Pacific coast, receive coal at the Government docks in Alaska or at Seattle, and return to any point on the canal or even on the Atlantic coast with the coal they have taken there in exchange for whatever cargo they may carry to the Pacific coast.

A line of Government ships and Government coal mines are both necessary for the complete solution of the transportation problems of Alaska and for the prevention of a monopoly of coal.

I have introduced an amendment to this bill to which I wish to call attention, and I shall ask, before the consideration of this bill has been completed, that it may be submitted to the Senate for a vote.

The coal-mining proposition is a very simple one in its general outlines. The Government is already operating a coal mine which has proved successful and demonstrated the capacity of the Government to mine coal in connection with the reclamation project at Williston, in North Dakota. It was necessary to do it there in order to get fuel to operate its machinery. The same inducements which apply there and encourage it there to develop its own coal mines on public land adjacent to the project are far more cogent in Alaska, where the enterprise will be so much larger and where the coal will be equally close and so much better and larger in its area.

The Government mining of coal is not a new experiment, by any means, in this country and in other countries. In New Zealand since 1901 the Government of New Zealand has been a competitor in the mining of coal. It is not a Government monopoly. Private mine operators have not been interfered with or put out of business by the Government mines, and need not be.

The purpose of such a proposition is not that there shall be an exclusive Government monopoly of coal mines, but that the price of coal to the consumer shall be regulated by the best possible regulator, namely, governmental competition. So in New Zealand the conditions of labor, the price of coal, the safety of mines, have all been improved by the advent of the Government into the coal-mining business, and the prosperity of the individual mine operators has been increased, because improved conditions, so far from being injurious to an intelligent operator of a coal mine, always prove advantageous to him as well as to his employees.

I have proposed, Mr. President, in connection with this bill, which provides for Government transportation—

> That the President is further authorized, empowered, and directed to cause to be opened and equipped on the public lands in Alaska reserved as hereinafter provided such coal mines as may be necessary to comply with the terms of this act, and to provide for the transportation, distribution, and sale of the proceeds of same as provided in this act.
>
> SEC. 3. That the President is further empowered, authorized, and directed to operate said transportation system, including railroads and boat lines, and all the accessories thereof, and to operate said coal mines and dispose of the product thereof by means of the agencies of the transportation and mining services herein provided.

It provides that the President shall do this, not through a commission established by Congress, independent of the President, but that he shall do it through agents appointed by him, and for whom the President and the administration shall be responsible to the people.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Nebraska?

Mr. POINDEXTER. I do.

Mr. NORRIS. I notice that the amendment which the Senator has been reading refers to boat lines. Does his amendment provide specifically that the President shall be authorized to construct boats in connection with these railroads?

Mr. POINDEXTER. Yes; it authorizes him to acquire them by construction or otherwise.

Mr. NORRIS. Does it specify the number in any way, and will it confine him as to their character, size, or cost?

Mr. POINDEXTER. It does. I will read to the Senator the provision in that regard:

> He is further empowered, authorized, and directed to establish such lines of freight and passenger boats as he may determine connecting the ocean terminus of said Alaska transportation system and such other Alaska points as may be available, in his discretion, with the city of Seattle and such other Pacific coast ports as he may determine.

There is a further provision in regard to these boats.

Mr. NORRIS. It seems to me, if the Senator will permit me, that if we are going to build boats at all we ought to develop their construction a little further than that. I should like to call the Senator's attention to an amendment that I have proposed. The committee, I understand, had it under consideration, but did not take any action on it one way or the other. It proposes to give the authority to the President to construct boats and to lease them to the Tanana Railway Co., and that they shall be suitable for traffic on the west and east coasts of both North and South America, as well as connecting with these fields. It seems to me that the boats ought not to be confined entirely to the Pacific coast of North America; but by the adoption of that amendment, or something of the kind, we ought to give the subject a wider scope, so that they could use the Panama Canal and even develop the commerce with South America.

Mr. POINDEXTER. The amendment which I have proposed provides a system which I think has been carefully worked out and which would take the place of the proposition of the Senator from Nebraska. It proposes to lease the boat lines to the railroad service. It provides that there shall be two Government services, one a mining service and the other a transportation service, and that the transportation service may acquire and operate the railroads and boats.

Further, in answer to the Senator's question with reference to the boats, it provides that—

> The term "transportation facilities" as used in this act shall include any or all portions of steam or electric railway lines, together with rolling stock and all equipment; telegraph and telephone lines; express service; canals; wharves, docks, bridges, or other terminal facilities; ocean or river vessels suitable for carrying coal or other freight or passengers, and which may be used as colliers or transports in time of war.

Mr. NORRIS. I think that is a very prudent provision. That will really give to the President the authority to construct boats which can be used in time of war.

Mr. POINDEXTER. Yes.

Mr. NORRIS. Does the Senator provide for any system of leasing boats?

Mr. POINDEXTER. Not at all.

Mr. NORRIS. I should like to say to the Senator while I am on my feet that I do not like the clause in the pending bill which gives the President the authority to lease this railroad; but it seems to me it would be very wise to give him the authority to lease it to the Panama Railroad Co., which is a corporation, as we all know, owned entirely by the Government, but operated as any other transportation corporation operates its line. It does all the things that all other transportation companies do. It would probably interfere somewhat with a Government-managed line; that is, if we managed it directly without the interposition of a corporation.

Mr. GALLINGER. Mr. President——

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from New Hampshire?

Mr. POINDEXTER. I do.

Mr. GALLINGER. I will ask the Senator from Washington if he thinks that the transportation from Alaska could possibly be sufficient to warrant the Government in constructing ships that could be used in time of war? They are very expensive. I doubt very much whether any such ship that would be of any use in time of war could be constructed for less than a million dollars, and it is my impression that it would take a much larger amount.

Mr. NORRIS. Mr. President——

Mr. POINDEXTER. I yield to the Senator from Nebraska.

Mr. NORRIS. I was going to suggest that all the bills which have been considered and passed providing for the payment of a tax to indemnify the owners of vessels of the merchant marine that were intended to be used in time of war provided for the construction of such vessels as would be suitable for the ordinary passenger and freight traffic.

Mr. GALLINGER. Yes; they did.

Mr. NORRIS. I suppose if we put that kind of a provision in the bill, we could provide for similar vessels. I do not suppose if the President constructed several of them that he would make them all alike. I do not claim to be an expert upon the subject, but I listened to the debate which took place several years ago on the question of the merchant marine and I understand that it was conceded by everyone that the kind of vessels the law

provided for and that were designed for use by the Government in time of war were the ordinary vessels used by the transportation companies in transporting freight and passengers. I think a vessel as large, perhaps, as some of our transports could be built for less than a million dollars, but there might be some traffic connected with the ports of North and South America where it would be profitable to construct other vessels. I do not know as to that; but, at least, the amendment would give to the President the discretion to construct those that he thought were proper, and he would, of course, inform himself from expert sources as to the kind of vessels which ought to be constructed.

Mr. GALLINGER. The Senator is correct in his suggestion that in all the so-called merchant-marine bills a provision was incorporated that the vessels should be constructed under the supervision of the Navy Department and that they should be so built that they could be used in time of war. But those vessels were to engage in the trans-Atlantic and trans-Pacific trade and in the trade with South America, where it was expected there would be a very large business.

The point I raised, in entire good faith, was whether it was probable that there would be sufficient business out of Alaskan ports to warrant the Government in constructing these costly ships, because they will necessarily be costly if they are constructed in accordance with specifications laid down by the Navy Department and equipped for use in war.

Mr. NORRIS. Speaking with reference to the amendment I myself have proposed, I will say that I did not anticipate that all the vessels to be constructed would be engaged in the trade with Alaska, but since it was in the bill as a parliamentary proposition I wanted to make it broad enough so that if the President thought it best he could construct the vessels and lease them to the Panama Railroad Co., and they could be used anywhere in North or South America in developing the trade between North and South America and making use of the canal, which is soon to be completed.

Mr. GALLINGER. I wish to make just one other inquiry of the Senator from Washington, who is so well informed on this subject that we are all delighted to listen to his discussion of it. I will ask the Senator if the present service from Puget Sound ports or the ports of California to Alaska is not reasonably satisfactory, and as to whether or not they are exacting unusual rates for passenger and freight service?

Mr. POINDEXTER. They have exacted unusual rates. I say that without any prejudice, because, as a matter of fact, I am getting very tired of continually waging battle against private monopoly. A man becomes wearied with it. Yet it is true that these boat lines—and there is very little business available except between the ports of Seattle and Alaska—have been exceedingly extortionate in their rates, not only for transportation but for dockage facilities. With the great power they have had they have acquired the water front of the ports of Alaska and have exacted such charges upon it that, after what was practically a popular uprising in the little town of Valdez, the people finally succeeded in getting a dock of their own, with the result that they reduced the price of coal $2 a ton, from $12 down to $10, which was quite an item for them.

The same battle was waged by the city of Juneau. Juneau's situation is a little different, in regard to transportation, from that of Valdez, because at Juneau there is a line of British Columbia vessels. I will say, incidentally, that those British Columbia boats are fine boats. They are very much desired where it is possible to travel on them on account of their good service. But, of course, under our coastwise shipping laws they can not carry from the United States to Juneau, and they are confronted by the tariff in taking articles needed from British Columbia into Juneau. So the syndicate line of ships had the same sort of practical monopoly growing out of those conditions at Juneau that they did at Valdez, notwithstanding the British ships were there, so far as freight was concerned, and they were held up, if I may use that word, by, in addition to the other agencies, a monopoly of the wharves of the city, and after a great deal of difficulty, fighting a political campaign over it, that little town finally got a city dock, which resulted in reducing the price of coal there, which was nearer to the coal fields, from $12 to $8 per ton. Those two things illustrate some of the extortionate charges of this transportation company.

Mr. GALLINGER. I had supposed, Mr. President, that there was not a monopoly of water transportation between Seattle and Alaska. I had an impression that there were different lines of steamers or individual steamers that were not controlled by one corporation. I do not know whether I am correct in that supposition or not.

Mr. POINDEXTER. I think the Senator is not correct in that conclusion. Although there are many people who will urge on behalf of the ship lines that they are competing with each other, the fact is generally known that they are, with the exception of perhaps one boat, the *Humboldt*, under common control. Many stories are told by people in Alaska, reputable and substantial men of business, about the oppression that they suffered there in various ways when they attempted to employ a ship even on special occasions to bring up a cargo. They go so far as to claim that undue influence was used on various occasions with the marine inspectors, the boiler inspectors, and others to their disadvantage, so as to keep them out of the field. The rates on lumber and other articles of heavy, bulky freight that the Alaskans are compelled to import from the sawmills farther south are quite enormous.

Mr. GALLINGER. My apprehension, Mr. President, has always been and is now that when the Government goes into the general business, whether it is transportation or commercial or any other form of business, we find that the Government will not be able to do the service any cheaper than enterprising private individuals. As I understand it, the Government has a submarine cable line from Seattle to Nome. Am I correct, I will ask the Senator?

Mr. POINDEXTER. Yes.

Mr. GALLINGER. Has the Senator ever investigated the cost of a message over that line from Seattle to Nome?

Mr. POINDEXTER. Somewhat. The charges are quite high. There has been considerable agitation for reducing them.

Mr. GALLINGER. Is it or is it not a fact that a message from Seattle to Nome sent by the Government costs more than a message from Seattle to New York and from New York across the Atlantic Ocean?

Mr. POINDEXTER. I do not think that is true, although I can not be positive about it. I think that is an exaggerated statement.

Mr. GALLINGER. I state it upon the authority of those who say it is a fact. I do not state it upon my own authority, because I know nothing about it. So I have feared, and I do fear now, that if we go into this matter of Government construction and operation of railroads and steamboats and telephones and telegraphs we will have a rude awakening some of these days to the fact that we have not reduced the cost to what is very often termed the ultimate consumer. That is my impression.

I have in my pocket an editorial from the London Daily Mail only 14 days old that is very illuminating as to what is happening in England to-day where they are owning and operating the telegraph and telephone. I propose to read it into the RECORD at the proper time, because I think it ought to be understood.

Mr. POINDEXTER. I heard the Senator refer to it a few days ago, and I have been looking forward with considerable interest to hearing it. It is a very interesting subject.

Mr. GALLINGER. May I read it now, I will ask the Senator?

Mr. POINDEXTER. I would prefer the Senator would wait until I conclude my remarks. I dislike to have it interpolated right in the midst of what I am saying. But I have understood that Government ownership of telephones in certain European countries is very much the opposite of that, and that it has proved to be satisfactory. But that is quite a different question from the construction of railroads in Alaska and the operation of ships. The Government experience in the operation of a Government ship line from New York to Panama has been eminently satisfactory. Generally speaking, the people of this country have not been dissatisfied with transportation conditions because of high rates, but they have been dissatisfied with them because of the discriminatory rates. They have been dissatisfied because of the use of these agencies to oppress one man in favor of another and to destroy one community and build up another. What they desire in transportation is that principle which ought to pervade all laws, namely, in the first place, that it should be just, and then that it should be equal and uniform in its operation.

Now, if the Senator will take the *Humboldt* case, involving the steamship *Humboldt*, which plied between Skagway and Seattle, and in which the opinion of the Supreme Court of the United States was published, and look into it, he will find some of the methods that were used by the syndicate ship lines to shut out competition, and it was only through a long and expensive litigation which few men would live long enough, or have courage and resources enough, to go through that this ship was able to secure from the White Pass & Yukon Railroad, which it is said is under the influence of the same financial power that controls the Copper River & Northwestern and the steamship lines and all other Alaskan utilities—but whether it is or not, it is not material to this point—before they could acquire from that road the same service and the same rates that that road gave to other steamship lines. The Senator can read-

ily see that where all of the business must go over that railroad, going from Seattle to Fairbanks and into the Yukon Valley generally, if it gives a better dockage charge and a better service and railroad rate to the syndicate steamers than it gave to the independent *Humboldt* and that was kept up the *Humboldt* would have to go out of business; it could not compete; it could not get the business; it would continue to be operated at a loss instead of at a profit.

Mr. GALLINGER. Mr. President, that, of course, goes without the saying. I will ask the Senator from Washington if, under our existing laws, we can not reach a condition of that kind?

Mr. POINDEXTER. Yes; we can reach it; that is, there is in the Government, in that great reservoir governmental powers, authority to reach such conditions; but the Senator knows the difficulty of administering and applying that power. In the case of the *Humboldt* they got relief from those particular discriminations after a period of time that would have bankrupted the ordinary steamship company operating a single boat. But it may be that even now, after they have gotten that relief, if they refuse to come into some sort of agreement with the syndicate, it will find other means of discriminating against them, and they would have to start litigation over again and go around the circle again in order to live.

Mr. GALLINGER. The same matter, Mr. President, occurs to me; that so far as extortionate rates on the existing railroads of Alaska are concerned, if we have not the power to regulate them it certainly is in our hands to create an instrumentality that will regulate them. I will ask the Senator if I am not correct as to that.

Mr. POINDEXTER. Yes; I agree with the Senator as to the power existing to do that, but the difficulties of its enforcement and of its administration, particularly when a great number of agencies, such as steamship lines, in connection with railroads are concerned, are so great that it has proved ineffective and hopeless.

The same thing is true as to working out some system by which the development of coal can be kept out of the hands of a monopoly. There are various things that look good on paper, but there is always some way of evading them. There is always some legal genius who can suggest how to do the thing that the syndicate wants to do.

Mr. GALLINGER. But, Mr. President, I had supposed that in this age of a "new freedom" we could do pretty much anything toward regulating all the public utilities. I think we have the power to do that, and we can invoke the instrumentalities that will accomplish it even in far-off Alaska. I am quite as much opposed to extortion and private combination as the Senator, and will cooperate with him to remedy it wherever I discover it.

Mr. POINDEXTER. I am sure that is the case. It occurs to me right now to say, as the representative, in part, of the West and the Pacific Northwest, we have a very deep appreciation of the friendly interest and sympathy which the Senator from New Hampshire usually shows in matters benefiting that part of the country.

Mr. GALLINGER. Thank you.

Mr. CHAMBERLAIN. Mr. President, I wish to say in connection with the transportation question raised by the Senator that the evidence before the Senate committee at least showed that about 30 per cent of the cost of transportation was by sea—that is, 30 per cent of the total charge—but it must be remembered that the same company, the same syndicate practically that operates the ocean steamers, has control of the transportation on the Yukon. So, while the charges on the Yukon are exorbitant, it is a division between the Yukon syndicate and the ocean-operating syndicate, because they are one and the same. So we can not tell exactly how that distribution of receipts is made.

In connection with Government ownership and control, which the distinguished Senator from New Hampshire fears, if the Senator will permit me just a moment, I want to show that generally in other countries than the United States there are 174,057 miles under Government ownership and operation under private ownership and public operation there are 11,030 miles; under public ownership and private ownership there are 35,244 miles; while in private ownership and private operation there are 422,080 miles. In other words, practically one-half of the railway mileage in the world outside of the United States is in either Government ownership or part Government ownership and private operation. Even in Russia there are 28,400 miles of railroads under public ownership and public operation. I get this from "Ownership and operation of railroads of the world," from the British parliamentary report.

Mr. POINDEXTER. I would much prefer myself not to be compelled to choose between private operation and exclusive Government operation, but that there should be both. Just as the principal reason for the improvement of waterways has been that they are regulators of railroad rates, so the operation of a Government railroad would be far better than any Interstate Commerce Commission as a regulator of rates.

The existence of the private road would also be an incentive and inducement for the correct and efficient operation of the Government road, because there would be rivalry and comparison constantly between the two. That will be the condition under this bill if the proper advantage is taken of the powers which it gives.

Now, pursuing the amendment which I propose, Mr. President, and in answer to some of the suggestions of the Senator from Nebraska [Mr. NORRIS] as to the manner in which ship lines shall be operated—and it applies also to the coal mines and to the railroads—in the first place, that the coal mines shall be made ready for operation and the railroads shall be constructed by the agents of the President, and that when they have been completed they shall be turned over to a transportation service and to a mining service for operation:

SEC. 7. That the construction of plants, as distinguished from the operation thereof, shall be conducted under the immediate direction of the President or of his agents, and upon the completion of such portions of plants as are capable of being operated as units, said portions shall be turned over to, and the operation thereof shall thereafter be conducted by, two services to be known, respectively, as the Alaska Transportation Service and the Alaska Mining Service. The term "plant" as used in this act includes any or all portions of transportation facilities, or coal distributing stations, extensions thereof and permanent improvements in connection therewith. The term "transportation service" as used in this act shall refer to the Alaska Transportation Service; the term "mining service," to the Alaska Mining Service; and the term "services," to the transportation and mining services taken together.

Each service shall be in charge of a chief appointed by, removable by, and acting under the direction of the President, and such chief of service shall have no power or duty other than the operation of said service; and the duties of inspection, fixing of wages and prices, and making of general rules and regulations provided for herein shall be in charge of other officials.

The transportation service shall be charged with the duty of operating for all purposes whatsoever all transportation facilities in the manner hereinafter provided.

The mining service shall be charged with the duty of operating the coal mines on lands reserved to the Government and the distributing stations, wherever established, in the manner hereinafter provided.

Then there is provided a method of accounting by the services:

SEC. 8. That in each service the total debit account for any fiscal year shall comprise all expenditures for operation and maintenance during said year, including payments for injuries to employees, charges for land, and other expenses, with 5 per cent per annum interest thereon, plus 5 per cent of the capital investment of said service, together with the depreciation charges for said year and payment for deficit accounts, if any, as specified in section 9; and the total credit account for any fiscal year shall comprise all money received or chargeable for service or products during said year.

Those are details merely of operating for the purpose of determining whether it is a loss or a gain.

As to the wages of employees, I think that it is perfectly proper, whether the enterprise shall be limited to the construction of a railroad or extended to the operation of a coal mine or to the operation of a line of ships, that some standard of relations between the Government and its employees should be fixed by Congress.

SEC. 10. That the President shall fix, and from time to time readjust, the minimum wages and salaries and the maximum prices to be paid or charged by the services. The minimum hourly wage paid any class of labor shall be not less than the average wage paid that class of labor by other employers under conditions equivalent to those prevailing in the respective services; the maximum price charged for any class of transportation shall be not greater than will pay a reasonable net profit on operation and a reasonable interest on the actual physical valuation of the properties involved, the same to be determined by the President; the maximum price charged for coal shall be not greater than will pay a reasonable profit on operations to be determined by the President, transportation, distribution, and rental value of lands to be included in cost of operation. The President may confer the power of fixing minimum wages and maximum prices upon an agent or agents appointed by him as provided in section 4.

Some comment has been made, Mr. President, during the discussion of this bill upon the policy which has been adopted with reference to forest reserves and the entire resources of the country, in fact, which those critics call "locking them up." I am very much in sympathy myself with many of the criticisms upon the administration of the land laws in Alaska, but I do not agree that, because there are faults in administration, necessarily the system is a bad one. Some question was asked here the other day as to why there should be a forest reserve in Alaska. There is the same reason that there should be a forest reserve in Alaska as that there should be a forest reserve in the State of Washington or anywhere else. If a forest reserve is a good thing, notwithstanding the extent to which our forest reserves have already been acquired by private corporations,

why, then, it is time to apply that good principle to Alaska as well as to the States; but if the administration of that law goes to the extent of preventing a settler from cutting wood on public land for his domestic use or for agricultural improvement or to preventing the miners from using it for fuel and even for the development of their mines, without the delay and circumlocution which is necessary in taking matters in Alaska up with the department in Washington, that feature of the administration ought to be abolished. These coal mines ought to be opened at once to the use of all of the inhabitants of Alaska for domestic purposes if they are so situated that they can use them. There ought to be the utmost generosity, the utmost liberality, with regard to the actual settlers in Alaska, giving them the benefit of every one of the natural resources which can add to their comfort or success. Conditions in any new country are hard enough even at the best, and the settlers ought not to have obstacles thrown in their way by foolish regulations such as have been described here. That, however, is no reason for abolishing the forest reserve and throwing it open to the Weyerhaeuser Timber Co. or the paper-pulp mills of this country to acquire, to exploit, and to withhold from settlement and development, as the Weyerhaeuser syndicate and its associate companies have acquired and withheld in such great areas in some of the Pacific Coast States. The forest reserve ought not to be abolished, but its administration ought to be improved.

It is conceded here apparently in argument by those who are opposed to this bill that the only way in which transportation can come through private enterprise is by throwing Alaska open, as they call it. Well, interpreted, that means giving it away, turning it over to the great combinations, industrial and financial, which are able to tower over their rivals and to destroy competition. That power exists not only in Alaska, but has its allied and connected parts in every financial center in this country.

The proposition involved in this bill is whether it would be wise or whether it would be just to this generation or to the generations that are to come after us to pay, as the price for a railroad in Alaska, Alaska itself, and to turn Alaska over forever to the vested rights which would be claimed by those who had once acquired title to its lands and franchises, to its transportation, giving them the greatest returns and the greatest wealth that any exploiters on the continental public lands of this country, great as they have been, have ever enjoyed.

The whole proposition of Alaska for the people is involved in the passage of this bill. It is far more than the millions which have come out of it; it is far greater in its influence upon the future history of this country than what could be acquired from its placer mines or its great copper lodes or the great herds of seal, that have been largely destroyed; or the whale fisheries, which have been exploited by people from very distant lands; or from the salmon fisheries, which have added to the millions of profits of people in distant States, and left scarcely a dollar of benefit to the people of Alaska, who naturally should profit by them. The interest in this bill which the people of this country have goes far beyond any of those things.

However pessimism may view that great country, however its resources may be depreciated, it is nevertheless a fact, proved by actual experiment, that American citizens can live there. The fact that its climate is rigorous is but an incident that goes to make character and fortitude; it is but a circumstance in this great Territory, if by the destruction of private monopoly the opportunity is preserved for the people who would settle there and make their homes, if equal opportunity is given to them, that in times of the Nation's peril there would come out of that hardy northern land sons and daughters to save their country when manhood and womanhood were needed in time of war or for the difficult problems with which we are compelled to deal in times of peace. It is the people, it is the civilization that can be built there, it is the outlet which we must have for the growing millions of ambitious sons of continental America who desire the independence that comes from the ownership of land, from owning their homes, who are able to walk erect, as the Anglo-Saxon has marched across the world as the owner, at least, of a little piece of the earth's surface, over which he can within the law do as he sees fit to do according to his lights and his convictions. It is the opportunity that can be preserved for that kind of people, with all that it means not only to those people themselves but that it means to us, that is involved here in the proposition of the passage or the defeat of this bill, which long experience has shown is the only way in which private monopoly can be broken loose from its stranglehold upon that Territory.

For a Bureau of Employment.

EXTENSION OF REMARKS
OF
HON. VICTOR MURDOCK,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Friday, May 1, 1914.

Mr. MURDOCK. Mr. Speaker, I introduced on April 29 last a bill to establish in the Department of Labor a bureau to be known as the bureau of employment. The number of the bill is H. R. 16130. Its purpose is to lessen the amount of unemployment in the United States.

Among the pressing national problems of the democracy, Mr. Speaker, the problems of labor come first. The estate which it has reached, the high estate to which it aspires, its plans and purposes, are indissolubly part of the vitality of the Republic, and remain and must remain the Nation's chief concern. For here, as nowhere else in the world, has labor those governmental processes by which it can blaze its way to the open highway which leads to the attainment of social justice.

That it is blazing its way, all but the willfully blind must see. Inspired by the new doctrine of legal equality and, at the same moment, wrenched from ancient viewpoints by the violent revolution which labor-dividing machinery, quickened transportation, and immediate communication wrought, labor has kept on its mighty march of progress. No blindness in courts, cushioned in easy precedents, no reluctance in legislatures, no antagonism of the selfish and unseeing elements in society have dismayed labor. The final arbiter of institutions is the prevalent sense of right. Ultimately it writes constitutions, drafts laws, and in the end against the last ditch of special privilege—delay—must interpret them. To this prevalent sense of right, labor directs its suit.

No better index of the progress that has been made may be found anywhere than in the remarkable series of propositions set forth concretely in the national platform of the Progressive Party of 1912, dealing with the rights of labor. The Progressive Party was new, sensitively alive to the problems of the hour, impatient with cant and glittering generality and the platform platitudes of the past. It drove directly to its purpose. It declared:

> The supreme duty of the Nation is the conservation of human resources through an enlightened measure of social and industrial justice. We pledge ourselves to work unceasingly in State and Nation for—
>
> Effective legislation looking to the prevention of industrial accidents, occupational diseases, overwork, involuntary unemployment, and other injurious effects incident to modern industry;
>
> The fixing of minimum safety and health standards for the various occupations, and the exercise of the public authority of State and Nation, including the Federal control over interstate commerce and the taxing power to maintain such standards;
>
> The prohibition of child labor;
>
> Minimum wage standards for working women, to provide a living scale in all industrial occupations;
>
> The prohibition of night work for women, and the establishment of an 8-hour day for women and young persons;
>
> One days' rest in seven for all wageworkers;
>
> The 8-hour day in continuous 24-hour industries;
>
> The abolition of the convict contract-labor system; substituting a system of prison production for governmental consumption only; and the application of prisoners' earnings to the support of their dependent families;
>
> Publicity as to wages, hours, and conditions of labor; full reports upon industrial accidents and diseases, and the opening to public inspection of all tallies, weights, measures, and check systems on labor products;
>
> Standards of compensation for death by industrial accident and injury and trade diseases which will transfer the burden of lost earnings from the families of working people to the industry, and thus to the community;
>
> The protection of home life against the hazards of sickness, irregular employment, and old age through the adoption of a system of social insurance adapted to American use;
>
> The development of the creative labor power of America by lifting the last load of illiteracy from American youth and establishing continuation schools for industrial education under public control, and encouraging agricultural education and demonstration in rural schools;
>
> The establishment of industrial research laboratories to put the methods and discoveries of science at the service of American producers.
>
> We favor the organization of the workers, men and women, as a means of protecting their interests and of promoting their progress.

THE PROBLEM A NATIONAL ONE.

The bill creating the bureau of employment is directed to the pledge looking to the prevention of involuntary unemployment.

The problem is essentially a national one. The Nation has become one market and one workshop. This is the answer to the question why cities and States—and many have attempted

the problem—have not attained the success in solving it they set out upon. The effectual unit is the Nation and nothing less.

There is involved also in the question a coordination of those decent employment agencies, under governmental license, and the drastic elimination of those agencies which have practiced the most cruel deceptions on men out of work through the absence of national legislation on the subject.

The problem to which we address ourselves is emphatically not the problem of the vagrant, the defective, or the inefficient. The man "out of work" does not argue himself inefficient, and the self-sufficient idle rich in this country who so contend are cruelly, if not consciously, callous to the facts. The problem is an industrial one dealing with the men who want work and the employer who wants workmen. I am not concerned, in this instance, with the loafers in society, either at the top or at the bottom.

I want to bring the man out of a job and the job that is waiting for the man together. I want my Nation to know, for the good of the whole industrial problem, more of the real facts in regard to casual labor and seasonal occupation.

I want the inhuman frauds and deceptions which have been practiced upon helpless workingmen, through the absence of such a national supervision as I provide, prohibited.

THE TESTIMONY OF FRANCES A. KELLOR.

Is there need of the legislation now? Let me quote from an article by Frances A. Kellor, of the Progressive National Service, a notable student of industrial conditions, who made a survey of the conditions of the unemployed in New York City last February. She writes:

One day this month, in studying how New York City deals with its unemployed, I found a man who was offered an outdoor job and who couldn t take it because he had no shoes or sufficient other clothing. Philanthropy provides a woodyard where he could have earned them.

I saw 250 men huddled in four dark rooms of an employment agency where they had to stand all night because some would have to be turned out if they lay down or sat up.

I trudged with one man to 17 agencies looking for a job, and got back to residential Fifth Avenue to find a man with a job but not knowing where to get a good man.

I saw a saloon that sets out every night in the barroom a counter of sandwiches and a t ·k of hash and witnessed the mad rush of men who had been without food for days other than the pickings from ash barrels. The saloon expects, when times are good, that the men will repay the favor.

I saw in the waiting rooms of department stores crowds of girls, some of whom lived in so-called working girls' homes, where their doors were locked during the day, shutting them out until night. This was the rule adopted when they were employed and could not be changed when they were without work. I saw, on the other hand, many unfilled requests for domestic workers.

I saw children with their working papers, new to the game of finding work, thrown out on their own resources to make connection where and how they could. I read of the demand for workers from localities which men could not possibly reach because they did not have the fare to get there.

Now, these thousands of people are not mendicants nor crooks, but honest working men and women. As early as June, and in the fall months, any intelligent government by consulting the employment agencies—the only barometer the country has—could have seen what was coming. In December the ratio of jobs requested, and those offered, was 5 to 1, on a basis of 1,500 applications. One agency reported that out of 200 requests within a month they had filled one place. Another said they had had a "good day" when they placed 4 men out of 60 men.

Now, what is the matter with our labor situation that we let men freeze and starve before we know what is happening? What is the matter with our city that, with its abundant resources, those who have jobs and supplies and those who have neither miss each other within the circumference of a few blocks? What is the matter with our State and Nation that a laborer can not go to the place where a job is waiting? And what becomes of our millions given to charity that the saloon in times of stress becomes the "neighborhood center"?

CONDITIONS AS DESCRIBED BY ELIZABETH READ.

In this connection I desire to present to the Congress and the country at this time an exceedingly able paper by Elizabeth Read, of New York, incorporating a statement of the reasons for the establishment of the bureau of employment. The paper sets forth present conditions in relation to unemployment which show that the situation is general and acute; and the reasons why these conditions can not be remedied by municipal or State action. Her view gains emphasis from the fact that the writer is the legal assistant of the legislative committee of the North American Civic League for Immigrants, New York City. The brief is as follows:

UNEMPLOYMENT NOW RECOGNIZED AS A CONTINUING SITUATION.

Until comparatively recent years, it has been generally believed in the United States that any man who wanted work could find it. This belief was, in part, a survival from old village conditions, where living was cheap and standards frugal. In part, it was the natural result of the unparalleled advantages of our industrial and economic condition; the stupendous development of agricultural and industrial resources of very large areas made it seem impossible that a man should be unable to find work of some sort to do.

Gradually, however, it became apparent that capable men were out of work. Various reasons were assigned for this—a strike, tariff changes, an election—anything, in short, that would prove that the need was only individual or local, or, if general, still only temporary.

This position was tenable only as long as no official investigations had been made into the subject. About 15 years ago, however, the collection of statistics relating to unemployment was begun by several Federal departments and State commissions and bureaus. The results of these investigations are stated here very briefly.

The 1900 Federal census shows that 22.3 per cent of all persons having gainful occupations were not working, either at their regular occupation or at any other, at some time during the census year. The report on unemployment summarizes as follows, its tables showing the number of persons unemployed in various occupations:

It appears that approximately four persons out of five who claimed gainful occupations were continuously employed throughout the census year, while the fifth person was idle for a period varying from one to twelve months.

Over 2,600,000 men and nearly 500,000 women were out of work for four to six months, and over 500,000 men were out of work seven months or over.

In 1901 the Federal Bureau of Labor made an investigation into the cost of living of 25,440 families of workmen or persons on salaries of not over $1,200 a year distributed over the United States. The report shows that about half—49.81 per cent—of the 24,402 heads of families were idle for part of the year.

The Geological Survey reports on coal mining from 1890 to 1910 show that workmen in bituminous mines lost from 22 per cent to 43 per cent of their working time annually, and workmen in anthracite mines from 23.7 per cent to 50 per cent, disregarding the year 1902, when the great strike took place.

The committee on unemployment of the New York State commission, appointed in 1909 to inquire into the question of employers' liability and other matters, said in its report:

There are no statistics available from which to compute the actual number of those without work. From the evidence before us we can say with certainty only this: That there are at all times able-bodied wage earners out of work in every city of the State; that the number varies from month to month and from year to year; that it grows larger during the winter and during the years of industrial depression, and reaches tremendous proportions every 15 or 20 years. A conservative estimate would be that in ordinary years of business activity the least number out of work is about 3 per cent of the wage earners regularly employed in the industries of the State, while during the winter months the number would rise to 8 or 10 per cent. In a year of business depression like 1908 the number out of work ranges from 15 to 30 per cent. These estimates do not include all the unemployed. Over and above the percentages here given are the beggars, tramps, and vagrants, who have entirely dropped out of our industries.

PRESENT AMOUNT OF UNEMPLOYMENT IN THE UNITED STATES.

What the number of men now unemployed in any given place is no one knows. That the number has been unusually large during the winter of 1913–14 is admitted even by those who challenge the accuracy of estimates made by organizations or investigators.

Industrial centers such as New York City and Chicago have naturally shown the highest degree of unemployment. Official bulletins published by Commissioner James M. Lynch, of the New York State department of labor, state that the percentage of unemployment among union workmen was greater in the fiscal year from September 30, 1912, to September 30, 1913, than in any other year since 1896, with the single exception of 1908. Sixteen and one-tenth per cent of the union men reporting to the department were idle on September 30, 1913. Through the winter this percentage rose steadily; on December 31, 1913, it was 38.8 per cent. The percentage of unemployed from July to December was 22.7 per cent—nearly equal to that in 1908, when it was 22.9 per cent. Ninety-two per cent of this enforced idleness was due to lack of work, and only 2 per cent to labor disputes.

These are the figures for New York State. In New York City the percentage was even higher—45.5 per cent at the end of December. As two-thirds of the State's union members in the building industry and over 90 per cent of the members in the clothing trades live in New York City, the number of unemployed in the city reached a very high mark. The number of men applying for shelter at the municipal lodging house was more than double the number for the same months in the preceding years. The Association for Improving the Condition of the Poor reported on February 3, 1914, after a careful investigation for two months by experienced agents, that 325,000 men were out of work in New York City. This estimate the association believes to be conservative. Employment agencies, homes, and philanthropical societies tell the same story.

All the industrial centers in the United States have been affected. The Pacific coast has had to face the same problem as

the Atlantic. In January Chief of Police Sebastian, of Los Angeles, stated that 30,000 persons there were unemployed, including 10,000 women. So large a number have been unemployed in San Francisco that the relief measures within the city's means were altogether inadequate. In Chicago Mayor Harrison appointed a commission on unemployment, which began work with $25,000 to expend as it deemed expedient.

THE MEN IN THE BREAD LINE.

Most of these men out of work are capable and willing. James T. Hunt, manager of the Bowery Mission, 227 Bowery, says: "Most of the men in our bread line are Americans, husky, strong, and willing." Almost all the men coming to the Municipal Lodging House in New York City are between 21 and 50. The Association for Improving the Condition of the Poor says that most of the 325,000 have homes and families to support.

What the exact truth is no one knows. Some persons are interested in showing only a few men are out of work, and others in maintaining that a very great many are. Some try to make light of a situation that they really know to be very grave; some try to make a grave one seem blacker still. Such investigations as those here cited, however, show that the truth does not lie either in the mouths of those who say, "All is well," nor of those who say, "All is wrong." Just where between those positions it does lie, no one knows; and yet a fairly accurate knowledge of the extent of unemployment is indispensable for an intelligent attempt to improve the situation. How is it possible to propose a remedy unless you know what it is to be a remedy for, unless you know how deep and how extensive a need it is to meet?

Still less do we know the character and quality of the men out of work. Even where we know accurately that 25,000 men are unemployed in a certain city, we do not know what percentage of them are capable artisans who simply can not find a job and what percentage are men simply too shiftless to keep a job if they had it. At present we have only one rough, crude test for separating them—the woodpile or the rock pile. We must learn to distinguish between the real unemployed workman and the man who is either shiftless by nature or who has grown lazy or disheartened from continual ill luck.

The need for distinguishing between these classes becomes sharply apparent when the question of relief or remedy comes up. What is a help to one class may be a harm to another. One class needs and wants only to be put into connection with work; the other class needs, though it may not want, to be put to work under some sort of supervision, where the connection between work and subsistence is insisted upon. Outside of these classes are the feeble-minded and the incorrigible, needing still another remedy—segregation.

This, then, is the situation in the United States at present; enough unemployment at all times to be a burden on the community, with the amount rising at certain seasons and under certain conditions to a degree sufficient to strain seriously our city governments. The newspapers have made us familiar with the dreary progress of this situation. We read of bread lines, soup kitchens, "armies" of the unemployed starting to march to Washington and driven out of a town with the fire hose, other crowds invading churches until we get confused between the honest desperation rising out of sore need and the intentional sowing of seeds of violence in strong men sick at heart from drinking the bitter brew of misery and charity.

THE CAUSE OF UNEMPLOYMENT.

The situation is sad indeed; but the saddest part of it is that most of the suffering and degradation is unnecessary. Unemployment can always be accounted for in part as due to business depressions, changes in fashion, changes of location of an industry, and the seasonal nature of some trades; but one great fundamental cause, and the one that could be most easily changed is the lack of organization in the matter of the supply of available labor power. The market for cotton, potatoes, steel, paper, leather, for almost any commodity has been organized, so that buyers and sellers know where they can learn what the supply and demand are. But the man with his power of work to sell has still to go from factory door to factory door trying to peddle it out.

In most States the supplying of this need has been left entirely to employment agencies, private or charitable, all acting independently of each other and competing, instead of cooperating. In New York City, for instance, there are about 850 private agencies. A man at the end of his resources can barely pay the fee in one of these. The chance that he will pick out the one that can place him is small. But the agency he chances to enter takes his fee, and tells him to call again, or sends him out of the State to a place where no work exists, or where he is discharged, after a week's work, to make room for another man—with another fee. There are also many racial, philanthropic, or civic employment agencies. But there is no one place in New York City or Chicago or San Francisco where the information collected at the different agencies is brought together. No one person and no one organization has any grasp of the entire situation.

The New York commission found that 60 per cent of the 750 factories it investigated in the State depended entirely for their supply of labor on applications at the factory doors. How slight the chance is that the workman will get to just the factory that needs the kind of work he can do may easily be conjectured. The fluctuating demand for labor draws to it a reserve force of workmen; each industrial city becomes a market, with men going about looking for a vacant place. The more there are of such separate markets, the less is the chance that the man and the work will come together.

The result is that though thousands of men are needed in small towns, and thousands more on farms, they have no way of finding out where to go. There is no central office that gathers up and records the demand; they must go from door to door. So crowds flock from the country, where they are needed, to the congested industrial cities and go about vainly looking for work, while work in other cities or States calls out for them. Harvests ripen and fall only partly garnered, because workmen idle in eastern cities can not get to western plains. Even the men and women that are working suffer, too; for when too many are consuming and too few producing, all must pay the price. The idle men and women, in the flower of their strength, lift up their empty hands for aid—hands empty of all the good things of life. From one side comes the chorus, "Give us work," and from another, "Give us men," until a person looking at these empty praying hands and listening to these confused cries feels as if he were flying with Satan through the realms of Chaos and Old Night.

NEED FOR REGULATING AGENCIES DOING AN INTERSTATE BUSINESS.

The lack of supervision exercised over employment agents doing an interstate business enables them to take advantage of men in bitter need, well knowing that these men will never be able to return to prosecute them. Exorbitant fees, false information about wages or conditions of work, men sent to places where no work exists, are examples of complaints brought against these agents. That this is no slight matter appears from the fact that in New York City alone 63,691 contract laborers, exclusive of farms hands, were sent out of New York in 1913 to different parts of the country by licensed agents. How many were sent out by unlicensed agents no one knows. According to the report of the commissioner of licenses in New York, the commonest form of deceit is the falsifying of conditions:

> Men are told that they are going to do grading work, and when they are shipped fifty or a hundred miles outside of New York they find that they have to work standing up to their knees in water. Some are told they have to work on roads and find that they must go into tunnels. Good sleeping quarters are promised to some, who are then made to sleep on the floors of saunties without even straw to lie upon. Proper food and cheap board are described, which turn out to be unfit food furnished at extortionate prices by the bordante. Men are led to believe that they can earn $3 a day, when frequently they can not earn $1 a day, and must pay the greater part of it for food and sleeping accommodations. If there is a strike on the works and the new hands are sometimes in danger, this fact is concealed. If they have no money they can not get away and must bear with the conditions, no matter how unfortunate they are. (Report of Commissioner of Licenses, New York City, 1913.)

The situation is the same in the West as in the East—hundreds of cases of fraud going unpunished because the interstate nature of the case prevented any one State from having jurisdiction. The commissioner of labor of Wisconsin, in a discussion on the regulation of employment agents before the Twenty-eighth Convention of the International Association of Bureaus of Labor, gave the following illustration of the lack of jurisdiction in such a case:

> One contractor had hired 300 men one week and sent them out about 100 miles on the railroad, had kept them three days, and discharged them. These men were charged $2 for their registration and $1 each for the 300—which made $300—went to the men that hired them, and the other $1 each—$300 for the 300 employees—went to the private agencies. Then he sent to the agency and said, "Send me more men; I can not use these any longer." So he made another change, and during the week his fee was $600, and the contractor of the railroad got $600 out of it. We do not know how we are going to reach them, because the contractors from another State come in and send their orders across the border line. (Page 85.)

The bureau of industries and immigration in the New York department of labor receives many complaints every year from workmen who have been cheated in interstate transactions of this kind. Eight men, for example, were sent to Pennsylvania to do construction work—machinist and contract work. They were put to work in front of furnaces—work beyond their

physical powers. They applied to the Associated Charities in the neighborhood, which asked the bureau to prevent this sort of misrepresentation. The bureau could take no action, as none of the complainants could come into its jurisdiction. In another case the Italian consul reports that Italian laborers sent by a New York agency to Montgomery, Ala., to do simple excavating work were obliged to work in water up to their knees. Some of the men contracted rheumatism, had to leave their work, and applied to the consul for help. Again the State was helpless.

These cases could be multiplied indefinitely in any State in the Union. Such agents build upon the knowledge that workmen must go from State to State as seasons change and industrial conditions alter.

It is clear that the lack of organization in the matter of supplying labor at present seriously and increasingly endangers the industrial welfare of the country. No country can hope to advance swiftly that has to carry too heavy a burden; those that are not capable of carrying themselves along—the sick, the injured, the aged—form a sufficiently heavy burden for any State. When to this is added the weight of thousands and hundreds of thousands asking only for the chance to support themselves, the burden becomes too heavy to be borne. Aside from the spiritual effect on a nation of a large body of men who feel in dumb, uncomprehending surprise that the existing order is somewhat becoming inadequate—entirely aside from this, even as a directly economic matter, this country can not afford, in the face of the present situation, to neglect to take all possible means of bringing together the work that is to be done and the men that want to do it.

THE INADEQUACY OF STATE CONTROL.

Unemployment is a matter which no State can adequately treat, because it has neither the authority nor the mechanism for getting information about labor and trade conditions beyond its boundaries. It could and should collect all possible information about such matters within its own territory, but that is altogether insufficient to cope with a problem that is in no sense local, but national.

Each State can use its police power to inspect employment agencies, and can deal through its courts with intrastate complaints. It can organize the supply of labor within the State. Seventeen States have established free employment bureaus, only four of which, however, have adequate appropriations and efficient methods.

Under present conditions, however, even a well-equipped State employment bureau with branch offices exchanging labor bulletins has no way of knowing what need may exist beyond its boundaries. The State of Rhode Island may have 5,000 unemployed men who are wanted in Minnesota, but Rhode Island has no way of finding that out. And if it should learn of the need for workmen elsewhere, it has no authority to use State funds to pay the men's transportation.

Many of the most serious conditions, however, are interstate in their very nature, and the mandate of a State runs only to the boundary thereof. Moreover, such transactions are properly subject only to Federal, not State, control; for if the sale of electric power in one State to be used in another constitutes interstate commerce, so does the disposition of working power.

It is objected that the supplying of information about work and workmen may safely be left to private enterprise. Present conditions are a sufficient answer to that position.

It is objected that the law of supply and demand can be relied on to bring men and work together. The answer is that it has not done so. Theoretically it might be expected to; practically it has not had that effect. "It is a condition and not a theory that confronts us."

It is objected that provision for unemployment should be left to the separate action of municipalities or States. It is sufficient answer to point out what would happen to any municipality or any State that offered to provide work for people that asked for it. Suppose it had been announced this winter that New York or Chicago or Washington had set itself to provide work for the unemployed.

It is objected that State regulation of private agencies and State free bureaus supply the need adequately. About one-third of the States have free bureaus of some sort, and about half the States have laws regulating private agencies in some fashion, but these laws and bureaus have not ended the abuses nor met the need.

Even if all the States did it, and did their best, that would be insufficient, for no State creates or controls its trade conditions any more than it creates its own weather. Many matters a State can regulate, of course. It can compel adjustments and reorganizations of manufacturing methods, but beyond that degree of control it has to take its share in whatever weather is sweeping across the country.

The work of separate State bureaus is absolutely necessary, and such bureaus should be established and brought to a high degree of efficiency in every State. But cooperating with them, bringing together all their observations and information, there should be a Federal bureau, charged with the duty of keeping watch over the supply of labor power available in the United States.

THE DUTIES OF A FEDERAL BUREAU OF EMPLOYMENT.

The purpose of the Federal bureau of employment would be to lessen the amount of unemployment in the United States.

It would endeavor, first of all, to bring together workmen needing work and employers needing workmen. It would do this through a central office at Washington and a system of branch labor exchanges in important industrial and commercial centers. Each exchange should collect all possible information about the state of the supply of available labor power in its district, both through its actual work as a free employment office and by any other means, and would cooperate with the others by exchanging reports through the central office. The central office should combine these local reports into a labor bulletin, from which anyone could learn the demand for work and for workmen in different parts of the country. The bureau would cooperate to the fullest possible extent with all existing State, municipal, and private employment agencies.

The bureau should also investigate the methods of all persons, corporations, and agencies procuring employment for others who carry on an interstate business. The head of the bureau should have power to license, inspect, and thus effectively control the work of all such interstate agencies.

The bureau would also make a thorough and comprehensive study of the causes of unemployment, in order to determine which of them are due to conditions that can be altered and which must be met as an inevitable incident to industry. It would study possible means for avoiding the dislocating effect of seasonal industries and for lessening the amount of casual labor. It would try to see what relation there is between unemployment and the lack of vocational guidance and industrial training. It would investigate the various systems of employment insurance and other methods of relief in operation in foreign countries, to judge whether some such provision would be applicable to American conditions.

Only by a definite, scientific, national plan can this country hope to solve the question of unemployment. By not attempting to solve it, the country is playing into the hands of those that say that no solution is possible.

Tribute to John Francis Schumacher.

EXTENSION OF REMARKS
OF
HON. HARRY H. DALE,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 23, 1914.

Mr. DALE. Mr. Speaker, I arise to pay tribute to the young hero John Francis Schumacher, coxswain of the battleship *Florida*, who went to his death on Tuesday last following the first clash of arms between the forces of the United States and Mexico. The boy at the time of his death was but 24 years of age. He enlisted at the Brooklyn Navy Yard in 1907, before he was 17 years old. He was assigned to the *New Hampshire*, but was transferred to the gunboat *Wheeling*, being promoted from able seaman to gunner's mate. He reenlisted on December 5, 1910, and was transferred to the battleship *Florida* last year.

Mr. Speaker, see the kind of man John F. Schumacher was, giving his life in the defense of his country. Just think of it, having spent seven years of his youthful life in the service of the United States Navy, being one of the many of the kind of men that must be called upon in times when our country may be in danger and our honor as a people hanging in the balance, and he such a true character of patriotism to be the first to fall in the defense of the flag and the honor of the Nation. Good to his dear mother, taken from her, fighting a noble cause, and now his name is on the Nation's roll of honor of the heroes passed and gone. "My boy was good to me and he would have made a great name in the Navy had he lived"

are the words of his dear mother. I wish to say to this broken-hearted mother that her boy has made a great name in the Navy in having completed life's battle in the defense of his country. No better record could he have made at Vera Cruz, assisting in landing the flag of the United States, participating in the sharp battle when the rifle bullets from the guns of the American marine answered and the big bells hanging in the church towers rang out clear and loud as the leaden pellets struck them, the dying among the dead. His eyes were closed in death, all for his country. Mr. Speaker, I know that the people of the United States extend their sympathy to the heart-broken mother of this dead hero.

Mothers and wives, should the call ring out,
It is you must answer your country's cry;
You must furnish brave hearts and stout
For the firing line where the heroes die.

For you must give us the strength we need;
You must give us the boys in blue;
For never a boy or a man shall bleed
But a mother or wife shall suffer, too.

Colorado Coal Strike.

EXTENSION OF REMARKS
OF
HON. GEORGE J. KINDEL,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,
Monday, May 4, 1914.

Mr. KINDEL. Mr. Speaker, to-day I asked for unanimous consent for the privilege of addressing the House for five minutes. This was denied me. My purpose was to read a telegram which I received last Saturday night from Mr. L. M. Bowers, manager of the Colorado Fuel & Iron Co.

The telegram which follows explains itself. The contents will no doubt surprise many who heard or read only one side of the controversy.

DENVER, COLO., *May 1, 1914.*

Hon. GEORGE J. KINDEL,
House of Representatives, Washington, D. C.:

To correct Hon. KEATING'S charges that the Colorado Fuel & Iron Co. did not voluntarily grant to its miners all the advantages of labor unions until compelled to do so to forestall a strike, we wish to say that a 10 per cent increase of wages, not asked for, was given on April 1, 1912. The circular advising the miners to employ their own check weighmen was posted April 11, 1912, one year and six months before strike. This circular referred to the fact that the company had always favored miners employing their check weighmen and reissued for information of new men on semimonthly pay day on February 1, 1913, and eight-hour day March 1, 1913, both unsolicited and six months before strike was called.

L. M. BOWERS.

The following signed article which appeared on the editorial page of the New York World of Sunday, May 3, elicited the letter from Mr. Harahan, my answer to which I also publish herewith:

[By GEORGE JOHN KINDEL, Congressman from first district of Colorado.]

The present situation in Colorado is the direct outcome of the pernicious activity of professional labor agitators, and the Democratic party, as well as the Department of Labor, are seriously to blame in the matter, for they are standing in with organized labor irrespective of considerations of justice and from purely political motives.

It is true that in the past the mine owners controlled politics in Colorado; that, as the saying was, they "voted sheep." But the present demands of organized labor not only represent the determination that it shall now in its turn be allowed to control politics, but that it shall dictate its own terms to the operators, and shall also be put in a position where it can compel the workers in the mines to join the union against their will.

As a matter of fact, the mine owners have been complying with the State laws in recent times, and the adoption of the initiative, referendum, and recall has made it impossible for them now to control the action of the State officials, for these can be recalled if their conduct becomes a cause of public scandal.

The real root of all the trouble is that the unions want to run the mines not in the interest of the actual workers on the spot, nor for the interest of the district, nor of the State, but simply for the money there is in it for the union. What the union leaders want is that the employers shall compel each worker to join the union, to pay $10 entrance fee to the union, to contribute $1 a month to the union funds, and that, in addition to this, the employers shall deduct from the wages of the workers and pay over to the union whatever fines the union may arbitrarily inflict on the workers.

This kind of labor tyranny is going to ruin the State if it is not checked. Some years ago, as a result of the same kind of thing, Denver lost the great Grant smelting plant, which gave employment to thousands. All that is now left of it is the $50,000 chimney, which stands as a significant monument of what happens when organized labor insists upon running the business of the State and the business of the employers, as well as its own business.

This brought forth the following letter from Mr. Harahan and my answer:

PHILADELPHIA, *May 3, 1914.*

Hon. GEORGE J. KINDEL,
House of Representatives, Washington, D. C.

DEAR SIR: I have read your statement in to-day's New York World on the deplorable conditions in Colorado.

While it may be perfectly satisfactory to the mine owners, a strict observance of facts would be more to the point.

Permit me to refer you to an official document issued by the secretary of state and commissioner of labor of Colorado. In his report to the governor for the years 1909–10 James B. Pearce states some facts that would tend to disprove certain statements in your article, and you may wish to revise your statement after perusing this report.

Yours, truly,

W. B. HARAHAN,
5101 North Broad Street, Philadelphia, Pa.

HOUSE OF REPRESENTATIVES,
Washington, May 4, 1914.

Mr. W. B. HARAHAN,
5101 North Broad Street, Philadelphia, Pa.

MY DEAR SIR: Glad to receive your criticism of my article on the Colorado strike in yesterday's New York World.

Evidently you did not read it carefully or you would not have arrived at your conclusion. I refer to the second paragraph, "It is true that in the past the mine owners controlled politics in Colorado," which I, with a large majority of others, opposed with all our might and went on a political strike until we have achieved initiative, referendum, and recall, which after all apparently avails us nothing, as is demonstrated in the present situation.

Representative STEENERSON, of Minnesota, suggested that lawless corporations should forfeit their charters, and if organized outside of the State, then oust them, as was done with the Standard Oil Co. in Texas and, I believe, in several other States, an opinion in which I fully concur.

Yours, in haste, GEO. J. KINDEL.

The following is a verbatim report of Hon. HALVOR STEENERSON'S remarks (see CONGRESSIONAL RECORD, p. 8040):

Mr. STEENERSON. Mr. Chairman, I understood the gentleman to state that these coal mines in Colorado are owned by corporations. Will the gentleman state whether they are Colorado corporations, or foreign corporations organized in other States?

Mr. KEATING. I am not informed as to that, but it is my impression that they are Colorado corporations.

Mr. STEENERSON. It seems to me that the violations of law enumerated by the gentleman in his speech on the part of these corporations would be sufficient ground, if the corporations are local in Colorado, for the forfeiture of their charter, and if they are foreign corporations, organized outside of the State of Colorado, they would be sufficient grounds for ousting them from the State; and it seems to me strange, considering the fact that this trouble has existed for some considerable length of time, that the State authorities have not sought to forfeit the charters of these corporations or else ousted them from the State if they persisted in violating the law.

Mr. KEATING. I will say to the gentleman that these violations of the law have continued for some years. Sometimes the necessity for action has been urgent and the violations of the law have been flagrant, and on such occasions there would be an outburst of public sentiment. But sometimes when these outbursts occurred the weapons to deal with them would not be at hand or the officers of the State would not be disposed to do their full duty. Before we could secure effective action public sentiment would cool and the offending incident would be forgotten.

Mr. STEENERSON. Both of these proceedings would be under the attorney general of the State. The gentleman stated that the rest of the counties of Colorado were not dominated by these conditions, but only two counties. Now, it seems to me, if the governor wanted to put a stop to the conditions that exist that would be the way to do it—either bring about proceedings for the forfeiture of the charters of the corporations or else to oust the corporations from the State.

A sample of letters echoing my sentiments, of which I receive many from strangers:

PORT HENRY, *April 30, 1914.*

Hon. GEORGE J. KINDEL,
House of Representatives, Washington, D. C.

DEAR SIR: Please allow me to congratulate you on your speech in regard to the recognition of the labor unions. One thing more, and but one, is needed to prevent such scenes as the dynamiting by the McNamaras and those that are to-day disgracing the State of Colorado, and in fact all America, viz, a law compelling all labor organizations (possibly all organizations) to be incorporated.

The poor, ignorant, mostly foreign, strikers, whose minds are easily inflamed and easily incited to act of violence and bloodshed, are not to blame, but the professional agitators, who agitate not for the good of honest labor and honest workmen, are to blame, for they are agitating for personal gain.

Such a bill would eliminate such leaders as the McNamaras, the Heywoods, the Cannons, the "Mother" Joneses, all foes to honest labor and honest laboring men.

All labor unions are not bad; some are a blessing. But all labor unions are a curse that are dominated by leaders looking to personal gain rather than the good of their fellow workmen, and a bill such as I suggest I believe would be approved by all honest workmen and all loyal Americans, and by their votes—for the majority of the workmen who have a vote are hard-headed, honest men, who do their own thinking—would approve of it. It would raise a howl from the anarchists and socialistic agitators, because it would put them out of business as leaders, but that is what is desired by all honest Americans. The sad spectacle seen in New York city of foreign socialists and anarchists parading and damning religion, the country, and her flag, unrebuked by the officials, is making the blood of many American citizens boil, and the sooner the administration and politicians realize it the better for them.

Again congratulating you, I beg to remain,

Yours, truly, W. C. WITHERBEE.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. GEORGE S. GRAHAM,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 21, 1914.

Mr. GRAHAM of Pennsylvania. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD I include analysis of right to toll exemption under the Hay-Pauncefote treaty, by J. T. Richards, of the New York bar.

It is as follows:

AN ANALYSIS OF THE RIGHT OF THE UNITED STATES TO USE THE PANAMA CANAL FOR ITS VESSELS OF COMMERCE WITHOUT PAYMENT OF TOLLS THEREFOR.

First. The right as it existed prior to the Clayton-Bulwer treaty, made July 4, 1850.

Second. As it existed after that treaty and prior to the Hay-Pauncefote treaty, made February 21, 1902.

Third. As it existed after the latter treaty and until the present time.

THE RIGHT TO TOLL EXEMPTION PRIOR TO ANY TREATY.

The United States, in the beginning, had the right to acquire territory on the Isthmus of Panama in any lawful manner and to construct and operate a canal thereon, and to exercise all the rights and powers and to enjoy all the benefits of ownership thereof.

THE RIGHT TO TOLL EXEMPTION AFTER THE CLAYTON-BULWER TREATY AND PRIOR TO THE HAY-PAUNCEFOTE TREATY, FROM JULY 4, 1850, TO FEBRUARY 21, 1902.

THE CLAYTON-BULWER TREATY.

A. Its application to the Nicaragua Canal.

B. Its application to the Panama Canal.

A.

THE NICARAGUA CANAL.

This treaty limits its contractual provisions and binding obligation solely to the subject matter of the Nicaragua Canal.

The material part of the recital is as follows:

The United States of America and Her Britannic Majesty, being desirous of * * * fixing in a convention their views and intentions with reference to any means of communication by ship canal which may be constructed between the Atlantic and Pacific Oceans by the way of the River San Juan de Nicaragua and either or both the Lakes of Nicaragua or Managua to any port or place on the Pacific Ocean, the President of the United States has conferred full power on John M. Clayton, Secretary of State, * * * and Her Britannic Majesty on * * * Sir Henry Lytton Bulwer * * *, minister plenipotentiary * * * for the aforesaid purpose, and the said plenipotentiaries * * * have agreed to the following articles.

Article 8 contains certain general declarations of principle and of future policy with reference to a canal across the Isthmus of Panama; but these are not embodied in binding stipulations, but, as expressly stated, are left to be dealt with and reduced to definite contractual obligations by some future treaty. These declarations of policy will be dealt with later.

THE CLAYTON-BULWER TREATY WAS INTENDED TO APPLY TO A CANAL THROUGH NICARAGUA, CONSTRUCTED, OWNED, AND OPERATED BY PARTIES OTHER THAN THE NATIONS WHO WERE PARTIES TO THE TREATY.

The treaty contemplates a canal to be built, owned, and controlled by private persons or corporations and not by either the United States or Great Britain. By the express provisions of article 1 it is stipulated that neither nation shall "obtain or maintain for itself any exclusive control over said ship canal * * * or occupy, fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America."

By article 3 it is stipulated "that if any such canal shall be undertaken * * * by any parties having the authority of the local governments through whose territory the same may pass, then the persons employed in making the said canal and their property * * * shall be protected * * * by the Governments of the United States and Great Britain * * *."

The use of the words "parties" and "persons" and the agreement to give protection clearly implied that the nations who promised protection did not intend to build the canal or receive protection. It would be incongruous for a nation to pledge its protection to itself. If it were intended to pledge the aid of one nation to the other in a case where either was expected to build the canal, appropriate language would have been used.

In like manner, in article 5 it is stipulated that the treaty nations "will protect the canal from interruption, seizure, or unjust confiscation," and so forth, provided that "if the persons or company undertaking or managing the same" shall make unfair discriminations, and so forth, either Government may withdraw protection.

Again, in article 7 reference is made in three different places to "persons or company" having a contract with the State through which the canal passes for its construction.

It is plain, therefore, that the Clayton-Bulwer treaty did not deal with the ownership of the Nicaragua Canal by either treaty nation, except substantially to prohibit it.

Their relation under the treaty to the owners of the canal was that of disinterested persons not privy to the enterprise offering protection and guaranty of neutrality, provided that the owners accepted it on reasonable conditions.

PROTECTION AND GUARANTY OF NEUTRALITY WAS TENDERED TO THE OWNERS OF THE CANAL AS AN OPTION TO BE AVAILED OF BY THEIR OWN FREE CHOICE, NOT AS AN OBLIGATION TO BE ENFORCED BY THE TREATY NATIONS AGAINST UNWILLING OWNERS.

Under the terms of the treaty it was contemplated that the owners would stand outside the treaty, not bound by its provisions unless they voluntarily accepted them. The proffer of protection and neutralization with the attendant conditions was tendered as an option to be availed of at will by the owner, not as an obligation to be enforced against him in invitum. No stipulation of the treaty provided that any of its conditions should be enforced upon the owner. He was free.

THE ONLY PENALTY OR REMEDY AGAINST THE OWNER FOR REFUSING TO COMPLY WITH THE CONDITIONS ON WHICH PROTECTION WAS OFFERED WAS WITHDRAWAL OF PROTECTION.

Even after protection and neutralization should have been extended no provision was made by the treaty to compel observance of the condition by the owner. The only penalty denounced by the treaty for breach of conditions was the withdrawal of protection and guaranty of neutrality by one or both treaty nations. (See art. 5.)

It was not even obligatory on both nations to withdraw. One might withdraw and the other might decline to withdraw and still continue to afford protection, notwithstanding the breach of condition.

The treaty fully recognized and took into account the moral and legal rights of the owner of the canal which were inherent in him as owner. Among these was the right to regulate the rates of traffic over his property. He was not to be deprived of any rights. The treaty offered benefits, and these were believed to be so important and so valuable that no owner of the canal could afford to refuse them in view of the reasonable terms at which they were offered. If he did refuse, he was within his rights.

Upon this point it will be interesting to cite the language of article 5:

The contracting parties further engage that when the said canal shall have been completed they will protect it from interruption, seizure, or unjust confiscation, and that they will guarantee the neutrality thereof, so that the said canal may forever be open and free and the capital invested therein secure. Nevertheless the Governments of the United States and Great Britain, in according their protection to the construction of said canal and guaranteeing its neutrality and security when completed, always understand that this protection is granted conditionally, and may be withdrawn by both Governments or either Government if both Governments or either Government should deem that the persons or company undertaking or managing the same adopt or establish such regulations concerning the traffic thereupon as are contrary to the spirit or intention of this convention, either by making unfair discriminations in favor of the commerce of one of the contracting parties over the commerce of the other, or by imposing oppressive exactions or unreasonable tolls upon passengers, vessels, goods, wares, merchandise, or other articles. Neither party, however, shall withdraw the aforesaid protection and guaranty without first giving six months' notice to the other.

It will be observed that the language of the last two sentences is most significant.

Even if discrimination should be made in favor of Great Britain and against the United States, the only remedy of the latter would be to withdraw from its part in the promise of protection and guaranty of neutrality, leaving Great Britain free to continue as to its part. The same would be true vice versa if the discrimination were in favor of the United States. There was no provision in the treaty requiring either Government to forbid its vessels of commerce to accept such discrimination or to penalize them by any tax or dues for acceptance. The sole instrument of enforcement, the only penalty, was the withdrawal of protection by the aggrieved nation, or both.

If the canal were built by a corporation either nation might acquire stock in the corporation provided that the amount were not sufficient to give it "exclusive control." There is no provision of the treaty forbidding either nation to own stock. The only prohibition is against exclusive control as set forth in article 1.

Neither is there any treaty provision forbidding either nation to aid such corporation by buying its bonds, not even from buying all its bonds, provided that the exclusive control of the canal did not pass under some collateral agreement. Either

nation therefore retained its ordinary rights in the matter of acquiring the securities of the company except that it must not acquire exclusive control of the canal or of the owner corporation.

It follows therefore that so far as the treaty affected the matter, the canal could have been constructed by a British corporation. Great Britain could have aided it by taking all its bonds and could have acquired any amount less than a majority of its stock. The corporation could have discriminated in favor of British commerce and against that of the United States, and the latter could not have prevented the discrimination. It could not even have required Great Britain to refuse protection or to withdraw the guaranty of neutrality.

But the United States could have withdrawn its guaranty of neutrality, and when war came between Great Britain and some other nation it could have refused to aid in maintaining that neutrality. Or if the war were with the United States the latter might have taken the canal by conquest if it could.

This was the real penalty denounced by the treaty and imposed by the withdrawal of the aggrieved nation. Doubtless ordinarily it would be adequate. But there was no mode of enforcing specific performances of the condition against discrimination. The owner, even though a British corporation, would have had the inherent right to discriminate in favor of the treaty nation of which it was a subject. The same would be true if the owner were a natural person and a British subject.

So far as the owner is affected, the treaty gives a mere option and imposes no obligation.

RIGHT OF OWNER TO USE CANAL WITHOUT PAYMENT OF TOLLS AND WITHOUT CONFERRING SAME PRIVILEGE ON OTHERS.

But assuming that the owner of the canal desired to retain the benefits of protection and of the guaranty of neutrality under the treaty, then he must comply with the conditions. These conditions forbid "making unfair discriminations in favor of the commerce" of one of the nonowning treaty nations "over the commerce of the other or imposing oppressive exactions or unreasonable tolls, and so forth." They do not assume to forbid discrimination by the owner in his own favor over any and all nonowners, whether parties to the treaty or not.

The discrimination forbidden is that between parties to the treaty standing upon the same footing and bearing the same relation to the subject matter, and it must be "unfair" discrimination, not a just and equitable distinction, based upon fundamental and substantial difference in the situation and rights of the parties. A distinction based on ownership is not prohibited. The term discrimination is not applicable to the use of his own property by an owner upon terms different from those on which the use is granted to strangers. They are not within the same classification and the same principles can not apply.

Apart from the equity of the matter, an owner can not pay himself. By whatever acts he attempted to accomplish it, they would spend themselves inefficiently, merged indistinguishably in his single personalty. It would be possible for him to pay tribute to strangers for the use of his own property, but this would be a "reductio ad absurdum."

The Clayton-Bulwer treaty attempted to perpetrate no such absurdities. It simply made the condition that the owner should treat nonowners "inter sesse," alike.

As said before, the Clayton-Bulwer treaty did not contemplate that either the United States or Great Britain should own or control the canal, and it left the owners, whoever they might be, free to use the canal for their own commerce as they pleased without payment, penalty, or concession to anyone. The treaty, as a condition of protection and of guaranty of neutrality, might have required the owners to submit to restrictions on their inherent right to personally use the canal for their own commerce, but in fact it imposed no condition bearing upon this point. They were free to run their own vessels of commerce without limitations.

RIGHT OF GREAT BRITAIN AND UNITED STATES TO PAY CANAL TOLLS FOR THEIR VESSELS OF COMMERCE.

The Clayton-Bulwer treaty did not in any manner assume to prescribe who should pay the canal toll on the vessels of commerce of the respective treaty nations. It follows, therefore, that the two nations retained their general rights in this respect precisely as if there had been no treaty. Either had the inherent right to aid its vessels of commerce by paying tolls for them directly to the owner of the canal or by any other form of subsidy. Such payment would have been a matter of internal policy, with which no other nation was concerned. And this would be so even if one treaty nation owned a large amount of stock in a corporation which owned the canal and received dividends therefrom which wholly or in part repaid the tolls for its vessels of commerce. It is true that in one sense the canal itself would be bearing the burden of these particular tolls out of its earnings, but this is not true in substance.

The canal would have to pay its dividend in any event, and it matters not whether the party who received the dividend paid the tolls out of that fund or out of some other fund, the tolls are paid in substance and in truth and paid by the nation, not by the canal company.

The result would be the same if the nation owning the stock merely offset its dividends pro tanto against the tolls. They would equally be paid by the nation.

The other treaty nation could not complain of discrimination by the canal company on the ground that it in effect was relieving the commerce of the associate nation from payment of tolls.

THE PANAMA CANAL AS AFFECTED BY THE CLAYTON-BULWER TREATY.

THE UNITED STATES PRIOR TO THE CLAYTON-BULWER TREATY HAD THE RIGHT TO ACQUIRE TERRITORY ON THE ISTHMUS OF PANAMA AND TO CONSTRUCT AND OPERATE A CANAL THROUGH THE SAME, AND THIS RIGHT WAS NOT DIMINISHED OR AFFECTED BY THE CLAYTON-BULWER TREATY.

Mr. ELIHU ROOT, in the Senate debate preceding the passage of the canal tolls exemption law, stated that the Clayton-Bulwer treaty prohibited the United States to construct and operate a canal across the Isthmus of Panama or to occupy or acquire territory there for canal purposes, and that but for the enabling provisions of the Hay-Pauncefote treaty the United States could not have built or acquired ownership of the canal.

Mr. ROOT was in error. Not only was the statement incorrect, but it was without even colorable excuse. The treaty is absolutely silent upon the matter. It would embarrass Mr. ROOT if he were even asked to cite the language of any such provision.

The only provision of the treaty restricting the right of the United States to own or control an interoceanic canal applies to the Nicaragua Canal and to Nicaragua and the other States of Central America and not to the Panama Canal nor to the Isthmus of Panama. That provision is contained in article 1. The preamble of the treaty recites that the purpose of the treaty is—

To fix in a convention the views and intentions of the United States and Great Britain with reference to any means of communication by ship canal which may be constructed between the Atlantic and Pacific Oceans by the way of the river San Juan de Nicaragua with either or both of the lakes of Nicaragua or Managua to any port or place on the Pacific Ocean.

Article 1 follows immediately after the preamble and is here set forth in full:

The Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control of the said ship canal, agreeing that neither will ever erect or maintain any fortifications commanding the same or in the vicinity thereof, or occupy, or fortify, or colonize, or assume, or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; nor will either make any use of any protection which either affords or may afford, or any alliance which either has or may have, to or with any State or people for the purpose of erecting or maintaining any such fortifications, or of occupying or fortifying or colonizing Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America, or of assuming or exercising dominion over the same, nor will the United States or Great Britain take advantage of any intimacy or use any alliance, connection, or influence that either may possess with any State or Government through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for the citizens or subjects of the one, any rights or advantages in regard to commerce or navigation through the said canal which shall not be offered on the same terms to the citizens or subjects of the other.

The Isthmus of Panama never formed part of the territory of any Central American State. It was part of New Granada and later of Colombia, States of South America. Geographically the Isthmus was neither part of North America nor South America, but was the connecting link between the two, an isthmus as distinguished from the two continents which it connected, and no more forming part of one than of the other. In article 8 of the treaty the Isthmus of Panama is referred to by a designation which effectually distinguishes it and sets it apart from any part of Central America, as follows: "Canal across the isthmus which connects North and South America," and again, "interoceanic communication whether by canal or railway by the way of Tehuantepec or Panama." Tehuantepec being part of Mexico and not of Central America.

The prohibitions of article 1 therefore did not apply to a "canal by way of Panama," and either the United States or Great Britain retained the general inherent right to acquire territory on the Isthmus and to construct, own, and operate a canal thereon.

Article 8 is the only part of the Clayton-Bulwer treaty which applies to the Panama Canal; but its provisions create no con-

tractual or binding obligation, but are a declaration of general principles and of common aims by the treaty nations.

The first question which article 8 presents is whether its provisions in themselves create contractual obligations, or whether they merely express a general principle and a tentative purpose subsequently to negotiate a definite treaty for the purpose of putting that principle in practical operation by applying it in appropriate detail to the Panama Canal.

As an examination of the precise language of this article is necessary, it is set forth in full, as follows:

ART. 8. The Governments of the United States and Great Britain having not only desired in entering into this convention to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulation, to any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America, and especially to the interoceanic communications, should the same prove to be practicable, whether by canal or railway, which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

This article does not by its terms purport to create treaty rights and obligations, but only expresses a tentative purpose to negotiate a treaty thereafter.

The words "they hereby agree to extend their protection by treaty stipulations," and so forth, are in form an agreement to make an agreement by treaty. But an agreement to make an agreement can not be enforced, because the reservation of the matter for future final disposition implies that there are branches of the subject matter or particular details not adequately dealt with in the preliminary agreement which must be dealt with by a later agreement before the minds of the parties can meet. Either party has the right to insist that the final agreement shall contain such particular stipulations as it may deem necessary to protect its interests in the subject matter in all its phases and under various contingencies which may arise; and if they can not come to a meeting of minds upon the different proposals, the final agreement may never be made, and the preliminary agreement can not be enforced, because no court or tribunal can make the final agreement for the parties if they are unable to make it for themselves.

Of course, if a preliminary agreement provided that the parties should thereafter make a final agreement containing certain provisions and no others and in a definite form and not otherwise, then the so-called preliminary agreement would be a final agreement complete in itself, containing within its four corners all that could ever be put in the so-called final agreement; and ex proprio vigore it would preclude the right to insist upon any changes or additions by the later agreement. A final agreement would be surplusage a mere repetition. Such a preliminary agreement could be enforced, because it was not an agreement to make an agreement, but an agreement complete and final in itself.

It must, however, appear affirmatively by the terms of the preliminary agreement that the parties have surrendered the right to insist upon additional provisions in the final contract or they will be deemed to have reserved that right, since there could be no object in reserving the disposition of the matter for a final agreement if it had already been fully and finally dealt with.

The lack of definiteness in stating the object of the preliminary agreement, as set forth in article 8, is an additional circumstance which indicates that the whole subject was reserved for a later treaty. The language used is as follows:

The Governments of the United States and Great Britain having not only desired to accomplish a particular object but to establish a general principle, they hereby agree to extend their protection by treaty stipulations to any other practicable communications whether by canal or railway—

And so forth.

There is no statement as to what the "general principle" is. It might, however, be inferred that the general principle is one of "protection" to any interoceanic canal or railway. The protection to be extended is presumably the same as that mentioned in article 3 and article 5, which refer to the Nicaragua Canal—protection of the person from unjust detention and the property from unjust confiscation, seizure, or interruption.

But nothing is said in article 8 about guaranteeing the "neutrality" of the Panama Canal, although in article 5 "protection" and the "guarantee of neutrality" are spoken of as two distinct matters in connection with the Nicaragua Canal. Obviously the final treaty was expected to supply omissions and deal with the subject matter fully.

The agreement to extend "protection" later by treaty stipulation to the Panama Canal set forth in article 8 was not a binding contractual obligation, but a mere declaration of principle and tentative expression of future purpose. It had no effect under international law, except as a declaration of common aims general in character and not fully particularized.

Even its moral influence as a declaration of common aims had lost effect by the long lapse of time without any attempt to enter into the proposed "treaty stipulations."

An agreement to make a treaty which had been left unexecuted for 51 years had no sanction left. No time for making the treaty was fixed, and a reasonable time had long passed. The matter had lapsed by abandonment.

The position of the parties had changed; their very identities had changed and the conditions and environment had changed. Neither law nor common sense could hold them to an executory agreement which had been so long left undone.

It follows, therefore, that prior to the ratification of the Hay-Pauncefote treaty, February 21, 1902, the United States and Great Britain were either of them wholly unfettered by any contractual obligation limiting their right to construct, own, and operate and use a canal across the Isthmus of Panama as they saw fit. There was not even any lawful obligation to refrain from discriminating between different nations as to changes or otherwise.

ARTICLE 8 DOES NOT APPLY TO A CASE WHERE ONE OF THE TREATY NATIONS IS OWNER OF CANAL.

Article 8 of the Clayton-Bulwer treaty did not contemplate a canal owned by either of the treaty nations, but a canal owned by persons or corporations who were strangers to the treaty, and to whom protection was to be extended, not as their right but as a benefit voluntarily granted upon certain conditions.

This is clear from the language used, namely, that the treaty nations "hereby agree to extend their protection," and so forth. These words would be inappropriate if either were the owner, since it would be incongruous to describe a man as extending protection to himself. To deal with that situation different and more apt words would be used.

So also the words "In granting their joint protection * * * it is always understood by the United States and Great Britain * * * that the parties constructing or owning" the canal, indicate that the parties granting protection are not the persons who receive it.

Article 8, therefore, does not apply to nor govern the case where one of the treaty nations is the owner of the canal. It is a rule of construction that general provisions in a contract must be limited in operation to the particular subject matter under consideration, even though the language in its ordinary and natural sense, taken alone, would include other matters as well.

Thus a general release under seal releasing from all debts will be confined to the particular debt mentioned in the recital.

Ramsden *v.* Hylton (2 Vesey Sr., 304); Thorpe *v.* Thorpe (1 Ld. Raymond, 235); Taylor *v.* Homersham (4 M. & S., 423); Cole *v.* Gibson (1 Vesey Gr., 504); Texas *v.* Onshiel (198 U. S., 521); Hoes *v.* Can Hoesen (1 Barb. Ch., 379); Jackson *v.* Stackhaus (1 Cowan, 122).

UNDER ARTICLE 8 THERE WAS NO PENALTY FOR NONCOMPLIANCE WITH CONDITIONS ATTACHED TO OFFER OF PROTECTION EXCEPT WITHHOLDING OF PROTECTION.

By the terms of article 8 the acceptance of protection and compliance with the conditions attached were not obligatory on the owner. The treaty did not seek to coerce him.

As in the case of the Nicaragua Canal under article 5, so in the case of the Panama Canal under article 8 protection was offered as an option to the owner. If he refused to comply with the conditions attached, protection might be withheld. There was no other penalty. Nor could the conditions be specifically enforced against the owner.

IN ARTICLE 8 THERE IS NO CONDITION THAT CHARGES OF TRAFFIC SHALL BE THE SAME FOR ALL PERSONS.

The article does contain a condition that the owners of the canal—

shall impose no other charges * * * than the aforesaid Governments shall approve of as just and equitable.

This is plainly a rule forbidding unfair discrimination, for a schedule of charges which made such discrimination would be inequitable. But equity means not the same identical treatment for all, since the same treatment applied to different persons having different rights and different relations to the subject matter might result in the grossest inequity. Equity is equality in

substance; it means equalization, not a formal and literal application of an identical rule to dissimilar conditions. As before shown, in dealing with the application of article 5 to the Nicaragua Canal, it would be grossly inequitable to subject an owner to the same charges as a stranger. And this was not the intention of the condition; the owner must be free to use his property without charge, else he will pay twice over for the use—once by a gross sum when he purchases or constructs it, and once again when he pays a current charge from time to time.

There must not be discrimination on grounds of nationality, but there should be a distinction on grounds of ownership.

THE HAY-PAUNCEFOTE TREATY.

THE RIGHT TO TOLL EXEMPTION AFTER THE HAY-PAUNCEFOTE TREATY, FEBRUARY 21, 1902, UNTIL THE PRESENT TIME.

It will be useful before proceeding with the consideration of this phase of the subject to keep in mind the conclusions reached by the previous analysis of the Clayton-Bulwer treaty.

SUMMARY STATEMENT OF EFFECT OF CLAYTON-BULWER TREATY.

First. The plenipotentiaries who negotiated the Clayton-Bulwer treaty were empowered only to negotiate a convention dealing with the Nicaragua Canal alone. (See preamble of treaty.)

In accordance with their powers, the treaty limits its contractual provisions and binding obligations to the Nicaragua Canal alone. (See articles 1 to 7, inclusive.)

Article 8 of the treaty contains certain declarations establishing the "general principle" of "protection" to be offered by the treaty powers to interoceanic canals and also an agreement to enter into a treaty thereafter extending protection to a canal proposed to be constructed across the Isthmus of Panama. An agreement to make a treaty, however, can not be enforced, since the parties might never come to a meeting of minds on the particular terms of the final treaty. The so-called agreement in legal effect amounts only to a tentative declaration of common aims and a general purpose.

Second. Article 1 of the treaty prohibits the treaty powers from "obtaining any exclusive control" over the Nicaragua Canal or occupying, colonizing, or exercising dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America. But if the canal were owned by a corporation, either power might acquire the stock to an amount less than a majority or might buy all the bonds, provided that it did not thus acquire an "exclusive control."

Third. The language of the treaty plainly implied that it contemplated that the Nicaragua Canal should be constructed and owned by parties other than the treaty powers, and the treaty had no application to a state of facts under which the canal was owned by a party to the treaty.

Fourth. Protection and guaranty of neutrality were to be tendered by the treaty powers to the owners of the Nicaragua Canal upon certain conditions as an option to be availed of by their own free choice, not as an obligation to be enforced by the treaty powers against unwilling owners.

Fifth. The only penalty or remedy provided by the treaty against the owner for refusing to observe the conditions on which protection and guaranty of neutrality were granted was the withdrawal of said protection and guaranty by one or both treaty powers after "giving six months' notice" to each other of their intention to withdraw. But either might decline to withdraw, notwithstanding the breach of condition by the owner.

Sixth. The terms of the treaty did not attempt to prohibit discrimination in toll charges in favor of the owner as against all nonowners, nor to limit the use of the canal by the owner for his own vessels of commerce and steamship lines without tolls or penalty in any form. Nor did it require the owner to make a concession of like exemption from tolls to the commerce of the nonowning treaty powers.

Seventh. The treaty did not prohibit either treaty power from paying the canal tolls for its vessels of commerce or aiding them by subsidies in any other form. This was a matter of internal policy which concerned only the nation adopting it, and which could not impair the rights of the other nation in the use of the canal.

Eighth. The treaty did not in any way abridge or limit the right of either treaty power to acquire territory on the Isthmus of Panama and to construct and operate a canal thereon and to hold exclusive control thereof. Article 1 did not apply to the Panama Canal, and all other provisions of the treaty are silent on the subject.

Ninth. As before stated, article 8, the only part of the treaty which applied to the Panama Canal, contained no binding contractual provisions and imposed no lawful obligations. It was merely tentative, an agreement to make a future treaty which could not be enforced because the final terms were reserved.

But if its provisions had possessed all the legal effect of a contract, yet they imposed no obligations upon the owner of the Panama Canal different from those imposed on the owner of the Nicaragua Canal by the other parts of the treaty.

(a) Under this article it was not contemplated that either treaty power should become the owner of the Panama Canal, nor were the provisions of that article applicable to ownership by either treaty power.

(b) The said article contained no reference to neutralization. It did contain a recital declaring the desire of the treaty powers to establish a general principle of protection, and to that end tentatively proposed an agreement thereafter to be made extending "protection" to the Panama Canal.

(c) The tender by the treaty powers of protection and neutralization to the owners of the Panama Canal was an option to be utilized of their free choice. Article 8 did not require them to accept it nor attempt to coerce them to perform the conditions on which protection was granted.

(d) No penalty or remedy for breach of condition of protection and neutrality by the owners was stated in said article, and the treaty powers could only withdraw protection at their option.

(e) Discrimination in tolls between the owners of the Panama Canal and the nonowning treaty powers was not prohibited by said article.

(f) Payment of tolls by either treaty power as a subsidy for its vessels of commerce was not prohibited by said article.

The United States therefore did not need the aid of the Hay-Pauncefote treaty for any purpose connected with the Panama Canal. It could have owned and controlled that canal, and could have imposed upon other nations any terms it saw fit for the privilege of using it. Nor was the United States bound to avail itself of any grant of protection or guaranty of neutrality at the hands of Great Britain, even if article 8 had created a contractual obligation, for the United States would only have stood committed jointly with Great Britain to grant protection to a corporation or private person who might own the canal.

It is clear, however, that so long as the Clayton-Bulwer treaty stood, the United States could not have acquired territory in Nicaragua nor have obtained exclusive control of the Nicaragua Canal.

The representative of the United States who negotiated the Hay-Pauncefote treaty should have seen that its application was restricted to a canal through Nicaragua alone. He should have left the Panama Canal untouched, inasmuch as the right of the United States to deal with that subject matter was wholly untrammeled.

Owing, however, to inefficient diplomacy the Hay-Pauncefote treaty was framed to cover both the Nicaragua Canal and the Panama Canal by the same provisions, and the country must accept them to their full extent according to their lawful effect.

The obscurities of that treaty have, however, given rise to questions which should never have had excuse for consideration.

THE HAY-PAUNCEFOTE TREATY WHOLLY REPEALED THE CLAYTON-BULWER TREATY.

The repealing provision is as follows: "Article 1. The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 18th of April, 1850"—that is, the Clayton-Bulwer treaty.

If there had been no repealing provision, the Clayton-Bulwer treaty would have remained in force, except as to those parts which were in conflict with the later treaty. But article 1, which provides that the later treaty shall "supersede" the earlier one, wholly displaces the Clayton-Bulwer treaty and puts the Hay-Pauncefote treaty in its place for all purposes.

It now supplies the only regulation of the subject matter by treaty.

THE HAY-PAUNCEFOTE TREATY CONTAINS NO CONTRACTUAL PROVISION OBLIGATING EITHER THE UNITED STATES OR GREAT BRITAIN TO GRANT TO THE OWNER OF THE PANAMA CANAL A GUARANTY OF NEUTRALITY.

All the contractual provisions of said treaty are contained in articles 1 to 5, inclusive. The first one in which "neutralization" is referred to is article 3, and in that Great Britain does not participate. It is the act of the United States alone. It adopts a basis for neutralization of the canal, but it contains no agreement by anyone to carry the "neutralization" into effect.

The language bearing upon the point is as follows:

ART. 3. The United States adopts as the basis of the neutralization of such ship canal the following rules, substantially as embodied in the convention of Constantinople, signed the 28th of October, 1888, for the free navigation of the Suez Canal.

The rules then follow but need not be discussed at this stage.

These rules are not adopted unconditionally but only as a basis of neutralization and must relate to some arrangement to

carry neutralization into effect. Neutralization as a principle is a mere abstraction and can not be enforced. Article 4 is the only other contractual provision besides article 3 which contains any reference to "neutrality" or "neutralization." The following is a copy:

ART. 4. It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization.

It will be seen at a glance that this provision does not supply the defect nor create any engagement on the part of Great Britain or the United States to guarantee neutrality or to enforce neutralization. The clause merely saves the "general principle" of neutralization from prejudice by reason of change of territorial sovereignty. It does not state details nor methods for applying or enforcing the principle. A contract declaring a principle can not be enforced.

While said treaty, by article 1, provides that the canal may be constructed under the auspices of the United States, the effect is merely permissive.

There is no engagement by the United States to construct the canal, nor is there any provision of said treaty framed to prevent the construction and ownership of an interoceanic canal by some nation, person, or corporation independently of the auspices or control of the United States. The United States might have been unable to negotiate the necessary treaty with the State having territorial jurisdiction, and some other nation or some independent corporation or persons might have obtained the concession for the canal there.

The French company had partly constructed the Panama Canal and still claimed rights in the canal concession exclusive of other interests. The canal might have been constructed and owned by American or English corporations or citizens or subjects under concessions from the State having territorial jurisdiction.

If the canal were constructed by an American company, aided by the United States, still the corporation might not be under the control of the United States. The United States might not care to control it, but might give it subventions and leave it to its own independent management, as was done with many of the Pacific railroads of the United States and Canada.

Who by the terms of the treaty was under engagement to grant a guaranty of neutrality to the Nation, persons, or corportions who might own the canal? And without such engagement the adoption of rules as a basis or condition of neutralization is futile.

Under the treaty, when the United States shall have completed the Panama Canal, there is no one bound to guarantee to it the maintenance of neutrality.

The United States can not guarantee neutrality to itself. It can protect its own property, but this right it has independent of treaty. It can also observe neutrality between other nations engaged in war, but this is an obligation resting upon it under international law independently of any treaty. The performance of these functions is not what is meant by "neutralization" in international law. Neutralization implies some treaty engagement between two or more nations whereby the treaty powers engage to refrain from acts of war within or against the neutralized State or territory. It also covers cases where the treaty powers, in addition, engage to prevent others from committing acts of war within or against the same. In the case of the Suez Canal convention of 1888, all the important nations of Europe were parties to the treaty and agreed among themselves that each would refrain from certain acts which tended to interfere with the free and uninterrupted use of the canal or with its neutrality, and also would refrain from attempting to secure in the use of the canal any advantage for its commerce over the commerce of the other treaty nations by any international agreement.

The State thus neutralized or the owner of the territory may or may not be a party to the neutralization treaty. He may voluntarily accept the conditions upon which it is granted, but the conditions of neutralization can not lawfully be imposed upon the owner without his consent, nor can neutralization itself be lawfully enforced against him in any manner which interferes with his right to use his own territory and property as he sees fit without his consent.

He has the right to use it for all purposes. If a State, it has the right to fortify the territory and use it as a base in time of war, notwithstanding any treaty between other powers to the contrary. Only his own consent can lawfully deprive him of this right.

The treaty which adopts a basis of neutralization for a canal not yet located nor the builder or owner yet known and which imposes no obligation on any nation or person to carry neutralization into effect, is inofficious, and by its terms must fail in its function. So far as neutralization goes, it is nugatory and can not be enforced.

The objection is not formal; it goes to the very substance of the question. If there were a mere lack of precise terms, but there appeared on the whole a clear intent on the part of the treaty nations to join in a guaranty of neutrality to persons owning the canal, then the lack of appropriate words of contract would be unimportant. But here there is not even enough to create implied obligations. Contractual undertakings cut out of the whole cloth can not be supplied by conjecture or even by parol evidence. There must at least be within the treaty itself the substance of the obligation. In that case the preliminary negotiations and other parol evidence might be used to explain ambiguities.

Here there is not even the elementary substance of a promise or engagement. If war should ever arise and Great Britain should fail to take due measures to maintain the neutrality of the Panama Canal and great damage and loss to the United States should result, no international tribunal could sustain a claim for damages in favor of the United States against Great Britain based on a claim of breach of agreement to maintain neutrality of the canal under the Hay-Pauncefote treaty, because the court would be unable to find any such undertaking by Great Britain in the said treaty. As a treaty to guarantee neutralization to the owner of the canal it can not be enforced.

THE EFFECT OF THE "GENERAL PRINCIPLE" OF NEUTRALIZATION MENTIONED IN THE PREAMBLE OF THE HAY-PAUNCEFOTE TREATY.

In addition to the clause in article 4 preserving the general principle of neutralization, there is also mention of the general principle of neutralization in the preamble of the said treaty.

The preamble recites that "the United States of America and His Majesty Edward VII * * * being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th of April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of said canal under the auspices of the Government of the United States without impairing the general principle of neutralization established in article 8 of that convention," and so forth.

By reference to article 8 of the Clayton-Bulwer treaty it will be seen that it contains no mention of "neutralization."

The only language referring to any "general principle" is as follows: The Governments of the United States and Great Britain having desired "to establish a general principle, they hereby agree to extend their protection by treaty stipulations to any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America."

The word "protection" in itself does not mean "neutralization." As far as it has any specific meaning in international law, it means a protectorate, which is something widely different from neutralization.

Article 8 contains no definition of the word nor explanation of the sense in which it is used.

The word "protection," however, is used in articles 3 and 5 of the same treaty, and is there defined in a sense different from neutralization.

In article 3 the language is:

The persons employed in making the canal and their property used or to be used for that object shall be protected, from the commencement of the said canal to its completion, by the Governments of the United States and Great Britain from unjust detention, confiscation, seizure, or any violence whatsoever.

In international law the designation "a neutral" is applicable only to the status of a State in its relation to other nations engaged in war "inter sesse." And neutralization signifies the maintenance of the status of neutrality by one or more nations other than the neutral under some treaty or contractual engagement. Neutralization might also be extended to the territory or property of corporations or individuals. But its functions properly apply to war, not to peace.

The protection mentioned in article 3 of the Clayton-Bulwer treaty is protection "from unjust detention, confiscation," and so forth. This would cover acts committed in times of peace and by civil power and would not include the same field as neutralization. Neutralization would safeguard from many acts in times of war which would otherwise be just and lawful under international law, and would not constitute unjust detention, confiscation, and so forth. Such acts would be the right of blockade and the right to object to allow the armed sea forces of one of two hostile nations to pass through the neutral's canal in time of war on a mission of war.

Again, in article 5 of the Clayton-Bulwer treaty the word "protection" is used in contradistinction to "neutralization,"

which is also there used according to its specific meaning in international law. The language is as follows: "The contracting parties further engage that, when the said canal shall have been completed, they will protect it from interruption, seizure, or unjust confiscation, and that they will guarantee the neutrality thereof so that the said canal may forever be open and free," and so forth.

The protection thus described is not neutralization. It certainly bears no resemblance to neutralization as particularly set forth in article 3 of the Hay-Pauncefote treaty.

The recital of the preamble of the Hay-Pauncefote treaty, referring to the "general principle of neutralization established in article 8" of the Clayton-Bulwer treaty, is misleading and ineffectual.

The "general principle" mentioned in said article was the principle of "protection" against unjust seizure, and so forth, in time of peace as well as of war and by the civil power as well as the military power.

No "general principle" of neutralization could be transplanted from article 8 of the Clayton-Bulwer treaty, because no such principle was ever incorporated in that article. Nor is it available in aid of the deficiencies of the Hay-Pauncefote treaty.

In any event, a mere declaration of "general principle" could not take the place of a contractual obligation. It has repeatedly been held by courts of all jurisdictions, national and international, that a "general principle" can not be enforced or made to operate as a legal obligation.

Further, the recital in the preamble could not operate as a contractual stipulation, because it contains no language which even in substance expresses a promise or engagement. A recital by the nature of its function is precluded from operating as an agreement since its office is merely to furnish a preliminary statement, setting forth the facts and circumstances to which the later contractual provisions relate. It is explanatory and interpretive of the construction of the covenants and agreements that follow. Without these later obligations the recital would have no office.

Of course, a recital might be conceived of so definite in detail and so clearly operative in its form of expression that it would constitute not merely a statement of facts, but a promise or agreement also.

But this is not so in the present case.

No intelligent interpretation can be given to the treaty if it be viewed as a guarantee of protection and neutrality by the treaty nations to the owner of the canal. If it was intended for that purpose, it must fail for lack of appropriate language to give it effect.

What, then, is the function of article 3 of the Hay-Pauncefote treaty? What is its efficient purpose? That it has a substantial function and a purpose that can be carried out can not be doubted. As this treaty contains no stipulations binding any State to grant protection and guarantee neutrality to the owner of the canal, it must have some different purpose. That purpose will be stated under the next heading.

THE TRUE FUNCTION OF ARTICLE 3.

If, as plainly appears, this article was not intended to provide a binding guaranty of protection and neutrality to the canal owner, it would not be available to owners generally. If the French Canal Co. should have completed the Panama Canal, the company would not have been entitled to claim protection under its provisions. This brings us to the gist of the matter. The Hay-Pauncefote treaty was not intended to apply to owners generally; it was made for a special purpose, namely, to enable the United States to locate, construct, own, and control an interoceanic canal between the Atlantic and Pacific Oceans, over any route which it might find suitable. It was necessary in order to do away with the restrictions of the Clayton-Bulwer treaty, which prohibited the acquisition of a canal by the Nicaragua route. It was not necessary for any other purpose, but it did contain a gratuitous provision affirmatively consenting to the use of any other route.

Article 3, then, related only to a canal to be owned or controlled by the United States.

Under the Clayton-Bulwer treaty, the United States and Great Britain had agreed to grant protection and guarantee of neutrality to any corporation or individual owner of a canal who would keep the canal open for the use of said nations upon equal terms as between themselves and without unfair discrimination in favor of the commerce of one against the commerce of the other. The acceptance of protection with the conditions attached to it were left to the option of the owner.

Under article 3 of the Hay-Pauncefote treaty, the order of things is reversed. The United States, as owner, offers to all nations who will observe the rules which the United States prescribes, the privilege of using the canal on terms of entire equality. The acceptance of this offer is optional with any such nation.

No such nation is bound by the treaty to guarantee protection and neutrality to the United States as owner, but the privilege to use the canal is conditional upon refraining from violations of the rules which are designed to safeguard that neutrality. The enforcement of neutrality, so far as the other nations are concerned, is dependent upon their forbearance. If they violate the rules of neutrality, the canal may be closed to their vessels and the privilege granted may be canceled.

CONSTRUCTION OF RULE 1.

Legal principles of construction applied:

Rule 1 under settled principles of law can not be construed as applying to the United States. It sets for the offer made by the United States to grant to all nations observing the rules prescribed by the United States the privilege of using the canal.

The term "all nations observing these rules" does not include the United States, but applies to the nations who are required to observe the rules as a condition of the offer.

The following is a copy of the first paragraph of article 3 and of rule 1 of the Hay-Pauncefote treaty:

ART. 3. The United States adopts as the basis of neutralization of such ship canal the following rules substantially as embodied in the convention of Constantinople, signed the 28th day of October, 1888, for the free navigation of the Suez Canal; that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

The rules established by the United States, as owner, are divided into two classes.

Rule 1 offers the option to use the canal.

Rules 2 to 6, inclusive, provide regulations protecting the neutrality of the canal.

Rules 2 to 6, inclusive, regulating neutrality, are all taken substantially from the Suez Canal convention.

Rule 1 is not taken from the Suez Canal convention, but its principal provisions are taken from the Clayton-Bulwer treaty.

The preliminary clause of said article 3 is calculated to give the impression that rule 1 also is taken from the Suez Canal convention, but, in fact, it is not, as comparison will disclose. "Terms of equality" or "equal terms" or "discrimination against a nation or its citizens in respect of charges," and so forth, are not mentioned in the Suez treaty, nor are equivalent words or provisions used.

These rules, as before pointed out, were adopted by the United States independently. Great Britain did not participate in their adoption. They are the regulations of the owner imposed as a condition on those nations to whom the privilege of using the canal is offered. Great Britain may acquire the privilege upon the same terms as other nations to whom the offer is made.

Rule 1 does not offer the use of the canal to "all nations," but only to "all nations observing these rules," made by the owner. The license to use the canal granted by the owner clearly was not intended for the benefit of the owner. It was granted to others, and the owner nation could not logically be included as one of the class to whom the license was offered. It did not require it. It had the right of use independently of the license offered by itself. Such a license applied to the owner would be a nullity. The owner would simply retain its original right.

So, too, the particular language, "the canal shall be free and open," is inappropriate when applied in favor of an owner in possession of its property. Such a provision in its case would be absurd. The clause is obviously designed to assure right of access to the canal to parties who might otherwise be excluded by the owner. These parties are the nations observing the owners' rules. It is to them that all the provisions of rule 1 apply. It is they to whose vessels of war and commerce the canal shall be free and open on terms of entire equality, not the owner. As under the Clayton-Bulwer treaty, so under the present treaty, the owner is left to its inherent rights, so far as its personal use of the canal is concerned. It is only the other nations, who would have no inherent right to the use of the canal, that are provided for by rule 1. It is "any such nation" that is protected from "discrimination in respect of conditions of charges of traffic or otherwise," and it is for such nations that the charges of traffic must be just and reasonable.

The rule 1 is the bill of rights granted by the owner to all nations who shall comply with its conditions. The owner stands neutral between them, preserving equality inter sesse and imposing only the just and equitable charges which are assured to them by the terms granted.

It would require a perverse and distorted ingenuity that could find anything in rule 1 that takes away the ordinary rights of the owner nation to use the canal as it may see fit for its vessels of war and commerce, or compels it to pay for that use by current tolls equal to those paid by strangers when it has already paid once for all for the perpetual use by a sum in gross expended in the purchase and construction of the property.

The provisions in rule 1 prescribing equality and forbidding discrimination in charges were both taken from the Clayton-Bulwer treaty. In that treaty they did not apply to the owner of the canal but only to the nations using the canal who granted protection and guaranteed neutrality to the owner. The owner stood apart, not on the same footing as the nonowning nations. His only duty to them was impartially to maintain equality between them.

The provision for "equality" in rule 1 was taken from article 8 of the earlier treaty. In that treaty the language used was that the canal "shall be open on equal terms" to every State granting protection to the parties owning or constructing the same.

This is in substance the same provision as in rule 1 of the present treaty. The "nations observing the rules" under this treaty are not bound to guarantee neutrality, but they are bound to refrain from any acts violating the rules framed to safeguard neutrality. They stand in substantially the same relation to the owner of the canal as in the Clayton-Bulwer treaty.

The provision thus transplanted into the Hay-Pauncefote treaty must, under ordinary rules of construction, have the same effect as in the treaty of origin. It must apply to the nonowning nations observing the rules of neutrality imposed by the owner, and not to the owner itself.

The same is true of the provision forbidding discrimination. That was transposed from article 5 of the Clayton-Bulwer treaty. The language used in that treaty was, "making unfair discriminations in favor of the commerce of one of the contracting parties over the commerce of the other by imposing unreasonable tolls upon vessels," and so forth.

By that language the discrimination intended was expressly defined as a preference in favor of one of the nonowning nations who were parties to the treaty as against the other. This excluded the owner from the application of the provisions. The language of the same provision, as transplanted into the Hay-Pauncefote treaty, is "discrimination against any nation in conditions of charges." The substance is the same as in the treaty of origin, and the same construction must be retained.

It is a settled rule of law that where a provision is taken in substance from some precedent instrument it shall have the same construction in the new instrument as in the one of origin. Even if the language is changed, and might be construed as having a different meaning from that in the instrument of origin, such construction will not be adopted unless an intention to change the effect clearly appears from the whole context.

This is the rule in case of provisions in statutes taken from earlier statutes (see Sutherland on Statutory Construction, secs. 401, 402, 403):

SEC. 401. A mere change in the words of a revision will not be deemed a change in the law unless it appears that such was the intention. The intent to change the law must be evident and certain; there must be such substantial change as to import such intention, or it must otherwise be manifest from other guides of interpretation, or the difference of phraseology will not be deemed expressive of a different intention.

SEC. 402. A statute provided that the defendant in a criminal case might testify in his own behalf, and that the jury, in judging of his credibility, shall take into consideration the fact that he is the defendant and the nature and enormity of the crime with which he is charged. In a subsequent revision "shall" was changed to "may," but it was held that no change of sense was intended. A statute provided that if any person shall be found on the first day of the week "buying or selling goods, wares, or merchandise, chattels or liquors, or any other kind of property," or engaged in any labor except works of necessity, he should be punished. The statute was amended and the words quoted omitted. It was held that it was not the intent to exclude such buying and selling from the operation of the statute, but to include such business under the head of labor and make it subject to the qualification contained in the exception. An act for the organization of industrial schools provided that the expense of children committed to the schools should be paid by the counties from which they were sent. The law was afterwards revised and this provision omitted, and the revised statute made no express provision for the payment of such expense. It was held, considering the whole statute and its purpose, that there was no intent to change the law in this respect, and the counties were held liable as before. A Connecticut statute of 1849 provided that additional land might be condemned to enlarge a cemetery when the parties could not agree. In the revision of 1875 this was changed to read that the owner of any cemetery who wishes to enlarge its limits by adding land the title to which he can not otherwise acquire may prefer a complaint for liberty to take the same. It was claimed that under the change of phraseology that land could not be condemned if it could be purchased at any price, but the court held that there was no intent to make a substantial change in sense, and that the statute still meant that the land could be condemned if the parties could not agree. The court says: "Whether, when a change is made in the language of a statute, a change of meaning is also intended must depend largely upon the facts and circumstances of each particular case. The change in words may be the effect or result of many causes other than an intent to change the meaning of the law." And the Supreme Court of Maine says: "A change of language in the revision of general statutes does not necessarily, nor even presumptively, indicate a change of legislative will. The desire for greater conciseness or simplicity of language will usually account for the change or omission of words." But where a new clause is added in a revision which plainly changes and qualifies the former meaning of the statute its operation is not affected by the fact that it was introduced in the course of a general revision.

SEC. 403. In the interpretation of reenacted statutes the court will follow the construction which they received when previously in force. The legislature will be presumed to know the effect which such statutes originally had, and by reenactment to intend that they should again have the same effect. The same rule applies to the readoption of a constitutional provision It is not necessary that a statute should be reenacted in identical words in order that the rule may apply. It is sufficient if it is reenacted in substantially the same words. The same principle applies when a statutory provision is taken from a constitutional provision which has been construed. The rule has been held to apply to the reenactment of a statute which has received a practical construction on the part of those who are called upon to execute it.

The reason of the rule applies equally to provisions in contracts taken from previous contracts. The same rule would also apply to treaties.

Certainly there is nothing in the language of the provisions of rule 1 of the Hay-Pauncefote treaty to show that the rights of an owner were specifically considered or were intended to be affected by provisions not originally designed for an owner.

The fact that the provision for equality is void in law and can not be carried out as applied to the owner, negatives the theory that such change in effect of the provision was intended. The same is true as to the provision against discrimination taken from the Clayton-Bulwer treaty.

The same rule applies to provisions in contracts transposed from earlier contracts, particularly if between the same parties and relating to the same or similar subject matter. That is the case here. Both the Clayton-Bulwer treaty and the Hay-Pauncefote treaty were between the same parties and related to the same subject matter.

Applying this doctrine and giving their natural force to the other considerations, it is impossible to hold as matter of law that the provisions in the Hay-Pauncefote treaty requiring equality of treatment and forbidding discrimination in charges apply as between the owner and the nonowning nations.

Not only is such construction contrary to the appropriate significance of the language, but it is harsh and inequitable.

The description "all nations observing these rules" can not be construed to apply to the United States, because, so construed, the provisions requiring "all such nations" to pay equal charges for their vessels of war would be impossible to execute, and void in law as against the United States. This consequence creates a legal presumption that the parties did not intend to include the United States under said description, "all nations observing these rules," but only the nonowning nations to whom, by the provision of rule 1, the United States offered the use of the canal.

If the United States is one of the class comprehended in the term "all nations," then the provisions requiring equality of treatment and forbidding discriminations contained in rule 1 were intended to apply to the owner of the canal. If those provisions require the United States to pay tolls on its own vessels it must pay on its vessels of war as well as upon its vessels of commerce. Rule 1 makes no distinction between the two. The language of the rule is:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any nation in conditions of charges.

Now, it is not a legal nor a metaphysical possibility for the owner to pay tolls to itself on its vessels of war. Being both payer and payee, the two functions would be merged in the single identity and could not be executed. The title and possession of the thing paid must remain the same, no matter what vain ceremonial may be employed. The advocates of repeal concede this. But they add that they do not require that payment shall be made for the vessels of war. This may cut the knot to their satisfaction, but it does not get rid of the logical difficulty in the construction they contend for. They insist upon what they claim is the plain literal sense of the rule. If that furnishes the true guide to interpretation, it should be capable of execution. But it is not. The provisions as applied to vessels of war of the owner is void, not for technical reasons, but because it is impossible to carry it out. The attempt results in a reductio ad absurdum which demonstrates that the construction adopted is false.

It is a principle of the law that courts will avoid a construction which will render part of a provision void. There is a

legal presumption that the parties did not intend it to bear such construction. (See Mills *v.* Dunham, 1 Eng. Ch. R., 590; Lorillard *v.* Clyde, 86 N. Y., 387.)

It follows that the provision requiring equality of treatment in respect to charges could not have been intended to apply as between the owner of the canal and the nonowning nations.

The fundamental principle of rule 1 is "equality." That is its spirit and its substance. The particular details are designed only to give effect to this principle. But if the United States, the owner of the canal, were placed in the same classification with the nonowning nations, and bound down to the same identical literal conditions in respect of payment of tolls, this would create a gross inequality in substance and effect and defeat the purpose of the rule. A construction which would produce this result would involve a self-contradiction in the rule itself such as would be destructive of its fundamental principle and not merely of some single detail of its provisions. From such consequences there necessarily springs up a legal and moral presumption that the construction is wrong, and that the United States was not intended to be placed in the same class or dealt with under the same literal formula with the nonowning nations.

A just consideration of all the circumstances of the case must convince any investigator analyzing the subject with a calm and scientific mind that rule 1 was intended to apply to members of a class where all held the same relation to the subject matter and between whom there was a natural equality of conditions at the outset. The application of the same formula to all under such circumstances would result in entire equality. But if there were introduced into the class another member, holding different relations to the subject matter and burdened with different conditions, the application of the uniform requirements to all might result in serious inequality and grave injustice.

True equality, equality in essence and in spirit, does not mean the same literal rule for all men under all circumstances, the same rule-of-thumb treatment of wholly different cases under wholly different conditions, all under the same artificial formula, but a treatment which administers equity and applies a just equalization to varying conditions as they arise.

Terms of entire equality do not mean that a short man and a tall man shall both be put in a short bed or wear the same-sized clothes. Nor, in the present case, does it mean that a vessel of 50 tons must pay the same gross sum as a vessel of 30,000 tons. Nor, on the other hand, does it mean that if a rate per ton be adopted it must be applied uniformly alike to a vessel of 50 tons and a vessel of 30,000 tons. In the last case, obviously, the small vessel must pay a much higher ton-mile rate than the large vessel, because it takes just as much time, power, operative expense, and wear and tear to operate the locks for the small vessel as for the large one.

The rule of equality does not forbid classification upon an appropriate basis and according to the substantial conditions. It does not forbid distinctions upon substantial grounds.

Difference of treatment of individuals not of the same class, and who do not bear the same substantial and equitable relation to the subject matter, is not discrimination in the sense forbidden by the treaty. If the difference of treatment is appropriate to the difference of relation to the subject matter, then it would be in the nature of adjustment and equalization—not of discrimination. "Discrimination against," as used in rule I, means hostile discrimination, "unfair discrimination." In the Clayton-Bulwer treaty from which the provision was taken the language was "unfair discrimination," and under the doctrine previously stated the same meaning must be given to it in the Hay-Pauncefote treaty.

Throughout the world it is customary for the purpose of fixing freight rates to classify commodities, putting those in the same class which bear approximately the same relation to the transportation service rendered. The rates per ton-mile for different classes are different, but for commodities of the same class they are the same. The difference of rates as between different classes is not and never has been deemed a discrimination, either in the common-sense acceptance of business men or in the judgment of judicial tribunals. In the United States all persons engaged in commerce are accustomed to differentiations established by the Interstate Commerce Commission as matter of justice and equalization; and these differentiations are frequently based not only on a classification according to the nature of respective commodities or the quantity of shipment or the distance of carriage or the speed of transportation or the cost of handling but also on the mere locality of the points from and to which the shipments are made. As, for instance, places between which there is competitive transportation by water and railroad.

The United States, as the owner of the Panama Canal, holds a relation to it different from that of any other nation. It has borne the whole cost, about $400,000,000. In expending this vast sum it has taken great risks that engineering obstacles or other difficulties might develop which would make the undertaking impracticable and that the treasure used would have been spent in vain. The French had this experience. The United States engineers encountered unexpected perils from slides on a great scale. They have not ceased yet, and the extent of the risk can not be known. Time alone can demonstrate what dangers beset the great dam. Above all, the Isthmus is in a region of earthquakes and upheavals. It is not impossible that some great cataclysm might occur, wrecking the canal and raising the levels so that a canal would be forever impossible. In addition are the uncertainties that it will prove a success as the route of an extensive trade.

Who could estimate these risks standing where the United States stood when it commenced to pour its money into the ground?

The value of the service rendered by the United States in assuming this risk is not to be estimated by the actual result looking back 50 years from now, but by the immeasurable possibilities that lay behind the black uncertainties, looking ahead from the beginning. All the insurance companies in the world banded together would not have assumed the risk upon any premiums much less than the total expenditure. The French had wasted nearly one hundred millions, and would have lost everything but for the United States, which paid them forty millions. If the United States had failed there would have been no other United States to pay any salvage.

No personal use which the United States could make of the canal would repay it for that risk alone in a hundred years. If the canal should be destroyed permanently by earthquake all possibility of recoupment would end. The United States can not make such charges as it thinks necessary. It is restricted first, by rule 1, to just and reasonable tolls; second, by the limitations of what the traffic could successfully bear. There is a limit, and a very low limit.

Who can say that the people of the United States, who are the Nation itself, stand on the same footing and in the same relation to the canal and the matter of tolls as other nations?

Will it be "equality" or just and equitable that, after having borne the whole burden and risk of the past and being still burdened with all the risks of the future, the United States should, in addition, bear an equal current burden with those who have stood by, and still stand by, and enjoy the use of the canal at will?

That would not be equality. It would be gross inequality. It is a case that urgently requires equalization.

Thus far only the general equities have been considered. But there is a special equity growing out of the legal relation of an owner to his own property, particularly the owner of a structure which is his own creation, who has produced something which did not exist before.

It is not correct to say that the United States does not pay for its personal use of the canal under the exemption from current tolls. It does not pay tolls currently, but it has already paid in a real sense when it paid the cost of acquiring and creating the canal.

The payment of the cost was a payment in gross for the perpetual use of the property, and included all the use that could be made of it for all time. What an owner pays when he buys property is really paid for the use in perpetuity. The title is only valuable because it gives the right of use. Several ancient forms of deeds were based on an act of English Parliament known as the "statute of uses." That provided that where one person was seized of the land and held the legal title but the right to the use was held by another, the use should become executed under the statute and the title and possession should be transferred to and vest in the person entitled to the use.

What is there in the principle of equality that would require the United States to pay a second time for its personal use of the canal? To do so would violate that principle.

The United States has paid already. It also stands bound in its relation as owner to bear alone all financial deficiencies that may accrue hereafter through inadequacy of income or any other cause, and it must also bear alone the great insurance risk of loss and damage from every possible cause which is permanently attached to the canal.

In addition, for many years to come there will of necessity be a large annual deficit, which, according to the estimates of the canal actuaries and traffic experts, will amount to $7,000,000 per year. The United States must pay this unconditionally. The nonowning nations bear no part of it.

Is the United States Nation to receive no credit for this in applying the rule of equality? Is it to receive no credit for all it has done, all the monies it has paid out, all the liabilities it has sustained and continues to sustain for the canal; labors and payments and liabilities in which the nonowning nations bear no part? Must it, in addition to all these things, pay full current tolls under the same classification with the nonowning nations, who light-heartedly use the canal at will and carry none of the original or permanent burdens? Would that constitute "terms of entire equality"? Would it not, on the other hand, be a grossly "unfair discrimination" against the people of the United States?

What would a court of equity hold if called upon to construe rule 1 and determine its effect? Would it decide according to the letter, to the destruction of the fundamental principle of the rule, or would it decide in harmony with the principle, infusing life into the letter, so that it should bear a meaning consistent with the principle and giving effect to it? It is clear that, upon sound rules of construction, the principle of rule 1 must be sustained, if possible, and conflict between its spirit and its letter avoided. "For the letter killeth, but the spirit giveth life" is true now in morals and in law, as it was 1,900 years ago.

Nor is there difficulty in reconciling the two. The provision is general in terms, not specific. It leaves abundant scope for explanation and interpretation. The language is:

> The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect to the conditions or charges of traffic.

If the description "all nations observing these rules" be interpreted as meaning the nonowning nations, who were required to accept the rules as a condition of the opening of the canal to them, and as not applicable to the United States, which imposed the condition and made the canal free and open, then all alleged conflict and inconsistency between the letter of the provision and its fundamental principle disappear. As applied to the nonowning nations, it affected only parties who stood upon equal footing and in like circumstances at the outset. For them the same identical treatment would be absolute equality. It follows that this construction must be adopted.

In a point already discussed it was shown that, independently of the grounds here considered, the provision could not apply to the United States, the owner nation, because the language, even in its literal sense, could not include the United States under the description "all nations observing these rules." The two points sustain each other. Each confirms and strengthens the other.

A COURT WILL GIVE TO A PROVISION THE MEANING OF WHICH IS PUT IN DOUBT, EITHER BY AMBIGUITY IN THE LANGUAGE OR BY INCONSISTENCIES IN ITS OPERATION, SUCH AN INTERPRETATION AS WILL GIVE IT A REASONABLE AND EQUITABLE EFFECT RATHER THAN ONE THAT IS HARSH AND INEQUITABLE.

Not only do courts apply this doctrine where the meaning is doubtful, but in many cases where the language is clear and results in no inconsistencies they disregard the plain meaning of the words if that produces consequences that are grossly inequitable and unfair. In such cases courts adopt a presumption that the parties did not intend a construction that would have such results. (See Genet *v.* Delaware & Hudson Canal Co., 163 N. Y., 173; Russell *v.* Allerton, 108 N. Y., 288; Smith *v.* Molleson, 143 N. Y., 241.)

In the last case the meaning of the language was plain. There was no room for a presumption that the parties did not understand it in its obvious sense, yet the court refused to give it effect in that sense on the sole ground that it worked results that were harsh and inequitable In Russell *v.* Allerton (108 N. Y., 288) the court said, at page 292:

> We do not think that the effect of the words in the charter party, "charterers to approve the ventilation," was to leave the subject of the ventilation of the ship to the absolute, unreasonable, and wholly arbitrary decision of the charterer. The agreement was entered into in England in July, 1878, and performance was not to be entered upon, at the earliest, until the middle of the following March, and plaintiffs were to send their ship over to Philadelphia to load. It can scarcely be regarded as credible that the owners of the vessel would place in the hands of the charterer the right to arbitrarily and without reason refuse to approve the ventilation of the ship.
>
> To give the words in question the meaning attached to them by the courts below is to place the plaintiffs in a matter purely of business wholly at the mercy of others with whom they were contracting.

(See also Belden *v.* Burke, 72 Hun., 51; U. S. *v.* Central Pacific R. R., 118 U. S., 235; Hobb *v.* McLean, 117 U. S., 567.)

The construction contended for by the advocates of repeal is harsh and inequitable as against the United States. Without adequate reason it disregards the inherent rights of ownership and the extraordinary risks and burdens which the owner of this particular property sustained in creating it and still sustains in caring for it. It virtually attempts to require that the owner pay for the use of the property twice over, once by a sum in gross and again by additional payments for its use equal to payments made for the same use by strangers who bore no part of the cost.

The consequences are such as to give rise to the presumption that such construction was not intended by the parties, especially since the scope and descriptive meaning of the words "all nations observing these rules" is open to grave doubts arising from inferences derived from the context.

The provisions for equality of terms and forbidding discriminations against nations or their citizens in respect of charges do not apply to the owner, nor do they require any payment of tolls for its vessels of commerce or of war. The owner of the Panama Canal has the ordinary rights of owner in its personal use of the canal, but must maintain entire equality of use as between all other nations.

There is nothing in the language of rule 1 to indicate that the particular question of the right of the owner nation to use the canal without payment of tolls was specifically considered when the treaty was negotiated. The provisions of that rule were transposed from the Clayton-Bulwer treaty, and its application to the owner under the Hay-Pauncefote treaty would be fortuitous.

It is a most important circumstance that there is no provision in the treaty, no particular language dealing specifically with the status of the United States as owner of the canal or with its right to use the canal for its own vessels. There is no specific language which shows affirmatively a purpose to take away from the people of the United States their inherent right to use their own property without tolls of any kind. Not only are there no such provisions in the treaty itself, but there was not even any discussion of the matter in the negotiations which resulted in the treaty. We are not left to conjecture on this point. Mr. Choate, our late ambassador, has very earnestly stated that not one word was said about the particular status of the United States as the owner nation or the different footing upon which it stood from other nations who were not owners; that no suggestion was made that the United States should retain its inherent right as owner to use the canal for its own vessels of commerce and of war without tolls, nor was the subject considered at all; and that there was no dissent by any one from the provision of rule 1 or opposition to its adoption.

Mr. Choate was evidently under the impression that his statement confirmed the British claim and corroborated the construction insisted upon by that nation. He is in error.

If it be competent evidence it shows that the subject was not specifically considered and that the minds of the negotiators did not act, and therefore did not meet upon it. They dealt only with the general provision applicable to the nations "observing the rules" prescribed by the United States as a condition of their use of the canal. Even in connection with this general provision they did not discuss its particular effect upon the right of the owner to the personal use of its own property or the question of tolls as it affected that use. These vitally important questions were passed sub silentio.

The faithful and competent diplomatic agents who were intrusted by the United States to protect its interests raised no voice, and so far as appears did not even think of the point. The vital rights, the substantial and highly meritorious equities, the peculiar and unique position of the owner in contradistinction to all other nations did not enter their thoughts. If their minds had conceived the questions at stake in their true relations, it is impossible that they should not have discussed them. As it was, they left them untouched in the negotiations and made no specific provision dealing with them one way or the other in the treaty itself.

The important rights of the United States were left, blindly and ignorantly, to the hazard of a general provision transplanted from the earlier Clayton-Bulwer treaty, which in the treaty of origin did not apply to and was not intended to affect the right of an owner in the personal use of his own property without charge. As incorporated in the Hay-Pauncefote treaty there was no substantial change in the language used, no phraseology which imparted a clear intention to change the effect of the provision. The testimony of Mr. Choate shows that there was no conscious purpose to make any change, and that the provision, substantially unchanged, was left to operate according to the ordinary rule of construction. Certainly Mr. Choate's testimony does not strengthen the position of the advocates of repeal. Here is a general provision plainly and admittedly applying to nonowning nations. Its application to the owner is not admitted and is, at the very least, open to doubt. Such application would involve incongruities. A contruction applying it to the owner is not necessary to give it a consistent effect and adequate purpose. Such construction would derogate from the

natural and ordinary rights of an owner and result in hardship and gross inequality inconsistent with the relative position and natural rights of the owner and nonowning nation.

A court would refuse to give such effect to a general provision under the circumstances.

Although the vessels of commerce and of war of the United States are exempted from tolls, the burden of the loss would be borne by the Nation and its people and would not fall upon the other nations or their subjects. The United States would really pay the tolls in another form.

The nonowning nations would be protected from having the burden cast upon them in the form of excessive charges by the provision that charges should be just and equitable. In any event, the United States could not fix the tolls at a rate higher than would be "just and equitable." They would be entitled to this full rate whether their own vessels paid tolls or not. They could demand no more from the nonowning nations when their own vessels were exempted from payment.

The United States therefore would not save anything by exemption. They would gain only by the increased use of the canal by their own vessels and by the consequent growth of commerce.

The same result would follow as from the abolition of toll roads and their transformation into public highways in the past. Travel increased enormously on the highways and property increased in value. The people paid for the use of the highways either in taxes for their maintenance or by their own labor, spent in work on them. In the case of the canal the people of the United States would have to pay taxes to make up any deficiency, and no nonowning nation would be called upon to take up the burden.

Even under the construction contended for by the advocates of repeal, taking the description "all nations" as including the owner nation, the United States, the exemption of vessels of commerce from tolls would not be a real exemption. It would be a subsidy. The United States would in fact pay the tolls.

The loss could not be thrown on nonowning nations, because the provision granting them the right to use the canal upon payment of just and equitable charges would forbid.

The question is not a question of substance—not a real question. It is merely a question of form, of ceremony, of pretense.

As before stated, no injury can result to Great Britain. The United States by releasing tolls on its own vessels in fact and in substance pays them by foregoing them. The result is precisely the same as if they had been formally paid and the amount turned back in a subsidy to the vessel making the payment. By foregoing the payment the United States does the same thing. The omission of the full formula can have no real effect, no substantial results. The situation is the natural result of the relation of an owner to his own property.

The United States might safely leave it to the courts of equity of England to determine as arbitrators whether an award should be made enjoining and prohibiting the United States from foregoing tolls on its vessels of commerce; the decision to be arrived at by the principles governing English courts of equity upon applications for injunction.

It has been conceded by the advocates of repeal that the United States would have the right to give a subsidy to the amount of the tolls or more, provided the amount were actually paid over to vessel owners.

No court of equity would grant an injunction if the same thing were accomplished by a single credit instead of by a double transfer of money from the Government to the vessel owner and back again.

The relief would be refused on two grounds:

First. That giving the subsidy by a single credit was simply the application of the principle which lies at the bottom of the doctrine of equitable set-off, namely, that the law will not require a man to do a vain and needless thing that profits nobody and the omission of which can injure nobody. Courts of equity look at the substance of things, not at the mere form. If the President had done the American people the justice to submit their case to an English court of equity as arbitrator they could rest assured that no injunction would ever be granted against them. The court would treat the whole controversy as a tempest in a teapot and refuse to grant any relief.

Second. The court would also refuse relief on the grounds that no substantial injury had resulted or could result to Great Britain from the payment of a subsidy by one credit instead of by a cash payment and repayment.

It is a fundamental rule of courts of equity that they will refuse relief where substantial injury is not shown. It has been repeatedly declared by them that they do not sit to pass upon mere academic questions where no substantial interests are at stake and no one has suffered or will suffer loss, but to redress the wrongs that bring injury and suffering in their train.

The real fact is that all the gentlemen, zealous friends of repeal—who so stigmatize those, their dishonorable countrymen, who humbly ask that the country be allowed its day in court, where its cause can be heard and justly decided, and who proclaim such high standards of honor of their own and are so solicitous for the honor of their wretched country—would not be so anxious for a repeal if they knew that a bill for a cash subsidy equaling the toll charges would be passed at once. Even though such a bill would meet their objections and relieve their sensitive honor from the extra and unusual duty which it is now doing, yet the exemption from tolls would remain, and that is the one particular thing they do not want—why, we need not inquire. They do not want exemption, even honorable exemption, least of all honorable exemption, because then their last refuge of hyperbole and exaggerated and inapt rhetoric would be destroyed.

What they are now doing is to attempt to convince people that the shadow is the substance, and, like all people who are in the wrong, they are attacking the character and motives of their opponents by way of raising dust to cloud the substance of the issue. They least of all want arbitration, because arbitration would lay the dust cloud once and for all.

The Final Point.

THE REAL OBLIGATION ON THE UNITED STATES, THE ONLY OBLIGATION THAT CAN BE ENFORCED AGAINST THE UNITED STATES AS OWNER, IN RESPECT TO CHARGES, IS THAT CHARGES SHALL BE JUST AND EQUITABLE.

Under this point it can be made very clear that even with toll exemptions the United States will still be bearing its full and honest share of the current burdens of the canal, and will be paying tolls for its vessels of commerce in as real a sense as if the owners paid the money into the treasury of the canal.

No men, not even the "dishonorable" ones, dispute that canal charges must be "just and equitable." They must not be arbitrary and oppressive, designed to get the last dollar possible from the traffic. The rates must be estimated and assessed upon some definite and just principle by competent actuaries or other experts.

A budget of estimates for each year should be prepared, which should include the amounts necessary for maintenance, upkeep, necessary alterations, minor betterments required by traffic, interest and other fixed charges, a moderate reserve to provide a sinking fund for extraordinary repairs, such as slides, damages by earthquake, and so forth. And in addition to all, a modest dividend return to compensate the United States not only for the great work it organized and accomplished but for the formidable unknown risks it took and which it must continue to bear. The whole work may yet be destroyed by some natural convulsion. The United States must bear the risk, just as it would bear the entire loss if it came.

But whatever basis be fixed the amount of that budget will constitute the fair total amount. For some years the United States will feel constrained voluntarily to forego some just items of the budget, but the right to them should be established in principle, even if waived from time to time by the United States, in order not to place a greater burden on commerce than it should fairly be asked to bear.

The budget of estimates being arrived at, the total amount should be apportioned among all the vessels that will use the canal, whether vessels of war or vessels of commerce, according to the best estimate that can be made up, the apportionment to be made upon some fair and equalizing system of classification, so that each vessel shall pay its ratable tax and its just share of the budget total, without unfair discrimination against any vessel or owner. If there were unfair discriminations, the charges could not be equitable, and certainly would not be just. United States vessels of war and commerce should be taken into account in the apportionment.

The United States will thus have complied in a spirit of largest equity and honor with the fundamental requirement of the treaty that rates shall be just and equitable.

We now come to the secondary and relatively unimportant question, Who may pay the tax for vessels? Must it be the private owners and no one else, or may others give aid by paying the tax for them?

The treaty does not prescribe who may pay the tax. But it does not follow that because the treaty does not confer any rights in this matter that they do not exist.

A treaty is a contract between nations, and a contract is designed to regulate a given subject matter in whole or in part. Back of the contract lies the subject matter. Contracts rarely deal with every detail of any subject matter. They are usually confined to a few important details. As to all details not regulated by the contract, the rights of the parties remain as if the contract had never been made. There being no provision in the treaty to prohibit subsidies, the parties retain their ordinary rights in this respect without limitation. Any person or

nation may provide the funds and make the payments—any chamber of commerce, any city, or State, or other body.

There is nothing to prevent Great Britain from paying the canal charges for its vessels of commerce. This is merely aid to its own vessels, not discrimination against American vessels or citizens in the enjoyment of the canal. It gives its vessels a competitive advantage in carrying on commerce through the canal, but the advantage does not arise from any discrimination in "respect of conditions of charges of traffic."

The charges are paid at the full equal rate, and under the treaty no nation has the right to inquire by whom they are paid. Nor would their payment by Great Britain entail any obligation on its part to give equal aid to American vessels by paying their canal tolls.

The next question is, How must they be paid? The mode is immaterial. Every obligation, either under the treaty or independent of it, will be satisfied, provided that there shall be a real charge against each vessel and that it be paid by some one.

England, of course, not being the owner will pay the tolls by bill of exchange or other actual transfer of property.

But the United States can not do this in the same manner, since the payment and receipt of payment would be merged and there could be no change of title or possession. But the United States can, nevertheless, do what in a court of equity and in truth would in substance and effect constitute a real payment, so far as the canal and its budget are affected and so far as other nations are affected. It can, as between the Nation and its shipowners, release the latter from payment, since the United States is the owner to whom payment must be made; but as between the United States and foreign nations, and as between the United States and the canal fund which it maintains, the Nation must make good the deficiency in the apportioned share of budget estimates from which the released owners have been exempted. This it must necessarily do, both as a matter of treaty obligation and as a matter of business necessity.

The share of the vessels of other nations can not be increased, and the United States must transfer to the canal fund whatever amount is needed.

It may get something back in dividends, just as England does from the Suez Canal. But if not, it must stand the entire deficiency just the same.

How is Great Britain prejudiced by such a payment? What concern of hers is it that vessel owners do not pay for themselves? How can it matter, so long as the money goes into the canal fund?

The exemption from tolls is not a real exemption. It is simply a novation by which the United States substitutes itself in the place of the vessel owner and assumes and pays his obligation to the canal fund.

As between the United States and its citizen there has been exemption; as between the citizen and the canal fund there has been no exemption, for the share of his vessel has been paid for him.

As between the citizen and the citizens of other nations there has been no breach of the rule of equality, for just as the United States has borne the obligations of its own citizens so Great Britain is free to bear the tolls for its own citizens, by paying the money into the canal treasury, either directly or by a general subsidy.

Many British vessels that will use the canal will be heavily subsidized. Many British vessels that use the Suez Canal are subsidized in amounts greater than the tolls, and Great Britain receives back from the canal company, in which it holds a majority of stock, dividends to an amount in excess of the subsidies paid out. No complaint has ever been made by other nations either against the subsidies or the recouping dividends.

The United States under the treaty has the right to permit a company to build the canal and could have acquired all the stock. In that case there could be no doubt that it would have the right to pay the tolls for its vessels to the company and to receive back from the canal in dividends whatever profits were earned. The effect upon the canal fund and foreign nations would have been precisely the same as it is now under toll exemption.

The treaty makes no distinction between the right to build directly or to aid a corporation to build. It certainly did not intend to impose more stringent restrictions on the United States if it built the canal itself than if it had aided a corporation to build it.

The advocates of repeal have talked about the spirit of the treaty; but when they are asked to state the precise grounds for the faith that is in them, they point to the letter of the treaty and insist upon that in the most exaggerated sense.

The spirit of the treaty is equality; not equality in form, but equality in substance and in truth. This they care nothing for. They will have none of it. They want Barrabas. What they really complain of is not that the tolls for the United States vessels will not be fully and fairly borne, but that the vessels will not be compelled to bear them as a penalty which can not be transferred.

If we make up a just and equitable budget upon a just principle, and apportion to the vessels of other nations only their just and equal share thereof, we shall have discharged our whole duty to England and the world, whether legally or morally and whether under the treaty or under the broadest obligations of right and justice independently of the treaty.

This is what this Government notified Great Britain would be done under the policy of toll exemption—before the present administration took office.

In the face of the clear-eyed truth, how petty seem the outcries about dishonor and the reflections upon the honesty of the Nation. There will come the time when the real aspect of this truth shall be known, and then there will be men, gentlemen of very high honor indeed, who will regret that they made their honor cheap by vaunting it against the truth and calling that truth dishonor.

National Constitutional Prohibition.

EXTENSION OF REMARKS

OF

HON. RICHMOND P. HOBSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

May 1, 1914.

The following is the amended and final form of the joint resolution (H. J. Res. 277) proposing an amendment to the Constitution of the United States:

Whereas exact scientific research has demonstrated that alcohol is a narcotic poison, destructive and degenerating to the human organism, and that its distribution as a beverage or contained in foods lays a staggering economic burden upon the shoulders of the people, lowers to an appalling degree the average standard of character of our citizenship, thereby undermining the public morals and the foundation of free institutions, produces widespread crime, pauperism, and insanity, inflicts disease and untimely death upon hundreds of thousands of citizens and blights with degeneracy their children unborn, threatening the future integrity and the very life of the Nation: Therefore be it

* * * * * * * *

"SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof, and exportation for sale thereof, are forever prohibited.

"SEC. 2. The Congress, or the States within their respective jurisdictions, shall have power to enforce this article by all needful legislation."

Mr. HOBSON. Mr. Speaker, under leave to print I will put into the RECORD a copy of a speech of mine made before the subcommittee of the Judiciary Committee of the Senate on Senate joint resolution 88, identical with House joint resolution 168:

"THE GREAT DESTROYER."

In February, 1911, I took occasion to put into the CONGRESSIONAL RECORD, in the form of a speech called "The Great Destroyer," the results of an investigation purely scientific and disinterested, employing rigid scientific methods. These results led scientifically to the conclusion that the alcohol disease in the Nation is organic and must be treated by organic methods. An organic method is a method that reaches the organs and the tissues which, for a Nation, are the people themselves. Taking the truth about alcohol to the people themselves is the first part and the basis of organic treatment. Following that, and in conjunction with it, the second part calls for prohibition of the traffic, to stop its spread and contagion, prohibition to be put into the organic law, where it could rest for long periods of time, allowing the slow, cumulative process of cure to take place; in other words, national prohibition in the Constitution of the United States.

With the cooperation of some friends I have sent out over 2,000,000 copies of the "Great destroyer" speech systematically into all the States and Territories, and I have written probably a million and a half letters on the subject, helping to lay the foundations. During the last three years, by lectures and addresses, I have taken opportunity to lay this matter before temperance and prohibition forces, the religious, civic, and uplift

forces of the Nation, at National and State conventions, and local meetings.

STATEMENT OF HON. RICHMOND PEARSON HOBSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ALABAMA.

Mr. HOBSON. Mr. Chairman and gentlemen of the committee, we feel very grateful to the committee for the courtesies extended to us.

METHODS OF THE LIQUOR INTERESTS.

I desire to call your attention at the outset to the fact that the liquor interests have not appeared here. Those who are to be affected directly by this legislation have not appeared. They did not appear in the House hearings, and they have not appeared in the Senate hearings. We are anxious that they should appear and submit their case in full, that they should meet us in the open, before the bar of judgment of this committee and the House committee; but they have not. All of those who have appeared in opposition have declared at the outset that they were not interested in the business in a financial way. No one imagines for a moment that the liquor interests, with millions of dollars of investment at stake, are not active in opposition to this resolution. On the contrary, their political activities are greater than was known before, but their ways being dark they shun the light. Instead of coming out in the open and following the course of honorable procedure before the duly constituted committee agencies, depending on the justice of their cause, they have established a "Protective Bureau" under the National Wholesale Liquor Dealers' Association to systematically develop their devious, underground methods of influencing public opinion and public officials. The headquarters of this national association at Cincinnati has recently called on all distillers, manufacturers, dealers, importers, brokers, and allied trades to pay a monthly tax into the protection bureau—1 cent per bushel on mash; 5 cents per barrel on whisky and rum, cordial and wines; 10 cents per barrel on brandy; dealers and importers paying one-tenth of 1 per cent on their sales, brokers 1 cent per barrel, and so forth; in all to net $5,000,000 per year.

THE PROCLAMATION OF MAINE.

A hard fight was fought in Maine in the summer of 1911, ending in the election of September, to retain prohibition in the State's constitution. On the eve of that election Mrs. L. M. N. Stevens, president of the National Women's Christian Temperance Union, one of the greatest women America has ever produced, issued a proclamation announcing that whether they won in Maine or lost, from the battle field of Maine she would advance with all the forces at her command, and that she invited all other temperance, prohibition, uplift, and patriotic forces to join her, to bring about national constitutional prohibition.

THE CONVENTION OF COLUMBUS, OHIO.

During the second week in November, 1913, a convention was held at Columbus, Ohio, the import of which was not fully appreciated at the time, for the reason that the liquor dealers and the cosmopolitan press in sympathy with them in America evidently did not wish it to be thoroughly appreciated by the people. It was the first time that practically all of the nationally organized uplift forces ever met together in the history of this country or in the history of any country. Those in attendance at that convention included official representatives of all the churches of all denominations, including the Mormon, as well as the Catholic and Protestant Churches, representatives of the Sunday schools, the Anti-Saloon League, the Woman's Christian Temperance Union, the Christian Endeavor Society, the Epworth League, and so forth. I could go on and enumerate all of them. There were 97 national organizations representing thousands and thousands of State and local organizations. They very clearly represented the conscience of the Nation. I do not say exclusively, but, on the whole, they represented the conscience of the Nation—the religious, moral, uplift forces of the whole Nation—they represented more than a majority of the American people.

Fifty-five per cent of all the American people to-day live under prohibition law; 71½ per cent of all the area of continental United States is under prohibition law, so I do not think I am wide of the mark when I say they represented a majority of the American people.

After due deliberation, the convention decided unanimously upon the two parts of organic treatment, to go systematically to the American people, to take the truth about alcohol, and to insist on national constitutional prohibition.

Being an organic question, the people have a right to settle it themselves. It is within the power of this Congress to wash its hands of the whole question by settling it right.

A QUESTION OF REFERENDUM.

I desire next to call your attention to the fact that the resolution is purely an act of referendum. It does not commit a Senator or Member of Congress to the merits or the wisdom of constitutional prohibition as an ultimate policy; it simply commits him to the principle of letting the people themselves pass on an organic question when they request to be allowed to do so.

Now, in States that have adopted the referendum the highest percentages of voters required to secure a referendum is 5 per cent. I repeat that a majority of the voters of the United States are represented in this official request, and the proportion is increasing every day. In as short a time as has elapsed since that convention last November there have been more than 3,000,000 petitions sent to Congress for this resolution, and that is only a beginning.

The question is, Ought the people to be allowed to decide the question when a majority of them have requested it?

THE GREAT COMMITTEE.

In order to proceed in regular form and comply with the spirit of our institutions and to manifest their great respect for Congress, the Anti-Saloon League convention, that was meeting jointly with the representatives of these other organizations, authorized a committee of a thousand men and the National Woman's Christian Temperance Union authorized a similar committee of women to memoralize Congress. They met in Washington on the 10th of December. The men's committee alone had increased to nearly 3,000, coming from every State and Territory in the Union, representing the strongest men in their respective communities.

They respectfully memorialized both Houses of Congress to pass the joint resolutions, H. J. Res. 168 and S. J. Res. 88, which are now before this subcommittee.

I submit that for such a question, submitted in this way, the subcommittee ought to, at the least, let the full committee pass on it. I submit that the full committee, at the least, ought to allow the Senate itself to pass upon it. Then I submit to the Senate and the House that the Members of Congress ought to allow the self-governing American people to pass upon it. No matter what objections may be raised, under the spirit of our institutions the people of the several States are competent to decide and have a right to the opportunity to decide on the merits of the question.

THE POWER TO AMEND THE CONSTITUTION.

Senator DILLINGHAM referred to the scope of the amendments that have been made thus far to the Constitution. Senator SHEPPARD was telling me a few minutes later that a criticism came to him from Texas, denying the right to amend the Constitution to abridge the rights originally reserved by the States. The very contrary is the spirit of the Constitution. It can not be conceded for an instant that the people who made the Constitution can not change it. The very conception makes the creature greater than the creator. Our forefathers showed their wisdom in providing for the most unlimited power of amendments to the Constitution. Article V of the Constitution, as pointed out before, places but one limitation, namely, "that no State, without its consent, shall be deprived of its equal suffrage in the Senate." The States now have the right to make any changes except to change the representation of the several States in the United States Senate. The States could repeal Article V and remove this limitation. Any new powers, if necessary to promote the general welfare, could be delegated to the Federal Government. But there are no new powers delegated in this amendment. On the contrary, it makes a surrender of power that the Federal Government now has—that is, the taxing power—not the whole of that power, but that part that deals with liquor. It is giving back to the States part of the power they originally conferred on the Federal Government.

The CHAIRMAN. Saying that on this one thing they shall tax no further.

Mr. HOBSON. Yes. The Federal Government can tax liquor now. After the adoption of the amendment they can tax it no further. The States can license liquor now, but when they do they relinquish a part of their police power. After the adoption of the amendment they would retain in full all their police powers, and each State would then cooperate with all other States for the exercise of that power. The invasion by liquor of one State by using another State as a base would end. A State never did possess a natural, inherent right to authorize harm and undermine morals and health, even of its own people, much less the people of other States.

That brings us at the outset to the question Senator DILLINGHAM raised a few moments ago, whether the adoption of the amendment would involve an encroachment on the police power of the States.

THE POLICE POWER OF THE STATES.

What is the police power of the States? The police power of the Federal Government or the State—any sovereign State—has been defined. Take the definition given by Blackstone, which is:

> The due regulation and domestic order of the Kingdom, whereby the inhabitants of a State, like members of a well-governed family, are bound to conform their general behavior to the rules of propriety, of neighborhood and good manners, and to be decent, industrious, and inoffensive in their respective stations.

Would this amendment interfere with any State carrying on the promotion of its domestic order?

Or you can take the definition in another form, in which it is given by Mr. Tiedeman, when he says:

> The object of government is to impose that degree of restraint upon human actions which is necessary to a uniform, reasonable enjoyment of private rights. The power of the government to impose this restraint is called the police power.

Does this amendment take away from any State the power to impose that restraint?

Let us analyze the effect of the taxing power. My point is that when this proposed amendment would stop a citizen of the State from manufacturing and selling liquor there would be no extension of Federal authority. The Federal Government in exercising the taxing power can now prevent a citizen of a State from manufacturing or selling liquor, no matter how plenary the power granted by the State may be.

In the case of the "phossy jaw" bill Congress exercised the taxing power to completely destroy the phosphorus process of manufacture, and no State could prevent it. Authorizing the manufacture and sale of liquor is not a right. It is not a natural right of a citizen. It is not a natural right of a State, neither a reserved right nor a right under the exercise of the police power. The police power exists to promote the domestic tranquillity, promote good order, promote the general welfare. The manufacture and sale of intoxicating liquors operate to oppose these ends. The Federal Government would invade the police power of the State if the Federal Government should forbid a State to prohibit the manufacture and sale of liquor.

Senator DILLINGHAM. Under the restrictive power of the State in the exercise of its police power, you do not deny but that it would have the entire right to prohibit the manufacture and sale, and even the use?

Mr. HOBSON. Yes; and the State will still have that right, even more complete after this amendment is adopted.

Whenever a State authorizes the manufacture and sale of intoxicating liquor it weakens, infringes, and curtails its own exercise of the police power.

Completely stopping the manufacture and sale of intoxicating liquors would strengthen the police powers on all the States and return these powers to their original completeness.

When you pass this Federal amendment you make the Federal Government cease to be an ally of liquor. It is not supposed to be an ally now, in theory, but in effect it is. In adopting this amendment you make the Federal Government cease to be an ally of these outlaws who are blighting the police power of the States.

Under the taxing power the Government to-day practically throws its protecting wing about the outlaws.

Senator DILLINGHAM. In our State they do hold that the possession of the receipt for the tax paid is prima facie evidence of a purpose to sell liquor contrary to the law.

Mr. HOBSON. The Federal Government has done all it could to prevent the officers of the law in the States from getting the names of these outlaws. Take New York City. They regulate there about ten or twelve thousand saloons. There are some 5,000 additional Government tax receipts, held for the purpose of protecting the illegal sale. Or take it in the State of New Jersey, where there are some 9,000 saloons regulated by the State and from 3,000 to 4,000 more Government tax receipts; so it goes throughout the country. Similarly protecting tax receipts are issued in prohibition territory where all manufacture and sale are illegal. The Federal Government to-day, instead of being the ally of a sovereign State to execute its police power, is the ally of the outlaws who undertake to put a blight on the police power.

But I will come back to that after I have discussed the nature of this traffic, and after we come to know the nature of the traffic you will find that every principle of law stands for its being suppressed by all the powers—local, State, and national.

Senator DILLINGHAM. I am not troubled on that question at all.

Mr. HOBSON. I will go through that briefly and put that in the record.

The CHAIRMAN. I think all the members of the committee are pretty well satisfied on that. We do not want to interrupt your argument, however.

Mr. HOBSON. I do not mind your interruptions at all.

The point of the argument here is this: Unless there is a consideration of a fundamental nature to the contrary, the Congress ought to grant this request, coming from the conscience of the Nation and from a majority of the people, to allow the people of the several States to pass on this great question involving their highest welfare. From the questions and remarks of the chairman and Senator DILLINGHAM, it appears advisable to take up here, before discussing the merits proper of the resolution, the whole question of rights and powers involved, to see if this question contains any serious consideration against the adoption of the resolution, although this will entail some repetition.

RIGHTS AND POWERS INVOLVED.

1. The Federal Government, under the taxing power, now possesses plenary power over the liquor question in the several States. The effect of the ratification of this amendment would be that the Federal Government would surrender this part of the taxing power originally granted to it by the States. There would be no enlargement of the power of the Federal Government, but a contraction of that power.

2. In the adoption of the amendment the States would secure the cooperation of the Federal Government, an additional instrumentality, in the carrying out of their own will, determined by not less than three-fourths of their whole number. Each State has a right under its police power to prohibit the sale of intoxicating liquors, and this right would be strengthened, and not weakened; but no State has a right under the police power to authorize that which, by court decisions and common knowledge, opposes the object for which the police power exists. The result of this amendment would be to strengthen, and not weaken, the police power of the several States, and promote the attainment, and not the failure, of the purposes for which the police power exists.

NATURE OF THE SALOON.

3. In Mugler *v.* Kansas (123 U. S., 205) the Supreme Court of the United States says:

> It is not necessary, for the sake of justifying the State legislation now under consideration, to array the appalling statistics of misery, pauperism, and crime which have their origin in the use or abuse of ardent spirits, for we can not shut out of view the facts, within the knowledge of all, that the public health, the public morals, and the public safety may be endangered by the general use of intoxicating drinks; nor the fact established by statistics accessible to everyone that the idleness, disorder, pauperism, and crime existing in the country are in some degree at least traceable to this evil.

In Crowley *v.* Christenson (137 U. S., 86) the Supreme Court of the United States, speaking of the saloon, said:

> As it is a business attended with danger to the community, it may, as already said, be entirely prohibited.

In Thurlow *v.* Commonwealth (5 Howard, 304) the Supreme Court of the United States said:

> The train of evils which marks the progress of intemperance is too obvious to require comment. It brings with it degradation of character, impairs the moral and physical energies, wastes the health, increases the number of paupers and criminals, undermines the morals, and sinks its victims to the lowest depths of vice and profligacy.

In Goddard *v.* President (15 Ill., 589) the Supreme Court of Illinois says:

> It is not sufficient to say that liquors are property, and their sale is as much secured as that of any other property. Their sale for use as a common beverage and tippling is hurtful and injurious to the public morals, good order, and well-being of society. Playing cards and other gaming instruments, and obscene books, prints, and pictures are likewise property, and the same right of sale might as justly be claimed, yet no complaint is made that even the importation as well as the sale is forbidden. When we defend the sale of liquor for the purpose of tippling we surely draw our arguments from our appetites and not our reason, observation, and experience. We may carefully protect the public morals and the profligate from the evils of gaming, horse racing, cockfighting; from the obscenity of prints and pictures; from horses and exhibitions of mountebanks and ropedancers; from the offensive smell of useful trades and hogpens; from the manufacture and exhibition of fireworks and squibs; from rogues, idlers, vagabonds, and vagrants; and from dangers of pestilence, contagion, and gunpowder; yet, according to the doctrine contended for, this right to vend a slow and sure poison as a common beverage must remain intact and not amenable to police regulations for its suppression, although all the other evils together will not destroy a tithe of the number of human lives nor produce more moral degradation, or suffering, wretchedness, and misery in the social relations of society, or pauperism, vagrancy, and crime in the political community, or pecuniary destitution of individuals and families than will the constitutionally protected right of destroying our neighbors and fellows for the selfish end of our own individual private gain. I am utterly incapable of so regarding it as above all the claims and interests of society, the peace and welfare of families, and especially above the police powers of government, and shall never be brought to acknowledge the sacredness and inviolability of its rights until I shall be able to forget all that I have seen, observed, known, and experienced of its destructiveness of all that is estimable upon earth. Viewing the great and irreparable mischief growing out of this practice, I am not prepared to say that another nuisance may not be added to the list, and that under the police powers society may find protection from its blighting curse.

Judge Cooley says of the liquor traffic:

The business of manufacturing and selling liquor is one that affects the public interests in many ways and leads to many disorders. It has a tendency to increase pauperism and crime. It renders a large force of peace officers essential, and it adds to the expense of the courts and of nearly all branches of civil administration.

Justice Bradley, of the United States Supreme Court, says:

Licenses may be properly required in the pursuit of many professions and avocations, which require peculiar skill and training or supervision for the public welfare. The profession or avocation is open to all alike who will prepare themselves with the requisite qualifications or give the requisite security for preserving public order. This is in harmony with the general proposition that the ordinary pursuits of life, forming the greater per cent of the industrial pursuits, are and ought to be free and open to all, subject only to such general regulations, applying equally to all, as the general good may demand.

All such regulations are entirely competent for the legislature to make and are in no sense an abridgement of the equal rights of citizens. But a license to do that which is odius and agaiust common right is necessarily an outrage upon the equal rights of citizens.

In Pearson *v.* International Distillery (72 Iowa, 348) the court said:

The evils flowing from intoxicating liquors arise wholly from its use as a beverage. But this use is widespread, reaching all classes of the people and both sexes and every age. No condition of life is wholly exempt therefrom. An enumeration of all the evils arising from the use of intoxicating liquors need not be attempted. They are numerous and affect the people collectively and individually. Idleness, poverty, pauperism, crime, insanity, disease, and the destruction of human life follow indulgence in the habit of using intoxicating drinks. Millions of our fellow countrymen are addicted to this habit, and of these millions become drunkards. Homes are broken up and domestic peace is destroyed by drunkenness.

The prisons, almshouses, and institutions for the care of orphanage, insanity, and affliction are largely filled by the vice. These are evils, but not all of the evils, of the alcohol habit, affecting the social conditions of the people and their comfort and good morals. But other evils attending the use of intoxicating beverages affect the State and its government. It is the prolific source of crime, pauperism, and insanity, and thereby entails taxation to defray the expenses of the conviction and punishment of criminals and the support of almshouses, asylums, and hospitals. It deteriorates mentally and physically the human stock, rendering its victims, as well as their progeny, less capable of bearing arms in defense of their country and of discharging other duties of citizens. Soldiers are unfitted for duty by it, and thereby battles have been lost and the liberty of nations, if not lost, has been imperiled. Tradition perpetuates, if history does not fully record, the evils which have flowed from the alcohol habit of officers and soldiers in our Armies. Washington struggled with difficulties occasioned by it, and other commanders of later days have had a like experience, while patriotic soldiers have suffered on account of inebriety of officers in all branches of the military service. The appetite for strong drink, possessed by so many of our countrymen, demands constant gratification and the expenditure therefor of enormous sums of money, thus creating a business—the keeping of saloons and dramshops—in which are employed an immense number of men. Their business and their relations with the idle and dangerous classes of society give them great influence in public affairs. The municipal government of the cities, often burdened with debts and robbed by unfaithful and mercenary officers in all departments, gives evidence of the direction in which this influence is exerted. Thinking men of the day largely concur in the opinion that the influence of the saloon and the idleness and vice of the multitude of its clientage united constitute the great peril of American institutions. We think none will deny that nothing but evil flows from this source.

THE QUESTION OF THE RIGHT TO SELL LIQUOR.

The Supreme Court of Indiana, quoting from Sherlock *v.* Stuart (96 Mich., 193) and Crowley *v.* Christenson (137 U. S., 86), says:

No one possesses an inalienable or constitutional right to keep a saloon for the sale of intoxicating liquor; to keep a saloon for the sale of intoxicating liquor is not a natural right to pursue an ordinary calling; there is no inherent right in a citizen to thus sell intoxicating liquors by retail; it is not a privilege of a citizen of the State or of the United States.

This compound decision means:

First. That the sale of intoxicating liquor is not a constitutional right.

Second. That it is not an inalienable right.

Third. That it is not an inherent right.

Fourth. That it is not a natural right to pursue an ordinary calling.

Fifth. That it is not the privilege of a citizen of the State.

Sixth. That it is not the privilege of a citizen of the United States.

"No one possesses a constitutional right to keep a saloon for the sale of intoxicating liquor." This language has been used by the Supreme Court of the United States and has been used by the Supreme Court of Kansas, the Supreme Court of Michigan, and the Supreme Court of Indiana.

"There is no inherent right in a citizen to thus sell intoxicating liquors." The United States Supreme Court has used this expression 12 different times. Similar declarations have been made by the supreme courts of practically all the States, among which may be mentioned the following:

Indiana, Illinois, South Carolina, Idaho, Colorado, Michigan, Louisiana, Oregon, Missouri, Iowa, Virginia, Alabama, South Dakota, Arkansas, Delaware, Kansas, Georgia, Pennsylvania, New York, North Carolina, New Jersey, Maryland, and the District of Columbia.

Take as an illustration the case of Harrison *v.* People (222 Ill., 150). The Supreme Court of Illinois said:

It must be conceded that the business of keeping a saloon or dramshop is one which no citizen has a natural or inherent right to pursue.

These decisions all show that no natural rights of any citizen would be invaded. On the contrary, since, as the courts have decided, the saloon is dangerous to the public, the suppression of the saloon will protect and secure the natural rights of a vast numbers of citizens, which rights are now infringed by the saloon.

No State has a reserved right or a right under its police power to authorize the sale of intoxicating liquors. In State *v.* Mississippi (101 U. S., 814) the United States Supreme Court says:

No legislature can bargain away the public health or the public morals. The people themselves can not do it, much less their servants. Government is organized with a view to their preservation and can not divest itself of the power to provide for them.

As cited above, Justice Bradley, of the United States Supreme Court, said:

* * * A license to do that which is odious and against common right is necessarily an outrage upon the equal rights of citizens.

In Boston Beer Co. *v.* Massachusetts (97 U. S., 989) the United States Supreme Court, speaking of the police power, said:

Whatever differences of opinion may exist as to the extent and boundaries of the police power, and however difficult it may be to render a satisfactory definition of it, there seems to be no doubt that it does extend to the protection of the lives, health, and property of the citizens and to the preservation of good order and the public morals. The legislature can not by any contract divest itself of the power to provide for these objects. They belong emphatically to that class of objects which demand the application of the maxim, Salus populi suppremа lex; and they are to be attained and provided for by such appropriate means as the legislative discretion devise. That discretion can no more be bargained away than the power itself.

Chief Justice Fuller says:

The police power rests upon necessity and the right of self-protection, and fundamental rights can not be invaded under the mere guise of a police regulation.

In Lawton *v.* Steele (152 U. S., 133) the United States Supreme Court said:

The extent and limits of what is known as the police power have been a fruitful subject of discussion in the appellate courts of nearly every State in the Union. It is universally conceded to include everything essential to the public safety, health, and morals, and to justify the destruction of a house falling to decay or otherwise endangering the lives of passers-by; the demolition of such as are in the path of a conflagration; the slaughter of diseased cattle, the destruction of decayed or unwholesome food; the prohibition of wooden buildings in cities; the regulation of railways and other means of public conveyance and of interments in burial grounds; the restriction of objectionable trades to certain localities; the compulsory vaccination of children; the confinement of the insane or those afflicted with contagious diseases; the restraint of vagrants, beggars, and habitual drunkards; the suppression of obscene publications and houses of ill fame; and the prohibition of gambling houses and places where intoxicating liquors are sold.

Judge Samuel R. Artman, judge of the twentieth judicial circuit of Indiana, says:

Accepting the estimate placed upon the saloon by the courts, in view of their own definition of the saloon license, we can not reason to the conclusion that the license is a means of protecting life, health, liberty, property, morals, peace, or good order, so as to establish it as an exercise of the police power.

In all of the decisions cited above and in all similar decisions it is clear that the police power is protective in its nature and is designed to carry out the object of government and the support of law to enforce the right and prohibit the wrong.

Judge Artman again says:

The police power is merely the power assumed by the people, in the foundation of the Government, to accomplish these ends. Government is a protective institution; its function is to preserve and protect men in the enjoyment of the inherent and inalienable rights with which Almighty God has endowed them. The police power, being one of the powers of the Government, is necessarily no more than a protective power; its function is to protect the preexisting rights of men, not to create and grant to certain individuals new rights. It is the power to enforce the right and prohibit the wrong. It is the power to enforce the chief end of organized government, which is the preservation and development of the good order, the peace, safety, health, morals, and welfare of the people. It is the power to enforce the principles of the moral law.

In Thorpe *v.* Rutland (R. R. 27 Vt., 140) the Supreme Court of Vermont said:

The police power of the State extends to the protection of the lives, limbs, health, comfort, and quiet of all persons, and the protection of all property within the State.

It is seen that no State has a right under the exercise of its police power to authorize individuals to sell intoxicating liquors, and, as stated above, in the use of the taxing power the Federal Government has power now to effectually prevent the States from so doing. But every State under its police power has

the right to prohibit the sale of intoxicating liquors, as this sale, by decisions of the courts, tends to pervert the objects for which government is founded. The great real invasion of the police powers of the State is the invasion that now exists under the operations of the national liquor interests. It can be said with scientific accuracy that from the nature of intoxicating liquors and their effects upon men that every saloon opposes the operation of the police powers of the State, and these powers should logically be invoked not to preserve and perpetuate, but to prohibit and destroy all saloons. But even where the States have empowered individuals to legally sell intoxicating liquors the liquor interests have unhesitatingly operated illegally through individuals not so empowered or authorized; and where municipalities, counties, and States, in the legitimate exercise of their police powers, have prohibited the sale of intoxicating liquors, the liquor interests have invariably undertaken to destroy the effectiveness of the exercise of these powers. In fact, the opponents of this resolution have invariably prided themselves—and all advocates of liquor have done the same—on the success of the liquor interests in violating prohibition laws; the usual terms are "prohibition does not prohibit." The States are left entirely free to exercise all of their police powers for the prohibition and suppression not only of the sale of intoxicating liquors, but of their use as well. The Federal Government, in joining to suppress the sale of intoxicating liquors, will cooperate with the States in the exercise of these rights and these powers.

In effect, no new powers would be granted to the Federal Government by the adoption of this resolution, but, on the contrary, it would cause the surrender of power now possessed by the Federal Government. It causes no surrender by a State of any part of its police power. The rights of the States, particularly their rights under the police power, are rendered more secure than before and no grant of power is made to the Federal Government.

The net total result would therefore be no disturbance of the existing balance of power between the State and Federal Governments, except to shift it some toward the side of the States, but for the States individually and for the Nation, a more thorough, complete, and effective exercise of police powers for the general welfare.

SANCTITY OF THE HOME.

The resolution deals only with the sale, and nowhere touches the question of use. Although it has been held by the Supreme Court that the drinking of intoxicating liquor is not a right of a citizen, since it entails an invasion of the rights of others, nevertheless the resolution complies with the spirit of our institutions in limiting itself to the essential province of the State—the question of sale founded upon contract, where one citizen for profit enters into a contract of sale with another citizen. Since a man does not sell to the members of his own family in his own home, this resolution does not invade the sanctity of the home. On the contrary, its effect will be to put an end to the cause more prolific than all other causes combined—the actual invasion that now takes place on account of the sale of intoxicating liquors.

INDIVIDUAL LIBERTY.

Since a citizen does not sell to himself, the resolution does not invade the rights of the individual. As pointed out above, no individual possesses a natural right to sell liquor, and there can be thus no invasion of individual liberty. On the contrary, the resolution, if adopted, would remove the cause more prolific than all other causes—the constant invasion of individual liberties through the sale of intoxicating liquors by others—described by Justice Bradley as "an outrage upon the equal rights of citizens."

In sum, from the standpoint of the effect upon rights and powers of individuals, of States, and of the Nation, the effect of the resolution would be wholly beneficial and in no wise harmful. It would, as seen from the decisions of the courts, strengthen the governments of both the States and the Nation in accomplishing the objects for which they both exist.

THE MERITS OF THE PROPOSITION.

Now, taking up the resolution on its merits, what is its object? Its object is to produce a sober nation, and by a sober nation I mean an abstemious nation and, if you wish to put it stronger, a total abstaining nation. That is its object. Why? Why does it seek to carry out that object? Because the beverage use of alcohol is harmful to the individual, to the Nation, and to the race, whether taken in moderate quantities or in excessive quantities.

How does it propose to carry this out? By stopping the recruiting of drinkers and not by interfering with old drinkers. It studiously avoids every question of use; it does not touch the user immediately and directly; but it stops the sale. It is because of the profits in the sale that the army of drinkers is steadily recruited.

How are new drinkers recruited? Testimony before this committee shows that the recruiting is chiefly among the young. I have been informed that at the last convention of the National Wholesale Liquor Dealers' Association one of their strong men delivered an address urging members to always bear in mind that their trade is built up upon the development of the appetite in boys, recommending them to treat boys free and develop the appetite, no matter what the cost; that it would come back a thousandfold as an investment when the boy grows up as a drinking man. In Oklahoma liquor dealers have been sending by mail liquor free by the quart to the boys of the State.

The authorities of Bellevue Hospital keep the records of their patients, numbering thousands of drunkards every year. They have a scientific list of questions as to the life history. One of the questions asked is, "At what age, do you remember, when you had the habit already formed?" The answers to that question show that 68 per cent of all the drunkards treated there had their habits contracted before they were 21 years old. The record showed that 30 per cent had their habits formed before they were 16 years old and 7 per cent before they were 12 years old.

The records went to show, in conjunction with other experiences, that a very small percentage of men begin to drink after they are grown. I have seen that percentage stated to be as low as 2 per cent. Bring up a boy without the habit of drinking until he settles down and he does not begin to drink after that. It shows that it is not natural for a human animal to drink poison any more than it is natural for any other animal, and that a knowledge of the nature of the poison will make a man who has not already contracted the habit avoid contracting it.

Who is it that undertakes to debauch the youth? I have yet to find a single man out of the business, no matter how much of a drinker he may be himself—a single man who would voluntarily teach a boy to drink. A man may drink himself, but he does not want his boy to learn the habit, and he does not want his neighbor's boy to learn the habit, and he is not going to be base enough, unless he is a degenerate, to teach boys to drink.

THE LIQUOR INTERESTS DEBAUCH THE YOUTH.

The continuation and expansion of drinking in the Nation is the result of the systematic debauching of the youth by the liquor interests for purposes of gain. The moment you stop the profits in the business by stopping the sale, the business itself must die, and the moment the organized liquor business dies, the systematic debauching of the youth of this country will cease. Thereafter the youth would grow up sober. In two generations we would be a completely sober Nation.

Now, that is the effect of this resolution. It leaves the whole domain of the use to the State and counties and families and individuals. What it does is to destroy the monster that debauches the American youth. A continuation of the debauching of the youth is indefensible. When the question is put on its merits and is put squarely before the people we will find marshaled against us only those who profit from the business. Drinkers as well as abstainers are going to join in putting an end to the systematic debauching of the youth of this country.

HOME DISTILLERIES.

We do not go into the question of use. This proposed amendment does not interfere with a State doing what it pleases to stop the use. But some have said, "Suppose there should be a large increase of the small distilleries at home?" The State, in the exercise of its police power, could meet that, likewise the police power of the municipality.

But let us concede, for the sake of argument, that the States and counties and municipalities did nothing else than to cooperate with the United States to prevent the sale, and did nothing to abolish distilleries in the home. Who would put up a distillery in his home? How many drinkers do you think would do that when there could be no sale and no profit? I think only a small percentage of heavy drinkers—those who felt they were bound to have their drinks.

Now, take that small percentage. The man who is making liquor in his home for himself would not teach his own boy to drink, nor would he teach other boys to drink; so the youth would still grow up sober.

ORGANIC TREATMENT.

That is the process of cure that nature employs in all organic diseases.

Take, for instance, the disease of cancer. When the cure does come, it comes through the growth of the young tissue, which does not contract the disease. The protection of the young growing tissue against the contagion of the organic disease is

nature's method of cure. The Nation is a great living organism, and a large part of its tissue—looking upon individuals as cells that make up the tissue—a large part of the tissue is diseased in various stages through this organic disease. If we would follow nature's methods we would recognize that rescue work is not a true solution of this problem. Not that I would, for an instant, discourage any rescue work, or any philanthropic work, but when we deal with a deep-seated organic disease like the liquor disease, we should not put our hope in curative processes, but in preventive processes.

This amendment is drawn to comply with that law of nature. The liquor interests maintain their business by debauching the youth; so the liquor interests must be destroyed.

When the strong arm of the Federal Government comes down, and is combined with the power of the States and the counties and the smaller communities to absolutely destroy the sale, none for an instant can question but that it would accomplish this object.

THE AMENDMENT WOULD BE EFFECTIVE.

If the Federal Government to-day can stop the illicit manufacture as it does so effectually, it could, by raising its little finger, stop the legal manufacture. No manufacturing process for the purpose of sale, of any size, could possibly develop without being detected. It would be a physical impossibility for the manufacture for sale to go on after this amendment became the supreme law of the land. The Federal officials, instead of being a shield to lawbreakers as they are now in the several States, would then cooperate and join the States to destroy everything that pertains to the sale.

Stopping the manufacture for sale, it would be easy to stop the sale. After killing off the organized liquor interests, the systematic law breaking that is now supported by them to break down the laws of the several States would cease. The debauching of officials would end. Effectiveness would be insured by this fact alone.

Prohibiting transportation for sale and importation for sale would meet any menace from the outside. Every official of State and Nation taking an oath to uphold the Constitution of the United States would feel it incumbent upon him, as his first and most sacred duty, to help sustain the law. It is a simple and self-evident fact that when this amendment is adopted the sale will end automatically, and the organized liquor business will die.

The day the organized liquor business dies the systematic debauching of the youth of this land ends, and the cure will set in inevitably.

It is a fallacy to imagine for an instant that in order to maintain the integrity of our institutions we must maintain within our body this disease. On the contrary, it is natural that the organic remedy for this organic disease should be simple and should not involve the sacrifice of any other function of the body politic. That is what it does. It does not touch a thing but the sale, and thus does not weaken but really strengthens the functions of the State and of local self-government.

HYPOCRISY OF THE LIQUOR INTERESTS.

It is interesting irony that those who voice the cry of individual liberty are the very ones who most ignore and invade the individual liberties of others.

Slavery can be produced in two ways. One, by taking possession of the physical man, with power to keep him a slave. The other is to transform his will so that, through some agency in your hands, you can control his actions. Traffic in the physical persons of human beings has been abolished. Yes, and there was no hesitation to change the Constitution of the United States in abolishing it.

But the enslaving of men, thousands and hundreds of thousands, is going on every day. It is estimated that there are 1,000,000 confirmed drunkards in this country to-day, and the number is gradually increasing. It is estimated that there are 4,000,000 heavy drinkers, who drink every day and must have it, but who are not considered drunkards. There were never half as many slaves in the United States of America, physical slaves, when they were at a maximum, as there are to-day of citizens enslaved by these men who are talking about their liberties.

These heavy drinkers and these drunkards, when you come to analyze it, are nothing more than machines to go out and get money; if they can not get it in any other way, they will steal, if necessary, after exhausting the substance of their families, just to bring in the money and deliver it to their masters—those who are supplying the liquor, who are talking about individual liberties.

These same culprits often deplore lawlessness, saying if the legal sale is forbidden it will encourage lawbreaking. United States licenses or tax receipts show that there are from one-quarter to one-half as many illicit tax receipts as there are legalized saloons in most of our wet territory. In dry territory you get a full and complete picture of this outlaw. He respects not the law of God or man, and his one pride has been, and is before this committee—it is the statement of those who appeared here—that "prohibition does not prohibit and can not prohibit." They come before this committee and say substantially that if you make this amendment the supreme law of the land they serve notice on you that they will be above the law.

LIQUOR A PIRATE.

It is nothing but piracy. You take a State, a sovereign State, of this Nation, which passes a prohibition law and sails forth, supposed to be with the protection of society, exercising its State rights. The pirates will appear on the horizon and fling the black flag to the breeze and tell you in advance that they are going to come alongside and get aboard and hoist the black flag above the flag of the State.

Now, they come here and tell us that were prohibition the organic law of the land they would put the black flag above the Stars and Stripes, as well as the flags of the States. And then they come and prate about fearing lawlessness if this measure were passed; they themselves to be the lawbreakers.

With equal contrast and inconsistency they come to invoke the Divine law, the Bible. I want to call the committee's special attention to the fact that they announced when they came in that their opposition was the churches, and that such opposition ought not to be considered.

THE DEVIL QUOTES SCRIPTURE.

The truth is the civil laws of society to-day, where society is perpetuated, grew out of and embody the moral laws and the natural laws upon the foundation of religion.

What do you expect when you find the welfare of humanity involved, the evolution of the human species, God's universal law of evolution interfered with? What do you expect but that the great organization that is here—of course, with human frailties—to carry out Gods' will in the world—what do you expect but to find the church practically unanimous against the liquor traffic?

But the liquor men go on and interpret the Scriptures. The preachers whose lives are given to interpret the Scriptures are nothing but fanatics, and know nothing. These liquor men, who utterly disregard the laws of God and man, come here, set aside the preachers, and set themselves up to interpret Holy Writ as justifying their trade. If it were worth serious consideration, I would take the time to lay before you the scientific explanation of this apparent foundation which they claim from the improper translation from the original, using "wine" for both the words that meant entirely different things, one wine proper and the other the unfermented juice of the grape, put into widely used leather bottles to keep, new bottles being used every year, because there would not be any ferment germs in the new bottles. Hence, the reference to not putting new wine into old bottles, as these would collect ferment germs and cause fermentation. A different word is used for alcoholic wine where fermentation has taken place, and this is referred to in terms of the strongest condemnation, both in the Old and New Testaments.

It is almost ludicrous to see the advocates of liquor depose ministers of the gospel and set themselves up to interpret the Scriptures, whose teachings they continually defy.

ALCOHOL A POISON.

The major premise of all those who appeared before this committee in opposition was substantially that alcohol is a food and its temperate use is beneficial; that all the ills attendant upon drinking are due to excessive use, like ills attendant upon the excessive use of meat. As a matter of fact, alcohol is a poison and its widespread moderate use is more harmful to society than the more limited excessive use.

This question, fortunately, is not open to discussion. It is a matter of fact, not of opinion. The truth about alcohol has been established just as completely as the law of gravitation. It is not debatable. Men who talk about the food value of alcohol and its benefit in moderation simply display their ignorance of up-to-date science.

It is produced by supplying food for ferment germs. The principal food for the ferment germ consists of glucose.

After devouring the food the germs give off gas, CO_2, and alcohol, C_2H_6O.

Now, Pasteur, in his laboratories in Paris, settled this fact that alcohol is the toxic excretion of ferment germs.

The law is universal that the toxin of one form of life will poison itself and every form of life of a higher order. The ferment germ is a single-cell germ, the lowest form of life, and ist toxin is therefore a poison to every form of life known to man, whether plant or animal. Alcohol is a protoplasmic poison.

All forms of life are made up of cells, very little, minute particles of protoplasm. Life goes on from regular changes in those cells. Toxins interfere with these life processes of protoplasm.

ALCOHOL AND DISEASE.

I will not stop to describe the way it affects the organs and the various tissues of the body. This toxin affects the red blood corpuscles, so they can not transport the necessary oxygen to the system. The whole system suffers

The white blood corpuscles fight disease germs of all kinds.

Now, alcohol acts on a white blood corpuscle in just about the way it acts on a man. If you take a fighting man and soak him in alcohol, you will reproduce a white blood corpuscle, when alcohol is in the system.

The CHAIRMAN. It makes you drunk?

Mr. HOBSON. Yes; he is no longer a good fighting man. Let us take for our illustration consumptives.

ALCOHOL AND CONSUMPTION.

The consumption germ is a very tenacious germ, and the only way to really overcome it is to build a wall around it. These little white blood corpuscles build a wall with their own bodies.

Investigations made in France show that the deaths from consumption throughout the Provinces of France are directly in proportion to the amount of alcohol consumed per capita. The figures show that 55 per cent of all deaths from consumption are really due to this cause. It is singular that in the general war against the white plague so little attention should have been given to alcohol, which causes more of the deaths than all other causes combined. This shows how deeply the hand of the liquor interests is felt in control of the means of popular education.

ANTIALCOHOLIC MOVEMENT IN GERMANY.

At this point I will cite the statement of 800 German professors and physicians who over their own signatures declared, among other things:

Science has shown that alcohol, even in moderate quantities, causes disturbance in the brain's action and paralyzes critical capacity, power of will, the ethical and æsthetic sense, and lowers self-control. For this reason one should realize that it is a poison and no longer to be classed with foods. Drinking customs bring degeneracy, poverty, sickness, vice, crime, madness, and death.

Representatives of the German-American Alliance have been so eloquent in their praise of moderate drinking, and who seem to be so proud of the drinking of Germany, should note this verdict of 800 authorities of the fatherland.

These German-Americans seem to be utterly ignorant of the great antialcohol work going on in Germany with the cooperation of the German Government, led by the German Emperor. In March of last year a nation-wide congress for the alcohol-free education of the youth of Germany was held in Berlin in the Prussian House of Deputies. The honorary president was the German chancellor himself, Dr. von Bethmann Hollweg. On the committee of honor all the Prussian ministers were represented, and eminent men from various parts of Germany.

The Federal Government of Germany sends antialcohol cards to all German mothers at the vaccination of their newborn. Every child entering a Berlin school takes home to its mother one of these cards explaining the injury that alcohol does, particularly to the child.

One of the German-Americans referred to Bismarck with great pride as an example of drinking customs. As a matter of fact, a saying of Bismarck's is being reproduced all over Germany, to the effect that if the workmen's protective code should be extended to the protection against "that Diabolus Germanicus," the drink devil, the great part of the social question would be solved at once.

Effective means are being used to cut out drinking in all forms from the German Army and the German Navy. Dr. Mattahei, staff physician of the German Army, declares, representing the attitude of the German authorities:

We should not discuss moderation with a man; the thing has long since been settled by science. The use of narcotic poisons is simply indecent and criminal.

The fact is the German scientists and high-class Germans in Germany are thoroughly ashamed of the stand taken by German-Americans. Prof. Rade, of Marburg, after recently visiting America, gave expression to this feeling of humiliation. He says:

The painful impression of the part the Germans are playing in the American alcoholic war was again and again made upon me. The Germans, with their fight for alcoholic freedom, represent a lower civilization as against the Anglo-American element, the protagonists in the prohibition movement. It is a matter of national honor that public opinion should be enlightened upon the subject, and should exercise a right influence across the sea. The German antiprohibitionists over there must be made to understand that they have not their relatives at home with them.

Perhaps the most concise and conclusive statement yet made is the one handed down by the congress against alcoholism in London in 1909. Scientific and professional men from all parts of the civilized world brought up and signed the following statement as the verdict of science:

Exact laboratory, clinical, and pathological research has demonstrated that alcohol is a dehydrating protoplasmic poison, and its use as a beverage is destructive and degenerating to the human organism. Its effects upon the cells and tissues of the body are depressive, narcotic, and anesthetic. Therefore, therapeutically, its use should be limited and restricted in the same way as of other poisonous drugs.

APPALLING LIFE WASTE.

The most comprehensive and scientific method of estimating the total life waste from alcohol is to compare the average of the mortality under similar conditions of living of total abstainers with the average of the country, with the average rate for moderate drinkers and the average rate for heavy drinkers.

The information on that subject is reliable and conclusive. It is drawn from many sources of accurate knowledge, and, among others, the British Government. The statistics have been obtained from the reports from the British interdepartmental committee on physical deterioration, from the reports of the great life insurance companies, from the reports of the registrar general of England, and from other mortality reports. I will not go through the details. The net result is substantially what is shown in this chart [exhibiting chart]. This chart shows the average number of deaths every year per 61,000 of the male population between 25 and 65. It shows the number for saloon keepers and bartenders. It also shows the number for total abstainers. Taking the men of adult years, there will be 1,642 deaths out of every 61,000 for saloon keepers, bartenders, and those in the trade. There will be 1,000 deaths for the population at large. There will be 560 deaths for total abstainers. I cited this comparison in my speech, "The great destroyer." People laughed at it at first and said it was impossible. But there are the figures, and they have been verified. If we were a nation of total abstainers our adults would die off at the rate of only 560 per 61,000. Instead of that they are dying off at the rate of 1,000 per 61,000 among the average population and at the rate of 1,642 among the saloon keepers, bartenders, and people in the trade.

There is but one mathematical conclusion that can be drawn from this, and that is that 440 out of every 1,000 deaths of adults are premature and due to alcohol.

I will refer in a moment to the effect upon the offspring. The blight there is very much more severe than it is upon the adults themselves. So, applying the same estimate to the whole population, minors as well as adults, we will be on the conservative side as to the whole result.

So we can take the whole population and say that alcohol causes the premature death of 440 adult citizens out of every 61,000 of the population every year. That means that alcohol kills about 700,000 Americans every year. That just about tallies with the detailed investigations of the proportions of those carried off by individual diseases, like consumption, really due to alcohol.

ALCOHOL AND DEGENERACY.

Another property of alcohol must be pointed out. It is not simply a general poison—a poison to every protoplasmic principle of life—but it has peculiar properties. Take morphine, take strychnine, take chloral, take belladonna, take all that group of poisons like alcohol low oxide derivatives of hydrocarbons; they are general poisons, but they have affinities, each making an attack upon certain particular tissues. Strychnine, for instance, attacks the spinal cord with particular fierceness and throws a person into convulsions.

Alcohol has the characteristic that its severest attack is on the tenderest cells, the youngest in evolution. Alcohol's deadliest attack is upon the cells that are in the line of the creature's evolution, and whatever that line is, in plant, animal, or man, alcohol will have a deadly effect and will tear down just where nature tried to build up. Alcohol's particular characteristic is that it tears down in the line of evolution. Nature is trying to build along some particular line in every species. Alcohol tears down in that particular line and reverses the process of nature.

Alcohol is the great specific cause for degeneracy.

The appalling extent of degeneracy is shown in the great number of unnatural crimes. There are 3,000 murders in this country every year in which men murder their own wives; 2,500 cases where they kill their own children. You do not find that in nature.

There are about 15,000 cases where men desert their helpless children. That will give you an index into the degeneracy that surrounds us. Instead of our working amongst and dealing with civilized men, we are in the midst of savages, in the midst of violence and crime. Sully Prudhomme, the great French scientist, said, "All in all, my opinion as to alcohol in all its forms is that it is fitted, thanks to the devastation that it brings about in the human system, to animalize people in all grades of society, and, sooner or later, to annihilate the superiority which man has slowly acquired over the anthropoid ape." Here this universal right of citizenship is violated not by prohibition but by the liquor traffic.

Nature has built up life in this universe on the evolutionary principle, and when that principle is reversed nature proceeds to eliminate. She adopts two methods, one to shorten your life and the other to blight your offspring, both in direct proportion to the degree of degeneracy.

The people of America do not know this, and so they drink 25 gallons per capita of alcoholic beverage every year, and so they die prematurely, 700,000 per year. Nature calls them up to the bar and shortens their lives.

Take a practical illustration: A boy who at the age of 20 is a total abstainer will live to be 65 years and 5 months old. That is the average. A boy at the age of 20 years carried on the books of an insurance company as a moderate drinker will die at the age of 51 years. His death will be attributed to some illness or other, but if he had been a total abstainer he would have lived 14 years longer.

A young man who at the age of 20 years is a heavy drinker, and there are a great many such, will die at the average age of 35 years. It will cost him 30 years out of his young life; he has but 15 years to live. We have in this country 1,000,000 drunkards, 4,000,000 heavy drinkers, and from 19 to 20 million moderate regular drinkers, and many millions more who drink on occasion. That is how the sum total whose lives are shortened on this account averages 700,000 a year.

ALCOHOL MORE DESTRUCTIVE THAN ALL THE WARS OF THE WORLD.

I had the War Department investigate for me the mortality on the battle fields of the world. The War College had a research made. They took all the authentic reports of all the battles from the Macedonian wars down to and including the Russo-Japanese War. They could not in every case get a separation of the killed and wounded, but applying the general proportion between the two the sum total amounted to 2,800,000—about 2,100,000 wounded, with less than 700,000 killed. It is easy for our minds to conceive that line of dead stretched out on the battle field. Alcohol kills more Americans in one year than all the wars of the world have killed on the field of battle in 2,300 years. It is not surprising that Prof. Fick, of Wurzburg, declared "the fight against alcohol is the most important phenomenon of our epoch—weightier than all State affairs, wars, and concluded peaces."

If life is part of the object of the Constitution, to protect life, then measures to protect the Nation against the ravages of this deadly enemy should have first consideration; such measures should be an inherent part of the Constitution. The shortening of life of the living is not alcohol's deadliest blow. This is struck at the children unborn.

Nature is not going to let degeneracy inherit the earth. Nature is not only going to shorten the lives of men who degenerate, but she is going to blight their offspring.

It is the same with plant and animal as with a man.

ALCOHOL BLIGHTS THE OFFSPRING.

Take the investigation made by Dr. Laitinin, of Helsingfors. He investigated nearly 6,000 families, comprising more than 20,000 children. He classes the parents as total abstaining, moderate drinkers, and alcoholics. His results have been confirmed by the investigations made on animals, the proportions being substantially the same in both cases in regard to heredity.

In the embryonic stage the tissues are the tenderest and the youngest; indeed, every process, even the earliest, that touches the question of reproduction, is the most delicate in male and female.

The effects of alcohol in all these processes are deadly. The investigations of Dr. Bertholet, of Lusanne, show that the organs of reproduction suffer most severely.

Now, the human species is evolving or building in the top of the brain, the cortex of the cerebrum; that part of the brain that is the seat of the moral sense, the center of inhibitation and self-control, the seat of what we call character.

Those tissues are the most sensitive, delicate, and unstable, because they are the latest, the youngest in the line of human evolution. In all species nature tries in her reproductive processes to foster this line. So, in regard to everything that touches the question of reproduction and the evolution of the species, alcohol blights with deadly effect.

One part of alcohol in a thousand parts of water, an extremely weak solution, will seriously and materially attack an embryo, while one part of alcohol in two hundred parts of water, still a weak solution, will kill an embryo. A mother can go out to dinner and come back with one two-hundredths part of alcohol in her system and have a miscarriage and never approach intoxication.

The experiments with animals confirm the results.

Dr. Laitinin's examination of 20,000 children showed that if both parents are simply moderate drinkers it nearly doubles the number of children that die during the first year of infancy, and it increases over 400 per cent the number of accidents and miscarriages among the mothers. It confirms the investigation by Dr. Demme, made at Berne, Switzerland, along the same line, where he found that up to the age of 5, taking all the children of drinking parents together and all the children of abstaining parents together in two groups, keeping a record, practically five times as many will die in the first group as in the second group. That is, nearly four out of five infant deaths of drinking parents are unnecessary, caused by alcohol, and the infant mortality from this cause is so great that if hogs were dying off at such a rate the whole resources of the Government would be used to stop the cause. The slaughter of the innocents by Herod was nothing compared to the slaughter of the innocents every year struck down by the acts of their own parents.

The parents do not know any better, and we can not get the truth to them rapidly. That is where our greatest trouble comes. The liquor interests talk of curing the disease by education and then proceed to prevent the education. They spend millions of dollars in preventing the education of the people. They use the billboards of the country; they use literature to carry false information about alcohol. They dominate the liquor policies of the press as a whole through misinformation. It permeates literally every known process of education, art, literature, music, the stage, the theaters—everywhere there is this misinformation, miseducation.

If both parents are alcoholic, one child out of every five of those that do survive will become insane. The blight has been on the nervous system. One out of every seven will be born deformed. One out of every three will become epileptic, hysterical, or feeble-minded. There is a report from an institution for feeble-minded children in Switzerland where they are teaching the truth. These feeble-minded children curse their parents.

Where both parents are alcoholic, only one out of six will be normal; five out of six will be abnormal.

If both parents, on the other hand, are total abstainers, there need be no anxiety about the mother. The investigations show that nature has not discriminated against the human species; that all reproduction troubles to humanity have been due to its degeneracy. Cut out alcohol, and no matter how hard a life the mother may have to lead, there will be no accidents to speak of and no dangers in maternity. Of the children that are born, nine out of ten will turn out to be absolutely normal.

Now, those children normally born, without any taint of degeneracy in the blood, will be highly susceptible to evolutionary processes. They will be healthy and easy to bring up. Give them a decent environment in which to live and they will end by rising to a degree higher and nobler than their parents.

Insure that a nation's children shall grow up sober, and the people are bound to rise; nothing can stop them; such a nation will build a wonderful civilization.

But if the children of a nation are debauched and grow up to be drinkers, their children will be blighted. Such a nation is bound to go down, and must ere long perish. In view of the vast alcoholism in Europe and in America, we can understand what Dr. Laitinin had in mind when he said at the Budapest congress:

> While the studies in this field were not yet sufficient to explain every side of the colossally important (alcohol) question, yet they enable us in some measure to see into the bottomless abyss on the edge of which humanity is standing.

DEGENERACY AND CITY LIFE.

In the light of these facts, let us examine the life history of nations that have risen and then perished. In no case has a nation degenerated while its people were rural, but whenever a nation of the past came to depend on city life that nation declined and ultimately perished. How shall we explain this? The country boys were not debauched by liquor. It did not pay the liquor interests of the past to go out and debauch the country boys. They were too scattered; but in the cities where they were thick it was easy to get them by the thousands. You need not think they will only get the average boys; they will get the boys of

high degree just as they will get the boys of low degree and middle degree.

And you can easily see how degeneracy runs a swift course in a few generations after the country ceases to renew the city life by new blood. What has been true in the past is true now, and will remain true. Unless the liquor problem is solved, if a nation comes to rest on the city life, it is bound to perish.

The best illustration in history of both of these processes is the history of Rome. Recent investigations go to show that the motive which Romulus had in the founding of Rome was to have a city in which the product of the wine press should never come. He founded Rome on the principle of total abstinence. For 500 years Rome practiced absolute prohibition.

For many centuries after that the Roman law forbade a Roman woman to take wine under penalty of death. This shows that they understood the blighting effect of alcohol upon posterity.

During those centuries you can see the evolutionary development of the Roman Empire very plainly, as compared with the surrounding peoples. They not only increased in numbers, but they developed the higher faculties of man, not only physical and intellectual but spiritual and moral power, to such an extent that they literally conquered the world and gave humanity a new civilization, laying down the true principles of jurisprudence, right, and justice for all time.

Rome, rural and sober, conquered, ruled, and blessed the world. But in turn, in their great city, they became dissipated, degenerate, and then great Rome fell at the hands of despised barbarians.

The same processes are going on in America to-day and in all civilized nations.

ALCOHOL STRIKES AT THE NATION'S PROSPERITY.

The Nation's material prosperity depends on the producing power of its citizens. The average of efficiency of the citizen as a producer is seriously lowered by the widespread use of alcohol, even in moderation.

Take beer, that the representatives of the German-American Alliance so lauded here last Saturday. Two steins of beer a day will lower your efficiency an average of from 8 to 10 per cent.

The temperate drinker that they are holding up to our people, the one who drinks moderately every day, is short from 25 to 40 per cent in his efficiency, depending on the individual and depending on the occupation.

And the greatest loss of efficiency is where the labor entails the exercise of the higher faculties, for these are the most sensitive.

It was pitiful to hear those men portray great men as being great from the use of alcohol. There is little excuse for their ignorance in citing Marshal Von Moltke. He was an ardent total abstainer and helped to found the greatest temperance association of Germany. He said, "Germany has more to fear from beer than from all the armies of France."

They likewise displayed gross ignorance in citing Lord Roberts, who is one of the foremost teetotalers of the British Army and one of the leaders in the work going forward to make that army dry. To-day there are 56,000 British soldiers who are total abstainers. The British defeats in South Africa during the Boer War were found to be largely the result of drink.

How unscientific, even ridiculous, was one of the speakers, comparing the Turks with the Teutons to convey the impression that drinking made the latter great. The scientific method is to compare the negro who is sober with the negro who drinks; to compare the Turk who is sober with the Turk who drinks; to compare the Teuton who is sober with the Teuton who drinks. You take a half-drunken man; he would be above the sober horse or the sober cow, but he would not compare with a sober man.

Investigation will show that the northern tribes have extended and developed more than the southern tribes of the same race. Why? Because the vine grows in the southern countries, carrying the extensive moderate use of wine used by women as well as men. Now, in the northern lands like the northern German forests men learned to brew and finally learned to distill from their native products. They would get wine only as a luxury, now and then. They would celebrate and go on big sprees at comparatively long intervals; but the average consumption of alcoholic beverages was much lower than in the southern countries, the land of the vines. Drinking was essentially heavy drinking by a few, and was not spread out over the people. You will find also that it was confined to the individual men, while the women and children remained abstemious. It is the moderate drinking in the Latin countries among the women and children, as well as the men, that is causing their decline and will ultimately cause their downfall. Says M. Reinach, deputy:

We have not a year to lose. It is a question of stopping this noble country, the land of Jeanne d'Arc and of the Revolution, of Vincent de Paul and of Voltaire, upon the declivity of the most shameful of destructions.

The northern races have preserved their place of leadership chiefly because the women have been abstemious, not because many of their men were drinkers. Here in America our women are abstemious. We need not think that the greatness of the country is due to the men. It is due chiefly to the superior sobriety of our mothers.

Twenty-five gallons of alcoholic beverages per capita consumed in the United States of America mean a terrific loss of national efficiency. I have made a scientific estimate of it. Taking the numbers of the different classes of drinkers in this country and the scientific returns in regard to the loss of efficiency of each class, my average showed that the American producers, on the whole, are about 21 or 21.5 per cent short in their efficiency. That means over $8,000,000,000 short every year. We are producing about $35,000,000,000, and it should be over $43,000,000,000.

The loss of efficiency is so serious that in trades and industries drinking, even temperately, is taken into account in the employment of men. All the first-class railroads have demanded prohibition complete, on duty and off duty. At first they demanded it when the men were on duty, and now they demand it when the men are off duty as well.

The idea of saying that the order issued by the Secretary of the Navy to break up the further drinking amongst the officers of the Navy was an invasion of the rights of the officers is ridiculous. You might say the same thing in regard to the railroads of the country, that the orders issued by the railroads insisting upon prohibition invade the rights of the employees.

The best investigation of this question was made in 1897 by our Bureau of Labor, one of the first investigations it made. The report shows that even at that date the majority of industrial activities in this country that employ men had found how serious the loss was from this habit, and the majority of them had already begun making serious demands upon their employees to abstain. The demand has grown steadily ever since.

One interesting thing about these tables of the Bureau of Labor is the record of what the employers of labor thought was the proper remedy. In the questions which were sent out to the employers at that time the bureau asked them to suggest the remedy. Remember, these were employers; men of unusual intelligence.

OUR PEOPLE BELIEVE IN PROHIBITION.

Prohibition heads the lists in the answers; 1,103 said that prohibition was the remedy they would suggest. The next answer was "Do not employ drinking men," and there were 769 of those. That is practically demanding local prohibition. That makes about 1,800 for prohibition. The next was high license, and there were 445 of those, less than one-quarter. Four times as many men, even at that day, believed that prohibition was a better remedy than high license. There were 180 answers for education, one-tenth; then there were 159 who advocated abolishing the saloon. These should be added to those recommending prohibition, making over 2,000. There were 136 answers in favor of moral and religious education. There were 125 who answered in favor of improving the social conditions. That is what one of the speakers for the opposition prided himself on, favoring better working conditions, better housing conditions for the poor. He said if you do that you will solve the problem. Nearly twenty times as many employers thought prohibition was the remedy. The fact is prohibition would solve the housing problem and prepare the solution for most social and economic problems.

There were only 85 answers that favored "limiting the number of saloons." Then there were only 75 that said "remove all restrictions."

I want to put this in the RECORD to show that even at that time the overwhelming consensus of opinion among men who employed labor was against alcohol and was in favor of prohibition as the remedy. The relative number has steadily increased. It is correct to say that not only the moral forces but the business forces of the Nation want prohibition.

ALCOHOL UNDERMINES NATIONAL CHARACTER.

Prosperity is important, but the foundation of prosperity as of greatness for a nation is the character of its citizens. All government really exists to promote its development, to promote the development of character in men. Free government, self-government, presumes a high average standard of character. It is that high average standard of character that determines whether

a people can govern themselves or not. Intelligence does not do it, except when it is coupled with character.

If the average efficiency of the Nation is short 21.5 per cent because of drink, the alarming question is, how much is the average standard of character short? Character is in the line of evolution. The degeneracy here must be much more alarming.

It is a disastrous thing to cut off so much of the producing power of the Nation and add so heavily to the burdens of crime, pauperism, and insanity, and to squander $2,500,000,0000 in drink; it is depressing upon a nation to feed so much foodstuff to the ferment fungi and then employ so many citizens in distributing their excretion to poison men instead of being employed in useful pursuits. How illogical for men to plead for a harmful business on the ground of its magnitude. The bigger it is the greater the necessity for its destruction.

It is a serious matter to strike at the prosperity of the nation. How much more serious to strike at the character of its citizens, at the Nation's liberties and institutions and its capacity for self-government. Because of the degeneracy from drink in large cities where it is sold self-government is impossible. The degenerate vote swamps the others. The vote of the degenerate, who has had the top part of his brain paralyzed, is venal. Being on a low level of character, his vote is for sale. When a large number of votes are for sale, who buy? The enemies of the people. Why do they buy? In order to be able to carry elections to oppress the people. They overthrew the liberties of Greece and Rome. They are already threatening the continuance of self-government in our big cities. The degenerate votes in our big cities to-day threaten self-government in many of our States. The liberties of America are menaced.

The Constitution of the United States of America was established to secure the blessings of liberty to ourselves and to our posterity. These blessings rest on the character of our people. This proposed amendment, which would destroy the agent that undermines the character of our people, is in direct line to carry out the purpose for which the Constitution was established and belongs naturally and logically in the Constitution itself.

NO TIME TO LOSE.

I wish to refer now to the urgency of this matter. Our people have been a sober people, a country people. Sober people founded this country and built it up. Take your father and take mine; take our fathers and our grandfathers and our great-grandfathers; they were the grandest race of men the world has ever seen. Test them by this Constitution that they established jointly; test them by the self-governing Commonwealths they successfully established—48 successful experiments in self-government; test them on the battle field. There never has been anything in the history of the world like the self-denial, the devotion, the courage manifested in the Civil War. No battles of history can enter the same class for percentages of killed and wounded. Test them by any test you please, they were the grandest race of men the world has ever seen. Down to the Civil War we were a country people. The last estimate I had was an estimate made before the middle of the last century. We had less than 12 per cent of the people living in cities, and 85 per cent of the people were engaged in agricultural pursuits. Since the Civil War all our public policies have been in the interest of the cities and against the country. Take our taxing policy, with the indirect system of tariffs; most of those activities that have been highly protected are in the cities. We have been simply taxing the country in the interest of the cities.

Then, take our fiscal policies. Until recently a national bank was not allowed to loan money on a farm. The very property that made up a country was not a basis of credit in the hands of the Government.

Then take the matter of transportation. During the period of discriminations of the railroads they gave the advantage to the big cities, and they do even to this good day. Take the matter of education. The Federal Government never seems to have realized that the Nation's future depends on the development of the youth; that the education of the youth is vital. As a consequence the education of the country has been neglected until the country people have felt compelled to go to the cities to give their children the advantages of an education.

Thus the great stream of our population has been flowing from the country to the city in spite of our farm lands, so that to-day the estimate is that just about 47 per cent of our people are living in cities. We have reached the turning point in the history of America, the passing from a country to a city people. Degenerate cities can not save themselves or save the nation dependent on them. If we wait much longer and the cities go on developing as they have in the past, it will soon be too late to solve the liquor problem. You and I, in our generation, we must solve this problem.

Already is has become the paramount problem of the cities and of the States that have big cities. It is the paramount problem in practically every State, the paramount problem in America to-day. Nothing can be more vital or more urgent for the consideration of this Congress.

Now, Mr. Chairman, I will hasten on to my summing up, because I do not want to draw this out too long.

THE NATION AND THE RACE.

The two great laws of life are the law of self-preservation and the law of evolution. A nation is a living organism; the young are coming up and the old are passing on. Those two laws are paramount.

The decisions of the courts cited above and the great scientific truths outlined show that the self-preservation of this Nation is at stake with all that it will mean to the future of humanity—the self-preservation of the species.

Now, the other natural law is involved, the law of evolution. Alcohol is striking its deadliest blows at the development and evolution of the Nation and the race by blighting the youth of the Nation. The duty to destroy the sale of liquor is the highest obligation known or that could be known to the Congress.

We can repeat the words of Dr. Roubinovitch, of the great Salpêtrière, of France:

> We are only at the dawn of a campaign the stakes of which are the existence of the Nation and of the race.

Examine the process of the renewal of the Nation. A child has the right to be well born. This is a real inherent right. Every child born in a civilized community is entitled to be free from degeneracy in blood in any form.

What is it that blights this inherent right of American citizens more than all others blights combined? It is alcohol. Here is where real inherent rights of citizens are invaded—not by prohibition, but by alcohol.

The next right every child has is to be born in a home with parental love surrounding it. Animals are born that way. When animals mate they will prepare a place to protect their offspring; the birds build nests. Man is entitled to the same care. A child who has not parental love and the tender care of its parents will not have a fair and equal chance in the world. His inherent rights have been invaded. What invades them more than all other causes combined? It is the alcoholic liquor traffic. The home is the nation's cornerstone. Woe to that nation when the integrity of its homes is undermined. It is not prohibition, but the liquor traffic that tramples upon the inherent rights associated with the home.

The next right the child has is the right of education during the plastic period and the right to protection against the dangers of being blighted before it becomes of age. What is it that more than all other things combined sends the boys to the factory or upon the streets and cuts off his education? It is the liquor traffic. What is it that more than all other causes combined debauches boys before they are grown, taking advantage of their weakness and innocence when they have the right to be protected by civilized society? It is alcohol and the traffic in it.

Those are real inherent rights of the greatest importance affecting practically every person in the land. If they do not affect you directly, they do your neighbor, and will reach you indirectly. This permeates the Nation. It is not prohibition, but the liquor traffic that tramples upon the inherent rights of citizens.

In our country the people as they go about carrying on their avocations have a right to deal with intelligent human beings. They have a right to deal with civilized, law-abiding human beings in a civilized manner. And yet, right in our midst are these agencies producing the lawless, the semicivilized, and the savage.

You take a young man and start him out highly civilized and let him go forward under the influence of this degenerating process and you come back after a while and you will find him down to the level of the semicivilized or the savage. He will soon get below the level of the brute.

THE CONSTITUTION.

What are constitutions for? Essentially to protect and promote these inherent and natural rights of men and of society. The preamble to the Constitution of the United States sets forth its object:

> We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

This amendment would wonderfully aid to "establish justice," reducing crime in general, reducing the debauching of the processes, stop the debauching of minors, and render justice to that most vast army of sufferers—the wives and children of drinkers.

The Supreme Court of the United States has held that the drinking of alcohol is not an individual matter, since it affects his family and those around him.

This amendment would wonderfully aid to secure "domestic tranquillity." What disturbs that tranquillity more than everything else combined is the liquor traffic.

This amendment would wonderfully aid to "provide for the common defense." The very life of the Nation is at stake before this arch enemy drink, an enemy more deadly than all the armies of the world.

This amendment would wonderfully aid to "promote the general welfare." The highest welfare is the development of character. The liquor traffic is the specific to tear down character.

This amendment would wonderfully aid to secure the blessings of liberty to ourselves and our posterity. It would destroy the enemy that is undermining our liberties and the liberties of our posterity.

Upon every object for which the Constitution was ordained this amendment has a material and vital effect. Liquor threatens to destroy specifically every one of these objects. This amendment would destroy liquor. In other words, this amendment, more than anything else, would contribute mightily to accomplish the object and carry out the spirit for which government is established; for which the Constitution was ordained. Indeed, this added amendment is necessary for the effectiveness of the Constitution, is vital to the perpetuation of our free institutions.

A NATIONAL QUESTION.

Mr. Chairman, other methods of solving the liquor question have been exhausted. Regulation has been tried in all its forms, local option has been tried in all its forms, State-wide prohibition has been tried in all its forms, and all these efforts have demonstrated that we are dealing with a national disease and that this disease is not only an organic disease but a contagious disease. The liquor interests pride themselves on violating local laws, on infringing the rights of individuals, the rights of communities, the rights of counties, the rights of sovereign States.

It is a good thing to have a town dry rather than wet, but if the town is dry and towns near by are wet the virus will be transmitted to the dry town. It is a good thing to have a county dry rather than wet, but if counties around it are wet the virus will be transmitted to the dry county. It is a good thing to have a State dry rather than wet, but if other States are wet the virus will be transmitted and the dry States will still have the germs of the contagious disease. An organic disease can not be cured by a local application. Curing in spots is but tentative. To cut out one root of a cancer is a good thing, but it will not give you a cure. For a real permanent cure you have got to put the disease out of the whole body. The body politic of this Nation is diseased, and the disease must be put out of the whole Nation, and the cure must be organic—prohibition in the organic law, not simply on the statute books.

Mr. Chairman, this amendment proposes to apply an organic treatment to an organic disease, national treatment to a national disease, to put the disease out of the whole body and to coordinate and bring together in full cooperation all of the curative agencies—national, State, local, and individual.

THE OPPOSITION.

Mr. Chairman, who are opposing this reasonable request from a majority of the American people, for the adoption of a wise measure of such supreme importance for the general good?

I do not cast any reflection upon the good people who were here talking about individual liberty and all sorts of miscellaneous superficial matters. The body of the opposition to this movement is the national liquor interests of America, that levy a cash tax of $2,500,000,000 every year upon the American people, and tax themselves to raise a big so-called defense fund amounting to millions, the purpose of which is to trample under foot the laws of town, city, county, State, and Nation, the laws of God and the laws of man.

I am not guessing about their sinister activities. I have just passed through an election. I faced not simply political forces, the natural, normal, logical, legitimate political forces of a senatorial contest. The national liquor interests of America came into my State. Their national representative called a conference of liquor politicians to work out the plans in detail, and then delegated a notorious liquor politician to take charge of the campaign against me. This politician opened up four different opposition headquarters not recognized officially and openly. He was not known officially at all in the fight. I was informed that they had scores of stenographers and more than 800 men on the salaried pay roll. I was informed that they called for 500 workers for one county alone, at $5 a day—$2,500 a day on one county alone. They certainly must have had half a million dollars worth of space in the big daily papers. I had none to speak of. That was the fight, Mr. Chairman. It was one man against the liquor interests of America. I learned what their methods are. They will not come into the open and make a fair, honorable fight. They stoop to anything. They will buy votes where votes can be bought. They will hire degenerates to steal votes where they can be stolen. They regard not the truth, but will rival the devil as the father of lies. They adopt criminal methods and criminal practices. They respect no man's good name. They desecrate the grave.

I am not complaining, Mr. Chairman, for I feel better equipped now to fight them. I expect to be in the fight when the thirty-sixth State ratifies this amendment. But I know the enemy I am describing. They are not here in an open fight, but already are working the papers overtime to misrepresent this amendment. In the Southern States they conjure up "State rights," "the police power." As usual they are depending not upon the justice of their cause but upon their money, the blood money that they have sucked from the veins of the people, the money of the slaves they have shackled.

The opposition are outlaws and follow the methods of pirates, like those that once roamed the high seas under the black flag.

CONCLUSION.

Mr. Chairman, this is a just request that the moral forces of the Nation have made upon Congress. Under the spirit of our institutions the people of the several States have a right to pass on this great organic question of life and death. The conscience of the Nation, with a majority of the American people behind it, are simply asking for a referendum. Irrespective of the merits of the resolution such a request for the transfer of the liquor question from the hands of Congress to the hands of the people should be granted. Certainly only considerations of the deepest organic nature would warrant considering a refusal. The only question that would seem to warrant serious consideration is the question of State rights—the question of the effect of the amendment upon the reserved rights of the States and their exercise of the police power. As shown conclusively, the power of three-quarters of the States to make a change in the organic law and to relinquish if need be part of their reserved power and to transfer additional power to the Federal Government can not be questioned. But the fact is, upon analysis, the amendment would not give added power to the Federal Government, but, on the contrary, would curtail part of the Federal taxing power. Neither would the effect of the amendment curtail the natural and inherent rights of the States, nor would it in any way limit the exercise of the police power, but would in effect strengthen the police power and bring to bear the cooperation of the Federal Government to stop the invasion of this police power by the liquor interests. All other questions of objection that have been raised or that could be raised by those opposing the resolution are of little merit. The most prominent of these is the claim that "prohibition does not prohibit." This claim itself justifies national prohibition, being a confession that this interstate outlaw has been able to trample under foot the laws of communities, counties, and sovereign States, confession that his operations are interstate and national, and demonstrating the necessity for the exercise of national power.

The question of the magnitude of the business becomes of no weight as an objection the moment it is found that the business is harmful instead of helpful to the public.

Thus, Mr. Chairman, we would be justified in claiming that irrespective of the merits of the resolution itself, there being no serious argument to the contrary, this request for a referendum ought to be granted. But the merits of the resolution are of the highest and supremest nature. The resolution would apply organic treatment to an organic disease. It would stop the debauching of the American youth and insure the growth of a sober nation. It limits itself to the broad domain of the State the question of sale, where one citizen seeks a profit in harming another citizen.

No one can question the effectiveness of this treatment, even though the States in smaller units of authority should do nothing to control or destroy the use.

In the light of modern science the traffic in alcohol has become absolutely indefensible. The dangerous nature of this traffic

has already been set forth by many decisions of the highest courts of the States and of the Nation. But modern science has demonstrated that the alcohol in alcoholic beverages is a poison that degenerates the human organism; that it entails crime, pauperism, disease, and insanity; that it undermines the public morals and lowers the average standard of character and, if not checked, entails the overthrow of liberty and the downfall of the Nation.

Furthermore, Mr. Chairman, the time has now come to take this action. Not only is this the greatest question before the people, but the people in every part of the land are aware of its significance. They have determined to settle this question themselves.

We petitioners feel that we have laid before you unchallenged arguments showing that the resolution is in full accord with the spirit of our Constitution, and is, indeed, a necessity to make that Constitution effective and carry out the purposes for which it exists and the purposes for which governments are organized amongst men.

We feel, Mr. Chairman, that we are working for the interests of our beloved country and in the interests of humanity in line with the uplift forces of nature and in obedience to divine will, and we feel that we shall not appeal in vain to you, to your subcommittee, your full committee, to the Senate, and to the House of Representatives.

The Government's Policy in Regard to Salaries of Officials and the Outlay of Public Funds for Purposes of Promoting the Efficiency of Those in Private Pursuits.

EXTENSION OF REMARKS

OF

HON. HERMAN A. METZ,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 6, 1914.

Mr. METZ. Mr. Speaker, the statements that the incentive for taking office is based on factors other than the salary paid are fortunately true; for if they were not, many of our most efficient officials would remain in private business, where services are compensated for on a much more liberal scale and commensurate with the service rendered.

I regret that whenever an attempt is made to raise the salary of a public official to a point where it might approximate the sum a man in private business or profession might earn when discharging duties not nearly as difficult or exacting, it is immediately said by some false economist that the "people are being robbed" or "the Treasury is being looted."

A gentleman who some years ago served his country as an Assistant Secretary of the Treasury, at a salary entirely out of proportion to the services rendered, has since entered the banking business and become the president of probably the largest and strongest banking institution in the country. I refer to him only for the purpose of illustrating the type of man and the kind of ability the country gets in spite of the very low salaries it pays to its higher officials.

A few evenings ago I had the pleasure of listening to an address by this gentleman at the banquet of the American Cotton Manufacturers' Association in New York City, and I was so impressed with what he said, in view of the number of speeches I have listened to on the floor of this House, usually in favor of the farmer and planter, and rarely in favor of the manufacturer or business man, whose welfare is just as essential to the prosperity of our country as is that of the agriculturist, that I deem it proper to incorporate what he said on that occasion in my remarks to-day.

Mr. Frank A. Vanderlip, formerly Assistant Secretary of the Treasury, and now president of the City National Bank, of New York City, the gentleman to whom I refer, in his address to the members of the American Cotton Manufacturers' Association, at their banquet in New York City on April 27, 1914, while discussing the Duke cotton-warehouse plan, said:

"The plan which your chairman has outlined for the creation of a comprehensive warehouse system, to be operated in a manner which will give the broadest currency to credit obligations based on cotton stored in these warehouses, is both interesting and significant. It is interesting as showing the tendency toward an important movement in the cotton trade. It is significant in indicating an awakening on the part of business men to certain distinctions in banking credit that are of great importance.

"During the discussion connected with the enactment of the new banking law there has been much education of bankers and business men alike on the subject of ideal banking credit. Not having reached, in all respects, the settled commercial status that we find in some of the European countries, we have failed here to draw the distinction that is so clearly drawn in most European banking centers between loans for capital purposes and loans of a self-liquidating character, the funds for the repayment of which must naturally and almost inevitably come promptly into the hands of the borrower in the seasonal course of his business.

"Our new banking act was designed to accomplish various things. In the minds of some of its advocates the things sought to be accomplished, I fear, were not entirely economic. But the fundamental economic principles back of the idea which led to this legislation prominently included the creation of a discount market; that is to say, the creation of a form of bankable paper which would be so secured through the names of acceptors and indorsers that the credit risk disappeared and the paper would find a ready market wherever there was money to loan, even though there existed in those quarters no knowledge regarding the credit of the original maker. Whatever will tend toward the creation of such a discount market will be helpful in lowering the rate of interest which the commerce of the country must pay. Whatever will tend to give broad currency to commercial paper, a currency wider than any knowledge of the maker's credit, will tend toward an equalization of rates, toward sounder banking conditions, and toward a lowering charge on commerce for interest. Such a proposition as has been here presented for giving a wide currency to loans made against cotton in warehouses is a fundamental movement, the first among a good many others now gathering force, I believe, that will eventually lead to a great discount market, where idle funds from the whole country and, indeed, from international money centers may find sound investment in short-term commercial credits.

"It seems to me admirable that you men who are interested in cotton manufacturing are thinking of some improvements in underlying methods which may help you in the conduct and extension of your business. The business of cotton spinning and weaving can not be cited as one of the phenomenal industrial developments of America, at least not in its recent years of history. Your business has grown, and it would be easy to present statistics that would be flattering to your management. On the whole, however, looked at from a world point of view, the cotton manufacturing business in America in recent years only about held its own in comparison with world development. While great growth is shown, quite as great growth is exemplified in the statistics of some other countries. With all the advantages of location in the midst of the production of two-thirds of the world's supply of raw material, with the greatest homogenous market in the world right at your hand, and that protected from foreign competition by high tariff, with the advantage of having the lowest rates of transportation of any country in the world, and of being historically a people of the greatest mechanical genius—in spite of all these advantages we have not seen the cotton manufacturing business in this country forge ahead as have many great lines of industry.

"The United Kingdom, importing every pound of cotton she manufactures, is still the world's greatest cotton mill. British spinners export as great an aggregate of cotton manufactures in a month as you do in a year. In fact, the United States takes its place alongside of India in its ability to supply the outside world with manufactured cotton goods. Germany exports well over twice as much as we do, and our total is exceeded by Belgium, France, and even little Switzerland. In the light of these facts, it is obvious that while in a protected market of gigantic extent we have been able to build up the greatest spinning business of any country in the world, we still are not fully supplying our own domestic market, importing over $60,000,000 worth of cotton goods annually, and the advantage of great manufacturing units have not enabled us to get our costs down to a point to make us even a factor of the first order in the world's markets for manufactured cotton. It well behooves you who are interested in this business, therefore, to think broadly and deeply on fundamental subjects in a way that may tend to cheapen your cost of production and put you in line with the other great cotton-manufacturing nations for world competition.

"One important element in the cost of production, of course, must always be the cost of capital, and you are undoubtedly taking a step in the right direction when you endeavor to give a more universal character to that part of your credit operations which can be based directly on stored raw material, and by doing that make that portion of your capital cost you less, because the security for your loans will be more broadly understood and the capital attracted to them come from wider fields.

"Broadly speaking, the cost of a manufactured product is made up of the price of raw material, expense of transportation, and the actual cost of manufacture. The cost of raw material at its point of production is substantially the same to all users. The cost of transportation from field to mill is measured approximately by distance, and here you have great advantage over all your foreign competitors. The cost of manufacture is made up of many elements, but among the principal ones are the cost of capital, the perfection of mechanical equipment, and the price and efficiency of labor.

"On the side of the cost of labor you can not hope, nor should you hope, to make that item in your cost sheet at all comparable with the same item in the cost sheets of your foreign competitors. At the risk of sounding a discordant note I will say that in my opinion you will not permanently reduce your labor cost by trying to compete through the employment of child labor with the lower labor level of other countries. I believe you must find ways of meeting world competition other than in the per diem cost of the labor item. Whether or not you have done everything you can in the perfection of mechanical equipment is a technical question, of which you are a far better judge than I can be, but it is at least obvious to a layman that the United States is not taking the great lead in inventive appliances in cotton manufacturing that it has in some other fields, and it would seem, therefore, that there might be opportunity there to do something toward meeting foreign competition.

"The great advantage which you hold is in cost of transportation. In view of high labor cost, there are impressive obstacles in the way of your meeting world competition by reducing the cost of manufacture. If the cost of raw material were reduced, however, the importance of the element where you have the advantage over all the world, the cost of transportation, would in time be further emphasized. Would it not seem, therefore, that one of the directions toward which this country might best turn its attention in any effort to take is place in world competition in this field should be in the reduction of the cost of raw material?

"Although we supply nearly two-thirds of the raw cotton of the world, I still believe that we present, in our methods of cotton production, one of the most gigantic examples of incompetency to be found anywhere. The huge and rapidly growing totals of our cotton crop are sources of satisfaction until we examine them in connection with our acreage. That examination discloses that four-tenths of a bale an acre is about the average of our production. In that figure I believe is to be found an important indictment against the United States, although it is by no means a type of indictment that lies solely against the cotton planters of America.

"The great bankers of Europe have a practice that I think might well be copied in this country, of issuing annual reports in which are to be found a broad and stimulating discussion of current financial economic conditions. I have just been reading the annual report of the Deutsche Bank, the greatest financial institution in Germany. After presenting some statistics of imports and exports of the leading countries of the world, showing Germany in a position second only to Great Britain, and away ahead of the United States, and indicating how, owing largely to favorable trade balances, the stock of gold held by the Reischbank increased during the year under reveiw by nearly $100,000,000, there occurs this paragraph:

"It is not to favorable climatic conditions alone that German agriculture is indebted for plentiful and increased returns. The following comparison of the produce of the leading agricultural countries will show to what extent progress has been made in the development of German soil through industrious work as well as through expenditure of capital in the shape of artificial fertilizers, machinery, and electrical power.

"In the table which follows the crop returns are shown for the leading countries of the world and for the principal agricultural products. We must remember that Germany is not a fertile country. Whatever German agriculture wins from the soil must come through hard work and intelligent methods. That country has nothing comparable to the natural advantages which we enjoy. These comparative crop returns, therefore, are all the more significant.

"This table of comparative yield shows that Germany reaps per acre 18 hundredweight of wheat, against 8½ in the United States; 14.7 hundredweight of rye, against 8.4 in the United States; 15½ hundredweight of oats, against 10.7 in the United States; and 120 hundredweight of potatoes, against just half that figure in the United States. The United States and European Russia fall into the lowest class of production, and even Canada in every item shows a greater yield than do our own acres. Europe produces no cotton, and therefore a similar unfortunate comparison can not be made with our cotton yield; but, what is perhaps still better, we can make comparison of our acreage yield with the easy possibilities under intelligent cultivation of what our own acres have been made to produce.

"We are now devoting about 35,000,000 acres to the production of cotton, and a good crop is about 200 pounds of ginned cotton an acre. The Department of Agriculture, which seems to be the one arm of our Government truly devoted to upbuilding and intelligent development of our resources, has demonstrated beyond any question what a shamefully small average yield this is.

"At the present time the Government has an arrangement with about 525 county agents in southern territory where cotton is the principal crop. These county agents carried on demonstrations with 12,000 individual farmers last year. The acreage involved was 104,000 acres. On these acres the department's instructions were carried out by the farmers with their own tools, teams, labor, and fertilizer, the department merely furnishing the instructions. The result was an average yield of 1,005 pounds of seed cotton per acre. In the States where these experiments were carried on the present average yield is 546 pounds of seed cotton per acre. It is therefore claimed by the Department of Agriculture that as a direct result of the instructions given to a limited number of farmers the number of pounds of seed cotton produced was increased by approximately 95 per cent.

"As an illustration of what can be done, the Department of Agriculture cites the case of an old negro farmer near Marion, Ala. This old colored man by economy and hard work covering a number of years, acquired a farm of 163 acres, but his land was poor, and not infrequently he found it did not produce even enough for seed. It occurred to him he might get better results by confining his efforts to a smaller acreage. He selected 2 acres near his cabin and practically abandoned the remainder of his farm. For years he has devoted himself to increasing the producing capacity of this small area. He went to work first to fertilize the 2 acres. He hauled into the field and plowed under dead leaves and other decaying vegetation from the nearby woods, cotton stalks and cornstalks, until he had brought the fertility of this little plot of ground up to a high state. So that in one year recently he succeeded in growing 506 pounds of cotton on a measured one-eighth of an acre. This is at the rate of 8 bales per acre, and although this man is advanced in years, his ambition yet is to produce 9 bales of cotton to an acre, and the Department of Agriculture is inclined to think that he will accomplish that result.

"The Department of Agriculture has been sending experts into the cotton belt who have taught the planters the benefits of good cultivation, rotation of crops, care and selection of seed, and the advantage of cooperation among the farmers themselves in securing uniformity in the kind and quality of the cotton raised. The results so far obtained are filled with promise. In many instances the acreage yield has been increased to as high as 2 bales per acre.

"The boll weevil continues its ravages through a large section of the cotton belt. The total loss in cotton production in the United States due to the boll weevil up to this time is believed to be in excess of 10,000,000 bales, which, at the low value of $50 per bale, not counting the loss of seed and cost of fighting the pest, represents a loss of $500,000,000. This estimate covers only the loss incurred in acres planted to cotton and takes no account of the reduction in production due to fear of the ravages of this insect.

"The experts are making progress in fighting the boll weevil, principally through the new methods of cultivation. Through their efforts in many sections of the infested regions, planters have been able to secure an average crop.

"In the Agricultural appropriation bill now pending in Congress is an item of $46,000 to continue the department's efforts to control disease of cotton and other crops. Another paragraph appropriates $180,000 for investigating the ginning, handling, grading, baling, gin compressing, and the establishment and demonstration of standards for the different grades of cotton. Of this sum, $60,000 is to be used in testing the waste, tensile strength, and bleaching qualities of the cotton as standardized by the Government. Another section appropriates $628,240 for farmers' cooperative demonstrations for the best methods of meeting the ravages of the boll weevil.

"An important work is being done by the cotton experts of the Government in the introduction of long fiber Egyptian cotton in the Southwest, especially in Arizona. This work may increase the area of our cotton belt. A year ago the Arizona farmers in and about the Salt River Valley planted approxi-

mately 4,500 acres in Egyptian cotton. About 3,500 acres came to maturity the next year. The remaining 1,000 acres failed by reason of lack of water, poor cultivation, and other hazards. But of the acreage which survived, the total yield was 2,200 bales for the 3,500 acres. Of this high-grade cotton the United States imports each year about 100,000,000 pounds, at a cost of approximately $20,000,000, the price per pound in many cases being 50 per cent more than the average American cotton, except the sea-island varieties.

"The planters in the Southwest, in consequence of the fact that the yield per acre of the 1½-inch fiber Egyptian cotton is fully as great as cotton in the Southern States, with the price much higher, have planted this year about 15,000 acres. The prospect is that this acreage will be greatly increased during the next few years.

"From the demonstration which the Department of Agriculture has made, covering wide territory and many seasons, it is, I believe, a safe assertion that thoroughly efficient methods of cultivation would double our cotton crop on the same acreage now devoted to that staple. The world will be ready to consume that increase as soon as, under the most optimistic view, we may hope that it will be accomplished. I believe there is no more important service that you men who are engaged in the cotton manufacturing business can perform looking toward the development of the cotton industry than to do all that you can to awaken public sentiment to the need for efficient methods of cotton cultivation. A realization of such improvements in methods as this branch of the Government is trying to bring about will do more toward the upbuilding of your business, it seems to me, than you are likely to accomplish with the same effort in any other direction.

"We are to-day a Nation grown critical of business methods and resentful of business accomplishment. By far the greater part of Government energies, as related to business, are directed toward destructive rather than constructive and creative ends. Business men have been called to account by Congress, commissions, and courts, and are being punished for past deeds and hampered in present activities. The managers of railroads, although they have given to the public an average freight rate much less than what similar service costs in other countries, are bound with ever increasing bonds of hampering regulations, and are held to the strictest accountability for any failure of administration which falls below a hundred per cent of efficiency. Directors of railroad property are told what they owe to the people in the way of wise and efficient management, and in spite of results attained, with which the results in no other country are comparable, they are held up to the public almost in the light of criminals, compelled to perform their daily task under the regulating eye of agents of the Government. If that is a fair measure of the duty to society which the managers of public utilities may rightfully be expected to perform—and I do not wish to be considered as denying that the public has a right to exact wise and efficient management—then why should not society demand wise and efficient conduct of the great agencies of production? If a railroad manager is culpable and is answerable to society for anything less than a hundred per cent of efficiency, what of the farmer and planter, holding the great agency of production—land—and utilizing it with but 40 per cent of efficiency? That is the indictment that stands against no small part of the agricultural community—a conduct of their business on a basis of 40 per cent of efficiency. It will not do to say that railroad managers and corporation heads are the representatives of publicly subscribed capital and are therefore subject, in the interests of society, to a surveillance that applies only to the affairs of a public corporation, while farmers represent only personal investment and may be left to work out with such ignorance or intelligence as they choose to bring to bear the conduct of their own affairs. Farmers and planters also owe something to society in the way of intelligently conducting their business. They hold the means of production in their control. The public interest and the common good demand that they exercise that trust with intelligence, efficiency, and thrift, quite as rightly as does public opinion demand efficiency and honesty in business administration. Prices of produce go up in answer to the inexorable law of supply and demand; values of the great agency of production—farm lands—have risen in our memory two or three hundred per cent, not because those lands were more efficiently managed, but because the demands of hungry mouths and backs to be clothed have made prices that permitted much increased values, even when not accompanied by increased efficiency of management.

"Is it not time for the maligned business man to direct some attention to the honest farmer, and to ask whether the people, whose demands the politicians are so fond of formulating, should not have directed against them and their small business methods some of the same analytical criticism that it has been the order of the day to direct against big business?

"I believe that as a Nation we have for some years been attacked by a hysteria of criticism against big business, until a majority of the people have come to believe that the way to secure prosperity is through legislation instead of through intelligent hard work, improved methods, and a scientific application of the best knowledge to their own business. If you can do anything to direct the attention of the cotton planters of the South or of the farmers of the whole country to the fact that the fundamental cause of the high cost of living is not to be found in the offices where big business is managed, but rather in the ignorance and inefficiency of management of their own farms and plantations, you will have done something to clear the atmosphere and to enable us some time to get started on a new period of true prosperity.

"The particular men who happen for the moment to be occupying official positions in Washington and elsewhere, and who are laying unbearable hardships upon the proper development of business in the United States, are not, perhaps, primarily to blame. The blame lies back of them in an ill-informed and frequently unfair state of public opinion. We have had a period of magazine and political muckraking, which has brought about a condition where business success is looked upon as a crime, where the man who has demonstrated that he can manage his business well is excluded from public counsel, and where no small part of our Government affairs have been put into the hands of men who would be incompetent successfully to manage modest business affairs.

"It is idle to rail at the public representatives of one party or another or at one administration or another. We have got to get back of all that and create a sounder, a more intelligent, and a more honest public opinion. That can not be quickly done, and it will never be done by a policy of silence on the part of those who represent important business interests. You have got something to do besides run your cotton mills. You and other business men must wake up to the fact that you have a public duty in the education of public opinion, and so long as you refrain from exercising it you will not only hinder the industrial and commercial development of this whole country but you will very directly permit your own business to be misunderstood and to be made the subject of unfair and uneconomic legislative attack. We are in a period of industrial and commercial depression. The marvel is not that in spite of our great resources we are in such a period, but, rather, with the terrible misunderstanding and misconception on the part of public opinion, that under a popular government we are not in a condition of much deeper depression.

"I regret that I can not at the moment see any marked tendency in the direction of business improvement. We have the promise of great crops, although there is much uncertainty between such an early promise and ultimate fulfillment. Should there be complete fulfillment of that promise, it would, of course, temporarily, at least, bring with it improvement. We may be permitted an increase of railroad rates, and that would be doubly helpful, first, on the side of its direct benefit, but even more on the side of a promise of fairer treatment. Business conditions are unsatisfactory, however, on account of fundamental reasons that are deeper than can be cured by one or both of these factors. The incentive for business men to take new risks, to expand their activities, to lead them to the inception of new or greater enterprises has received a serious check from the unfair attitude of public opinion as exemplified in Congress, by commissions, and in the printed page that reflects and molds the state of public opinion. I do not believe that we can hope for permanent relief from the unsatisfactory position in which business is now placed until we can get a public opinion that more truly reflects a fair attitude, based on correct economic principles. It seems to me the highest duty of business men, particularly such an influential group as is represented here, to contribute the best that is in them toward the creation of a wiser, a sounder, and a more intelligent public opinion in regard to business affairs. That can neither be done by silent acquiescence nor by dissatisfied grumbling at existing tendencies. You must take your active part in forming public opinion. It is time for business men to speak out. Where errors and mistakes have been made, let them be frankly acknowledged, but insist upon a better understanding of your methods, your problems, and your aims. Let your voice be heard and your views expressed with frankness and honesty, and we may then hope that an intelligent and informed public sentiment will give to business men fair play, and to business an enduring foundation upon which sound prosperity may be solidly built."

Irrigation of Arid Lands.

EXTENSION OF REMARKS
OF
HON. JOHN R. CONNELLY,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 7, 1914.

Mr. CONNELLY of Kansas. Mr. Speaker, I am one of those who represent a constituency on the floor of this House who are interested in the question of irrigation. The west half of my district is part of that great plain that lies on the slope east of the Rocky Mountains, where the soil is rich and fertile and the climate is the best. The conditions are such that in that great country it is necessary for a good part of the growing seasons in most years for crops to have additional water from that which comes with the ordinary rainfall. There are years—in fact, they are not infrequent—when there is plenty of rainfall to answer the purpose for growing much of our crops, but most of the years, for many kinds of crops that grow splendidly in that country, additional water is needed. In my opinion, Mr. Speaker, after living in that great country of the West for a quarter of a century, there are a few things that the Government could well do for the people there that would be of very material benefit to them, and in the long run every dollar expended would come back to the Treasury of the United States with a reasonable rate of interest. There are conditions there, perhaps, that do not exist in many other parts of the country. In the first place, let me say to those of you who are from the older settled communities and do not realize the difficulties and disparagements of the pioneer life, that it is the history of the settlement of nearly every country that the pioneer is the man with moderate or small means. This is necessarily so in the great conditions that guide men in the affairs of life.

The man in the older country who has means and wealth at his command, who has home and acres that he owns in his own right, seldom sees the necessities of going to a new country and there meeting the conditions incident to the pioneer. The man who has money and land and credit at his command is more likely to stay where he grew up, where his family was born and reared, and where the ties of early life, of relatives and friends, hold him with bands that are not easily broken. It is the poor man who lives in the older settled communities who sees the price of land each year go higher and higher and the chances for him to own a home and see his family settled around him each year grow less certain that go there. He breaks these bands of friends and of the scenes that hold every mortal in their grasp and, with a purpose to better his conditions and the condition of those who are near and dear to him, sets his face resolutely toward the land of the pioneer. Mr. Speaker, I am not saying that they are not the best people in the world. I have lived all of my life since reaching manhood's estate among these people who constitute the pioneers of that western country, and I say to you that I would rather trust their sense of honor, their ideas of the duty that men owe to each other, than that of any people in all this old world. But they are not a wealthy people, and wealth that comes to a new country to find investment only comes because a better return in the way of interest can be secured there than where values are more settled and, as they contend, where risks are less hazardous. This makes the rate of interest charged to the pioneer people greater than that charged to those who live elsewhere, and it is to this phase of the question that I want to call the attention of the membership of this House. Let me summarize by saying that that great plateau that comes down from the east slope of the Rocky Mountains and reaches down to the district that I represent here has a soil that would compare with the soil that was noted for its richness in the ancient valleys of the Euphrates and the Nile, a climate that would put to flight the claims of southern Italy, a beauty of landscape that would vie with the dells and vales of old Scotland, and a people the best that ever blessed any community or that ever builded any State.

Mr. Speaker, nature that has been so lavish with that country has been derelict only in the one particular. Most of the years the rainfall is not sufficient to raise most kinds of crops. But while nature has not sent enough rainfall to grow crops successfully there it has placed at a depth of from 50 to 150 feet below the surface a never-failing supply of the best water to be found anywhere. Now, what is the condition that these people find themselves in? They learn if they would irrigate successfully they must have two things cheap. They must have cheap power and cheap money to install their irrigation plants. The man who can equip his land so as to pump water on 20 acres can not only live and rear his family and support them, but he can produce much more to help to supply the other parts of the world. But when he attempts to borrow money to put one of these plants in operation he finds that the rate that he must pay is from 8 to 12 per cent, and this, in my opinion, prevents thousands of people from installing the plants. Every business man of experience knows that when men go into any legitimate business and pay interest on the capital at the rate of 10 per cent per annum that it means failure.

Now, I have introduced and at this time have a bill before the Committee on Irrigation of Arid Lands, having for its purpose the assistance of installing these plants by allowing the owners of land to borrow money from the Government by giving a first mortgage on lands upon which plants of approved pattern for irrigation have been installed, money sufficient to defray the expense of installing the plant, at a rate of interest not exceeding 2 per cent per annum on 25 years' time. I want to tell you of some of the reasons why I believe the Government can well afford to do this for the people of that country. First, it will not in the long run cost this Government one dollar of money, but every dollar will come back to the Treasury with interest. Second, it will enable thousands of people to build and maintain homes and add to the wealth and production of the country in general. Third, it will show the people of that great domain that this Government is not especially partial to the East, the North, or the South. The coast communities of the country have its thousands of miles of coasts and its many harbors that the Government very properly attempts to keep in condition so that commerce can be transacted between the States. The rivers of the country demand millions of money each year to keep them in shape to bear upon their bosoms the boats bearing the commerce of the country. Here and there all over the country are projects that require money appropriated directly to assist and foster. The Middle West, or that portion of the country just east of the Rocky Mountains, has received but slight attention in years gone by, and this is the purpose of this speech—to call your attention to our needs and the things that we deserve. Mr. Speaker, we have just passed a bill which spends forty-odd millions of dollars for river and harbors. Much of that is spent to prevent the annual floods that come down off the high lands each springtime and carry destruction and death in its wake to the communities of the river countries. I wonder if it will ever occur to the Members of Congress that much of this water could well be held in that country toward the western mountains, and thereby change it from a menace to property and lives as it rushes in torrents on to the sea, to a thousand reservoirs and ponds, blessing and beautifying the Great Plains country and changing her landscape, her climate, and make her the best country between the two oceans. Sometime, Mr. Speaker, I trust that the claims for the assistance that these people deserve, and which in the long run would not cost the Government a dollar, will be given due consideration. We are spending millions to open up the great Alaskan country, and I believe properly so; but why should we go so far away to spend our money and then neglect to extend a helping hand to those of our own people here who have made a heroic fight to reclaim from the semiarid territory that vast domain that promises an empire of the most productive soil that was ever made fruitful by the efforts of men?

Mr. Speaker, I imagine that I can hear those say who have not given this matter thought that the idea of advancing assistance in this line is visionary. I hope they will not make up their minds entirely until they have considered what has been done by other countries to encourage enterprises and settlers on lands rich in soil but located where the natural rainfall is not yet sufficient to bring the land to its highest state of production. Over in Australia, a land where people are supposed to be far less advanced than in America, the Government builds a residence upon the land, giving the settler the choice of 14 different styles of houses to select from. The Government there grades his land so that he may know at the beginning which land is valuable for alfalfa, which is adapted to fruit raising, and so forth. The settler could find this out for himself in the bitter school of experience, but the State there does it for him. It not only grades his land, but it seeds one-fourth of each allotment to alfalfa, the settler paying one-fourth of the cost and has 10 years to pay the remainder. Besides this, the Government loans to the settler an amount of money equal to 60 per cent of the permanent improvements that he places on the land at a rate of interest varying from 3 to 3½ per cent per annum. He is given encouragement in various ways to become a home owner and live upon the land and help to raise enough to feed the people of the country who are engaged in other than

agricultural pursuits. We might go on and tell how in this land of Australia the land is sold to the settler, and he is given 30 years to pay for it, paying 6 per cent interest on the purchase price; 4½ per cent of this goes to pay interest on the debt, 1½ per cent goes into a sinking fund, which at the end of 30 years pays the whole debt. These are a few of the things that other countries have done and are doing to encourage their people to go upon the lands in the arid and semiarid districts and make homes there and make it a producing country instead of a barren country. I have not, in the bill that I have introduced, sought to have this Government go so far as these other Governments have gone. Our people would be content with much less; but I have introduced this bill with the idea of calling the attention of the Members of this House to the needs of a great number of people who live in these communities and in the hope that after a sane discussion of these wants and needs some action might be taken here to meet these reasonable demands.

Mr. Speaker, no greater or better work can be done by any Congress than to encourage the building of homes and the helping of a people to become producers. Each year the army of nonproducers is growing greater; each year the system that we are trying to maintain encourages more people to climb on the backs of society and ride, instead of getting down to the grass roots and producing from the virgin soil that which sustains the race; each year finds more people who want to emulate the example of the lilies, "which toil not, neither do they spin." Mr. Speaker, I find men here vying with each other in voting millions of dollars for the Army and the Navy. I am not prepared to say that this money is wasted, but certainly it has no claims like the claim of these producers who live on the lands and who must pay the price ultimately that parades these agencies of destruction, of death, and disaster. I find millions of money provided each year to the Government wards who live in ease and trifling idleness. I find millions spent to keep up a system of departments and bureaus filled with thousands and thousands of Dead Sea fruit, the residue of the civil service. I find money spent lavishly and extravagantly upon every form of people who want to idle and consume, but it is a niggardly share that can ever be directed toward the people who deserve assistance to make their labors more profitable.

Mr. Speaker, I want to see the day when the honest laborer, clothed in the homespun and who lives close to nature and takes from the soil the recompense for his labor, will be given the same consideration that is given the frock-coated genteel that hangs like a leech onto the vehicle of government and plays no part of consequence in the great economy of the Nation's life. I want the day to come soon when he who walks the paths of peace and who wrings from the soil the products that feed and clothe a nation shall be considered of as much importance as he who spends his life learning the arts of destruction and war and who is a consumer and in no sense a producer. I hope to see the day when the farmer who follows the furrows in the fallowed fields from early morn to the evening's sunset, who pays his debts from his frugal earnings, and who rears his family in the paths of righteousness and rectitude will be considered, as he is, as great a hero as he who storms a citadel or takes a redoubt. When that time comes, then will we be able to say that justice sits enthroned in the high places and virtue is rewarded according to its deserts.

Parcel Post Rates to Mexico.

REMARKS
OF
HON. GEORGE J. KINDEL,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,
Monday, May 4, 1914.

Mr. KINDEL. Mr. Speaker, why penalize our Army and Navy boys on parcel post who are in Mexico?

Rates from United States to Mexico on 11 pounds	$1.32
Rates from England to Mexico on 11 pounds	.85
Rates from Italy to Mexico on 11 pounds	.53
Rates from Germany to Mexico on 11 pounds	.57
Rates from France to Mexico on 11 pounds	.48½

Is this fair to either our heroic soldiers or enterprising merchants?

The parcel-post rate on 11 pounds to any part of Mexico from either El Paso or Galveston, Tex., is $1.32, while from all countries across the sea enumerated above the much lower rates apply, to our country's disadvantage.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. THETUS W. SIMS,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 7, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. SIMS. Mr. Speaker, on January 16 I made a speech in opposition to the proposed increase in freight rates in official classification territory, in which I said that the Consolidation Coal Co. was a subsidiary of the Baltimore & Ohio Railroad Co. On March 24 I made a further statement, in which I incorporated in my remarks a statement given me by Senator CHILTON, of West Virginia, showing that I was in error in my statement of January 16. My January speech was published in part in the American Shippers' Gazette, including the statement as to this coal company. In the issue of that publication of April 30 my last statement is published, with a letter of Mr. J. H. Wheelwright, president of the said coal company. Then follows an editorial comment, with a statement of facts tending to show that, while the title to the shares of stock formerly owned by the Baltimore & Ohio Railroad Co. have been transferred, conditions remain such that the railroad company has effective control of the coal company. Inasmuch as I placed in the RECORD the full statement given me by Senator CHILTON, I now read the statement in the American Shippers' Gazette:

THE CONSOLIDATED COAL CO. HAS THE CONGRESSIONAL RECORD CORRECTED TO SHOW THAT IT IS NOT A BALTIMORE & OHIO SUBSIDIARY.

The American Shippers' Gazette is in receipt of a letter from the Consolidated Coal Co. under date of April 13, 1914, in which attention is directed to the following facts:

"Under date of January 31 you quote in your issue a part of the speech of Hon. T. W. SIMS, of Tennessee, in connection with the 5 per cent increase in freight rates to the railroads, in which speech Representative SIMS stated that this company was in reality a subsidiary of the Baltimore & Ohio, etc. I inclose you herewith extract from the CONGRESSIONAL RECORD of March 24, 1914, in which Representative SIMS retracts this statement and gives the facts."

This letter is signed by J. H. Wheelwright, president. The extract from the CONGRESSIONAL RECORD referred to as taken from pages 747–748 of March 24, 1914, is as follows:

"Mr. SIMS. Mr. Chairman, in a speech I delivered on the 16th of January last, in opposition to the proposed increase in freight rates in official classification territory, I made the following statement:

"'It is of record that the Consolidated Coal Co., a large producer and shipper of coal in West Virginia and Kentucky, is much quoted as favoring the increase in rates "because the railroads need it," but the fact that this company is in reality a subsidiary of the Baltimore & Ohio Co. is not given equal prominence.'

"Mr. Chairman, my authority for that statement was the report of the Interstate Commerce Commission under the Tillman-Gillespie resolution, dated January 25, 1907. But I am informed by Senator CHILTON, of that State, that, while the facts were as I stated them to be from the report referred to at the time it was made, that such were not facts at the date of my speech, and I take this opportunity to set myself right, and in justice to the coal company, by reading the following statement of facts given me by Senator CHILTON, of West Virginia:

"'On April 26, 1906, Messrs. Clarence W. Watson, Jere H. Wheelwright, and H. Crawford Black bought from the Baltimore & Ohio Railroad Co. all that company's holdings of stock in the Consolidated Coal Co., viz, 53,532 shares out of 102,500 shares outstanding, or 52.2 per cent of the whole.

"'The shares were transferred to the Windsor Trust Co., of New York, as trustee, to hold as security for the payment of the purchase money and interest thereon. The right to vote the stock vested in the purchasers, subject only to interference by the trustee on complaint of the railroad company in case the management of the coal company diverted tonnage.

"'Of the 53,532 shares, 43,000 shares are still held by the trustee. In 1909 the purchase agreement was supplemented, the purchasers depositing additional shares simply as collateral, agreeing to withdraw 13,000 shares on or before April 30, 1916, and being accorded the right to withdraw the balance of the 43,000 shares at the rate of 6,250 shares per year thereafter.

"'In May, 1909, the capital stock of the company was increased 200,000 shares, and in October, 1910, was further increased 250,000 shares of $25,000,000 par value, which had been sold at par and all of which is now outstanding, so that the 43,000 shares originally purchased from the Baltimore & Ohio Railroad Co. and still held by the trustee represents but 17.2 per cent of the voting shares of the coal company. The Baltimore & Ohio Railroad Co. owns or votes no shares whatever.

"'The operations of the Consolidated Coal Co. are not confined to the Baltimore & Ohio system. In 1908 the Consolidated Coal Co. purchased over 32,000 acres of coal land on the Chesapeake & Ohio Railroad in Johnson County, Ky., known as the Millers Creek coal field. This operation, which is now a large one, is exclusively on the Chesapeake & Ohio Railway.

"'In 1910 the Consolidated Coal Co. purchased 100,000 acres of the highest grade by-product coking coal in the United States, situated in the eastern part of Kentucky and known as the Elkhorn coal field. To reach the western part of this field, on account of its remarkable quality, the Louisville & Nashville Railroad Co. built a new line from their existing line at Jackson, Ky., a distance of 98 miles.

"'Both of these properties have been developed, and are capable of producing a large tonnage of coke. In the purchase of coal lands and in the improvements on these two roads alone the Consolidated Coal Co. has already expended $8,000,000.'"

The foregoing is an example of how half truths may be dressed up so as to look like the real thing. It is but another illustration of how easily the average citizen, be he ever so intelligent, may be deceived. The statement as furnished in the foregoing extract by Senator CHILTON contains much truth, but it does not disclose the real situation as it obtains in the Consolidated Coal Co.

In the investigation of the Interstate Commerce Commission under the Tillman-Gillespie resolution, the Baltimore & Ohio Railroad Co. was severely criticized for its discriminatory practices regarding independent coal properties whose duty it was to serve impartially. These unjustly discriminatory practices were indulged for the benefit and profit of the Baltimore & Ohio Railroad itself and for the benefit of its subsidiary company, the Consolidated Coal Co. So severe was the castigation of the commission of these reprehensible practices that the railroad sought to escape further criticism and perhaps prosecution by an alleged sale of its holdings in the coal company on April 26, 1906, at a date somewhat prior to the report of the commission itself.

Of this alleged disposal of its holdings in the Consolidated Coal Co. the commission paid its respects to the Baltimore & Ohio Railroad Co. in its report of January 25, 1907, as follows:

"The sale was made during the progress of this investigation and only after the ownership of this stock by the Baltimore & Ohio Railroad Co. and the discriminations against other shippers by the Baltimore & Ohio Railroad Co. had been developed. The terms of the sale named in the contract are such that the rate of interest upon the purchase money is less than the rate of dividend paid for the last year, and very much less than the rate of net earnings for that year, or, in other words, by appropriating the net earnings to that purpose not only can the interest on these deferred payments of purchase money be met, but the principal of the same can by degrees be paid off, without any expenditure on the part of the purchasers.

"It is also to be noted that this contract provides that until all of these deferred payments are met the Consolidated Coal Co. shall ship all the coal handled by it or its subsidiary companies over the Baltimore & Ohio Railroad or Pennsylvania Railroad Co., and the last deferred payment can not be met for 30 years, so that the tonnage is apparently secured these two railroads for that length of time.

"This sale could only be made by and with the consent and approval of the president and directors of the Baltimore & Ohio Railroad Co., many of whom are also directors of the Pennsylvania Railroad Co. and the New York Central & Hudson River Railroad Co.

"It appears to the commission that after this apparent transfer of the stock of the Consolidated Coal Co. held by the Baltimore & Ohio Railroad Co. that this railroad company is still very largely interested in the prosperity of the Consolidated Coal Co. and its subsidiary companies, and if the ownership of stock in the Consolidated Coal Co. was responsible for discrimination alleged to have been practiced by the Baltimore & Ohio Railroad Co., then the same incentive to discrimination in favor of and favoritism to the Consolidated Coal Co. and its subsidiary companies exists now, as far as the railroad company is concerned, as before the apparent sale of the stock aforesaid."

In the information furnished by Senator CHILTON stress seems to be laid upon the fact that the capital stock of the Consolidated Coal Co. has been increased very materially, so as to reduce the percentage of the holdings in the hands of the trustee provided for in the sale by the railroad company from 52 to 17 per cent so as to make it appear that the railroad company does not have the preponderance of power in the corporation. The statement does not show who holds the balance of this stock, nor that such holders are not closely allied with the Baltimore & Ohio Railroad Co. Nor is it hardly admissible that the railroad company, having sewed up the coal company and its alleged purchasers in a 30-year contract, and having possession of a majority of the stock of the company, would permit the control of that company to get beyond it, in view of the fact that the provision for the shipments over the two specified railroads could be declared to be invalid at the instance of the coal company.

These are only a few of the things which occur to one in considering the relationship which has subsisted heretofore between these properties.

There was no substantial change in the ownership of the coal property, as pointed out by the commission, nor has anyone since understood that there has been any substantial change; but, on the contrary, there abides in the minds of those familiar with such matters that there is an identity of interests between the railroad company and the coal company, and there are many things which seem to confirm this view.

Some two or three years ago the Baltimore & Ohio Railroad Co., in common with the other carriers serving West Virginia coal fields, made an application to the Federal commission for authority to increase their rates on coal from West Virginia districts to lake ports. At the same time there was pending the Pittsburgh-lake rate case, in which latter case the commission reduced the rate 10 cents per ton. Notwithstanding the Baltimore & Ohio was at that time asking privilege to increase its rates on lake coal from West Virginia territory, and setting up that the existing rate was too low, as soon as the commission reduced the Pittsburgh-lake rate 10 cents per ton the Baltimore & Ohio immediately reduced its rate by a like amount. Of course, everyone understood that this was intended to maintain the same parity or differential for the benefit of the Consolidated Coal Co. principally.

As noted in the statement of Senator CHILTON, the Consolidated Coal Co. has extended its operations to Kentucky, and has purchased large acreages of coal lands adjacent to the Chesapeake & Ohio Railroad. Those who remember this acquisition of property in Kentucky will recall that there was quite a lot of excitement because of the threatened invasion of Kentucky by the Baltimore & Ohio Railroad which promised to throw its lines into that territory to serve its subsidiary, the Consolidated Coal Co. After some time spent in alleged surveys and much bluffing it was reported that the Chesapeake & Ohio and the Baltimore & Ohio had agreed upon a division of the tonnage coming to the Chesapeake & Ohio, and especially from the Consolidated Coal Co., by which the Baltimore & Ohio, and particularly its subsidiary, the Cincinnati, Hamilton & Dayton, was to receive a very large coal tonnage from the Kentucky field. This was in consideration of the Baltimore & Ohio remaining out of that territory. The Baltimore & Ohio had about the same time taken over the defunct Cincinnati, Hamilton & Dayton Railway, and the Chesapeake & Ohio was threatening to cut off its coal traffic from the Cincinnati, Hamilton & Dayton and divert it over its own lines then recently acquired.

The scheme of the Baltimore & Ohio was not only to extend the operations of the Consolidated Coal Co. to the splendid new fields of Kentucky, but it was to furnish at the same time a tonnage for the Cincinnati, Hamilton & Dayton that would help raise the revenues of that property. The Baltimore & Ohio had taken over the Cincinnati, Hamilton & Dayton under a seven years' operating arrangement, with the privilege of purchase or long-time lease at the end of that period should it so elect. Of course, the Baltimore & Ohio did not take the Cincinnati, Hamilton & Dayton over voluntarily, but the broken-down property was assigned to the Baltimore & Ohio by "the powers that be," and it was a part of the statesmanship of the railroad magnates controlling the several properties to give the Cincinnati, Hamilton & Dayton an assured tonnage when they resolved to send the Consolidated Coal Co. into the fields of eastern Kentucky.

To-day no one familiar with the coal trade in its larger sense, or familiar with the relationship or ramifications of railroads, doubts for one moment that the Baltimore & Ohio Railroad Co. absolutely dominates the Consolidated Coal Co. in all of its policies as completely as it did prior to the alleged sale of the stock in 1906.

In fact, among all persons who have any relations in the matter with the railroads or coal company, the Consolidated Coal Co. is synonymous with the Baltimore & Ohio Railroad Co.

It was very kind in Mr. SIMS to permit Senator CHILTON to correct his remarks, and thus furnish some data to be distributed about for the purpose of correcting the effect of his speech, and it bespeaks the fairness with which Mr. SIMS desires to treat all persons, and yet it is only fair that all the facts should be known about the relation which these properties sustain toward each other. The spirit and letter of the terms of the contract of sale are still binding upon the coal company, regardless of who holds the stock, and that fact has not yet been disclosed so as to show that, even though the stock holdings are scattered. As a matter of fact, even a minority interest in a property where the stock is largely scattered is sufficient to establish an effective control.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 7, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BAILEY. Mr. Speaker, I can not forbear adding my humble yet heartfelt protest to those already so eloquently made by the gentleman from Mississippi [Mr. WITHERSPOON] and the gentleman from Missouri [Mr. HENSLEY] against the monstrous extravagance contemplated in this bill. The gentleman from Tennessee [Mr. PADGETT] has resented with deep feeling the language of the minority report, in which the appropriation of almost $140,000,000 for the Navy is characterized as "inexcusable extravagance and a criminal waste of the public moneys." Yet will any other characterization fit the case? Is it possible to characterize it as prudent, economical, conservative, wisely thoughtful of that oft-forgotten man who must bear the burden?

Of course, I do not fail to realize, Mr. Speaker, that at this crisis in our relations with a neighbor it is difficult to withstand the warlike pressure or to appeal to reason where reason should hold highest sway. Yet it is impossible for me to remain silent when I contemplate the raid upon the Treasury which this measure proposes. It has been demonstrated on this floor beyond any sort of question that our Navy is already one of the greatest in the world, second only to that of Great Britain. But the big Navy boomers are not content. They are bent on keeping up the killing pace which has carried us from one extreme to another and which shows no sign of abatement. Every pretext is seized upon to justify this madness. A fresh war scare is invented every day to frighten the timid; and new atrocities are imagined with every revolution of the earth to inflame popular passion and lend occasion for "preparedness."

But who has been threatening us? When or by whom have our rights been assailed? What peril confronts us? From what quarter is any assault upon our shores to be expected? From Mexico? Do we fear that stricken and impoverished land, torn with revolution, sunk in misery and degradation, palsied by ignorance and superstition, bowed down under the awful burden of an age-long tyranny? We have a mighty fleet in her waters to-day. Do we need other ships to invest her ports and to cut off her communications with the outer world? Why, Mr. Speaker, the whole Mexican Navy could not withstand a single one of our battleships for a minute. The least formidable of the steel fighting machines now before Vera Cruz or Tampico could sink all the war vessels in the Mexican fleet with a single broadside. Yet our trouble with poor, decrepit Mexico is affording excuse for what is proposed in this bill. It is furnishing to jingoism an argument which it has not been slow to seize. It is lending an encouragement to the big Navy boomers which could scarcely have been more fortuitous.

The truth is that upon no sane ground is it possible to justify or even to palliate the "inexcusable extravagance and criminal waste of the public moneys" contemplated in the pending measure. Japan distinctly disavows any thought of trying to force our hand at this time or at any other. Germany has no more reason to seek a quarrel with us than we have to seek one with France or Italy or Russia. Great Britain has had sufficient experience in fighting us before to make her exceedingly slow to think of fighting us again; and in fact her people are our friends; they would contemplate with horror any break in the amicable relations which have so long existed, and they no more think of severing these relations than they do of giving up the great policy of free trade which has made them rich and powerful.

If there be a menace in any quarter, it is in Latin America. We have few real friends there. We are regarded with undisguised disfavor. They believe us to be harboring designs against them. They see in our naval expansion not a threat against Europe, not sinister designs on Japan or China, not even a defensive preparation, but a deliberate purpose to bring them under an enforced protectorate similar to that which has been imposed on Cuba. Latin America is jealous of its independence. It has the same pride in its liberties as we so fondly boast. It has its own ambitions and its own ideals. It has a destiny to work out in its own way and along lines chosen by itself. It would therefore be less than what we know it to be if it did not look with growing distrust upon that vast preparation, which Latin America can interpret in no other way than that it is aimed at steady southward extension of our sphere of influence.

But, Mr. Speaker, is there anyone on this floor who would frankly avow the designs which Latin Americans suspect? Is there indeed a lurking purpose in the background of jingoism which justifies the suspicions and the fears which the Republics to the southward entertain? As far as the great plain people of this country are concerned, I feel confident that they entertain no thought of expansion. They have had enough of that in connection with the Philippines. They are not anxious to take on new problems and to involve themselves in fresh complications. There are great problems at home which call for the best thought and the best endeavor of all earnest Americans in working out adequate solutions. What of the trusts? What of the transportation monopoly? What of the development of Alaska? What of the industrial perplexity suggested by conditions in Colorado and Michigan? What of the public roads, for which we have just begun to make appropriations and which must call for greater and greater drafts upon the Public Treasury? Shall all these interests be submerged or set aside while we foot it mightily toward a goal which marks the brink of a fearful precipice? For we can not pursue the present course indefinitely and still hope to escape ruin. We may outrun the world in this stupid and wanton race for sea supremacy, but at what a cost! It should be kept in mind that all the scores of millions carried in this bill represent a drain on resources; and in this it differs from expenditures on roads or on rivers or on harbors or in the development of Alaska. In all these cases money expended will represent an investment upon which substantial returns may safely be anticipated. But what return, what proper return, can a battleship bring? Well, it can bring suspicion, resentment, retaliation, international disquiet, strained relations with neighbors, fear to weaker peoples, a bit of pride and glory for a privileged class supported in ungainful employment by the horny-handed toilers in mill and mine, in the factory, and on the farm.

Mr. Speaker, I stand for peace, and it is because I stand for peace that I protest now with all earnestness and in all candor against the "inexcusable extravagance and criminal waste of the public money" signalized by this culminating achievement of American jingoism, following the flag of William Randolph Hearst rather than the modest banner of Jeffersonian simplicity. In our Baltimore platform, Mr. Speaker, we gave a very solemn pledge to the American people on the subject of economy. In that platform we quite properly, and I thought sincerely, denounced Republican extravagance. I took that platform seriously, and the people must have so taken it, else we should not have been entrusted with the commission we now bear. But in spending $140,00,000 on the Navy and $101,000,000 on the Army are we keeping that pledge? Are we maintaining faith with the farmers and the artisans who bear the load? Are we playing fair to ourselves or to them? Is a total outlay exceeding that of the most profligate Republican Congress a proper fulfillment of our sacred promise? For one I think not. For one I protest with all my soul against the bad faith it implies. As was said on this floor by the eloquent gentleman from Missouri [Mr. HENSLEY], if more battleships were really needed, no sacrifice in meeting that need would be too great for the American people, for the people back home whom I represent, to make. But there is no such need. Our shores are threatened by no invader. No spoiler menaces our cities. No alien tyrant lies in wait to subvert our institutions and take away our liberties.

In every direction save one the skies are perfectly clear, and in that one direction a bow of promise has appeared which every lover of peace must welcome and every friend of humanity must desire to bring to fulfillment. To me war is ineffably hate-

ful. I can see in it nothing to inspire, nothing to glorify, nothing to exalt. Of course, it brings out sacrifice and valor and splendid heroism. It brings out courage and daring and high emprise. But it also brings out all the harder and baser and more sordid passions. It brings out cruelty, malevolence, bitter hatred, false ideals, all the brute instincts. It turns gentle human beings into monsters, reveling in blood, as ready to "kill all over 10" as to apply the torch or to trample every human right into the dust. And after all how useless it is; how little worthy of a civilized people. Long ago we had risen in the scale of intelligence and reason to the point where the code duello was abolished as between individuals. Our grandfathers thought that only by shooting their neighbor could insult be wiped out and honor satisfied. But common sense rebelled against this stupid and degrading system. The better sentiment of men repelled the idea that honor was a thing so delicate and so sacred that only in blood could stains upon it be washed away. But the code duello as it applies to nations is still as inviolate as in the days of old. We still resort to it, even under so slight a provocation as that of the arrest of a few marines and in spite of apology and the punishment of the offending subordinate. May we not with propriety inquire whether we should be so ready to resort to it if we had fewer huge battleships and 15-inch guns? Do the possession of these indeed make for peace? Are they not rather an abiding temptation to aggression? Would we ever have thought of playing the international policeman and undertaking to regulate all the affairs of our weaker neighbors had we refused to permit William C. Whitney to enter upon the realization of his dream of empire—a dream which found partial fulfillment in the conquest of the Philippines and in the seizure of Panama under the guise of a fake Republic which could not have lasted a minute without the support of our guns?

No, Mr. Speaker, we are not making for peace in multiplying our fighting machines and in drawing increasing numbers of the youth of our land into the business of war. Every pretense that naval expansion means international security is a false one. The Navy is the national hip pocket. We have gotten rid of the hip pocket in our ordinary life. No man thinks of going "loaded" to-day as in the old days. We have quit wearing knives in our boots. The sword cane has gone out of fashion. Gun toting has lost vogue even in Texas. We go our several ways without thought of molestation, and the more so when we go unarmed. It is the man with a gun on his person who is always afraid, always expecting trouble and always finding it. May not the same be said of nations? Are we not a thousand times more timorous to-day, a thousand times more fearful of some lurking enemy, than we were 50 or 75 years ago, when our Navy was all but a minus quantity, when our Army was negligible as far as numbers were concerned, and when our material resources were as nothing in comparison with those available now? Is it the law of "preparedness" that our apprehensions increase with every increase in ships and guns?

Mr. Speaker, who has failed to note the war talk which has cropped out in almost every debate on this floor during the last year? It has not mattered what was the measure under consideration, what the policy being discussed, what the general theme before the house, always the thought of war, the suggestion of bloodshed, has obtruded, like the head of King Charles in Mr. Dick's Memorial. Back of Alaska development lurked the supposed needs of Army and Navy. Back of the Panama Canal has lurked the military and naval advantage it is expected to give. Back of nearly all our plans and purposes we find crouching some hint of coming trouble against which we must arm and regarding which we must always be on the alert. We talk of war so much that the war idea gets into the very atmosphere and the spirit of war comes to rule our thoughts, to direct our energies, and to animate our social life. We think in terms of carnage. We turn away from the golden rule to worship at the shrine of gold braid.

Why not think and speak in the terms of peace? Why not talk of amity and brotherhood and good will? Why not arm ourselves with truth and justice and righteousness rather than with Krag rifles and 15-inch guns? Why not think more of the Prince of Peace and less of the Prince of the Powers of Darkness? Why not try to draw weaker peoples to us by friendship and high courtesy and noble self-denial in the face of power and opportunity rather than laying them under tribute through the exercise of superior strength? Why not be as manly in our national as in our individual life? Why have a double standard in conduct and conception—a standard of peace and self-restraint for the individual; a standard of force and self-assertion for the Nation?

Mr. Speaker, the path seems clear to me. It is the path not of duty and destiny but of Christian faith and brotherhood and loving kindness. It leads not to war and waste and widowhood, but to plenty and prosperity and peace. Those who follow it may not win to glory and renown; they may not be hailed as heroes by the mob; they may not bask in the smiles of privilege or wear the favors of princes and potentates; but they shall mount to higher and better things, to a sense of obligation to fellow men, to a realization of the value of human life, to a new birth in the spirit of Him who said: "A new commandment I give unto you, that ye love one another."

Our Father, King of nations,
In this our time give peace.
End war's black desolations
And bid its carnage cease,
Its rifles' vengeful rattle,
Its cannons' murderous roar.
Stanch the red tide of battle
And let it rage no more.

Wars, hateful to the mothers
Of sons in conflict slain,
Where brothers kill their brothers
While widows weep in vain,
While orphans' tears are falling—
God, end this reign of hate,
This shrewd, financed, appalling,
False glory of the State.

Teach Thou our heroes, Father,
To use their strength and skill
And leadership the rather
To save and not to kill.
Lest through war's devastations
Good human harvests cease,
Destroy the scourge of nations,
Enthrone the Prince of Peace.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. FRANK B. WILLIS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 7, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. WILLIS. Mr. Speaker, during the discussion of this bill much has been said concerning the advisability of having construction work done in Government navy yards. Personally I am in favor of having this new construction carried on, so far as possible, in navy yards owned and operated by the Government of the United States. At present it would be inadvisable to undertake all work of this character in Government yards, because without vast additional expense these yards, with the exception of the Brooklyn Navy Yard, are not equipped for the construction of large armored vessels; and it is, furthermore, desirable that some work be done in private yards in order that we may encourage the industry and labor of our own country, and have these construction agencies to fall back on in time of need. Yet whenever new construction work is to be done it should be assigned in the first instance so as to keep busy the Government plants that we already have. Why should contracts be given to private concerns and our Government yards, with their expensive equipment and highly organized force of skilled mechanics, be allowed to lie idle? Our own governmental plants should be run to their full capacity, provided that much new construction work shall be decided on, and only the surplus work left after providing that our own Government yards shall be run to their full capacity should be let by contract to private shipbuilding concerns.

There are many advantages flowing from Government construction, among them being better conditions for workmen, better workmanship on the vessels, and greater expedition in the completion of the work. The time of construction has been cut nearly in half since the Government commenced to do some of its own work. Some of the advantages of Government construction and the viewpoint of the workingmen relative thereto are clearly set forth in the following letters from the Affiliated Trades of the New York Navy Yard and the International Association of Machinists:

AFFILIATED TRADES OF THE NEW YORK NAVY YARD,
Borough of Brooklyn, N. Y., April 28, 1914.

MY DEAR CONGRESSMAN: The Navy appropriation bill now before Congress will provide for the building of other battleships.

The trades of the New York Navy Yard desire to call to your attention the fact that the last ship constructed in the Government navy yard, namely, the *New York*, although construction was started some months after her sister ship the *Texas*, is now ready for service and on her way to Mexico to do duty before the *Texas*, which was contracted for at one of the private shipbuilding companies.

This is a record to be proud of, and we, as American workmen, all citizens of this great Republic, feel proud of this accomplishment

and ask that in providing for further construction of ships that Congress be sure to keep this force in the New York Navy Yard steadily employed, as it is said by experts to be the most efficient construction force ever organized.

Yours, respectfully,

J. J. McKNIGHT, *President*,
J. S. McDONAGH, *Secretary*.

WASHINGTON, D. C., *April 24, 1914*.

Hon. FRANK B. WILLIS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: During the consideration of the pending naval appropriation bill the proposition will be submitted to the House of having one battleship constructed in a Government navy yard.

As a representative of organized labor in the navy yards permit me to point out a few reasons why Congress should favor this policy.

Prior to 1903, when the first battleship was built in the Brooklyn Navy Yard, it had been customary for private contractors to take about three years to build battleships, as in the case of the *Georgia* and the *Nebraska*, and they were seldom completed within contract time, which was usually exceeded by six or eight months. As compared to this, the *Connecticut*, built by the Government in 1903–4, was launched in 18 months and 19 days after the keel was laid. This is an important consideration in the construction of modern battleships, considering the fact that a ship is out of date in less than 10 years and practically useless in 20 years.

A battleship costing $15,000,000 would depreciate at that rate about $1,000,000 per year, so that if the Government by continuing its policy of constructing some of its own battleships can thereby force private contractors to reduce the time required for building from three years to one year, as at present is the case, it would be economy even if each ship built by the Government cost $2,000,000 more than by contract.

The *Connecticut*, which was built in a navy yard, cost only about 5 per cent more than its sister ship, built by private contract, and this added expense was entirely made up by the fact that the workmanship on the Government-built vessel excelled that of the other to such an extent that thousands of dollars were saved in repairs of the navy-yard built ship, according to the records.

Much has been made of the alleged fact by the opponents of Government construction that the *Florida*, which was built at a navy yard, cost nearly $2,000,000 more than its sister ship, the *Utah*, which was built by contract. However, much of this excess cost, it has repeatedly been asserted on the floors of Congress, was due to overhead charges for maintaining the navy yard, most of which would have existed whether there had been any ship built at the navy yard or not; so that the costs charged to the battleship were not all caused by the building of the ship, and should not be counted as a part of its cost.

It has also been brought to our attention that contractors building battleships for the Government about that time were losing several hundred thousand dollars on their contracts, due perhaps to their efforts to discourage Government construction, knowing that if it could be shown that Government construction was much more expensive, comparatively, that there would be a chance of having the Government shops put out of commission and they could go back to their old practices and recoup their losses.

Whatever the facts might be with regard to the cost of the *Florida*, the more recent efforts at battleship construction in navy yards have been toward lower costs and still faster records.

When the *Pennsylvania* was let to the Newport News Shipbuilding Co. in 1913 the bid by the New York Navy Yard was only about $35,000 more than the bid of the concern that got the contract; and the bid of the Mare Island Navy Yard exceeded the Newport News company by only $12,000. Either of these differences is a mere bagatelle.

As to the relation of the navy-yard bids to the actual cost of the work, it can be cited that the cost of the battleship *New York*, which has just been completed by the New York Navy Yard, was $659,635.41 less than the original estimate by that navy yard, according to the latest facts available at the Navy Department. Furthermore, the battleship *New York* was launched in 12 months and 19 days after the keel was laid, a record that is worth much in these days of rapidly changing designs in war vessels.

It is now predicted that a battleship can be built at a navy yard in about 10 months, and at less cost than formerly, unless Congress destroys the present splendid organization of its own shipbuilding establishments by failing to have battleships built there.

The total cost of constructing the hull and machinery of the *New York* in a navy yard is approximately $6,248,224.38 for labor, material, and indirect charges; and the total cost so far incurred in building her sister ship, the *Texas*, is $5,940,695, according to the latest information available.

In order to maintain a trained and efficient force for construction work in our navy yards it is necessary to build continually; otherwise both equipment and working force will become demoralized and unable to compete successfully with the shipbuilding contractor.

It is well recognized that if a navy yard is operated at approximately its full capacity, the overhead charges will be reduced, the working force will put forward their best efforts, because it will not fear discharge for lack of work, and there will always be an adequate supply of materials and workmen on hand for doing repairs economically.

I sincerely trust that we can count upon your active support, as well as your vote, in having a clause inserted in this year's naval appropriation bill providing for one battleship to be built in a Government navy yard.

Thanking you for past favors and for anything further you may do in our behalf, I remain,

Very respectfully, yours,

M. P. ALIFAS,
President District No. 44,
International Association of Machinists.

The disadvantages of construction in Government yards are comparatively slight, and in many cases only speculative when compared with construction in privately owned yards. So long as the construction of additional warships is deemed necessary as a guaranty of our national safety, so long should the Congress provide that the construction work of the Government should be done in Government navy yards up to the capacity of those yards economically operated, only surplus work going to privately owned shipbuilding concerns. The Secretary of the Navy is asking for two battleships; if these are authorized, at least one of them should be built in a Government navy yard. Better workmanship, better labor conditions, speedier work—all these are results of Government construction. In my judgment careful governmental methods will ultimately bring the margin of cost down to the minimum and thus result in a saving of the people's money. The amendment offered by the gentleman from Illinois [Mr. BUCHANAN] is a step in the right direction and I shall support it. By requiring at least a portion of the work to be done in Government yards it means better ships, better conditions for workingmen, and sound and safe economic policy for the Government.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CARY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 7, 1914.

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. CARY. Mr. Speaker, on Monday, the 24th of February, 1913, the gentleman from Illinois [Mr. MADDEN] said:

Is there any reason why the District Commissioners should not be fined and jailed for all this sort of thing?

Answering the gentleman from Illinois, the minority leader [Mr. MANN] said:

Perhaps some of them ought to be jailed and kept there.

These edifying remarks were brought about as the result of the exposure of certain crookedness in the conduct of affairs of the District of Columbia.

While the District of Columbia appropriation bill was under consideration in the House in January, 1912, the gentleman from Nebraska [Mr. LOBECK] furnished certain data showing the secret, underhanded, irregular, and illegal transactions made by the District Commissioners and by their subordinates, with their sanction. In the course of his speech, he said:

The auditor of the District of Columbia passed the accounts for the illegal purchase of these 16 street-sweeping machines because he was ordered to do so by the Commissioners of the District. The entire transaction was illegal.

At various times and on various occasions when the District appropriation bill was under consideration in this House certain other exposures showing illegal and unauthorized transactions made by the Commissioners of the District of Columbia, without authority in law, have been made.

In the spring of the year of 1911 the commissioners began to build a $60,000 stable on lots 4, 5, 6, 7, 8, and 9, in square 1043, located in a residential section of the city, before they had a title to the property. I will have something to say on another occasion in reference to this transaction.

Now, on the 31st of January, 1913, the chairman of the House Committee on the District of Columbia [Mr. JOHNSON] openly charged on the floor of this House that the commissioners had spent $67,000 illegally in paying architect's fees. In view of these facts and occurrences it has occurred to me as being rather strange that no curb has been put on these illegal and unauthorized acts on the part of the Commissioners of the District. For the benefit of the Members of the House who have not the time or the inclination to go into District matters, I desire to give a short history of the Washington Asylum and Workhouse of the District of Columbia, showing the amounts appropriated by Congress for the past six or seven years, the deficiencies that have been made, and the sudden increase in the cost of maintaining this institution from practically nothing in 1907 to approximately $600,000 in 1913.

The appropriation for maintenance for the Washington Asylum for the fiscal year 1907 was $82,681. There was a deficiency appropriation of $8,000, as shown in volume 34, page 1379, United States Statutes at Large, making the total cost $90,681. At that time the labor of the convicts was estimated to be worth $120,000 per annum to the District of Columbia, so that the institution was more than self-sustaining. In 1908 the appropriation was $87,251, with no deficiency. In 1909 the appropriation was $90,676, and there was a deficiency of $12,000, making a total cost of $102,676. (See vol. 35, p. 916, U. S. Stat. L.) The cost in 1910 was $101,330, with no deficiency. The cost in 1911 was $106,641, and there was a deficiency of $120,000, making the total cost $226,641. (See vol. 36, p. 786, U. S. Stat. L.) This is the year when Occoquan was established. W. V. Judson was its paternal ancestor. The title of the institution was changed in this year to Reformatory and Workhouse. In 1912 the cost of maintaining this institution was $193,000 plus a de-

ficiency of $61,500, or a total of $254,500. The cost for the fiscal year 1913 was $225,158, plus a deficiency of $120,000, making the total cost a little more than $345,000. During this fiscal year the additional cost for street work, made necessary by the removal of these prisoners to distant climes, was in the neighborhood of $250,000, or a grand total of approximately $600,000 for the fiscal year 1913.

In addition to all this extravagant use of the public funds on account of Occoquan, which was known as Judson's pet, his plaything, I think it well for Members to know that there is an item in another one of the appropriation bills of $65,000 for dredging Occoquan Creek so as to make it navigable by the scows, barges, pungeys, and tugs which go to make up the Occoquan navy, including Admiral Judson's flagship, which, according to published accounts, is frequently aground on the mud flats of the Potomac or ashore along the picturesque banks of Occoquan Creek. An annual dredging of this creek gives employment to certain persons, spreads the public funds around, and is one of Admiral Judson's so-called "economies." He had others. One of them was brought about by euchring the District of Columbia out of a revenue of $3,000 per annum secured by the sale of street sweepings. This is a permanent annual "economy."

Another "economy" consists in spending thousands of dollars each year in an attempt to raise vegetables with which to supply hospitals, charitable institutions, and, in fact, all public institutions in the District of Columbia. Hundreds and hundreds of acres of land have been planted in vegetables of every sort, but whoever heard of even so much as a single head of cabbage being delivered from Occoquan to city institutions? About three years ago several acres were planted in onions at an expense of thousands of dollars, the net result of the crop being about a peck. The crop would have been larger, but for the fact that the prisoners, who planted the sets, snipped the tender roots from practically all of them. A few of the sets escaped the surgical operation of the convicts. These instances of "economies" might be multiplied indefinitely.

I understand, Mr. Speaker, that they have about 800 hens on the place, but the attendants say they have never seen any eggs. If these are laying hens, I should like to know what becomes of the eggs. If they are not laying hens, then the cost of feeding such a large flock can easily be described as another one of the many Occoquan "economies." A few years ago the late lamented board of commissioners asked Congress for the sum of $25,000 for the purchase of a steamboat. They asked for the sum of $900 to pay a captain of the boat, $840 to pay an engineer, and various other sums for fuel and other fixed charges. As soon as Congress got wise to this steamboat scheme the item was promptly put out of the bill, but no one seems to have made a point of order on the salary items for a captain, engineer, and other officers, the result being that those items stayed in the bill. Admiral Judson was then in a queer position. He had funds available for the employment of steamboat officials, but he had no steamboat. Did that worry the admiral, Mr. Speaker? Not so you can notice it. Was the money carried in the bill for these steamboat officials turned into the Treasury? There is no record of it. The employment of a steamboat captain and an engineer for a steamboat that was not in existence is another one of a long and tedious series of "economies" for which Admiral Judson was famous. Is there any record anywhere that this now celebrated naval officer ever turned any money into the Treasury? If he did, I have been unable to make the discovery.

Mr. Speaker, by far the greater part of these extravagant expenditures was due to the activity of Engineer Commissioner William V. Judson, dubbed by a Member of this House as "Admiral of the Occoquan navy." This official, versatile and always alert in his multitudinous methods of securing appropriations for carrying out the numerous schemes of which he was the author, was, it appears, exceedingly anxious to acquire a fleet in keeping with the dignity of the naval honor conferred upon him. Mr. Speaker, I can see, in imagination, this highly inflated official standing on the quarter deck of his flagship and proudly surveying the District armada, bristling with the paraphernalia of naval pomp and power, giving orders with the calm deliberation of a Nelson; or, in later years and in our own time, commanding in the rugged but incandescent and incisive language of an Evans.

Admiral Judson! Mr. Speaker, bear in mind my words, the name of this great man—great in his ability to drag money from the two appropriations committees of Congress, to hoodwink and deceive the most astute members of those two important bodies—the name of this great man, Mr. Speaker, will be handed down in the unwritten history of the District of Columbia as one of the most accomplished official tricksters that ever occupied the office of engineer commissioner.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 7, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. GRAY. Mr. Speaker, economy is not the only reason why this Government should manufacture its own armor plate, as well as arms and armament and all its military supplies and naval equipment. It has been found that the companies engaged in furnishing our armament and war supplies not only take advantage in time of peace to form trust combinations and impose excessive and extortionate charges, but that in time of war they seek to take still further advantage by reason of the dependency of the Government. It is an open and acknowledged fact that during the late War with Spain the armor-plate companies refused to supply the Government with armor plate unless the Government complied with their demands for an increase of $100 a ton over and above what the Government had determined as a fair and reasonable price. It has also been found that these companies have been giving out our warship designs and plans to foreign Governments to which they are selling armor plates, arms and armament, and warship supplies with which to fight us in the event of hostilities. I quote here from the statement of Admiral C. E. Vreeland, member of the General Naval Board, in answer to questions propounded by myself, and shown at page 593 of the hearings had before the Committee on Naval Affairs during the present session of Congress, showing that these disclosures made to other nations cover the whole field of battleship construction and naval equipment, the unmistakable purpose of which is to excite rivalry among the nations and to promote the increase of all navies as a world-wide commercial enterprise:

Mr. GRAY. Admiral, are you acquainted with the improvement and development that is now in progress among the navies of the great powers of the world?

Admiral VREELAND. In a general way. We can not get exact information from foreign powers.

Mr. GRAY. Are not the substantial improvements and developments in progress in all of the navies of the world, the great improvements, the same inventions—are they not tried out by all the nations?

Admiral VREELAND. I believe that is true.

Mr. GRAY. Are not the same developments as to armor plate being tried out substantially in all of the navies of the world?

Admiral VREELAND. I believe that is also true.

Mr. GRAY. And in torpedo boats?

Admiral VREELAND. And in destroyers; yes, sir.

Mr. GRAY. And also with the airships?

Admiral VREELAND. Yes, sir.

Mr. GRAY. Of course, I am confining myself to the few great powers. Have you any means of knowing how the information in regard to the same inventions improvements, and the development is being carried so accurately from one nation to another?

Admiral VREELAND. By the manufacturers seeking business abroad.

Mr. GRAY. The same inventions and improvements, substantially, are in progress. How is that information being carried from one nation to another?

Admiral VREELAND. I should say by manufacturers and inventors. Is that what you mean?

Mr. GRAY. Yes, sir. Is it true that the material that is manufactured by one company is being sold to all of the navies of the world, substantially?

Admiral VREELAND. At one time the Harvey process of making armor was adopted by some European powers; later the Krupp process was decided to be the better, and we adopted that. Contractors in this country obtained the rights.

Mr. GRAY. And the same improvements and developments in projectiles in all of the navies of the world?

Admiral VREELAND. Yes, sir.

Every taxpayer of this Nation should also know that we now have the greatest and most powerful Navy in all our history; that we have created this Navy by building less than two warships a year, or, in other words, by building 35 ships in 24 years; that all the navies of the world are building up evenly together without change of relative position or gain of advantage one over the other; that the increase of one navy has the effect only to prompt an equal increase in every other navy; that if we increase our Navy to-day, every other naval power will in turn follow with a like increase to-morrow; that increasing our Navy will not make us stronger over the navies of other nations, but will only excite rivalry to make all other nations equally strong; that increasing our Navy not only increases the taxes upon our own people, but will result in increasing the taxes in a like amount upon the people of all naval-power nations.

Every taxpayer should know that one of the battleships known as dreadnaughts which we are now building is equal to

three of the battleships which we have heretofore been building; that to build one of these dreadnaught battleships a year will not only maintain our present naval power and efficiency but will be increasing our Navy at a more rapid rate than ever before; that to build two of these dreadnaught battleships a year, as recommended by the Naval Affairs Committee, will be increasing our Navy three times as fast as ever before; and that to build four dreadnaught battleships a year, as recommended by the naval board, would be to increase our Navy six times faster than ever before in all our history.

But even this rate of increase is not to be the limit of our naval extension. We are to tax our people to further increase and add to our Navy until the ability of the people of other nations to pay taxes is exhausted. We are to build on and on until the people of other nations fall prostrate under the crushing burdens of war taxes. We are to build to the very limit of human endurance, under the taxing power, to reach the goal of naval supremacy, and I here quote from the answers of Admiral C. E. Vreeland, a member of the General Naval Board which recommended the construction of four dreadnaught battleships a year, and given in response to questions by myself relative to the policy of naval increase, and found at pages 585–586 of the hearings of the Committee on Naval Affairs during the present session of Congress, showing that such is the policy or the inevitable result:

Mr. GRAY. I wish to inquire of the Admiral if it is not the policy of other Governments to increase their navies with all the other leading powers?

Admiral VREELAND. It is, sir.

Mr. GRAY. What would be the advantage to us or any other power if the navies were increased equally by all the nations of the world? Would there be any advantage to us or to any other power?

Admiral VREELAND. Not if you mean in the same ratio.

Mr. GRAY. Would not the same grounds exist after an increase for a further increase?

Admiral VREELAND. It would seem so.

Mr. GRAY. The only advantage that could be gained by an increase of the navies to any nation in the world would be a greater increase of one nation over another. Is it not a fact that there is a rivalry now between nations?

Admiral VREELAND. No, sir.

Mr. GRAY. They are all going up together?

Admiral VREELAND. Yes, sir.

Mr. GRAY. There would be no advantage gained by any nation, then. How long could that be maintained, that even increase, and what advantage would it be to any nation?

Admiral VREELAND. If it continues to increase, the poorer nation will eventually exhaust itself, and then the other nations, the United States included, will have a free hand—I mean be free to build in accordance with the changed conditions. I think it proper to add that rivalry, in the sense in which that word has been used here, does not really exist, nor do I think it is contemplated.

Mr. GRAY. Then it is only a question of the limit of taxation?

Admiral VREELAND. Yes, sir.

Agricultural Appropriation Bill.

SPEECH

OF

HON. JAMES MANAHAN,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 13, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill H. R. 13679, the Agricultural appropriation bill.

Mr. MANAHAN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Minnesota [Mr. MANAHAN] moves to strike out the last word.

Mr. MANAHAN. I make this motion for the purpose of making an observation. I must confess that I was greatly interested in the question just propounded to the chairman of the committee by one of the farmers of the House. I had myself been wondering what purpose this appropriation really served—an appropriation in the neighborhood of $275,000 for crop estimates and forecasts for the coming year.

It seems to me that before we appropriate this sum of money for crop estimates and forecasts it would be well to have a clearer idea of the object to be accomplished. I am frank to say that I do not believe that these crop estimates and forecasts serve any useful purpose to the people. The importance of crops to the people rests on opportunity for the consumption of those crops by the people. I suspect that the forecasts made by the Government on the growing crops serve only men who gamble in grain and cotton on boards of trade and in chambers of commerce. In the past five years we have appropriated over $1,000,000 for this forecasting and guessing by the Government. What good does it do to spend the farmers' taxes finding out what the farmers' yield will be? Will it increase the price when finally the crops are harvested? What good does it do the men who buy bread or clothing to know in advance what the yield in wheat or cotton will be? Will it change the prices the consumers must pay for their bread or clothing?

Mr. Chairman, I wish some one favoring this appropriation would tell us who will be benefited by it. No doubt speculators on the boards of trade and gamblers in the chambers of commerce, men figuring on how they can manipulate the markets so as to get the bulk of the farmers' crop at the lowest possible price and then sell it to the great markets of consumption at the highest possible price, are glad to have the Government spend millions gathering information that will help them in their calculations. These crop forecasts are, in plain words, the guide of gamblers. Wheat is grown for bread. Why should we permit men to control its movement by betting on the price it will bring when it is harvested? Why should we spend the taxpayers' money estimating that harvest when the estimate will serve only men seeking to control the movement of wheat by betting on its price for future delivery? Are we so simple as to assume that the greedy speculators will not seek advantage and profit when they are permitted to deal in a crop before it is produced with fairly accurate knowledge of what that crop will be?

THE LESSON OF HISTORY.

From the very beginning of history men have sought to make unfair profit out of the necessities of their fellow men, and in no instances have the greedy ones been more successful than in controlling the supply of food. Hunger always compels unconditional surrender of the most valuable human possession—property, reputation, even liberty. The Appropriation Committee have evidently studied diligently the statistical abstracts of the United States, but I fear they have neglected to study the warning precedents of sacred history. When the gifted chairman of the committee, Mr. LEVER, was fixing this estimate for the crop forecast and its interpretation, I am sure he must have recalled the incident when Joseph forecasted for Pharaoh the crops of Egypt for 14 years. Surely he has not forgotten the advantage taken by the greedy king of the knowledge given him by Joseph. You will remember, gentlemen, that Pharaoh had a dream in which he saw seven fat ears of corn growing upon a stalk, to be consumed by seven lean ears growing upon the same stalk. This dream, followed by a similar one, so troubled the king that he submitted it to his magicians. No one could tell him the answer. It was recalled that there was at the time a young Jew in jail who had shown great skill in forecasting events and interpreting dreams. This young man was brought before Pharaoh, and with prophetic foresight he read in the dream a famine that would follow after seven years of plenty. Joseph not only told Pharaoh what his dream meant, but with wonderful sagacity urged conservation during the good times by the creation of an office with power to collect into public warehouses a large part of each year's crop, saying to the king: "Let Pharaoh do this, and let him appoint officers over the land, and take up the fifth part of the land of Egypt in the seven plenteous years." There was statesmanship in this advice, and Joseph clearly intended that the grain so gathered should be held in trust by the Government for the people, for he said: "Let them gather all the food of those good years that come and lay up corn under the hand of Pharaoh, and let them keep food in the cities, and that food shall be for store to the land (for the public) against the seven years of famine, which shall be in the land of Egypt, that the land (people) perish not through famine."

The crop forecast was correct and the advice was sound. It undoubtedly appealed to the farmers of Egypt, and they responded willingly. But Pharaoh, like the empire builders of later days, had guile as well as greed. For, as the Good Book says, "the thing was good in the eyes of Pharaoh." He saw the stupendous power over the people that control of the surplus food would give him when the days of hunger came, and he also knew well that he could win the unswerving allegiance and service of the gifted Joseph if he took him out of jail and gave him honor and power. He made Joseph his prime minister, and Joseph served him faithfully. "And Joseph gathered corn as the sands of the sea, very much, until he left numbering, for it was without number." What do these significant lines mean? How utterly helpless when the hard times came were the people with the government in control of the nation's grain, as much as "the sands of the sea" all stored "under the hand of Pharaoh," meaning that the warehouse receipts were all issued in the name of the king. All must starve or beg, "and when the land of Egypt were famished the people cried to Pharaoh for bread, and Pharaoh said to all Egypt, Go

unto Joseph: what he saith to you, do." The trust magnates of our day had an illustrious predecessor in Pharaoh, the Egyptian king. In control of the necessities of life they, like Pharaoh, avoid all direct trading with hungry men and try to ease their own consciences by shifting the responsibility upon their superintendents or general managers. Pharaoh said to his starving subjects, "Go unto Joseph," knowing that in fidelity to the man who had taken him from jail and given him high place Joseph would make stern bargains with the people.

Never in all history were such unfair prices charged for food as Pharaoh and Joseph charged for the grain in the granaries of Egypt.

And Joseph gathered up all the money that was found in the land of Egypt and in the land of Canaan for the corn which they brought; and Joseph brought the money unto Pharaoh's house.

And when money failed in the land of Egypt and in the land of Canaan all of the Egyptians came unto Joseph and said, "Give us bread, for why should we die in thy presence? for the money faileth."

And Joseph said, "Give your cattle; and I will give for your cattle if money fail."

And they brought their cattle unto Joseph, and Joseph gave them bread in exchange for horses and for the flocks and for the cattle of the herds and for the asses; and he fed them with bread for all their cattle for that year.

When that year was ended they came unto him the second year and said unto him: "We will not hide it from my lord how that our money is spent; my lord also hath our herds of cattle; there is not aught left in the sight of my lord but our bodies and our lands. Wherefore shall we die before thine eyes, both we and our land? Buy us and our land for bread, and we and our lands will be servants unto Pharaoh."

Thus the people of Egypt sold themselves and their children and all their lands and property to the greedy king for corn to eat, which had been their own corn. This cruel bargain was not the result of the crop forecast made by Joseph nor from any lack of statesmanship in Joseph's advice to save from the good years' surplus, but was possible because the law at that time permitted the greedy king to take advantage of the knowledge of coming events, and with that knowledge to control the storing and movement of grain. [Applause.] What is the meaning of this tragic chapter of the Old Testament? Let us apply the lesson to our own method of forecasting and dealing in the farmers' crops.

Mr. HEFLIN. Will the gentleman yield?

Mr. MANAHAN. Certainly.

Mr. HEFLIN. I want to say to the gentleman that I entertained views somewhat like his for some time on this question of estimating the crop; but we found that before the Government estimated the cotton crop these associations of speculators always overestimated the crop; the Government estimate is more nearly in keeping with the actual output of cotton than the estimate that used to be made when the people making the estimate wanted the price of cotton to go down.

Mr. MANAHAN. I appreciate the suggestion made. Of course the same principle applies to grain as to cotton. The same principles are involved in the trading in grain as are involved in the trading in cotton. The same terrible abuses are practiced upon the producer, and there is the same lack of real service in the one sort of future trading as in the other. And as long as men are permitted to gamble in the agricultural products of the country and are permitted to sell in the future that which is not yet produced, and are permitted by that system of selling in the future to control the price of agricultural products, it is, of course, wise and proper to make these appropriations for estimates, so that the estimates of the Government will be more in accordance with the facts and will not serve the purposes of the gamblers as well as their own fictitious estimates would. But I am opposed to trading in futures in grain and cotton alike. I believe it serves no useful purpose. It has been conclusively shown that dealing in futures, hedging, and speculating are simply the means which selfish and greedy traders use to compel the farmer to take an inadequate price at the season when the farmers are obliged to sell their crop, and then boost the price to the consumers after they, as such gamblers, have control of the market and its surplus. [Applause.]

Mr. JACOWAY. Suppose the speculator should say that there was a 14,000,000-bale crop in the South, when in fact there was only a 12,000,000-bale crop. If the 12,000,000-bale crop was accurately estimated by the Agricultural Department, would not the price of cotton be proportionately increased to the man who actually produced it?

Mr. MANAHAN. It would be proportionately increased if it was not for the fact that the men on the exchange in control of the price would hammer it down in spite of the Government estimate, by virtue of the power they have under the rules of the exchange—which everyone recognizes to be the fact—of being able to fill their contracts with inferior grades of cotton.

Mr. LEVER. The gentleman from Minnesota is not complaining so much about the making of the Government estimate as he is against the operations in cotton futures and in grain futures, with which view I agree.

Mr. MANAHAN. Yes; that is largely true, Mr. Chairman. I do not complain so much about the money spent in making crop estimates from time to time as I do about the control of prices and the swindle of farmers during the crop-moving season by means of future trading in cotton and grain on the great exchanges of the country. I am glad to be assured by Mr. LEVER, as head of the great Committee on Agriculture, that he agrees with me in condemning the common practice of gambling in grain as well as in cotton. [Applause.]

FUTURE GRAIN TRADING IS GAMBLING.

Some men on this floor, however, as well as in the grain trade, object to the word "gambling" in describing the business of buying and selling for future delivery; they prefer to use the more respectable word "speculation." But "what's in a name?" Were it called by any other name it would smell as bad.

I am told by a colleague from the far West that gentlemen playing poker will not stack the cards on each other, and that real gamblers have nerve and courage. This much can not be said of the millionaires controlling our great wheat and cotton markets. They operate at long distance, through concealed brokers, under advice of counsel, protected by special legislation, even guided by Government forecasts. But the game these men play against the small dealer, against the men who actually raise the crops, is a loaded-dice game. It is gambling—crooked gambling; cowardly crooked gambling at that. It weakens the moral fiber, as all gambling does; but more, it disturbs and checks the normal distribution of the people's food and makes paupers of many while making millionaires of a few. And yet men who would like to be respectable squirm when we call their business, in plain words, a gamble. They should be thankful that we do not use a harsher term. [Applause.]

I am aware of the fact that books have been written by college professors in explanation and defense of future trading. No doubt learned men in Pharaoh's time defended the conservation policy of that thrifty king. Possibly professors can be persuaded to write books as lawyers are hired to try lawsuits. But even if such professors, defending this system of future trading, were absolutely free from need and above temptation—and I am sure they are as free as any class or profession in the world—the fact remains that their reasoning is purely theoretical and based on facts as they ought to be, not as they really are. These theorists do not know the tricks of the trade; these mild-mannered men of the schools are very innocent when they are not special pleaders for hire. These unsuspecting ones do not know that the future trading in the pit of Chicago covers more imaginary wheat in a day than actually comes to Chicago as real wheat in a year. They do not know that the prices made by this stupendous trading in future contracts on this one Chicago market dominate all other markets and control their prices, subject only to modifying local and transportation conditions. They do not know that these prices made by the Chicago market are just what the large operators in control of the public warehouses, with political influence over grain inspection, in control of the board of trade, see fit to make to serve their speculative purposes. Therefore these theorists who write that future trading steadies and sustains the market do not know what they are talking about. [Applause.]

Is it not clear, Mr. Chairman, that when a big dealer like Armour has a public warehouse in which he can place doctored grain of poor quality, but graded high by an accommodating inspector, he can force down prices on grain futures by actually delivering the poor stuff, if necessary, when his contracts mature? And, sir, is it not equally clear that when several large dealers and millers in several large market places act in concert in bidding in the pit and in doctoring inferior grades of grain and in controlling the very machinery of the exchanges where business is done that it is possible for them, within very wide limits and regardless of the supply or demand, to actually control and fix the price paid to the farmer? Such is the case. The recent hearing on my resolution (H. Res. 424) before the Rules Committee of the House established the following facts:

FACTS ESTABLISHED AT HEARING ON MANAHAN RESOLUTION.

1. Grain prices paid farmers for real grain are controlled by pit trading of gamblers dealing only in imaginary grain.

2. The price of grain futures depends more on control of grading and storage by the grain-exchange monopoly than it does upon the world supply and demand.

3. The dominating grain exchanges of the country are Chicago and Minneapolis. Each is a monopoly.

4. The National Government should help destroy these monopolies and make open and free markets everywhere, because any State acting alone can not reach the evil of gambling in grain and betting on future prices.

Mr. Benjamin Drake, of Minneapolis, speaking for over 100,000 farmers of the Northwest and for the cooperative association elevators of both North and South Dakota, urged with great power before the Rules Committee the need of legislation by Congress. He showed that the Chamber of Commerce of Minneapolis is an absolute monopoly; that it is controlled by a few powerful men owning the great mills and elevators; that their operations are secret and exclusive, under a special law; that they forbid competition in bidding for grain on track at country points; that by selling to themselves and to each other they take repeated commissions on the same grain; that grain consigned to them as commission men they sell to themselves as elevator men in another name and charge a commission for so doing; then, as elevator men, they doctor the grain, raising its grade and its selling price; that they turn it back to themselves as commission men and sell it to a miller at the advanced price and charge him a commission for so doing. That they have the ability to control the prices and juggle the grades, exact double commissions, and sell to themselves at the expense of the farmer and contrary to every principle of fair dealing and common honesty is due to the stern grip they have on the business as a monopoly and to the subserviency and supineness of both State and National Governments in permitting it.

FARMERS ROBBED BY GRAIN MONOPOLY.

Mr. Chairman, I can not state in words too plain and strong the fact that for years the farmers of the Northwest have been robbed by the grain pirates of Chicago and Minneapolis. These men have succeeded in hammering down prices on the farmer by compelling him to take what they offer for grain; but the consumer pays dearly for bread and meal by the time that grain has passed through the great terminals and mills to the enrichment of the combination. The National Government should prosecute under the Sherman antitrust law; the State government should prosecute under the State antitrust law. Congress should pass additional legislation forbidding absolutely the continuance of this abuse in interstate trade and prohibiting gambling in food products. Mr. Chairman, I am aware of the fact that Congress feels disinclined to meddle in matters over which the State has more or less control. At the hearing before the Rules Committee some of my collengues expressed themselves as reluctant to order a congressional investigation on the ground that the evils could be cured by the States of Minnesota and Illinois.

MINNESOTA SHOULD ENFORCE ANTITRUST LAWS.

While Mr. Drake was testifying before the committee the following colloquy took place:

Mr. CANTRILL. Let me ask you a question there, please. It does not bear directly on the argument now, but I want to get it into the record. Have you a State antitrust law?

Mr. DRAKE. We have a State law which is termed a State antitrust law.

Mr. CANTRILL. Has there been any attempt by anyone to have this monopoly you complain of here indicted and convicted in your State courts under that law?

Mr. DRAKE. I would prefer not to answer that question unless it is necessary.

Mr. CANTRILL. Well, I should think, Mr. Chairman—it seems to me that in this investigation that is rather a vital question, because I am very frank to state that as a member of the committee I do not think Congress ought to be dipping into these investigations unless it can be proven that the States are absolutely unable to handle the question. If you have a monopoly in your State and a State law that can handle it, I think you should make an effort to do it. I am very frank to say that we have in Kentucky such a law and have indicted and convicted the International Harvester Co. and the Imperial Tobacco Co. and other trusts and monopolies. The reason I ask that is that I want to get it into the record what you had to say on that point. Mr. Greeley told the committee the other day—in answer to my question he practically admitted that in Illinois there was a condition of affairs that the Board of Trade of Chicago practically controlled the Illinois Legislature and the Illinois courts, and that the farmers of Illinois and the shippers there could not get any redress in that State. I would like to ask the question and get it into the record whether in your opinion such a condition of affairs exists in Minnesota? It seems to me that it has a direct effect on consideration of this resolution by the committee. I know it would have, so far as I am individually concerned as a member of the committee. Of course I can only speak for myself.

Mr. DRAKE. In the first place, as I have endeavored to point out, any legislation affecting futures will necessarily be futile unless——

Mr. CANTRILL (interposing). I am not speaking now of futures. The point I am speaking of is—the main thing is that the farmers are confronted with this monopoly. If you have a State law directed against the suppression of monopolies, what I want to know is whether the effort has been made in Minnesota in the court under that law, to attack this monopoly that you complain of here; and if so, whether there has been any attempt to indict that monopoly.

Mr. DRAKE. I would prefer to say nothing more than this, unless the committee insists. The matter has been presented to the attorney general of the State of Minnesota. The attorney general (Lyndon A. Smith) has done nothing. Is that answer satisfactory?

Mr. MANAHAN. What other conditions are there, generally?

Mr. DRAKE. Well, in my judgment, the State of Minnesota is the most boss-ridden State in the Union. That is my opinion.

Mr. CANTRILL. Well, that is what we want to know. We want to get the facts in the case.

Mr. DRAKE. We have in that State the Great Northern Railroad, the "empire builder"——

Mr. CANTRILL (interposing). That is the boss of the State?

Mr. DRAKE. The political and financial boss of the State.

Mr. CANTRILL. In other words, you have practically the same condition in Minnesota that Mr. Greeley complains of in Illinois, and you have come to Congress to get the relief that you can not get in your own State?

Mr. DRAKE. We can not get that relief.

Mr. CANTRILL. That is what we want to know. There is no reason for having any secrecy about this thing, because it has all got to be published when we get on the floor of the House. What we want now is publicity.

Mr. DRAKE. When the house committee started its investigation it was a real investigation, made up of farmers, the men who had made their campaign upon the proposition that they would investigate these evils. When the house started that investigation, what happened? The chamber of commerce got busy. Their secretary, Mr. McHugh, as it appears in the record, got into touch with the reactionary senators. The senate of my State, broadly speaking, was reactionary, and they were able to start, as a backfire to this real investigation—they were able to start a senate investigation to traverse the same ground. In reality it was a committee to whitewash the chamber of commerce. It was headed by a man who is here to-day—Senator Works, of Blue Earth, Minn.—a man who has gone out on the platform since, speaking for the combine, and who is here to-day to argue for the combine—the servitor, in my judgment, of the Grain Trust of the Northwest.

THE MINNESOTA INVESTIGATING COMMITTEE.

Mr. Chairman, as Mr. Drake stated, a committee of the State Senate of Minnesota during the last session made an investigation of these same matters and submitted two reports, one whitewashing and the other condemning the chamber of commerce and the system of grading and inspection in vogue. It is true that the majority of this senate committee reported generally in favor of the chamber and of Minnesota's grading and inspection administration. But I deliberately say that the chamber of commerce influence in Minnesota politics succeeded in packing that committee with its friends for the express purpose of whitewashing it and neutralizing the work of the house committee, which was at the same time investigating the same matters. Congress and its committees should not be misled by the report of the majority of the Minnesota Senate committee. To anyone in Minnesota familiar with the make-up of that committee and with knowledge of the facts regarding its appointment, the report of the minority carries greater weight than the report of the majority.

The minority report is signed by Senators A. L. Hanson and O. A. Lende, two of the ablest and most progressive public men of Minnesota. The record of each of these men shows courage, capacity, and great zeal for the public good. No man who knows either of them would ever think of questioning either their integrity or their intelligence; and when they unite in a statement of conditions which they have themselves investigated, what they say is entitled to full faith and credit.

But how is it with the majority report of the senate committee and the personnel of the members signing it? Senator S. D. Works, of Mankato, clearly shows himself by coming on to Washington and making a special plea for the chamber of commerce before the Rules Committee to be, as Mr. Drake aptly said—

a man who has gone out on the platform since speaking for the combine and who is here to-day to argue for the combine—the servitor, in my judgment, of the Grain Trust of the Northwest.

Senator Works is classified in the public opinion of Minnesota as a reactionary senator, and his record in the senate on vital questions shows his subserviency to big business.

Senator George H. Sullivan, another signer of the majority report, for years has been one of the attorneys for our Rapid Transit Co., and is generally recognized as a man who can be depended on by the great corporations of the State to protect them from adverse legislation. He is a man of great ability and unquestioned personal integrity, but he is honestly so conservative and so sincerely wedded to the existing order and methods of all large business enterprises that he is incapable of seeing anything evil in any form of monopoly profits or speculative gains.

Senator V. L. Johnson, the third signer of the report whitewashing the chamber of commerce, is hard to classify. He is one of a type of public men unfortunately too common. He tries to take both sides of every question, but instinctively leans toward the side that best serves self. He tries zealously to make every man think that he is on his side. Lacking the ability to be a leading conservative and the courage to be a progressive, he hangs suspended in the twilight zone between. When the Senate hearing was on and it become apparent that Senators Hanson and Lende stood with the farmers and that Senators Works and Sullivan stood for the grain combine, Senator Johnson was taken up to the mountain top, and the temptation was too strong.

The investigating committee of the house in Minnesota, on the other hand, was a very fair and able committee. Its leading members were farmers who had made a lifelong study of market conditions and were desperately in earnest in their efforts to bring out the truth and to find a remedy for the evils from which the farmers had long suffered. Representative C. M. Bendixon, the chairman of the committee, a well-informed farmer who had attended the State university and served in former sessions of the legislature with distinction, is a man of uncompromising fairness, and during the entire hearing of the committee insisted on giving the chamber of commerce every opportunity to defend its practices and justify its record. Representative A. F. Teigen, another farmer with a college education, who had for years investigated the problem of future trading and who was the author of the resolution and a most active member of the committee, is also a man of fine courage and integrity. He started the movement to investigate market conditions at Minneapolis when he knew the powerful interests it would arouse against him as a public man, but from the beginning he never hesitated. Representatives D. P. O'Neil and Martin Schwartz, the two remaining farmers on the committee, are self-made men of rugged honesty. Both of them have won high place for their interest in education and the general upbuilding of the State. No man dare question the courage, honesty, or intelligence of either of them. The fifth member of the committee, Representative Frank Hopkins, is a young lawyer of keen intelligence who during the entire hearing showed his professional training and skill and his professional instinct to bring out both sides by developing every doubtful point, whether favorable to the farmers or the exchange. No one could say that he was prejudiced against the chamber, and he must have been convinced of the abuses condemned by the report when he signed it.

The Minnesota investigations disclosed many impositions and abuses from which our producers and consumers alike suffer on account of the Grain and Milling Trust. But the trust had too much pull with the politicians, and no remedial laws were passed and no prosecutions begun under old laws. We still suffer from an unfair inspection system. We are still swindled by prices made by gamblers instead of by crops. This Congress should help. If it will destroy the gambling in grain, as promised by the Democratic platform, we will try to do the rest and drive the rogues from our market places.

SOME FACTS DISCLOSED IN MINNESOTA INVESTIGATION.

Mr. Chairman, I was attorney for the house committee during the Minnesota investigation and know whereof I speak when I say that the grain-market conditions in the Northwest in all the great terminals from Chicago to Winnipeg are unfair to the farmers and take from them every year the larger part of the profits of their crops. It was shown that in Minneapolis for over 10 years an overcharge aggregating approximately $5,000 a month had been collected as switching charges; that much of the grain marketed in Minneapolis, as well as in Chicago, had to bear not only double commissions but excessive profits in the exchange, and the heavy burden of almost countless future sales in the pit as well. These gambling sales run into the millions daily. From the testimony of Mr. W. S. Williams, secretary of the Clearing House Association of the Minneapolis Chamber of Commerce, it appears that future sales in that market alone aggregate not less than ten thousand million dollars annually. Is it not clear, Mr. Chairman, that the possibility of being called upon to deliver in the future such enormous quantities of grain, more than there is of actual grain in all the world, must, of course, depress the price to a low level in the pit? And, sir, strange as it may seem, the prices paid to the farmers for the real wheat by millers for the purpose of making flour are fixed and made by the prices the gamblers are paying at the same hour in their pit operations. The testimony on this point was conclusive.

Mr. W. A. Gregory, a member of the chamber of commerce, testified (vol. 4, p. 1203):

Mr. MANAHAN. So, I say the power of the men in the pit to buy and sell grain under future contracts as exercised by them in the chamber of commerce does affect the price of wheat?.
Mr. GREGORY. Temporarily it does.
Mr. MANAHAN. From day to day?
Mr. GREGORY. Yes; that is during the day it does have an effect.
Mr. MANAHAN. Yes; from day to day?
Mr. GREGORY. Yes. I believe it does. I think it does.

Mr. F. A. Hallett, a commission merchant, also testified (vol. 4, p. 1085):

Mr MANAHAN. You have already testified that, generally speaking, the price paid for cash grain was fixed by the futures?
Mr. HALLETT. Yes.
Mr. MANAHAN. So far as your observation and experience on the board goes, Mr. Hallett, the principal influence that you have directing you in future bidding is the other markets of the world. That is the principal thing, isn't it?
Mr. HALLETT. It is one of the things.

Mr. E. L. Welch, another member of the chamber of commerce, also testified (vol. 3, p. 885):

Mr. MANAHAN. Do you get large orders from Chicago?
Mr. WELCH. Yes, sir.
Mr. MANAHAN. Very large orders, do you?
Mr. WELCH. Yes, sir.
Mr. MANAHAN. How large is the largest you get—you have ever got?
Mr. WELCH. Oh, possibly 100,000.
Mr. MANAHAN. You get a hundred thousand a clip from Chicago?
Mr. WELCH. We have.
Mr. MANAHAN. Frequently?
Mr. WELCH. Not frequently.
Mr. MANAHAN. But occasionally you get large orders from Chicago, do you?
Mr. WELCH. Well, from 10 up to 100.
Mr. MANAHAN. Well, from Chicago?
Mr. WELCH. Yes, sir.
Mr. MANAHAN. And other commission men, to your knowledge, get the same thing?
Mr. WELCH. I presume they do.
Mr. MANAHAN. So far as you know?
Mr. WELCH. Yes, sir.

Mr. V. S. Ireys, one of the professional pit traders, answered questions as follows (vol. 5, pp. 1405–1406):

Mr. MANAHAN. If the buying orders were more numerous and vigorous, the price would immediately respond and go up? If the selling orders were more numerous, the price would immediately sag?
Mr. IREYS. That is it.
Mr. MANAHAN. And just the minute that price would sag, as a scalper, you would take as much as you thought you could handle quickly and immediately sell in Chicago or wherever you thought the better opportunity was?
Mr. IREYS. Yes. Your market is now made; the price of cash wheat is made by the price of futures. If you abolish futures, the price of cash wheat is made by what the miller or some group of men will pay for it. It restricts your trade.

Mr. F. G. Holbrook, another pit trader, gave the following illuminating estimate as to the magnitude of his "scalping" transactions (vol. 5, p. 1476):

Mr. MANAHAN. Mr. Holbrook, I understand since you have testified yesterday you have checked over your memorandum of business and desire to make some corrections as to your testimony?
Mr. HOLBROOK. Yes, sir; my remembrance is I testified in response to your question as to the volume of trading, that it ran from ten thousand to twenty or thirty thousand and upward some days. I find in looking over there was some days as low as 10, 20, and 30, and upward, and the average since the first of the year amounts to 67,000 bushels.

But, Mr. Chairman, why cite testimony to prove what no one denies regarding the effect of future trading upon cash wheat on the market? However, gentlemen may have the old-fashioned notion that these speculative prices made in the pit reflect world conditions of supply and demand. There never was a more colossal error fastened upon a great industry. As a matter of fact, the world's supply and demand of grain so evenly balance from season to season and from year to year that there is no occasion and no justification for violent fluctuations in price. A bushel of wheat means food for an individual for as many days this year as last year or next year. Its intrinsic value does not fluctuate. The supply being constant and so evenly balancing the demand from season to season there is no excuse for the market value to fluctuate if blind legislation did not permit men to gamble in it and to juggle its prices. To prove conclusively that the market price of wheat is not made by the supply and demand I called the attention of the Rules Committee on the first day of its hearing to a comparison of production and prices for the years 1909 and 1911. In 1909 the whole world produced 3,581,519,000 bushels of wheat. In 1911 the world produced 3,540,717,000 bushels, being over 40,000,000 less than in 1909. Nevertheless the price of wheat ranged higher during the entire year of 1909, the year of the heavy production, than it did in 1911. According to the Statistical Abstract of the United States Government the value of wheat on the farm December 1, 1909, after the harvest, was 99 cents a bushel, while on December 1, 1911, it was but 87.4 cents per bushel, over 11 cents a bushel less. What made this value of 99 cents a bushel on the American farm at the end of this bumper crop of the whole world? Was it a failure of wheat in the United States? No. The same Statistical Abstract of our Government shows that the production of wheat in the United States alone for 1909 was 737,189,000 bushels, while the production in the United States for 1911 was only 621,338,000 bushels, which was over 115,000,000 bushels less than it was in 1909. So it appears that, at the end of the harvest, wheat on the American farm was worth 11 cents a bushel more in 1909 than it was at the end of 1911, although in 1909 the crop in the United States, as well as the world's crop of wheat, was much larger during the year of the higher prices. In the face of these figures what becomes of the humbug about the world's supply and demand under present conditions?

For fear that some resourceful gentleman may suggest that the high price of wheat in 1909 in spite of the excessive crop of that season was due to a failure of production in other cereals, let me state that the same statistical authorities show that the corn crop of the world in 1909 exceeded that of 1911 by over

100,000,000 bushels, while the corn crop of the United States in 1909 exceeded that of 1911 by over 240,000,000 bushels. It also appears that the production of oats, rye, and barley was heavier in the whole world and in the United States in 1909 than it was in 1911. It also appears from the same authorities that the years preceding and succeeding each of these years for which figures are given were normal years. These statistics were called to the attention of the Rules Committee in the presence of the leading men of the Chicago Board of Trade and the Minneapolis Chamber of Commerce in attendance upon that committee on the opening day of the hearing. No attempt was made by anyone to controvert them, because they are taken from official reports. No attempt was made to explain them, because explanation is impossible on the theory that prices of grain are made by the world's supply and demand. The fact is, sir, that prices of grain are made under the present intolerable market conditions not by the supply and demand of grain, but by the arbitrary will and to satisfy the insatiable greed of gamblers. The greedy speculators of the Chicago exchange, operating in defiance of law, under the cover and protection of a servile inspection system, by the use of enormous quantities of doctored and depreciated grain held by them as licensed warehousemen, are able to hold prices at approximately any level that will suit their purposes. In 1909 their purposes were served by bulling the market to a farmers' level of 99 cents in spite of the overproduction of that year. In 1911 their purposes were served by holding the farmers' market down to the eighties. This year and last year and every year, Mr. Chairman, the great grain octopus of Chicago has power to set the general level of prices for grain gamblers the world over. They dominate the Liverpool market when they do not act in concert and conjunction with it. They dominate Minneapolis absolutely, subject only to occasional variations on account of local crop conditions. To me this condition of affairs seems intolerable in a country where the general welfare depends so much upon the prosperity of the farmers.

These evils can not be cured by the Agricultural Department under present laws, no matter how much money we appropriate for the use of the department in forecasting crops or investigating market conditions, while we permit the overshadowing vice of gambling in the necessities of life. In fact, sir, this problem of marketing and distributing requires a complete readjustment as well as the elimination of pure speculation. The markets must be free. Adequate warehouse and storage facilities should be furnished by the Government itself for the use of all, on equal terms, who care to store surplus products. A real Federal inspection and grading of grain, uniform and stable, must be provided. Mere supervision by the National Government will never stop the big operators from taking advantage of small dealers and helpless producers.

IMPORTANCE OF FAIR INSPECTION AND HONEST GRADES.

Mr. Chairman, I wish I could make clear the great importance of having honest and uniform grades and a fair inspection of grain at all markets. This is doubly important under present conditions permitting men to make future contracts which can be consummated by the delivery of grain graded by official inspectors. If the grades themselves are dishonest or the inspectors unfair in passing upon the grain used to fill future contracts, the effect of such dishonest grades and unfair inspection is to hammer down the price of futures and thereby depress the price of cash grain to the farmers. The large milling interests as well as the large terminal elevator interests are of course interested in such combination of future trading and subservient grading and inspection as will tend to depress the price of grain to the farmers, because the world's demand for food being a constant, unvarying demand measured by the universal hunger the lower they can keep the price paid the original producers the better chance it gives them to profit in the grain, before it reaches the bread makers and bread eaters. Keep in mind, sir, that a very small change in the price per bushel of grain means a staggering aggregate to the farmers of the Nation. Each year the United States produces approximately 5,000,000,000 bushels of grain, subject to future trading and price manipulation in the great terminal market places. If by an unfair system of grading and inspection or by combination between pit traders or between large milling and terminal elevator interests the price of grain in the United States can be lowered 1 cent a bushel, it means a loss to the farmers of the Nation of just $50,000,000 on an annual crop of five thousand million bushels. And when they can depress the price by combination and manipulation to the extent of 10 cents a bushel, as I think they have for this year's crop, it means a loss to the farmers of the staggering sum of $500,000,000. Is it any wonder that every time a bill or resolution comes before a committee of this House looking toward a reform in the matter of grain exchanges a powerful group of operators with their lawyers will come in force to the hearing? Is it strange that, as Mr. Drake showed before the Rules Committee by the words of the president of the board of trade in his annual message of 1911, that organization has really created a lobby for the "education of Congressmen along lines of legislation pertaining to grain exchanges"? Is it strange that members of the Minneapolis Chamber of Commerce, to retain their grip on that great market, are in politics in a desperate effort to defeat for public office every man who has the temerity to urge legislation that will curb their power and destroy their graft?

During the last session of the Minnesota Legislature a committee appointed by the House of Representatives of Minnesota to investigate the Minneapolis Chamber of Commerce and the Duluth Board of Trade established the facts to which I have called attention and showed that for years the grading and inspection of grain in that State operated to the disadvantage of the producers and the profit of the great terminal elevators and mills. For instance, it was shown that between September 1, 1910, and August 31, 1912, the terminal elevators at Minneapolis received 15,571,575 bushels of No. 1 northern wheat, but during the same time these same elevators shipped out 19,978,777 bushels of the same grade. They had no wheat of this grade on hand at the beginning of the period and 114,454 bushels at the end of the period, showing that these terminal elevators had an overage of approximately 4,500,000 bushels for that period of No. 1 northern wheat. During the same period there was received of No. 2 northern wheat 20,413,584 and shipped out 22,242,410 bushels, making an overage of nearly 2,000,000 bushels of No. 2. This gain of approximately 6,500,000 bushels of wheat in the two higher grades, Nos. 1 and 2, was made up from the inferior grades, which were inspected into these elevators as No. 3 and No. 4, "rejected" and "no grade." These four inferior grades were, of course, bought at prices ranging from 2 to 12 cents a bushel less than the regular price paid for No. 2 northern.

An examination of the statistics shows a similar result in other years. During the year 1902 the elevators at Duluth took in 599,602 bushels of No. 1 hard wheat and shipped out 648,607 bushels. They took in of No. 1 northern 15,187,012 bushels and shipped out 19,886,137 bushels, a gain of nearly 5,000,000 in No. 1 northern, while of rejected wheat they took in 892,241 bushels and shipped out only 94,626 bushels.

Of "no grade" wheat they took in 2,561,505 bushels and shipped out only 468,922 bushels. I do not have the number of bushels of Nos. 2, 3, and 4 shipped in and out in order to make up the overage of nearly 5,000,000 bushels shown in No. 1 northern.

The statistics for the year 1904 of the terminal elevators in Duluth are equally significant, showing that of No. 1 hard wheat they took in a little over 60,000 bushels and shipped out over 109,000. Of No. 1 northern, however, the grade upon which the future bidding is based, they took in only 12,401,000 bushels, approximately, while they shipped out over 18,217,000 bushels, a gain of nearly 6,000,000 bushels. In order to make this gain in No. 1 northern, they had to use enormous quantities of wheat which was inspected in to them as No. 3, and as "rejected" or "no grade" wheat. Of No. 3 northern they took in over 2,616,000, but shipped out only two hundred and eighty-three thousand-odd bushels. Of "rejected" wheat they took in over 2,350,000 and shipped out less than 315,000; and of "no grade" they took in 2,586,843 bushels and shipped out 256,943 bushels. It is clear that by the difference of inspection in and out when applied to the grain for this year going through the terminal elevators at Duluth approximately 2,000,000 bushels of No. 3, 2,000,000 bushels of "rejected," and 2,000,000 bushels of "no grade" wheat were lifted to No. 1 northern to make up the overage of approximately 6,000,000 bushels in that grade.

Keep in mind that "rejected" wheat is wheat that is actually deteriorated by either must, mold, or something of that sort, and is of inferior milling quality; and that "no grade" wheat is wheat that is too damp to be graded, in the mind of the inspector, as No. 1. The prices paid for No. 3, "rejected," and "no grade" wheat ranges from 5 to 12 cents a bushel less than No. 1. The iniquity of this situation lies in the fact that all of this "rejected" and "no grade" and inferior wheat thus lifted by the inspectors into No. 1 grade becomes immediately available in filling future contracts, and therefore becomes the future trading standard grade, thereby depressing the future price of No. 1 Northern wheat on all future markets. The significance of this is seen when we remember that the cash price of wheat paid to the farmers in the country and on all the great exchanges is based upon the future price thus made by a doctored and inferior quality, but enormous quantity, of wheat in storage and available for filling contracts.

In the terminal markets of Minnesota—Minneapolis and Duluth—of that part of the crop of the Northwest that passes through the terminal elevators, and is thus inspected in and out by the Minnesota authorities, approximately 10,000,000 bushels of each season's crop is brought and put into the elevators at a low price as No. 3, No. 4, rejected, and no-grade wheat, as indicated by the statistics given, but goes out and upon the general market at the regular future prices prevailing and in satisfaction of future contracts as No. 1 or No. 2, mostly No. 1, and at a price from 5 to 10 cents a bushel more than was paid for it. At 10 cents a bushel the profit to the men at the terminals who thus doctor the wheat and the loss to the farmers who sold it to them would be approximately $1,000,000 a year. By no stretch of the imagination can this be called legitimate or honest, and the stern fact that it takes place is a more severe criticism of the grading and inspection that permits it than any words of mine could be. Inasmuch as the inspection after the mixing and doctoring of the grain and out of the terminal elevators is the inspection upon which future prices are made, it follows that the inspection upon arrival of wheat at the terminal markets in the Northwest is manifestly unfair in its severity and discriminates against the producer.

The same evil practice prevails regarding the inspection of barley, enormous quantities of which the inspectors refuse to grade as malting barley on arrival at the terminals, calling the shipments generally feed barley, which compels it to be sold without grading and at a reduced price, because the farmer has no way of proving in the face of the inspector's certificate that the barley graded as feed barley is really malting barley and is ultimately used as such. A very large part of the barley shipped to Minnesota and called by the inspectors feed barley to enable the brokers to buy it more cheaply and accounted to the farmers by the commission merchant who sells it as feed barley without a grade is really sold or used by the purchaser as malting barley at a profit of from 10 to 12 cents a bushel. This sort of transaction may be legal. It may be business. But to me it looks like stealing.

Mr. Chairman, to put the whole thing in a nutshell, under present conditions in the Northwest, the great bread basket of this Nation, the whole machinery of distribution, has been monopolized. The market place, which should be clean and pure as a temple of worship, has become a place of sharp practice and unfair bargaining—I was almost tempted to say a den of thieves.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 5, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. GRAY. Mr. Speaker, the following letter from Hon. Samuel Gompers, as president of the American Federation of Labor, defining his views relative to the increase of the Navy, and written in response to an inquiry as to the position of that organization toward military and naval increase, will be of special interest at this time when the claim is being made that organized labor is demanding a still further increase of the Navy:

AMERICAN FEDERATION OF LABOR,
801–809 G STREET NW.,
Washington, D. C. March 6, 1914.

Hon. FINLY H. GRAY,
House of Representatives, Washington, D. C.

DEAR SIR: I have been absent from the city on official business, which has prevented my making an earlier reply to your letter of March 2. I beg to say that I have looked over your speech on the naval holiday, and would say that I fully approve of the position you have taken on the subject of naval holiday in defending laboring men against the charge of demanding the construction of battleships for the purpose of securing employment.

Your attention is called to a resolution which I had the honor of submitting to the last annual convention of the American Federation of Labor, held at Seattle, Wash., 1913, which the convention approved, on the subject of international peace. Copy of that resolution is inclosed herein. It is commended to your consideration.

Very truly, yours,

SAMUEL GOMPERS,
President American Federation of Labor.

The resolution inclosed is as follows:

Resolution No. 163—by Delegate Samuel Gompers.

Whereas the progress of the world's development has been a series of attempts to establish some better form of justice, and the changes that have taken place in political institutions have been for the purpose of securing better and easier ways of securing justice to a constantly increasing proportion of the people; and

Whereas justice prevails more surely and more freely where men are engaged in the customary occupations of life, with minds and energies intent upon those things which promote the social, economic, and moral welfare, undisturbed by the passions, the turmoil, and the destruction accompanying all wars, and there is free scope for the institutions for administering justice, which, though not perfect, are the best means as yet attainable for securing the rights to the people; and

Whereas the methods, the effects, the influences of war are destructive, destroying property, wealth, human life and happiness, and national power; and

Whereas the influence of war upon minds and hearts is brutalizing, numbing human sympathies through familiarity with suffering and bloodshed and through regarding the taking of human life as essential to attaining desired ends; and

Whereas the existence and preparedness of large navies and large standing armies tend to precipitate international conflicts rather than to exert an influence that makes for peace and the settlement of misunderstandings upon an equitable basis; and

Whereas the practice of militarism is not only wasteful in expending funds that should be used for other purposes that would make the lives of the people better and happier, but also in expending human ability and energy upon things of no constructive value and of no paramount interest or advantage; and

Whereas the Government of Great Britain has offered the suggestion that all powers cease naval construction for a specific period, thereby putting a check upon mad rivalry in increasing national armament; and

Whereas such a "naval holiday" from battleship construction would establish a precedent and a tendency that could be made a beginning of gradual disarmament; and

Whereas the American labor movement has repeatedly and emphatically declared for international peace and for policies and institutions to promote international justice, which is the only foundation for all peace, and has ever encouraged mutual good will and exchange of fraternal courtesies between the labor movements of the different nations in order to further international peace: Therefore be it

Resolved, That the Seattle convention of the American Federation of Labor express its appreciation of the proposal of the British Government, respectfully urge it upon the labor movement of Germany and the German Government for favorable consideration and action, and use every honorable means to prevail upon the present administration of the United States to use its best offices to encourage this movement for international peace and disarmament.

I also wish to quote from the report of the American Federation of Labor delegates to the British Trades Congress, 1913, as showing the attitude of labor abroad against the policy of increasing the Navy:

One of the strongest impressions made upon the minds of your delegates while attending the congress was the prevailing sentiment against international wars. There seems to be a general sentiment that trade-unionists would not be pawns in the game of international war as played by political or commercial interests for financial or territorial aggrandizement, and that the trade-unionists of the world, bound together in bonds of fraternity, strengthened by the annual visitations of delegates from each country to the others, would enter their most emphatic protest against being rendered as food for the cannon and other implements of war at the behest of their despoilers.

I also quote from the report of G. W. Perkins, labor delegate from the United States to the Trades Union Congress held at Zurich, Switzerland, 1913, as showing the intense opposition of labor in continental Europe against the policy of military extension:

Everywhere in Europe, and especially continental Europe, there is a strong protest and terrifically bitter feeling against large standing armies. The expense for the maintenance and the upkeep and overhead charges, in Germany especially, is something appalling and constitutes the reason which actuates largely as a protest against the standing army.

Organized labor has not only declared against militarism in plain and unequivocal terms, but labor leaders are everywhere awake to the arts and intrigues of the war-supply companies to manufacture false public opinion to be reflected upon Congress, with a view to influencing military and naval increase as a profit-making enterprise. Only during the present session of Congress, while the Committee on Naval Affairs was conducting hearings preparatory to reporting the annual appropriation bill and determining upon a policy respecting naval increase, a circular letter was sent out to the labor organizations throughout the country under the name and style of the Columbia Lodge, No. 174, of the International Association of Machinists, Washington, D. C., appealing for support for the construction of more battleships, on the ground of securing employment for labor. The letter assumed to voice the sentiment of organized labor leaders, and accompanying the same was a blank petition asking Congress for the construction of more battleships. The letter contained instructions for filling out and signing the petition and forwarding the same to the Members of Congress representing the district in which the labor union sought to be influenced was located. While some lodges were decoyed into approving the petition and forwarding the same in accordance with the instructions contained in the letter, the appeal was generally disapproved, and the following resolution passed by the International Association of Machinists, Vermilion Lodge, No. 473, Danville, Ill., in response to this circular letter and petition, shows the alertness of present-day labor leaders to detect the means and methods of modern commercialism to

manufacture and create public opinion to influence and control legislation:

This is the resolution in response to the request:

INTERNATIONAL ASSOCIATION OF MACHINISTS,
VERMILION LODGE, No. 473,
Danville, Ill., January 23, 1914.

Whereas the legislative committee, Columbia Lodge, No. 174, of the International Association of Machinists, has appealed to the Danville Trades and Labor Council and Local 473, International Association of Machinists, for moral support wherein they ask that we favor the construction of more battleships instead of lessening battleship construction, giving as a reason to obtain said support that at a time when work is becoming slack throughout the country it is unwise to aggravate the condition by adopting a policy of naval construction that will throw thousands of workingmen out of employment; and

Whereas we know that the construction of battleships are intended for war purposes, and that all the expenses of all the wars in all the world in all time have been paid with the results of productive labor, always resulting in the working class paying all the expenses of all wars; and

Whereas we realize that in war soldiers cease to produce wealth, and finally soldiers actually destroy wealth; and

Whereas we believe that war appropriations could be applied in a more beneficial way to society in general; for instance, the cost of the Civil War amounted to $31,521,815,230.60. This sum, if applied to another way, would pay for a $1,700 home and also for $400 worth of furniture for each house for a total population of 90,000,000 people, estimating 6 per family in each home. Or this sum would pay all the salaries of 25,000 school-teachers, at $625 per year, from the birth of Christ to the year 1900, and leave sufficient to establish 50 universities, each institution provided with $10,000,000 worth of buildings and equipment, and each institution provided also with a $10,000,000 endowment fund for running expenses; and

Whereas we believe the members of the aforesaid lodge are promoting war, even though they would have it appear to the contrary, by asking for increased construction of battleships; and

Whereas we believe that whoever would understand war must give special attention, first, to the economic interpretation of history; second, to the class struggle, considered historically and currently; and, third, to surplus value, produced by the workers, but legally escaping from their control to the capitalist class, as a result of the institution of private ownership and private control of the collectively used means of production: Therefore be it

Resolved by the Danville Trades and Labor Council and Vermilion Lodge, No. 473, International Association of Machinists, That we disapprove of the appeal made by the aforesaid Lodge No. 174, believing that occasional literary and oratorical snowballs ignorantly, gracefully, and grammatically tossed in the direction of hell (for war is hell) will have no effect on the general temperature of that warlike region; and be it further

Resolved, That the two inclosed petitions intended for to be sent to our Congressmen and Senators be left blank, and that a copy of these resolutions be sent to Lodge No. 174 and the monthly journal of the International Association of Machinists for publication.

DANVILLE TRADES AND LABOR COUNCIL,
JOHN F. DEMLOW,
P. R. CHRISTENSON,
GEO. W. BERRY,
Resolution Committee.

Adopted by Local No. 473, International Association of Machinists, January 26, 1914.

H. A. WISE, *President*,
W. T. RIZER, *Recording Secretary*,
EDWARD M. METHE,
PERCY MOLYNEAUX,
FRED WITTIG,
Resolution Committee.

Albin Eric Stream.

EXTENSION OF REMARKS
OF
HON. DANIEL J. GRIFFIN,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 7, 1914.

Mr. GRIFFIN. Mr. Speaker, Albin Eric Stream, a resident of my congressional district, a youth of 17 years, on April 22, 1914, at Vera Cruz, Mexico, gave up his young life in defense of his country's honor.

He was the idolized son of Eric and Amelia Stream, both natives of Sweden, who came to our shores years ago, grew up in the spirit of our free institutions, and in the death of their son have offered the greatest tribute it is possible for patriotic parents to pay to this land of God-given liberty and equality.

Of the race of Leif Ericson, the call of the sea was heard by him and welcomed. He enlisted as an ordinary seaman and was assigned to the U. S. S. *New Jersey*. His career in the Navy in the service of our country, which he loved with passionate fervor, had barely commenced when hostilities were begun in Vera Cruz, Mexico.

The bugle call of duty sounded, the order of command was given, and the youth of 17, Albin Eric Stream, was found at his post ready to obey.

The advance was made, Vera Cruz was taken, and young Stream fell—an immortal hero.

Dismissal of Nellie M. Corrigan—Piece-Rate System in Office of Auditor of the Post Office Department—Clerks and Their Leave.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Monday, May 11, 1914.

Mr. BRYAN. Mr. Speaker, while the legislative appropriation bill was up before the House some weeks ago, I criticized the piece-rate system in vogue in the office of the Auditor of the Post Office Department, and also criticized adversely the auditor's methods. The gentleman from California [Mr. J. I. NOLAN] and the gentleman from Illinois [Mr. BUCHANAN] also criticized the auditor and his system. The auditor was defended by the members of the committee, nearly every one of whom claimed to know a great deal more about the office and the auditor's methods than it was believed either of us who were making the complaint knew. It developed during the debate that many complaints had been made which were similar to those made to us by the clerks and operators. But Mr. Kram was said to have saved considerable money for the Government, and therefore he should be sustained. The piece-rate system was knocked out, but Mr. Kram's severity and unfair treatment of the clerks in his department seems to have been aggravated. I desire to take the whole proposition up and discuss it with some sequence; but, first, I will present the recent and most aggravating incident, which illustrates more than a dozen investigations could, the utter unfitness of Mr. Kram for the place he now occupies. I do not mean that Mr. Kram is guilty of any acts of moral turpitude or of any shady transactions, but it appears that he has gone totally daffy on system—save a dollar and work the employees. The humane element is entirely eliminated.

The incident I shall now refer to is one that it becomes my duty to take up not only for the good of the service, but to check what I believe is a determination on the part of this official to drive out of the office each and every clerk whom he suspicions of having furnished information on which the recent complaints against his office are based. We have not yet reached that point where a Government clerk can not with safety inform Members of Congress of the doings in the department, so far as their own conditions of labor and hours of leave and direct management are concerned. So far as I know, the auditor is mistaken in the present case, for I had never had any conversation or communication whatever with the party I am about to refer to concerning Mr. Kram or his office or any other subject. He suspicioned her, however, and she had to get out. As one of the charges, he states he is—

advised that more recently you have been persistently and perniciously active in attempting to cause dissension and protest among your fellow employees.

CASE OF MISS NELLIE M. CORRIGAN.

From all I can learn, this lady has a splendid record as a civil-service clerk, is well liked by her associates, is a vocalist, and would grace any home that she might have been called upon to occupy. But she is supporting herself, and has from time to time aided others, so she is a piece-rate worker in Auditor Kram's department. She has not the same consideration that a clerk would have who did not reside in the District of Columbia. She has no patronage back of her.

This Congress has passed certain laws as to sick leave and leave without pay. Auditor Kram has no more right to take this leave from the employees in his department than he has to take from them their pay envelopes for labor performed. He does not look at the matter that way. He believes his first duty is to make a record for those wonderful tabulating and punching machines of that great corporation that rents them to the Government. Cutting out leave helps him make this record, so out goes the leave. Promotion for clerks hinders him, for with promotion comes higher pay, so he makes no promotions; demotions are his delight. Clerks will not work so hard on salaries, so he institutes piece-rate systems, and, by classifications and bulletins, he marathonizes his office till speed is the all-essential.

Since her suspension by the auditor Miss Corrigan came to me—I had never had a word with her before—and made this statement:

I applied for sick leave, but Mr. Kram would not allow it. I was sick and had to go to a doctor for treatment.

My arm was disabled. Every time I struck the key of the machine it felt like it was striking on a sore boil on the upper part of my arm. I went to Dr. Thomas I. Lowe, 205 H Street NW., and before he could examine it thoroughly he had to administer codeine to dull the pain. So later in the day he examined it thoroughly, thinking maybe there was a tendon pushed out of place, and found it was just a bad case of inflamed muscles and nerves. Then I made application for sick leave, and Mr. Kram refused to grant it. I then complained to Mr. Hamlin, the Assistant Secretary of the Treasury, and Mr. Kram held up my pay, amounting to $42.54, which had been issued to me and was for 12 days' actual work. There was no question of leave involved in that amount. The pay is ordinarily placed in envelopes and handed out to the employees at their desks. Everybody was paid but me. I then complained again to Mr. Hamlin. Mr. Kram was forced to give an answer to Mr. Hamlin, and he ordered me suspended indefinitely without pay, preferring a charge of leave without permission. This charge is absolutely false, as I did not leave the office without making an application for leave. In the room where I have been serving as a key puncher there are 10 women employees. Two of these women besides myself are undergoing treatment for disabled arms on account of this work. The feeling against the system of piece-rate work on these machines as conducted under Mr. Kram is unanimous, practically. No men are worked on these machines. They say the men are not adapted to it. Very few women can keep at the work, making a living wage, for many months without being disabled and unfitted for other Government service.

It is noted that I was not suspended until a week after I had gone back to work, and the question of leave without permission was manufactured by Mr. Kram because I complained against his depriving me of the sick leave which the law gave me and which he claims to allow all employees. It is almost a uniform complaint against Mr. Kram that he does not allow the employees their leave as provided by law.

Mr. Speaker, I have heard this complaint that Mr. Kram unlawfully refuses leave allowed by law to these clerks from so many sources that I know it is true. Any jury would convict him on the evidence. I hear also that he has certain favored ones, who testify to certain easy-mark Congressmen, who receive better treatment as to their leave.

FORMAL CHARGES ARE MADE.

Here are the formal charges presented by Mr. Kram against Miss Corrigan:

TREASURY DEPARTMENT,
Washington, May 7, 1914.

Miss NELLIE M. CORRIGAN,
2425 Eighteenth Street NW., Washington, D. C.

MADAM: The Auditor for the Post Office Department reports in your case substantially as follows:

You were transferred from the Bureau of Engraving and Printing to his office on March 28, 1904, and in 1906 promoted to $720 per annum, at which salary you remained until your transfer to the piece-rate roll on December 16, 1912. In the 12 months from April 1, 1913, to March 31, 1914, you received, as a piece-rate operator, $1,061.37, an increase of $341.37, or 47 per cent, over your former annual salary.

Your record, the auditor states, as a trouble maker in his office dates practically from the date of your original transfer from the Bureau of Engraving and Printing. On the record cards kept in his office the following entry appears: "3-15-06. Trouble with Mrs. Cropley about transom between 724-724A."

The auditor states that this does not refer to a petty complaint made to the chief of division, but an appeal from his decision direct to the auditor. He states that he is advised that more recently you have been persistently and perniciously active in attempting to cause dissension and protest among your fellow employees. At no time, he states, have you shown a disposition to consistently observe the rules of the office or abide by the rulings of your supervisory officers.

On April 18, 1914, the auditor reports, you were absent without leave, in violation of the regulations of the Treasury Department. He further states that on the day preceding you made application in the usual way for one day's leave, which was not approved for the reason that a prior absence of five days, for which no application had been submitted, was pending, and the full allotment to June 30, except one day, had previously been used. This, the auditor states, was fully explained to you in a conversation on April 17, relative to the five days' absence referred to above.

In view of these facts the auditor has suspended you from work, and you will be given an opportunity to reply in writing to these statements before further action is taken in the case.

Respectfully,
C. S. HAMLIN,
Assistant Secretary.

Miss Corrigan has filed the following reply:

MAY 9, 1914.

Hon. C. F. HAMLIN,
Assistant Secretary of Treasury, Washington, D. C.

DEAR SIR: For answer to the charges against me by Charles C. Kram, Auditor for the Post Office Department, I deny each and every one of the charges except as hereinafter admitted.

The statement that I was transferred from the Bureau of Engraving and Printing to his office on March 28, 1904, is correct. It is also true that in 1906 I was promoted to $720 per annum and that I remained at the salary until December 16, 1912, when I was transferred to the piece-rate roll to do service on the punching machines.

I refer you to my record of 16 years' service to show you that I have been faithful in every post to which I have been assigned, and have rendered efficient service with a good, clear record during the entire period. Upon transfer to the piece-rate roll my opportunity for further promotion was destroyed, although I had been on clerical work, and in 1907 I was in the checking division of this department, and in three months made such a good record as to quantity and accuracy that Mr. Timmie recommended me for a $900 rating, beginning July 1, 1907. I was denied this higher rating because I came from the Bureau of Engraving and Printing. In the performance of my duties as a piece-rate operator I did good work, as is shown by the statement of the auditor that I received $1,061.37 in 12 months from April 1, 1913, to March 31, 1914, this sum being a showing of a creditable amount of work performed

Answering the charge that I am a trouble maker, as evidenced by the entry in the auditor's records that I had trouble on March 15, 1906, with Mrs. Cropley about a transom between 724 and 724a, I first respectfully call your attention to the fact that no other item of trouble making is of record against me, and that the auditor's claim that I am a trouble maker must be based solely on this entry, except as claimed by him further in the report that I have recently made trouble for his department.

With particular reference to the transom matter, I ask that you observe, first, that the incident occurred more than eight years ago. The facts are as follows: On the day mentioned—a very raw, rainy day—Mrs. Cropley, having a window open in her room, opened the transom between 724 and 724a. The raw, cold air blew down on my head and back, and it was too much for me to stand without complaint, as I felt sure it would give me a cold and involve perhaps serious complications, my physical condition at the time being considered. The transom was operated from my side, and I closed it from my side without any comment. Mrs. Cropley reported this to the chief of division, who did not take up the matter or side with her, it being generally agreed that an operator had a right to close a window or transom which was operated on her side of the room in case she believed the open window endangered her health. Mrs. Cropley was not satisfied, and went to the auditor with a report which caused this notation to be made and placed on record. The matter was a very trivial affair, and it was quite unusual that any mention should be made of it.

Aside from being in a weakened physical condition at the time, I was leading the choir at St. Mary's Church, and was very cautious not to take cold or impair my voice unnecessarily.

The charge of causing dissension and protest among fellow employees is without foundation.

His statement that I have not consistently observed the rules of the office or abided by the ruling of supervisory officers is untrue. So far as I can remember I have never been "on the carpet" or subjected to reproof or discipline of any kind until the present incident.

I have not attempted to create dissension or protest, although it is known in the room where I work that I have been under the care of Dr. Lowe, 205 H Street NW., for a disabled arm and other physical complications brought on by the hard work of operating the punching machine in this office. It is also known that in the same room are three others, piece-rate clerks, who are now or have been recently under the care of a physician for the same trouble. It is impossible for any clerk to continue to operate the punching machine at a high rate of speed without becoming injuriously affected to more or less degree. This fact is so well known that the Civic League has made complaint of the condition existing in this office to the health bureau, and the health bureau has attempted to investigate the conditions there existing, and Auditor Kram has prevented such investigation by the Government bureau. Congressman BRYAN and Congressman KNOWLAND and others have recently commented on the situation in Congress, and have criticized the situation emphatically. These facts perhaps account for some of the protest that Mr. Kram has heard, but I emphatically deny that I have made any attempt to foment trouble or discord in his office among the employees.

ABSENCE WITHOUT LEAVE.

Replying to the charge that I was absent on April 18, 1914, without leave, will say that I applied for leave for April 18 in writing on April 17 at 2 p. m., and did not leave the office until 5.50 p. m. of that day. I was sick at the time and under the care of Dr. Lowe, and was very much in need of the leave for which I applied. I went to Mr. Kram's office at 4.30 and remained there until 5.30.

Prior to this, on April 3, I was sick, leaving the office—entirely unable to continue the work—at 3 o'clock, expecting to return the next morning; but as I was unable to return I was reported sick and remained sick for five days. Each morning I was reported sick, in accordance with the rules and practice in the office. I then made application for allowance of this period as sick leave. The auditor informed me positively, both through my chief, Mr. Wanamaker, and personally, that this allowance would not be made, and the five days' application was not pending, but had been denied, so that there can be no truth or justification of the charge that I was absent one day while my former application was pending.

The auditor stated to me that the five days' absence was denied on April 17 on the ground that the full allotment to June 30, except one day, had been previously used by me. This is fully borne out by the statement of the auditor as set forth in your letter to me bearing date of May 7, 1914.

If the auditor insists that I have ever violated any rules of the office or my supervisory officers, as stated in your letter, I request that he make his charges more definite and certain by setting forth definitely each and every instance of such violation. I am sure, however, that he can not name any such instances for the reason already stated in this letter.

Having fully answered these charges, I respectfully ask that I be cleared of any blame and be reinstated and transferred out of the jurisdiction of Mr. Kram.

Affirmatively I call to the attention of the Secretary the gross injustice practiced by the auditor in denying my application for sick leave and the one day leave. He explained to me that the allotment to me until June 30, 1914, had been already used. It meant I would lose 15 days due me before that time, and by a process of bringing leave from last year and credit on this year he figured I had used the 15 days. I had no more than was due me last year. He did not claim that I could not be spared, but informed me ahead of time that 15 days of the 30 days' leave granted by a law of Congress I could not have.

The statement of the auditor as set forth on page 1 of your letter that my pay as piece-rate operator caused me to have an increase of 47 per cent over former salary is inaccurate on account of the way Mr. Kram figured. He held that we were not entitled to holidays, being piece-rate workers, and charged us up for Christmas, 1912; New Years, 1913; and February 22, and March 4, 1913, as well as half holidays preceding Christmas and New Years. He took from me 2½ days' leave for January, and 2½ for February, and 3 days' sick leave for that year—in all, 13 days of leave to which I was entitled by act of Congress of which he deprived me. Mr. Kram, however, said that Congress had not granted this leave and he could not pay us for the time. To verify this claim as to the unusual method of figuring leave adopted by Mr. Kram I respectfully refer the fact to the records and to the clerks and employees in his department.

It seems quite odd that the charge for trouble making should not have been preferred against me until eight years after the only instance referred to had occurred.

To verify my statement that other employees in this room that I have worked are under doctors' treatment as stated in this answer I respectfully refer you to the employees themselves for testimony.

I respectfully request that my request for reinstatement be granted and out of human kindness and for the sake of justice that I be transferred to the Treasury, out of the reach of the cruel arm of Mr. Kram, for it is plain that Mr. Kram will not permit me to continue efficient in

his department, and my opportunity for good service to the Government will be curtailed if I am kept under his jurisdiction.

Respectfully,

NELLIE M. CORRIGAN.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., May 9, 1914.

Mr. CHARLES S. HAMLIN,
Assistant Secretary of Treasury Department.

MY DEAR MR. HAMLIN: Miss Corrigan has come to me and told me about her suspension by Auditor Kram. Although I have made several speeches in Congress against the infamous and outrageous policies pursued by Kram in his office, and although I have received testimonials from physicians and protests from numerous employees verifying charges of inhumanity and outrageous treatment of employees in his department, Miss Corrigan has never come to me or had any transactions whatever with me until after her suspension. I can not believe she has been endeavoring to make trouble in the department as charged, or else she surely would have aided me in my campaign against the methods pursued by Kram.

I want to say further that I have read the charges Kram prefers, and I have read her answer, and I, on behalf of good service and humanity, request that the facts be investigated before Miss Corrigan is denied her right as a civil-service employee.

I have in my office data which will completely verify the statements made by her in her answer. Not only have doctors been treating the women who have been victimized by this infamous piece-rate punching-machine business, but complaints have been filed by public-spirited citizens of Washington, and the health bureau has sent a representative of that bureau to Kram and has made an attempt to investigate the conditions there, but Kram has denied the right of these investigators and has succeeded in preventing the truth being brought to light. I am going to make this case as public as possible, and cheerfully tender to you every assistance I can render to aid you in this connection and to promote the good of the service.

This fellow Kram actually held up the woman's pay, and all of the employees in the department received their pay regularly on May 2, and her envelope containing $42.54 for pay actually earned by her in 12 days, about which there was no sort of question, was held up by this deluded officer for three days, with the inevitable result of embarrassing this woman in the way that any helpless person can be embarrassed by having their money thus detained in unlawful hands. I have the envelope in which this pay was to be delivered to Miss Corrigan marked across its face with the word "hold," which was done under Kram's orders.

I intend to make this case public from start to finish and want you to know in advance that I crave every opportunity to aid you and the department in administering simple justice and in preventing any embarrassment that can be avoided. But there are many clerks in this department that are being subjected continually to this kind of brutal insults from Kram, and I am going to continue to oppose the perpetuation of such a state of affairs.

Sincerely, yours,

J. W. BRYAN.

WHY SO MANY COMPLAINTS?

In the recent debate it developed that this auditor had been complained against to the gentleman from Illinois [Mr. MANN], the gentleman from Indiana [Mr. COX], the gentleman from New York [Mr. FITZGERALD], the gentleman from Maryland [Mr. LEWIS], the gentleman from California [Mr. J. I. NOLAN], the gentleman from Illinois [Mr. BUCHANAN], and I could name a dozen other Members who have received complaints.

Mr. Kram knows how to show off his department, and he takes the Members into his several offices and shows them the best side of everything. It is a tremendous machine in operation and is enough to dazzle any ordinary Member of Congress, who ordinarily knows nothing about efficiency in such a department. He is very affable, and no Member wants to be unpleasant. Members who go through his department in this way are prepared to defend him and his system on this floor, and in the recent debate some of the Members told me I did not know because I had not thoroughly investigated the office. It is true I did not know then as much as I ought to have known; but to-day I know more about that office and Mr. Kram and his system than any Member of Congress, I do not care where he comes from or of what committee he is a member.

Aside from the days I have spent with the clerks and employees themselves, I have been through the office. From 10 in the morning till 4 in the afternoon, without lunch, I went with Mr. Kram from room to room. I did not see enough to make me an expert on the adequacy of the audit, and I will leave that for others to tell about, but I saw enough to convince me that not half the story of the tyranny and inhumanity of Mr. Kram in dealing with his clerks and employees has been told. With him it is a mania for his system. After showing me the system at 4 o'clock, with his customary confidence, he asked me if I did not want to talk to some of the piece-rate employees. I said yes, and we entered the first room, where 10 were employed. One was absent, who, I have learned, was Miss Corrigan—suspended that very morning.

I told Mr. Kram that of course it would be necessary for him to get out of the room while I talked; so he left, and I shut the doors. The ladies almost in a chorus said "It's all true"; the sentiment seemed unanimous, though two or three of them said they were getting better salaries than they were getting under their old rating. They are mostly District of Columbia girls from the Bureau of Engraving or temporaries who, for one cause or another, can not hope for promotion under regular operation of civil-service rules.

Two of the eight who were present were then under doctors' care for their disabled arms. Not one of them dissented to the claim that they were being unlawfully deprived of their leave. I told one of the operators to put the facts in writing and mail them to me and here is what she states the facts to be:

WASHINGTON, D. C., *May 5, 1914.*

DEAR MR. BRYAN: I can not tell you how much pleasure your visit to Mr. Kram's office gave us, and I feel sure that on leaving you felt convinced that we really have some grievance and not merely imaginations.

As we told you, one of our great grievances is our annual leave question. Why should Mr. Kram think that pieceworkers are not entitled to 30 days' leave? As he asked one employee who went to him about getting paid for leave that she was justly entitled to, "Whoever heard of pieceworkers getting 30 days leave a year?" And she told him of the pieceworkers in the Bureau of Engraving and Printing and the Printing Office who get 30 days.

Last year we lost considerable money through his method of calculating. To begin with, we lost January 1, 1913 (legal holiday), February 22, 1913 (legal holiday), March 4 (legal holiday), besides annual leave of 2½ days a month for January and February and 1 day for March, leaving us only 24 days annual leave for the year.

Now, in nearly every instance those 24 days were taken from July 1, 1913, to December, 1913, which, of course, was the end of that fiscal year. Now, this year he tells us that our fiscal year is changed and that it runs from July, 1913, to July, 1914, thereby counting all the leave we had the last half of last year as part of the leave of this year. In other words, he is giving us 30 days in 18 months instead of 30 days in 12 months.

Do we not work hard enough to be entitled to those 30 days? Mr. Kram claims that we earn so much more money than before. True enough we do, but when you consider all the leave we lose we are not so much to the good.

Mr. Kram tells us that the change in the fiscal year is by order of the Secretary of the Treasury, but at the Treasury the officials know nothing about it; and then, too, it is only the pieceworkers whose leave has been changed, the clerks' fiscal year remaining the same. Why this discrimination?

Another grievance—piecework. Why should women be made to do such nerve-racking work until at the end of the day they have no strength left? That is what piecework does. It is an incentive to speed one's limit just because there is a chance to earn a few more cents, little counting the great danger to one's health.

Does the Government puts such a little value on a woman's health and life? Mr. Kram has to admit that it is nerve-racking work, and that in two years one's health will be broken.

Thanking you for your kindly interests and hoping you will be successful in bettering our conditions, I beg to remain,

Gratefully, yours,

Another operator wrote me this story:

MAY 7, 1914.

Hon. J. W. BRYAN.

SIR: As one of those key punchers in the Auditor's Office for the Post Office, I will state a few facts.

Work on those machines will, in the course of a few years, cause many to be invalids for life. I am suffering with neuritis of the right arm, and I am only one of many. In one room alone 5 out of 10 have been to doctors for treatment already. Some suffer with the back and some with the head.

In regard to leave, it is juggled up so that one never knows what's what. Some get paid for leave, but more don't get paid, a sort of discrimination, it seems. Since we have been on these machines many have lost some of their leave. I lost 10 days of annual leave and was not paid for 3 holidays; have had no sick leave in four years. Others have fared the same. When we were paid for leave we never got our average for the days we worked. For instance, if we worked 26 days in month, making $3 per day, the amount was divided by 30 days, bringing the average down to $2.60 per day. Some fine computing? No doubt the amounts thus saved by the taking away of leave and the charge for errors at the rate of $30 per thousand is how the office is run on such an economical basis. We have to remain very still and never complain, for if one gets the enmity of the auditor all peace and happiness is past for them.

It is true we have made a few more dollars; but what is that compared to health, happiness, and peace. The way we are situated now, if one becomes disabled from the work on those machines, out they go, a dependent probably on some kin; a most deplorable outlook. For man's inhumanity to man makes countless thousands mourn.

Yours, respectfully,

The following letter from a physician, Dr. Riley D. Moore, corroborates the statements made by the myriad of witnesses already cited and referred to:

WASHINGTON, D. C., *May 2, 1914.*

Hon. J. W. BRYAN,
House of Representatives.

DEAR SIR: Replying to your recent inquiry, will say that for some weeks I had under treatment an operator of a punching machine in the office of the Auditor of the Post Office Department.

Within a month after beginning work distressing pains developed in the arm, for which nothing but temporary relief could be obtained. The condition seemed to be neither more nor less than a severe exhaustion of the muscles and nerves of the arm, and within a short time after giving up the position recovery was made without further treatment. However, I would not have expected such a ready recovery had the work been continued a few months longer, for conditions causing severe and almost constant pain must sooner or later prove disastrous to the general health. I was informed that there were others in the office suffering from the same painful affection.

In conversation with my patient I gathered facts which might be of interest to you. A thin card would crumple in the machine and a thick one requires the exertion of far too much force on the key to punch the hole, and that to do a reasonable amount of work on these machines, even if piecework payment were abolished, would still be torture to many operators. Personally I know very little of the rules under which the work is done. I have never seen one of the machines in operation and know nothing of their mechanism. It is quite probable that changes could be made in the rules governing their operation which might help to eliminate the severity of the work, but it seems as

less essential that the machines should be changed or some electrical attachment devised so that it would require much less pressure on the keys to punch a hole through the card, thereby partially eliminating what is now a strain on the wrist and muscles of the arm.

It does not take a psychologist, an economist, or an efficiency expert to know that the nearer to ideal the working conditions the more contented the worker, and the more contented the worker the greater his interest and efficiency in his work. A few employers have already learned this lesson, and I hope those who oppose civil-service reforms may also come to see it. If Government employees get lazy and lose ambition, as some contend, it is the very best reason why Congress should bring about the needed reforms which a few seem so strenuously to oppose. Encouragement and incentive are the forces productive of efficiency; and if the latter is not of the highest, it should not be blamed to the perverseness of the Government employee, who is made of the same sort of stuff as that of which Congressmen are made, but rather to his working conditions.

With best wishes for your success in civil-service reform, I am,

Respectfully, yours,

RILEY D. MOORE.

The Washington Post, January 1, 1913, had the following:

WOMEN BROKEN DOWN BY MACHINES; UNITED STATES SURGEONS GO TO THEIR RESCUE.

Punching machines employed in statistical departments of the many great factories, the last word in modern bookkeeping, have been placed under surveillance by the Federal Public Health Service because of the high percentage of nervous breakdown cases noted among the women operatives. It was stated at the department yesterday that an effort was being made to devise an electrical apparatus to operate the punches, relieving the women of much of the physical strain which officials hold responsible for their nervous condition.

IN USE IN DEPARTMENTS HERE.

The machines are at present in use in many United States auditing departments, including the Post Office auditor's bureau. They require the operators to press down numbered keys, which cut out corresponding marks in the cards beneath. All figuring is done mechanically, the punch marks guiding the tabulating mechanism, which is electrically driven. Operators have complained of sore fingers, due to the pressure required on the punch keys. As the soreness spread to the arm and shoulder symptoms of nervousness followed, and often complete nervous breakdown has been the culmination. It is hoped an electrical device will minimize the physical effort required.

This rescue of the United States surgeons never happened, for Kram objected.

How can it be that Congressmen with brains and hearts and heads of departments will not believe this story. I have already stated that Auditor Kram has prevented an investigation of complaints filed at the health bureau against these punching machines, and the auditor has prevented investigation by the health bureau by interposing the question of jurisdiction. Let any Member interview the health bureau. Surg. Gen. Blue referred the matter to Dr. Rucker, and he appointed Dr. Carne to make the investigation. But to this very moment no investigation has been had, because Mr. Kram would not stand for it.

But I was telling about my own visit. After I came out of this room I asked to go to the room where some 60 operators were at work, and Mr. Kram said he was afraid the department would not like that. "Why," I said, "I am a Member of Congress and on the Committee on Reform in the Civil Service. Surely the head of the department will not object to my talking to the employees, especially piece-rate employees."

He thought otherwise; that while he himself did not object Mr. Burleson might object. I said, "Well, I will phone him at once and tell him you do not object, but prefer me to get his permission." He answered that he would prefer to phone. I then said to him that I would not go further with the matter if he objected, and he answered, "Well, I do object." That ended it, of course.

After he completed showing me through the various auditing departments, I asked him to take me to his bookkeeping department and allow me to interview the bookkeepers as to kicks from postmasters concerning the accuracy of the audit. He then censured certain bookkeepers, calling one by name, whom he called "knockers," but objected to my interviewing them.

THERE IS NO END OF COMPLAINTS.

On March 27, 1913, George B. Furman, a $1,600 clerk in his department, now promoted to the Income Tax Division of the Treasury, wrote a letter to the Secretary of the Treasury concerning the—

Deplorable conditions existing in the office of the Auditor of the Post Office Department. The mechanical tabulating system, coupled with the piece-rate basis of paying employees—

He wrote—

has not only proven to be a failure, but has completely demoralized the entire force. There is practically no organization, and in face of all claim to the contrary, the first year's experience with the present system will net a loss to the Government of over $100,000.

If you will appoint a committee to interrogate the leading clerks in private and out of the presence of the auditor, my statement will be fully verified.

I have never met Mr. Furman, but I have investigated his record and read this letter in the Treasury Department. I have published only excerpts from the letter. He has a splendid record as a clerk and has quite powerful political backing. Auditor Kram has never caused the word "hold" to be written across his pay envelope.

On November 4, 1911, Auditor Kram wrote the Secretary of the Treasury, recommending promotion of Furman to $1,800 clerkship on account of "efficiency." Further, Mr. Kram says in the letter:

His record for attendance and attention to duty is excellent. In my opinion, Mr. Furman is most entitled to this promotion when compared with other clerks of his grade.

It was 16 months later that this efficient and competent clerk wrote of the "deplorable conditions" in this office.

The following statement was handed me by a former clerk in the department, who is not now in the employ of the Government:

[Memorandum for the Secretary of the Treasury concerning the administration of the office of the Auditor for the Post Office Department.]

Comparative statements showing cost of auditing money-order accounts during fiscal years 1912 and 1913.

FISCAL YEAR 1912.

1	Chief Division of Money Order Assorting	$2,250
1	Assistant Chief Division of Money Order Assorting	2,000
1	stenographer	1,000
2	clerks in charge sections, at $840	1,680
2	money-order searchers, at $720	1,440
10	clerks on international work, at $720	7,200
3	file clerks, at $840	2,520
4	messengers, at $720	2,880
24	Cost of executive force	20,970
230	assorters and numberers, at $700	161,000
	Total cost of division	181,970
1	Chief Division of Money Order Auditing	2,250
1	Assistant Chief Division of Money Order Auditing	2,000
1	stenographer	1,000
8	clerks in charge of rooms, at $1,600	12,800
3	assistant clerks in charge of rooms, at $1,400	4,200
16	clerks, examining credit sides, at $1,000	16,000
6	clerks, examining debtor sides, at $1,200	7,200
3	clerks, at $900, distributing	2,700
2	messengers, at $840	1,680
1	stray checker	900
1	searcher	900
43	Cost of executive force	51,630
106	clerks, at $1,000, operating adding machines	106,000
	Total cost of division	157,630
	Total cost Division of Money Order Assorting	181,970
	Total cost Division of Money Order Auditing	157,630
	Total for the two divisions	339,600

FISCAL YEAR 1913.

1	Chief Division Money Order Assorting	2,250
1	Assistant Chief Division Money Order Assorting	2,000
34	clerks, at $1,000, examining issued tabulating	34,000
1	clerk, directing gang punching	1,200
7	clerks, at $1,100, on gang punching	7,700
1	clerk, directing assorting machines	1,600
34	clerks, at $1,200, on assorting machines	40,800
1	principal bookkeeper, directing key-punching work	2,000
89	clerks, at $1,000, on key-punching machines	89,000
1	clerk, directing key-punching work	1,600
25	clerks, at $900, on key-punching work	22,500
6	clerks, at $1,000, checking coupons	6,000
7	clerks, at $1,000, checking fourth quarter, 1911, domestic money orders	7,000
24	clerks, at $660, checking coupons	15,840
8	laborers, at $660, trucking cards and file cases	5,280
240	Total cost of division	238,770
1	Chief Division Money Order Auditing	2,250
1	stenographer	1,000
1	clerk in charge mails and files	1,600
24	clerks, at $1,000, mails and files	24,000
1	principal bookkeeper, directing key-punching work	2,000
50	clerks, at $1,000, on key-punching machines	50,000
1	messenger, at $360	360
1	clerk, directing paid tabulating	1,600
14	clerks, at $1,200, on paid tabulating	16,800
1	clerk, directing examination paid tabulating	1,600
34	clerks, at $1,000, examining paid tabulating	34,000
1	messenger	360
130	Total cost of division	135,570
	Total cost Division Money Order Assorting	238,770
	Total cost Division Money Order Auditing	135,570
	Per annum cost of cards	60,000
	Per annum rental of 24 tabulating machines, at $29.50 per month	8,496
	Per annum rental 30 assorting machines, at $20 per month	7,200
	Total	450,036
	Cost of system in vogue in 1913, per annum	450,036
	Cost of system in vogue in 1912, per annum	339,600
	Increase in cost of new system over old	110,436

The present auditor has claimed that the new system effected a saving of $500,000 per annum. In addition to the expenditures enumerated under the new system there should be included 6 gang punches, at $75 each, $450, and 250 key punches, at $25 each, $6,250.

COMMENTS.

The reduced number of employees in the two divisions treated hereinbefore, in 1913 as compared with 1912, is not due to economy

of labor because of new system, but to the fact that in 1912 there were a number of quite inefficient clerks, and to the further fact that under the new system the clerks are overworked.

Inquiry of bookkeepers in Division of Postmasters' Accounts would develop that nearly all errors reported by postmasters under card system are well founded and that the office of the auditor has erred. Under the old system the reverse was true.

More time is actually required to audit under the card system, and the work is becoming more behind each day.

The audit, regardless of cost, under present system is worth nothing, because not true. Accuracy is sacrificed in the attempt to make a good showing as to speed under the new system. Under card system no permanent record is left to check against. Cards for third quarter have been sold; those for fourth quarter are being removed as fast as audit is completed.

It has been stated that under the card system any account or money order desired could be located in 15 minutes. In truth many accounts are greatly delayed in getting placed, and not a few are lost. Money orders known to be in the office often can not be located for weeks. Five months were spent in auditing the issued or debit side of the third quarter 1912. It may be debit side of fourth quarter 1912 will be card audited in four months, but never in less without material increase in force Card system costs more now, and if past arrears were shoved aside without audit and the force increased sufficiently to keep work current with an even start, the force engaged would be greater numerically than under the old system.

One clerk recently remarked to the writer that he had some thirty-odd letters which had been lying in his desk, an accumulation of some weeks, to which he could not reply because money orders and accounts necessary to replies could not be located under the new system.

Another clerk remarked that while under the old system he could start to work on his money-order accounts as soon as received, under the new system they came to him so disarranged that it required four days to assort them.

Money-order accounts now coming in are piled up for a week or two before being opened and "boxed" for the key punchers, and they will stay boxed for several weeks before they are "key punched."

Recently a fire or burglary case came up for investigation. The money-order accounts involved were included under the law authorizing the auditor to pass without audit the accounts from January 1 to June 30, 1912. Result, allowance of postmaster's claim without further investigation.

Machines are out of order and doing bad work about one-tenth of the time. A clerk recently told the writer he had occasion to carefully check an account against the cards and could find no error, cards having been correctly punched. Investigation disclosed that a small spot on one card had caused a machine to err to the extent of $300.

Frequently two or three bunches of cards are gang punched for one office, when each bunch should have been gang punched for a different office.

Tabulating and assorting machines spoil, by tearing and mutilating, many cards, which are not replaced.

Much of the "record" work in tabulating is fake, i. e., checking up receipts on large, usually correct offices by merely checking without making comparisons and additions.

Day's work punching cards, about 2,200. Day's work with adding machine on paid orders, about 15,000.

To assort and number cards takes 11 handlings. Orders, 9 handlings.

Checking orders by adding machine about one-third as fast as by machine audit on issued side. Net results indicate old system quicker, more accurate, and can be operated with fewer clerks.

Verifying a previous comment, a clerk writes: "Under old system kicks by postmasters in nine cases out of ten resulted in the auditor's office being proved correct and the postmaster wrong. Now, under machine system, the office is wrong nine times out of ten."

A clerk writes: "The machine audit has discovered only one-fifth of the usual number of double payments of money orders. Under old system there were about 30,000 per annum, averaging $8 each. Has business improved or is the new system at fault?" Same clerk writes: "Office is in the worst confusion in its history, and everybody is overworked."

Railway Mail Service travel allowance pay rolls for the quarter ended March 31, 1913, were audited on the basis of the postmasters' figures. This, of course, is no audit. This work will continue to fall behind without a substantial increase in force.

The administration has apparently accepted the statements of the Auditor for the Post Office Department at their face value. Figures and assertions in this memorandum have been carefully verified and are believed to be correct. It is not, however, asked or expected that they be accepted, but it is hoped that they will result in an unbiased investigation and verification. Such investigation should be independent of the auditor. The present castle of cards must inevitably fall of its own weight in course of time. If this memorandum results in a fair investigation, its statements will be confirmed and its purpose fulfilled. In investigating, clerks should be interviewed, having been first guaranteed immunity because of telling the truth. It is further suggested that if a bunch of a thousand money-order statements and the orders germane thereto were lifted and audited by a firm of expert accountants or other unprejudiced parties, that a wide discrepancy would be found between the true audit and the card-system audit, and that the statement that no true audit is now had would be verified.

The writer is interested in the present administration, and this memorandum is tendered in the hope that it may indicate the true condition of affairs and result in remedial action before conditions become a matter of public knowledge. Investigation in no manner directed or governed by the auditor must inevitably have the desired effect. The memorandum is prepared entirely without animus and with no self-interest.

In conclusion, I quote from another communication from a clerk: "Auditor procured insertion of paragraph 2, page 4, deficiency bill. In urging passage Secretary MacVeagh wrote committee: 'Unless some such provision is made the auditor will be seriously embarrassed.'" (This paragraph, which has been hereinbefore referred to, authorized passage of accounts without audit of orders issued during first half of calendar year 1912.)

The Washington Post of January 9, 1913, had the following:

POST-OFFICE CLERKS IN REVOLT—WOMEN ORGANIZE TO EXPOSE AUDITOR'S "SWEAT SHOP"—PUT THEM ON "PIECEWORK"—CIVIL-SERVICE LAW HAS BEEN VIOLATED THEY ALLEGE, SALARIES BEING SO REDUCED ONLY $55 A MONTH CAN BE EARNED—TEN SUFFERERS MEET AND OUTLINE SECRET PLANS FOR A STRIKE.

Declaring that the Auditing Office of the Post Office Department has been converted into a "sweat shop" that would shame any factory conditions in the country and laying the blame directly to a newly installed system of card punching that deals with money orders, 10 irate women, representative of 217 female Government employees, met secretly last night at the home of one of the Treasury employees and laid plans to expose what they termed the "unfair system" under which they labor.

Threats were made at the meeting which insured the belief that, if necessary, drastic methods would be adopted by the women to gain their ends. It was hinted that the American Federation of Labor would be sought as a final refuge, and that if Congress does not do something to alleviate their sufferings the whole force will go on strike.

AUDITOR KRAM IS BLAMED.

The Sixth Auditor's Office of the Post Office Department, the one referred to in the complaint, is in charge of Charles Kram. The women claim that he has taken them from under the jurisdiction of the civil service and put them on "piecework."

Under the civil-service rule the salaries in this particular department run from $600 to $900 per annum. Now, it is claimed, the women are lucky if they can make $55 a month.

Further than that, the women claim that they have been deprived of their annual leave, which was granted by Congress and to which every other Government employee is entitled. Women under the supervision of Mr. Kram claim also that their physical being is jeopardized by the punching machines, which injure the ends of their fingers.

CHARGED FOR CARDS SPOILED.

For punching cards the women are paid $1.50 a thousand if the cards are perfect, but are charged $30 a thousand for cards spoiled.

Each card must be punched 18 times, and the claim is made that some women were lucky if they can get a thousand perfect cards a day.

Nearly all of the women who attended last night's meeting have been in the employ of the Government for the past 10 years, and all of them have done service in the Auditing Department of the Post Office. Some had received $840 a year and others the full quota—$900.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. THOMAS C. THACHER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 9, 1914,

On the bill (H. R. 15280) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1915, and for other purposes.

Mr. THACHER. Mr. Speaker, I take this opportunity of calling the attention of the Members of the House of Representatives to a communication of considerable importance. I have just received from Massachusetts a letter addressed to Woodrow Wilson, President of the United States, and signed by 22 prominent Democratic members of the Massachusetts Legislature who voted in the Massachusetts Legislature on March 13 against the resolution seeking to pledge the Massachusetts delegation in Congress against the repeal of the Panama Canal tolls bill, and who now renew their faith in the wisdom and correctness of the attitude of President Wilson upon this question. This letter was left this afternoon with President Wilson.

As a Democratic Member of Congress from the Commonwealth of Massachusetts, who voted to sustain President Wilson on this question, because I believed that he was right, I take pleasure in bringing the following communication to the attention of the Congress.

APRIL 15, 1914.

WOODROW WILSON,
President of the United States,
White House, Washington, D. C.:

The undersigned Democratic members of the Massachusetts Legislature, who voted in the house of representatives on March 13 against the resolution seeking to pledge the Massachusetts delegation in Congress against the repeal of the Panama Canal tolls bill, take this opportunity to renew our faith in the wisdom and correctness of your attitude upon that matter.

Signed at the statehouse in Boston, April 15, 1914.

P. Joseph McManus, nineteenth Suffolk district; John F. Doherty, ninth Bristol district; William E. Hickey, fifteenth Suffolk district; Henry J. Mahoney, second Middlesex district; John J. Lydon, fifteenth Suffolk district; Charles H. McGlue, fourteenth Essex district; Leo M. Harlow, second Bristol district; William O. Souther, jr., third Plymouth district; John E. Cuddy, jr., fifth Essex district; James F. Barry, second Hampden district; James J. Murphy, twelfth Suffolk district; Charles S. Lawler, twenty fourth Suffolk district; John J. Reilly, seventeenth Suffolk district; John Ennis, fourth Berkshire district; Edward M. Hall, fifth Berkshire district; Edward C. Bodfish, sixth Plymouth district; Morton H. Burdick, third Berkshire district; John P. Conroy, third Middlesex district; Herbert L. Ray, eighth Worcester district; Daniel J. Buckley, eighth Hampden district; Charles A. Le Gro, first Hampden district; Edward F. Harrington, tenth Bristol district.

Inspection and Grading of Grain.

SPEECH

OF

HON. LAWRENCE Y. SHERMAN,

OF ILLINOIS,

IN THE SENATE OF THE UNITED STATES,

Friday, April 10, Monday, April 13, and Tuesday, April 14, 1914.

The Senate had under consideration the bill (S. 120) to provide for the inspection and grading of grain entering into interstate commerce, and to secure uniformity in standards and classification of grain, and for other purposes.

Mr. SHERMAN. Mr. President, the discussion of Senate bill 120 has proceeded somewhat and I wish to be heard while I submit some observations in opposition to the bill.

The bill undertakes to fix commercial standards and regulate thereby contracts made in one State to be performed in whole or in part in another State. It is sought to justify this action by saying that it is analogous to the pure-food law, meat inspection, the refusal to transmit lottery tickets through the mails, and obscene literature, or to suppress entirely crimes or what are likely to become crimes connected with the interstate commerce of the country. Quarantine laws and pure-food laws are uniformly an exercise of the police power either by the Government or by the individual State. If it be sought to justify the provisions of this bill by the police power, it ought properly to fall within some of the prohibited things intended to be a part of the proper exercise of that power. The mere fixing of a commercial standard for merchandise or a desire to regulate contracts concerning an article which may be handled by an interstate carrier merely to execute the contract does not justify us in invoking the police power of the Government through an act of Congress.

There are a great many things that we might properly think are desirable, which still are beyond the power of Congress; and even if they were admitted to be within the power of Congress it would be inexpedient or unwise to exercise the power. If a commercial standard for the performance of private contracts be fixed for grain mentioned in this bill, there is no reason why the same power should not be exercised in fixing the standard of other kinds of merchandise. There is a standard Government blanket, for instance, of a certain length and width and containing a certain number of pounds of wool of a given kind. That makes the standard Government blanket. When we buy that blanket we know what it is; it is well known to the trade, as well known as many other standard articles of woolen manufacture. If a person, however, were to seek to invoke the power of Congress in order to inspect factories or the different stages of production and impose a standard of woolen blankets, he probably would find little support for the exercise of that power.

It seems to me that it would be equally desirable at times to inspect the production of boots and shoes, so their standard might be fixed and manufacturers be required to produce up to that standard. Legislation has appeared to exclude unless properly branded a certain manufacture of footgear from the commerce of the country. Clothing might likewise be classified in the interest of honesty; shoddy could be separated from the genuine woolen article; a given grade of worsteds or woolens could, it might be insisted, be fixed with manifest advantage not only to the trade but to the purchaser and final user of those articles. I do not think, though, that it would be justifiable at any time to seek to invoke the police power in exercising control of the manufactures; standards for the articles of merchandise named might be fixed without destroying the State's power of inspecting the instruments of production wholly in its jurisdiction.

It does not seem to me that there is any difference between a commercial standard in grain and other forms of merchandise of the kind I have described nor in its inspection. The inspection of grain is not a sanitary act; it is not required by the quarantine laws; it does not materially affect either the purity or the healthfulness of the grain entering into the commerce of the country, nor is this bill sought to be justified on that ground. I can not see any similarity between the pure-food and meat-inspection laws or the general exercise of the police power in the protection of morals or health or the prevention of crime and the proposed bill. The more I examine the subject, the more it seems to me as though the bill contains in some of its sections, notably in section 13, provisions that are manifestly beyond the regulatory power of Congress. Section 13 provides:

SEC. 13. That the shipment or consignment of any grain aforesaid from any of the places mentioned herein to another State or foreign country without the same being inspected and graded as herein provided is hereby prohibited; but where grain has been once inspected hereunder, and remains unmixed with other grain, the same need not be reinspected at the place from which it is exported: *Provided, however,* That said Secretary may, in his discretion, reinspect any cargo of such grain before the same is exported.

From the initial point named in the bill, section 13 prohibits the shipping of grain of the kind designated to any point without the State, whether to another State or Territory or to any foreign country. I should like to discover, for my satisfaction, as well as for the general information it might contain, under what authority Congress seeks to prohibit me or my neighbor from shipping an article of merchandise from any of these designated points—Minneapolis, Chicago, Kansas City, and so forth—to any point outside the State or to any Territory or foreign country? The bill does not invoke any police power known either to State or Nation; there is no authority to seize grain when neither quarantine regulations, public health, nor public morals are involved, or even to regulate its course of trade. Still this section, and the manifest spirit of the whole bill, is obviously not only to regulate a thing that does not call for the exercise of the police power, but to entirely prohibit it.

It has been uniformly considered that the interstate-commerce clause of the Constitution, vesting power in Congress, is a regulatory power, not a prohibitive power, over every legitimate article of commerce. Still this bill is prohibitory. One can not even raise his own grain, put it in the hands of a common carrier passing through any point designated in section 2, and send it to any point outside the State without being subject to penalties. This of itself indicates that the bill as drawn has exceeded the lawful powers of Congress.

If there were something in the character of the merchandise prohibited when not inspected that would be injurious to public morals or health, I could understand why this section would be justified. The mere fact that at one of these points named in the bill an inspector acting under State authority might consider corn or oats to be of No. 2 or No. 3 grade, and an inspector some place else outside of that jurisdiction might consider the grain to grade lower or higher, involves no question of public morals; it is a mere exercise of judgment on the quality of the article; it does not affect the health of the community. Any of the edible grains for human food are not affected by the mere grading. If the grain were prohibited as an article of commerce because it had become unhealthful, because it had become musty, heated, or fermented in such a way that it might be improper to mingle it in the food supply of the country, it would raise a proper question for the exercise of the police power. Such grain might be made contraband of commerce.

The police power is inherent in Congress. I think we can admit, for the purpose of discussing this bill, that in no place in the Constitution is any power of that kind vested in Congress, but it is an inherent power vested in every sovereign, whether it be the State or the National Government. No question of that kind, however, is involved. I do not understand that it is seriously contended here that this bill is sought to be justified on the ground that it will prevent unhealthful or deleterious food products from entering into the volume of interstate commerce. On the contrary, it is sought to be enacted entirely on the ground that there is a difference of judgment as to the quality of grain. A controversy has arisen between different authorities and different jurisdictions as to the commercial standards of grain and the exercise of judgment on its quality.

Every State may inspect its own grain; that right is inherent. So long as it keeps within its own borders, in the production, the collection, or the distribution of grain, a State is possessed of plenary sovereign power over it.

There are principally three surplus grain producing States, some or all of whose representatives are seeking some regulation of this kind from their viewpoint, all of whom could themselves regulate within their own limits every pound of surplus grain produced. There is no reason why North Dakota could not, if she wished, make inspection laws of her own. She might thereby procure satisfactory evidence of the grade of her grains going into the general markets of the country, and thereby have something more than the mere testimony of alleged interested witnesses. The witnesses for this bill criticize Minnesota and Illinois laws and inspection systems. North Dakota has not seen fit to help herself. Probably South Dakota is in the same classification of States, along with a part of Iowa. Iowa likely is a surplus grain producing State with no primary market within her borders, not, at least, a primary market as that term is understood in the grain traffic of this country. It does not affect Iowa, however, so materially, because Iowa very largely feeds to stock her grains, leaving but an inconsiderable percentage of them, compared with the total volume of pro-

duction, to enter into the trade in the markets of that State or in the general markets of the country. These three States, however, are the principal surplus grain producing States, having no primary market within their respective borders.

No reason is apparent why North Dakota could not create by act of her general assembly an inspection system, provide official inspections, fix her grades, and procure documentary and official evidence of the condition of her grain at the time it leaves her limits and enters into the general commerce of the country. This right can be extended further than is generally supposed. I think North Dakota, as well as any other State wishing to do so, could go so far as to prohibit entirely the shipping of grain without her borders unless it were inspected and graded in a certain way, the legislature having power to provide the details of that operation. It is very similar to the tobacco case, as I recollect, in the State of Kentucky, where it was provided that tobacco should be prepared in a certain form before it would be permitted to leave the boundaries of the State and enter into the general volume of trade. I cite this to show the wide scope of the State's power. The same reasoning would permit that action to be done by any State in the Union acting through proper legislative authority.

The State, in every instance, has power to protect its own citizens by such legislation; and in every way that a legislature may devise, the powers of the legislature are much more comprehensive than the powers of Congress. Congress acts under limited authority; we act only under granted power. The power lawfully to pass this bill must be sought either in the interstate-commerce clause of the Constitution or in the further power vested in Congress to fix the standard of weights and measures. If it can not be deduced from one or the other or both of these, the power does not exist, since this power must be a granted one to be exercised by Congress, unless it be derived from the police power. A State legislature suffers no such limitation upon its powers. It possesses full powers of sovereignty except in so far as power has been granted to the General Government or has been prohibited to the States by the Constitution of the United States. A State legislature possesses that power except in so far as the judicial and executive power of the State concerned has been vested in other departments. Subject to those limitations, a State legislature possesses, like the English Parliament, omnipotent power in legislative matters to do what it will with the persons and property of the citizens residing within its borders. So it seems to me that the States concerned, having full power, first ought to be called on to invoke the remedy.

I do not think there well be any controversy between those who support this bill and myself about the necessity as well as the propriety of a uniformity of grades. Since I have begun to give this subject some attention, reaching back several years ago, it has seemed to me at all times that uniformity of grades is desirable. To go further, however, than uniformity of grades and attempt to secure the results desired in this bill by inspection, it occurs to me, is going beyond the possibilities not only practically to be considered but even theoretically. Grades for all grain, in the first instance, will require uniform inspection. Uniform inspection requires uniform judgment. If there is no uniform judgment among men who are serving as inspectors, there will be no uniformity of grades.

Uniform standards may be provided, as weights and measures are fixed. Congress may by a general act applicable throughout the country fix what such weights and measures shall be. Such weights and measures thereafter for the articles so covered are binding on all who buy and sell the articles concerned in contracts to be performed by delivery in weights or measures. So a standard of weights and measures becomes a method which all who are engaged in that business are required to employ if contracts are executed by weights or measures. It keeps them working on a fixed measure, a fixed weight, or a common basis. Inspection, however, to constitute a uniform grade of grain, requires the same quality of an article and the same kind of an article, the same intrinsic qualities, such as the physical characteristics of the grain, the moisture content, its purity or freedom from foreign substances, and involves the climatic and weather conditions under which it was produced and harvested and brought to its state and time when it enters the general market. These matters are ones that affect the intrinsic character of the article itself. They are ones that only an inspector skilled in that line can discover. It seems to me that if the Government shall fix a uniform standard for the several grains mentioned in the bill, embracing the staple grains that enter into the general commerce of the country, it will have gone as far as it practically can.

There are certain occupations impressed with a public interest. Among those are the common carriers of the country and the public warehouses. Without stopping to enumerate them, I think there are some eight or more States at the present time having well-organized, complete inspection systems of their own. In the State which I have the honor in part to represent more than 45 years ago the question arose as to the regulation of both those public utilities. That State was originally the theater of experiment in which the common carriers were first subjected to legislative regulation, and along with that went the regulation of public warehouses. These agencies in the general commerce of the country stood at the gateway of the grain trade, largely, if not entirely, at that time in the city of Chicago.

A constitution was written in 1870 and adopted by the people of that State. It contained two articles covering the two agencies named. I shall not take the time to read from the constitution of that State, adopted in 1870, one of the two articles, but will ask that it be printed as a part of my observations.

The VICE PRESIDENT. Without objection that may be done.

The matter referred to is as follows:

ARTICLE 13.

WAREHOUSES.

1. All elevators or storehouses where grain or other property is stored for a compensation, whether the property stored be kept separate or not, are declared to be public warehouses.

2. The owner, lessee, or manager of each and every public warehouse situated in any town or city of not less than 100,000 inhabitants shall make weekly statements under oath before some officer to be designated by law, and keep the same posted in some conspicuous place in the office of such warehouse, and shall also file a copy for public examination in such places as shall be designated by law, which statement shall correctly set forth the amount and grade of each and every kind of grain in such warehouse, together with such other property as may be stored therein and what warehouse receipts have been issued, and are, at the time of making such statement, outstanding therefor, and shall on the copy posted in the warehouse note daily such changes as may be made in the quantity and grade of grain in such warehouse, and the different grades of grain shipped in separate lots shall not be mixed with inferior or superior grades without the consent of the owner or consignee thereof.

3. Owners of property stored in any warehouse, or holder of a receipt for the same, shall always be at liberty to examine such property stored and all the books and records of the warehouse in regard to such property.

4. All railroad companies and other common carriers on railroads shall weigh or measure grain at points where it is shipped and receipt for the full amount, and shall be responsible for the delivery of such amount to the owner or consignee thereof at the place of destination.

5. All railroad companies receiving and transporting grain, in bulk or otherwise, shall deliver the same to any consignee thereof or any elevator or public warehouse to which it may be consigned, provided such consignee or the elevator or public warehouse can be reached by any track owned, leased, or used, or which can be used, by such railroad companies; and all railroad companies shall permit connections to be made with their track so that any such consignee and any public warehouse, coal bank, or coal yard may be reached by the cars of said railroad.

6. It shall be the duty of the general assembly to pass all necessary laws to prevent the issue of false and fraudulent warehouse receipts and to give full effect to this article of the constitution, which shall be liberally construed so as to protect producers and shippers; and the enumeration of the remedies herein named shall not be construed to deny to the general assembly the power to prescribe by law such other and further remedies as may be found expedient or to deprive any person of existing common-law remedies.

7. The general assembly shall pass laws for the inspection of grain, for the protection of producers, shippers, and receivers of grain and produce. (Constitution, Illinois, 1870, p. 74.)

Mr. SHERMAN. This article referring to warehouses declares that they are subject to regulation by the general assembly. In 1871, followed later by some amendatory and supplementary acts which were found necessary to perfect it, a complete system of grain inspection was provided. It is a warehouse inspection. A person in that State may own grain, either of his own production or by purchase, and store it and make it an article of commerce without having it inspected by public authority. In that particular the grain occupies the same ground that other merchandise does. The inspection made is for the purpose of fixing the grade when it enters a public warehouse and, with the certificate that goes with it, rendering its transfer easy and safe. Inspection fixes its character by grades before it loses its identity by mixing with other grain in a public warehouse. A warehouse certificate is conclusive evidence of title. It passes by transfer so as to vest, from the original holder, the title in the transferee. In the States having the inspection the public warehouse is subject to regulation by the legislature. They have uniformly provided for a board of warehouse commissioners, and usually jurisdiction over the railroads is conferred on the same board.

Criticism is made by certain witnesses, who have testified at various intervals in committees and elsewhere, of the inspection made by State authority. The criticism is especially directed at Chicago, at Minneapolis—probably the largest wheat market of the world—and at Omaha, which is comparatively a new market alongside of some of the older ones in the country, but, nevertheless, a rapidly growing and important market for certain of the great grain-producing areas of the

farming communities west of the Mississippi River. Kansas City and St. Louis are also coming in for a portion of this criticism. Duluth is included in the criticism; it is at the head of lake navigation during the open season—some seven or eight months of the year—making it an important point for shipping certain of the grains produced in large quantities in the Northwest. I find by examination of the evidence that certain cities in Ohio are unsparingly criticized—Toledo and Cleveland. Buffalo comes in for some of it; Philadelphia and Baltimore for more.

These systems, created and sustained by the State, are not above criticism. No one knows better than I, so far as my own State is involved in the criticism, that some of the criticisms in past years have been somewhat justified. That the criticism is of such a character as to show that the inspection system of that State or any one of the States that maintain an inspection system ought to be destroyed does not follow from any of the evidence submitted.

I find by reading the testimony of these witnesses that it is confined either to those coming from the surplus grain-producing States, without primary markets, or to those that have become dissatisfied with the course of business uniformly pursued in the grain exchanges of the several States. The statutes passed pursuant to these constitutionally vested powers have been developed by experience. I wish especially to refer to some of the statutes of Illinois. I do so because certain of the witnesses who testified, some five years ago, and some two or three years ago, are of the opinion that the grades are unworthy of confidence, and that the business transaction is but little removed from gross criminality.

The statute under which the grain market in Chicago has been developed was enacted in 1871. It divides public warehouses into three classes—A, B, and C. Class A includes all warehouses in cities of not less than 100,000 population. At that time it comprised but a single city in the State, namely, Chicago. In class A, further, in order to come within the classification it is required that grain shall be received and mingled in the elevator in such a way that the identity of the grain is lost. Class B embraces all warehouses in which the grain of separate owners is mingled in such a way as to lose its identity in cities of less than 100,000 population. Class C comprises all other warehouses with which we are not immediately concerned in the examination of this bill.

Warehouses of the kind in question are required to be licensed by the railroad and warehouse commission. Under the act of 1871 the State began to license warehouses in Chicago, and later on the system was extended to other cities from time to time, as it was required as a result of the development of the grain trade and the growth of the cities.

These licenses are granted by the board created by this statute. These witnesses—and I shall not consume the time of the Senate by reading them in detail—invariably say that the railroad and warehouse commissioners of this and other States are mere pawns in the game of politics; that they are footballs kicked about from one campaign to another, that rise and fall in the performance of their duty, subject to the vicissitudes and the fluctuations of party politics. This is the uniform criticism made by those who go farther. Some, however, do not go so far. Those who go farther intimate, or stop but little short of intimating, actual criminality, or, if not criminality, a very choice grade of rascality.

After the license is taken out by a public warehouse there are certain provisions that govern the transaction of business by that warehouse. It is provided that they shall not discriminate in the storage of grain between owners or agents who apply seeking storage capacity. It is provided further that they shall receive up to their full capacity. The manner of issuing receipts is minutely provided for. The cancellation of the receipts upon the outgoing of the grain is provided for. The liability of the warehouseman can not be limited in a warehouse certificate. The delivery of the property is provided for. There is a separate bin provision under which the identity of the grain may be preserved, if the owner so desires. There are stringent regulations on the warehouseman that he shall not interfere with separate bin receipts; that it shall be stated upon the face of the receipt so issued that it is a separate bin receipt. Publicity in regard to the quantity of grain stored and the grades is secured by a section that requires the information to be posted in a public place in the office or some readily accessible place in or about the warehouse. There is a chief grain inspector provided. The chief grain inspector is placed under bond in the penal sum of $50,000. There are assistant or deputy grain inspectors. Each one of them gives bond in the sum of $5,000. The condition of the bond is that they shall well perform their duties as inspectors. The bond stands as a permanent security for all who may transact business with a warehouseman to indemnify them for negligence or any injury that may be inflicted in the wrongful performance of his duty. Moreover, out of excess of caution, anything that in the absence of a statute would be a common-law liability is provided for in the statute, so that the common-law liability may not be limited merely by the enumeration of statutory remedies.

Penalties are provided for violation of the act. A registrar of warehouse certificates or receipts is provided for, and his duties are fixed. The rates of storage are fixed at 1½ cents per bushel for the first 10 days and half a cent per bushel for each 10 days thereafter. This, by the way, is a maximum charge; it is not a minimum charge. It is a charge beyond which the public warehouseman can not go.

The warehouseman is prohibited from mixing the grain of owners. Under penalties he may not tamper with the grain stored. Whether it be in bulk, where the identity of the grain is destroyed, or whether it be grain stored in separate bins, in no event can a warehouseman interfere with the grain. He can not mix it; he can not do anything with it to change the purity, the grade, or the condition, unless it be found that it is necessary to preserve it from destruction, as in case of accident or fire, or in case of changes occurring in the grain itself that make it necessary that it be handled or moved in order to preserve it.

Weights are provided for by statute, so that there is no private weight that any shipper or seller into that market is obliged to take. There is an examination and testing of the scales by which the weights are taken. Under those weights no one can go without a remedy. Under these regulations the grain is weighed and inspected. Misconduct of inspectors is not only a civil liability on the bond but as well is a penal liability, a misdemeanor, for any willful act done to the injury of the owner of grain so stored. In the event of grain being brought to a public warehouse by an owner or factor, it can not be deposited or stored in a public warehouse until it is first inspected. This is the only obligatory feature of inspection—that it can not be stored in a regularly licensed public warehouse unless it be first inspected by the inspectors provided in the act. This leaves private inspectors at full liberty to transact their business. It does not interfere with private contracts on grades or samples. It does not interfere with the buyer and seller fixing by contract any form of inspection or any grades or samples they may desire.

I do not understand that an act of Congress can do that. I challenge the right of Congress, through any of the vested or granted powers given it by the only document that gives us a right to sit here and legislate, to interfere with my right or my neighbor's right to make contracts for future or present delivery, in any way I please, of grain I produce or buy. It is an unwarrantable interference by legislative power that seeks, when no question of police power is involved, to prevent my handling my property as I see fit, either within the limits of my own State or when I put it in the larger area of interstate commerce. I challenge the right under this bill and the power of Congress, when no question of public health or public morals or purity of a food product is involved, to interfere with the right of the producer and the shipper of grain to do as they please by private contract. There is nothing I can find that justifies, by such a bill as this, thrusting the legislative hand into the sanctity of a private contract into which I have entered, and undertaking to destroy the contract or to prohibit me from making it.

We have seen in these late years a great deal of interference or attempted interference with the right of private contract. The courts have zealously upheld the right of private contract, and, except in cases relating to the public morals or the public health or some other well-recognized ground for the exercise of the police power, have uniformly declined to interfere with that right. Still this bill, in section 13, undertakes to say that grain that is in good condition and that may be manufactured into a healthful food product, either for live stock or for the human family, shall not enter into the interstate commerce of the country unless it be inspected and graded as provided in the bill. I think it undertakes to do something that Congress has no power to do. Long ago, however, I adopted the principle of never arguing the constitutionality of a measure before a legislative body. There is another forum to settle that, and in due time all of those matters can be reached in that forum. I only wish to argue against the propriety of the interference by Congress with the right of private contract in an article of merchandise involving none of the police powers of the State or Government. If, after the grain has been inspected, an owner is dissatisfied with the inspection, he may,

through his agent or by himself, appeal to another authority. He may, in the first instance, take it to the chief inspector and have the grain again examined and graded.

I wish to place in the RECORD here, without reading them, certain sections of the Revised Statutes of Illinois relating to the warehousing inspection and weighing of grain.

The VICE PRESIDENT. In the absence of objection, it will be so ordered.

The matter referred to is as follows:

WAREHOUSES.

An act to regulate public warehouses and the warehousing and inspection of grain, and to give effect to article 13 of the constitution of this State. (Approved Apr. 25, 1871. In force July 1, 1871. L. 1871–72, p. 762.)

134. CLASSIFIED.

1. *Be it enacted by the people of the State of Illinois represented in the general assembly*, That public warehouses as defined in article 13 of the constitution of this State shall be divided into three classes, to be designated as classes A, B, and C, respectively.

135. CLASSES DEFINED.

2. Public warehouses of class A shall embrace all warehouses, elevators, and granaries in which grain is stored in bulk and in which the grain of different owners is mixed together, or in which grain is stored in such a manner that the identity of different lots or parcels can not be accurately preserved, such warehouses, elevators, or granaries being located in cities having not less than 100,000 inhabitants. Public warehouses of class B shall embrace all other warehouses, elevators, or granaries in which grain is stored in bulk and in which the grain of different owners is mixed together. Public warehouses of class C shall embrace all other warehouses or places where property of any kind is stored for a consideration. (See Union Trust Co. *v.* Wilson, 198 U. S., 530.)

136. LICENSE.

3. The proprietor, lessee, or manager of any public warehouse of class A shall be required, before transacting any business in such warehouse, to procure from the board of commissioners or railroads and warehouses a license permitting such proprietor, lessee, or manager to transact business as a public warehouseman under the laws of this State, which license shall be issued by said commissioners upon a written application therefor, which shall set forth the location and name of such warehouse and the individual name of each person interested as owner or principal in the management of the same; or if the warehouse be owned or managed by a corporation, the names of the president, secretary, and treasurer of such corporation shall be stated; and the said license shall give authority to carry on and conduct the business of a public warehouse of class A in accordance with the laws of this State and shall be revocable by the said commissioners after full hearing upon satisfactory proof of any violation of law by such licensee, such proof to be taken in such manner as may be directed by and under rules to be established by said commissioners; but the action of such commissioners in granting or refusing such licenses and in revoking licenses may be reviewed by the circuit court of the county where such elevator or warehouse is located. (As amended by act approved May 24, 1907. In force July 1, 1907. L. 1907, p. 491. See 162, Munn *v.* People, 6 Legal News, 165, 173, and 9 Ib., 199.)

137. BOND.

4. The person receiving a license as herein provided shall file with the board of commissioners of railroads and warehouses a bond to the people of the State of Illinois, with good and sufficient surety, to be approved by said commissioners, in a penal sum to be fixed by said commissioners and which shall not be less than $10,000, conditioned for the faithful performance of his duty as a public warehouseman of class A, and his full and unreserved compliance with all the laws of this State in relation thereto. (As amended by act approved May 24, 1907. In force July 1, 1907. L. 1907, p. 491.)

138. PENALTY FOR DOING BUSINESS WITHOUT LICENSE.

5. Any person who shall transact the business of a public warehouse of class A without first procuring a license as herein provided, or who shall continue to transact any such business after such license has been revoked—save only that he may be permitted to deliver property previously stored in such warehouse—shall, on conviction, be fined in a sum not less than $100 for each and every day such business is carried on. (As amended by act approved May 24, 1907. In force July 1, 1907. L. 1907, p. 491.)

139. NOT TO DISCRIMINATE—WHEN GRAIN MAY BE MIXED—RECEIPTS.

6. It shall be the duty of every warehouseman of class A to receive for storage any grain that may be tendered to him in the usual manner in which warehouses are accustomed to receive the same in the ordinary and usual course of business, not making any discrimination between persons, desiring to avail themselves of warehouse facilities—such grain, in all cases, to be inspected and graded by a duly authorized inspector, and to be stored with grain of a similar grade, received at the same time, as near as may be. In no case shall grain of different grades be mixed together while in store, but if the owner or consignee so requests and the warehouseman consents thereto his grain of the same grade may be kept in a bin by itself, apart from that of other owners, which bin shall thereupon be marked and known as a "separate bin." If a warehouse receipt be issued for grain so kept separate, it shall state on its face that it is in a separate bin, and shall state the number of such bin; and no grain shall be delivered from such warehouse unless it be inspected on the delivery thereof by a duly authorized inspector of grain. Nothing in this section shall be so construed as to require the recept of grain into any warehouse in which there is not sufficient room to accommodate or store it properly, or in cases where such warehouse is necessarily closed.

No grain shall be received into any private elevator or warehouse located in cities having a population of not less than 100,000 inhabitants until it shall have been inspected by a duly authorized inspector, and no grain shall be delivered from any such elevator or warehouse in cars or boats for shipment until it shall have been inspected out by a duly authorized inspector. Any proprietor, lessee, or manager of any warehouse or elevator who shall refuse or neglect to cause grain to be inspected as in this section provided shall upon conviction be fined in a sum not less than $100 for each and every offense. (As amended by act approved May 24, 1907. In force July 1, 1907. L. 1907, p. 491.)

140. MANNER OF ISSUING RECEIPTS.

7. Upon application of the owner or consignee of grain stored in a public warehouse of class A, the same being accompanied with evidence that all transportation or other charges which may be a lien upon such grain, including charge for inspection, have been paid, the warehouseman shall issue to the person entitled thereto a warehouse receipt therefor, subject to the order of the owner or consignee, which receipt shall bear the date corresponding with the receipt of grain into store, and shall state upon its face the quantity and inspected grade of the grain, and that the grain mentioned in it has been received into store, to be stored with grain of the same grade by inspection received at about the date of the receipt, and that it is deliverable upon the return of the receipt properly indorsed by the person to whose order it was issued, and the payment of proper charges for storage. All warehouse receipts for grain issued from the same warehouse shall be consecutively numbered, and no two receipts bearing the same number shall be issued from the same warehouse during any one year, except in the case of a lost or destroyed receipt, in which case the new receipt shall bear the same date and number as the original and shall be plainly marked on its face "duplicate." If the grain was received from railroad cars, the number of each car shall be stated upon the receipt, with the amount it contained; if from canal boat or other vessel, the name of such craft; if from teams or by other means, the manner of its receipt shall be stated on its face.

141. CANCELING RECEIPTS.

8. Upon the delivery of grain from store upon any receipt, such receipt shall be plainly marked across its face with the word "canceled," with the name of the person canceling the same, and shall thereafter be void and shall not be put again in circulation, nor shall grain be delivered twice upon the same receipt.

142. FURTHER OF ISSUING AND CANCELING RECEIPTS.

9. No warehouse receipt shall be issued, except upon the actual delivery of grain into store, in the warehouse from which it purports to be issued and which is to be represented by the receipt; nor shall any receipt be issued for a greater quantity of grain than was contained in the lot or parcel stated to have been received; nor shall more than one receipt be issued for the same lot of grain, except in cases where receipts for a part of a lot are desired, and then the aggregate receipts for a particular lot shall cover that lot and no more. In cases where a part of the grain represented by the receipt is delivered out of store and the remainder is left a new receipt may be issued for such remainder; but such new receipt shall bear the same date as the original and shall state on its face that it is balance of receipt of the original number, and the receipt upon which a part has been delivered shall be canceled in the same manner as if it had all been delivered. In case it is desirable to divide one receipt into two or more, or in case it be desirable to consolidate two or more receipts into one, and the warehouseman consent thereto, the original receipt shall be canceled the same as if the grain had been delivered from store, and the new receipts shall express on their face that they are parts of other receipts or a consolidation of other receipts, as the case may be, and the numbers of the original receipts shall also appear upon the new ones issued as explanatory of the change, but no consolidation of receipts of dates differing more than 10 days shall be permitted, and all new receipts issued for old ones canceled, as herein provided, shall bear the same dates as those originally issued, as near as may be.

143. NOT TO LIMIT LIABILITY.

10. No warehouseman in this State shall insert in any receipt issued by him any language in anywise limiting or modifying his liabilities or responsibility as imposed by the laws of this State.

144. DELIVERY OF PROPERTY.

11. On the return of any warehouse receipt issued by him, properly indorsed, and the tender of all proper charges upon the property represented by it, such property shall be immediately deliverable to the holder of such receipt, and it shall not be subject to any further charges for storage after demand for such delivery shall have been made. Unless the property represented by such receipt shall be delivered within two business hours after such demand shall have been made, the warehouseman in default shall be liable to the owner of such receipt for damages for such default, in the sum of 1 cent per bushel, and in addition thereto 1 cent per bushel for each and every day of such neglect or refusal to deliver: *Provided*, That no warehouseman shall be held to be in default in delivering if the property is delivered in the order demanded, and as rapidly as due diligence, care, and prudence will justify.

145. POSTING GRAIN IN STORE—STATEMENT TO REGISTRAR—DAILY PUBLICATION—CANCELED RECEIPTS.

12. The warehouseman of every public warehouse of Class A shall, on or before Tuesday morning of each week, cause to be made out and shall keep posted up in the business office of his warehouse in a conspicuous place, a statement of the amount of each kind and grade of grain in store in his warehouse at the close of business on the previous Saturday, and shall also on each Tuesday morning render a similar statement, made under oath before some officer authorized by law to administer oaths, by one of the principal owners or operators thereof, or by the bookkeeper thereof, having personal knowledge of the facts, to the warehouse registrar appointed as hereinafter provided. They shall also be required to furnish daily to the same registrar a correct statement of the amount of each kind and grade of grain received in store in such warehouse on the previous day, also the amount of each kind and grade of grain delivered or shipped by such warehouseman during the previous day, and what warehouse receipts have been canceled, upon which the grain has been delivered on such day, giving the number of each receipt and amount, kind, and grade of grain received and shipped upon each; also how much grain, if any, was so delivered or shipped and the kind and grade of it, for which warehouse receipts had not been issued, and when and how such unreceipted grain was received by them; the aggregate of such reported cancellations and delivery of unreceipted grain, corresponding in amount, kind, and grade with the amount so reported, delivered, or shipped. They shall also at the same time report what receipts, if any, have been canceled and new ones issued in their stead as herein provided for. And the warehouseman making such statements shall, in addition, furnish the said registrar any further information, regarding such receipts, issued or canceled, that may be necessary to enable him to keep a full and correct record of all receipts issued and canceled, and of grain received and delivered.

146. APPOINTMENT OF CHIEF INSPECTOR.

14. (1) It shall be the duty of the governor to appoint, by and with the advice and consent of the Senate, a suitable person who shall not be a member of the board of trade, and who shall not be interested either directly or indirectly in any warehouse in this State, a chief inspector of grain for the entire State of Illinois, who shall hold his office for a term of two years, unless sooner removed, as hereinafter provided; the office of said chief inspector of grain shall be in the city of Chicago.

(2) Duty of chief inspector: It shall be the duty of such chief inspector of grain to have a general supervision of the inspection of grain, as required by this act or laws of this State, under the advice and immediate direction of the board of commissioners of railroads and warehouses, also to have general supervision over all deputy inspectors now appointed or hereafter to be appointed.

(3) Deputy inspectors: The said chief inspector shall have the authority to appoint, upon the approval of the board of commissioners of railroads and warehouses, such suitable persons in sufficient numbers to act as deputy inspectors, who shall not be members of the board of trade nor interested in any warehouse, and also such other employees as may be necessary to properly conduct the business of his office; but no deputy inspector shall be appointed for or assigned to duty in any city or county in which is located one or more elevators of class B, except upon a request for such action by the county commissioners or board of supervisors of the county in which such warehouse or warehouses are located, such request to be made to the railroad and warehouse commissioners; and in cities or counties wherein a deputy inspector may be appointed or assigned to duty no person other than such deputy inspector shall inspect or grade any grain without being liable to the penalties provided in section 20 of this act.

(4) When inspector to take oath and give bond: The chief inspector of grain shall, upon entering upon the duties of his office, be required to take an oath as in cases of other officers, and he shall execute a bond to the people of the State of Illinois in the penal sum of $50,000, with sureties to be approved by the board of commissioners of railroads and warehouses, with a condition therein that he will faithfully discharge the duties of his said office as chief inspector of grain according to law and the rules and regulations prescribing his duties; and that he will pay all lawful damages to any person or persons who may be injured by reason of his neglect, refusal, or failure to legally comply with the law and the rules and regulations aforesaid.

(5) Deputy inspector—Oath—Bond: And each deputy inspector shall take a like oath and execute a bond in the penal sum of $5,000 when appointed with like conditions, and to be approved in like manner as is provided in case of the chief inspector of grain, which said bonds shall be filed in the office of said commissioners; and suit may be brought upon said bond or bonds in any court having jurisdiction thereof, in the county where the plaintiff or defendant resides, for the use of the person or persons injured.

(6) Rules for government of inspectors: The chief inspector of grain and all deputy inspectors of grain and other employees in connection therewith shall be governed in their respective duties by such rules and regulations as may be prescribed by the board of commissioners of railroads and warehouses; and the said board of commissioners shall have full power to make all proper rules and regulations for the inspection of grain, and shall also have power to fix the rate of charges for the inspection of grain and the manner in which the same shall be collected, which charges shall be regulated in such manner as will, in the judgment of the commissioners, produce sufficient revenue to meet the necessary expenses of the service of inspection, but the revenues received from any such inspection in any county or city shall in no event be used to pay deficit in any other county or city.

(7) Compensation: It shall be the duty of the board of commissioners to fix the amount of compensation to be paid to the chief inspector, deputy inspectors, and all other persons employed in the inspection service, and prescribe the time and manner of their payment.

(8) Appointment of warehouse registrar: The board of commissioners of railroads and warehouses are hereby authorized to appoint a suitable person as warehouse registrar and such assistants as may be deemed necessary to perform the duties imposed upon such registrar by the provisions of this act.

(9) Board of commissioners to exercise general supervision: The said board of commissioners shall have and exercise a general supervision and control of such appointees, shall prescribe their respective duties, shall fix the amount of their compensation and the time and manner of its payment.

(10) Penalty for violating act: Upon the complaint, in writing, of any person of the said board of commissioners, supported by reasonable and satisfactory proof, that any person appointed or employed under the provisions of this section has violated any of the rules prescribed for his government, has been guilty of any improper official act, or has been found insufficient or incompetent for the duties of his position, such person shall be immediately removed from his office or employment by the same authority that appointed him, and his place shall be filled, if necessary, by a new appointment; or, in case it shall be deemed necessary to reduce the number of persons so appointed or employed, their term of service shall cease under the orders of the same authority by which they were appointed or employed.

(11) Necessary expenses of inspection of grain: All necessary expenses incident to the inspection of grain and to the office of registrar, economically administered, including the rent of suitable offices, shall be deemed expenses of the inspection service and shall be included in the estimate of expenses of such inspection service and shall be paid from the funds collected for the same. (As amended by act approved May 24, 1907. In force July 1, 1907. L. 1907, p. 491.)

147. RATES OF STORAGE.

15. Every warehouseman of public warehouses of class "A" shall be required, during the first week in January of each year, to publish in one or more of the newspapers (daily, if there be such) published in the city in which such warehouse is situated, a table or schedule of rates for the storage of grain in his warehouse during the ensuing year, which rates shall not be increased, except as provided for in section 16 of this act, during the year; and such published rates, or any published reduction of them, shall apply to all grain received into such warehouse from any person or source, and no discrimination shall be made, directly or indirectly, for or against any charges made by such warehouseman for the storage of grain. The maximum charge for storage and handling of grain, including the cost of receiving and delivering, shall be, for the first 10 days or part thereof, 1½ cents per bushel, and for each 10 days or part thereof after the first 10 days one-half of 1 cent per bushel: *Provided, however*, That grain damp or liable to early damage, as indicated by its inspection when received, may be subject to 2 cents per bushel storage for the first 10 days and for each additional 5 days or part thereof not exceeding one-half of 1 cent per bushel: *Provided further*, That where grain has been received in any such warehouse prior to the 1st day of March, 1877, under any express or implied contract to pay and receive rates of storage different from those prescribed by law, or where it has been received under any custom or usage prior to said day to pay or receive rates of storage different from the rates fixed by law, it shall be lawful for any owner or manager of such warehouse to receive and collect such agreed or customary rates. (As amended by act approved May 21, 1877. In force July 1, 1877. L. 1877, p. 169; Legal News Ed., p. 153.)

148. LOSS BY FIRE—HEATING—ORDER OF DELIVERY—GRAIN OUT OF CONDITION.

16. No public-warehouse man shall be held responsible for any loss or damage to property by fire while in his custody, provided reasonable care and vigilance be exercised to protect and preserve the same; nor shall he be held liable for damage to grain by heating, if it can be shown that he has exercised proper care in handling and storing the same and that such heating or damage was the result of causes beyond his control; and, in order that no such injustice may result to the holder of grain in any public warehouse of classes A and B, it shall be deemed the duty of such warehouseman to dispose of, by delivery or shipping, in the ordinary and legal manner of so delivering, that grain of any particular grade which was first received by them or which has been for the longest time in store in his warehouse; and, unless public notice has been given that some portion of the grain in his warehouse is out of condition, or becoming so, such warehouseman shall deliver grain of quality equal to that received by him on all receipts as presented. In case, however, any warehouseman of classes A or B shall discover that any portion of the grain in his warehouse is out of condition, or becoming so, and it is not in his power to preserve the same, he shall immediately give public notice, by advertisement in a daily newspaper in the city in which such warehouse is situated, and by posting a notice in the most public place (for such purpose) in such city, of its actual condition, as near as he can ascertain it; shall state in such notice the kind and grade of the grain and the bins in which it is stored, and shall also state in such notice the receipts outstanding upon which such grain will be delivered, giving the numbers, amounts, and dates of each, which receipts shall be those of the oldest dates then in circulation or uncanceled, the grain represented by which has not previously been declared or receipted for as out of condition; or if the grain longest in store has not been receipted for, he shall so state, and give the name of the party for whom such grain was stored, the date it was received, and the amount of it; and the enumeration of receipts and identification of grain so discredited shall embrace, as near as may be, as great a quantity of grain as is contained in such bins; and such grain shall be delivered upon the return and cancellation of the receipts, and the unreceipted grain upon the request of the owner or person in charge thereof. Nothing herein contained shall be held to relieve the said warehouseman from exercising proper care and vigilance in preserving such grain after such publication of its condition; but such grain shall be kept separate and apart from all direct contact with other grain and shall not be mixed with other grain while in store in such warehouse. Any warehouseman guilty of any act or neglect the effect of which is to depreciate property stored in the warehouse under his control shall be held responsible as at common law or upon the bond of such warehouseman, and in addition thereto the license of such warehouseman, if his warehouse be of class A, shall be revoked. Nothing in this section shall be so construed as to permit any warehouseman to deliver any grain stored in a special bin or by itself, as provided in this act, to any but the owner of the lot, whether the same be represented by a warehouse receipt or otherwise. In case the grain declared out of condition, as herein provided for, shall (not) be removed from store by the owner thereof within two months from the date of the notice of its being out of condition, it shall be lawful for the warehouseman where the grain is stored to sell the same at public auction, for account of said owner, by giving 10 days' public notice, by advertisement in a newspaper (daily, if there be such) published in the city or town where such warehouse is located.

149. TAMPERING WITH GRAIN STORED—PRIVATE BINS—DRYING, CLEANING, MOVING.

17. It shall not be lawful for any public warehouseman to mix any grain of different grades together, or to select different qualities of the same grade for the purpose of storing or delivering the same, nor shall be attempt to deliver grain of one grade for another, or in any way tamper with grain while in his possession or custody, with a view of securing any profit to himself or any other person, and in no case, even of grain stored in a separate bin, shall he be permitted to mix grain of different grades together while in store. He may, however, on request of the owner of any grain stored in a private bin, be permitted to dry, clean, or otherwise improve the condition or value of any such lot of grain, but in such case it shall only be delivered as such separate lot or as the grade it was originally when received by him, without reference to the grade it may be as improved by such process of drying or cleaning. Nothing in this section, however, shall prevent any warehouseman from moving grain while within his warehouse for its preservation or safe-keeping.

150. EXAMINATION OF GRAIN AND SCALES—INCORRECT SCALES.

18. All persons owning property, or who may be interested in the same, in any public warehouse, and all duly authorized inspectors of such property, shall at all times, during ordinary business hours, be at full liberty to examine any and all property stored in any public warehouse in this State, and all proper facilities shall be extended to such person by the warehouseman, his agents and servants, for an examination; and all parts of public warehouses shall be free for the inspection and examination of any person interested in property stored therein, or for any authorized inspector of such property. And all scales used for the weighing of property in public warehouses shall be subject to examination and test by any duly authorized inspector or sealer of weights and measures at any time when required by any person or persons, agent or agents, whose property has been or is to be weighed on such scales, the expense of such test by an inspector or sealer to be paid by the warehouse proprietor if the scales are found incorrect, but not otherwise. Any warehouseman who may be guilty of continuing to use scales found to be in an imperfect or incorrect condition by such examination and test, until the same shall have been pronounced correct and properly sealed, shall be liable to be proceeded against as hereinafter provided. (See 179–180. "Weights and Measures," ch. 147, No. 14; "Criminal Code," ch. 38, No. 101.)

151. GRAIN MUST BE INSPECTED.

19. In all places where there are legally appointed inspectors of grain no proprietor or manager of a public warehouse of class B shall be permitted to receive any grain and mix the same with the grain of

other owners in the storage thereof until the same shall have been inspected and graded by such inspector.

152. ASSUMING TO ACT AS INSPECTOR.

20. Any person who shall assume to act as an inspector of grain who has not first been so appointed and sworn shall be held to be an impostor and shall be punished by a fine of not less than $50 nor more than $100 for each and every attempt to so inspect grain, to be recovered before a justice of the peace.

MISCONDUCT OF INSPECTOR—INFLUENCING.

Any duly authorized inspector of grain who shall be guilty of neglect of duty, or who shall knowingly or carelessly inspect or grade any grain improperly, or who shall accept any money or other consideration, directly or indirectly, for any neglect of duty or the improper performance of any duty as such inspector of grain, and any person who shall improperly influence any inspector of grain in the performance of his duties as such inspector, shall be deemed guilty of a misdemeanor and on conviction shall be fined in a sum not less than $100 nor more than $1,000, in the discretion of the court, or shall be imprisoned in the county jail not less than 3 nor more than 12 months, or both, in the discretion of the court.

153. OWNER, ETC., DISSATISFIED WITH INSPECTION—HIS RIGHTS.

21. In case any owner or consignee of grain shall be dissatisfied with the inspection of any lot of grain, or shall from any cause desire to receive his property without its passing into store, he shall be at liberty to have the same withheld from going into any public warehouse—whether the property may have previously been consigned to such warehouse or not—by giving notice to the person or corporation in whose possession it may be at the time of giving such notice, and such grain shall be withheld from going into store and be delivered to him, subject only to such proper charges as may be a lien upon it prior to such notice. The grain, if in railroad cars, to be removed therefrom by such owner or consignee within 24 hours after such notice has been given to the railroad company having it in possession: *Provided*, Such railroad company place the same in a proper and convenient place for unloading, and any person or corporation refusing to allow such owner or consignee to so receive his grain shall be deemed guilty of conversion, and shall be liable to pay such owner or consignee double the value of the property so converted. Notice that such grain is not to be delivered into store may also be given to the proprietor or manager of any warehouse into which it would otherwise have been delivered; and if, after such notice, it be taken into store in such warehouse, the proprietor or manager of such warehouse shall be liable to the owner of such grain for double its market value.

154. COMBINATIONS.

22. It shall be unlawful for any proprietor, lessee, or manager of any public warehouse to enter into any contract, agreement, understanding, or combination with any railroad company or other corporation, or with any individual or individuals, by which the property of any person is to be delivered to any public warehouse for storage or for other purpose, contrary to the direction of the owner, his agent, or consignee. Any violation of this section shall subject the offender to be proceeded against as provided in section 23 of this act.

155. SUITS.

23. If any warehouseman of class A shall be guilty of a violation of any of the provisions of this act, it shall be lawful for any person injured by such violation to bring suit in any court of competent jurisdiction upon the bond of such warehouseman, in the name of the people of the State of Illinois, to the use of such person. In all criminal prosecutions against a warehouseman for the violation of any of the provisions of this act it shall be the duty of the prosecuting attorney of the county in which such prosecution is brought to prosecute the same to a final issue in the name of and on behalf of the people of the State of Illinois.

156. WAREHOUSE RECEIPT ASSIGNABLE.

24. Warehouse receipts for property stored in any class of public warehouses as herein described shall be transferable by the indorsement of the party to whose order such receipt may be issued, and such indorsement shall be deemed a valid transfer of the property represented by such receipt and may be made either in blank or to the order of another. All warehouse receipts for property stored in public warehouses of class C shall distinctly state on their face the brand or distinguishing marks upon such property.

157. FALSE RECEIPTS—FRAUDULENT REMOVAL.

25. Any warehouseman of any public warehouse who shall be guilty of issuing any warehouse receipt for any property not actually in store at the time of issuing such receipt, or who shall be guilty of issuing any warehouse receipt in any respect fraudulent in its character, either as to its date or the quantity, quality, or inspected grade of such property, or who shall remove any property from store (except to preserve it from fire or other sudden danger), without the return and cancellation of any and all outstanding receipts that may have been issued to represent such property, shall, when convicted thereof, be deemed guilty of a crime and shall suffer, in addition to any other penalties prescribed by this act, imprisonment in the penitentiary for not less than 1 and not more than 10 years. (Restricted as to receipts issued before Oct. 8, 1871. L. 1871–72, p. 774. See Criminal Code, ch. 38, 124, 125. See 290–295.)

158. COMMON-LAW REMEDY SAVED.

26. Nothing in this act shall deprive any person of any common-law remedy now existing.

159. PRINTED COPY OF ACT POSTED.

27. All proprietors or managers of public warehouses shall keep posted up at all times in a conspicuous place in their business offices and in each of their warehouses a printed copy of this act.

160. REPEAL.

28. All acts or parts of acts inconsistent with this act are hereby repealed.

An act to amend an act entitled "An act to regulate public warehouses and the warehousing and inspection of grain, and to give effect to article 13 of the constitution of the State," approved April 25, 1871, in force July 1, 1871, and to establish a committee of appeal and prescribe their duties. (Approved Apr. 15, 1873. In force July 1, 1873.)

161. COMMISSIONERS TO ESTABLISH GRADES.

1. *Be it enacted by the people of the State of Illinois, represented in the general assembly*, That the board of railroad and warehouse commissioners shall establish a proper number and standard of grades for the inspection of grain, and may alter or change the same from time to time: *Provided*, No modification or change of grades shall be made or any new ones established without public notice being given of such contemplated change for at least 20 days prior thereto by publication in three daily newspapers printed in each city containing warehouses of class A: *And provided further*, That no mixture of old and new grades, even though designated by the same name or distinction, shall be permitted while in store.

162. COMMITTEE OF APPEALS.

2. Within 20 days after this act takes effect the board of railroad and warehouse commissioners shall appoint three discreet and competent persons to act as a committee of appeals in every city wherein is located a warehouse of class A, who shall hold their office for one year and until their successors are appointed. And every year thereafter a like committee of appeals shall be appointed by said commissioners, who shall hold office for one year and until their successors are appointed: *Provided*, Said commissioners shall have power, in their discretion, to remove from office any member of said committee at any time, and fill vacancies thus created by the appointment of other discreet persons.

163. APPEALS—NOTICES.

3. In all matters involving doubt on the part of the chief inspector, or any deputy inspector, as to the proper inspection of any lot of grain, or in case any owner, consignee, or shipper of grain, or any warehouse manager, shall be dissatisfied with the decision of the chief inspector or any deputy inspector, an appeal may be made to said committee of appeal, and the decision of a majority of said committee shall be final. Said board of commissioners are authorized to make all necessary rules governing the manner of appeals as herein provided. And all complaints in regard to the inspection of grain and all notices requiring the services of the committee of appeals may be served on said committee, or may be filed with the warehouse registrar of said city, who shall immediately notify said committee of the fact and who shall furnish said committee with such clerical assistance as may be necessary for the proper discharge of their duties. It shall be the duty of said committee, on receiving such notice, to immediately act on and render a decision in each case. (As amended by act approved June 4, 1907. In force July 1, 1907; L. 1907, p. 490.)

164. COMMITTEE OF APPEALS—OATH—BOND—WHO MAY SERVE ON.

4. The said committee of appeals shall, before entering upon the duties of their office, take an oath, as in case of other inspectors of grain, and shall execute a bond in the penal sum of $5,000, with like conditions as is provided in the case of other inspectors of grain, which said bond shall be subject to the approval of the board of railroad and warehouse commissioners. It is further provided that the salaries of said committee of appeals shall be fixed by the board of railroad and warehouse commissioners and be paid from the inspection fund, or by the party taking the appeal, under such rules as the commission shall prescribe; and all necessary expenses incurred in carrying out the provisions of this act, except as herein otherwise provided, shall be paid out of the funds collected for the inspection service upon the order of the commissioners: *Provided*, That no person shall be appointed to serve on the committee of appeals who is a purchaser of or a receiver of grain or other articles to be passed upon by said committee. (As amended by act approved June 26, 1885. In force July 1, 1885. L. 1885, Legal News Ad., p. 178.)

165. "REGISTERED FOR COLLECTION"—INSPECTION FEES.

5. No grain shall be delivered from store from any warehouse of class A, for which or representing which warehouse receipts shall have been issued, except upon the return of such receipts stamped or otherwise plainly marked by the warehouse register with the words "registered for collection" and the date thereof; and said board of commissioners shall have power to fix the rates of charges for the inspection of grain, both into and out of warehouses, which charges shall be a lien upon all grain so inspected and may be collected of the owners, receivers, or shippers of such grain in such manner as the said commissioners may prescribe.

178. CANCELLATION OF WAREHOUSE LICENSES.

12. Said commissioners are hereby authorized to hear and determine all applications for the cancellation of warehouse licenses in this State which may be issued in pursuance of any laws of this State, and for that purpose to make and adopt such rules and regulations concerning such hearing and determination as may from time to time by them be deemed proper. And if upon such hearing it shall appear that any public warehouseman has been guilty of violating any law of this State concerning the business of public warehousemen said commissioners may cancel and revoke the license of said public warehouseman and immediately notify the officer who issued such license of such revocation and cancellation; and no person whose license as a public warehouseman shall be canceled or revoked shall be entitled to another license or to carry on the business in this State of such public warehouseman until the expiration of six months from the date of such revocation and cancellation and until he shall have again been licensed: *Provided*, That this section shall not be so construed as to prevent any such warehouseman from delivering any grain on hand at the time of such revocation or cancellation of his said license. And all licenses issued in violation of the provisions of this section shall be deemed null and void.

179. POWER TO EXAMINE BOOKS, ETC.

13. The property, books, records, accounts, papers, and proceedings of all such railroad companies, other common carriers, and all public warehousemen shall at all times during business hours be subject to the examination and inspection of such commissioners, and they shall have power to examine, under oath or affirmation, any and all directors, officers, managers, agents, and employees of any such railroad corporation or other common carrier, and any and all owners, managers, lessees, agents, and employees of such public warehouses, and other persons, concerning any matter relating to the condition and management of such business. The commissioners, or any of them, in the performance of their official duties, or any person specially delegated by the commission for that purpose, may enter and remain during business hours in the cars, offices, depots, and upon the railroads or in vessels, or in or upon any of the instrumentalities used by common carriers in and about the transportation of persons or property between points wholly within the State of Illinois, and may examine the books and affairs of such common carrier, and in all proceedings before the commission under a complaint duly filed, or upon a proceeding begun by the commission upon their own motion, the commission shall have

power to require by subpœna the attendance and the testimony of witnesses and the production of all books, papers, tariffs, contracts, agreements, and documents relating in any matter embraced within such complaint or proceedings. Information so obtained shall not be admitted in evidence or used in any other proceeding. (As amended by act approved June 10, 1911. In force July 1, 1911. L. 1911, p. 471.)

180. MAY EXAMINE WITNESSES, ETC.

14. In making any examination as contemplated in this act, or for the purpose of obtaining information pursuant to this act, said commissioners shall have the power to issue subpœnas for the attendance of witnesses and may administer oaths. In case any person shall willfully fail or refuse to obey such subpœna, it shall be the duty of the circuit court of any county, upon application of the said commissioners, to issue an attatchment of such witness and compel such witness to attend before the commissioners and give his testimony upon such matters as shall be lawfully required by such commissioners: and the said court shall have power to punish for contempt, as in other cases of refusal to obey the process and order of such court.

181. PENALTY AGAINST WITNESSES.

15. Any person who shall willfully neglect or refuse to obey the process of subpœna issued by said commissioners, and appear and testify as therein required, shall be deemed guilty of a misdemeanor, and shall be liable to an indictment in any court of competent jurisdiction, and on the conviction thereof shall be punished for each offense by a fine of not less than $25 nor more than $500, or by imprisonment of not more than 30 days, or both, in the discretion of the court before which such conviction shall be had.

182. PENALTY AGAINST RAILROAD COMPANIES, OTHER COMMON CARRIERS, WAREHOUSEMEN, ETC.

16. Every railroad company or other common carrier, and every officer, agent, or employee of any railroad company or other common carrier, and every owner, lessee, manager, or employee of any warehouse who shall willfully neglect to make and furnish any report required in this act at the time required, or who shall willfully and unlawfully hinder, delay, or obstruct said commissioners in the discharge of the duties hereby imposed upon them, shall forfeit and pay a sum of not less than $100 nor more than $5,000 for each offense, to be recovered in an action of debt in the name and for the use of the people of the State of Illinois; and every railroad company or other common carrier, and every officer, agent, or employee of any such railroad company or other common carrier, and every owner, lessee, manager, or agent or employee of any public warehouse shall be liable to a like penalty for every period of 10 days it or he shall willfully neglect or refuse to make such report.

183. ATTORNEY GENERAL AND STATE'S ATTORNEY TO PROSECUTE SUITS.

17. It shall be the duty of the attorney general and the State's attorney in any county, on the request of said commissioners, to institute and prosecute any and all suits and proceedings which they or either of them shall be directed by said commissioners to institute and prosecute for a violation of this act, or of any law of this State concerning railroad companies, other common carriers, or warehouses, the officers, employees, owners, operators, or agents of any such companies, common carriers, or warehouses. (As amended by act approved June 10, 1911. In force July 1, 1911. L. 1911, p. 471.)

184. IN NAME OF PEOPLE—PAY—QUI TAM ACTIONS.

18. All such prosecutions shall be in the name of the people of the State of Illinois, and all moneys arising therefrom shall be paid into the State treasury by the sheriff or other officer collecting the same; and the State's attorney shall be entitled to receive for his compensation from the State treasurer on bills to be approved by the chairman of the commission and by the governor a sum not exceeding 10 per cent of the amount received and paid into the State treasury as aforesaid: *Provided*, This act shall not be construed so as to prevent any person from prosecuting any qui tam action as authorized by law and of receiving such part of the amount recovered in such action as is or may be provided under any law of this State. (As amended by act approved June 10, 1911. In force July 1, 1911. L. 1911, p. 471.)

RIGHTS OF INDIVIDUALS SAVED.

19. This act shall not be so construed as to waive or affect the right of any person injured by the violation of any law in regard to railroad companies, other common carriers, or warehouses from prosecuting for his private damages in any manner allowed by law. (As amended by act approved June 10, 1911. In force July 1, 1911. L. 1911, p. 471.)

STATE WEIGHMASTERS.

An act to provide for the appointment of State weighmasters. (Approved June 23, 1883. In force July 1, 1883. L. 1883, p. 172; Legal News Ed., p. 137.)

186. WEIGHMASTER—APPOINTMENT OF.

1. *Be it enacted by the people of the State of Illinois, represented in the general assembly*, That there shall be appointed by the railroad and warehouse commissioners in all cities where there is State inspection of grain a State weighmaster and such assistants as shall be necessary.

187. DUTIES OF.

2. Said State weighmaster and assistants shall, at the places aforesaid, supervise and have exclusive control of the weighing of grain and other property which may be subject to inspection, and the inspection of scales and the action and certificate of such weighmaster and assistants in the discharge of their aforesaid duties shall be conclusive upon all parties in interest.

188. FIX FEES.

3. The board of railroad and warehouse commissioners shall fix the fees to the paid for the weighing of grain or other property, which fees shall be paid equally by all parties interested in the purchase and sale of property weighed or scales inspected and tested.

189. WEIGHMASTER—QUALIFICATIONS—BOND—COMPENSATION.

4. Said State weighmaster and assistants shall not be a member of any board of trade or association of like character; they shall give bonds in the sum of $5,000, conditioned for the faithful discharge of their duties, and shall receive such compensation as the board of railroad and warehouse commissioners shall determine.

190. MAY ADOPT RULES.

5. The railroad and warehouse commissioners shall adopt such rules and regulations for the weighing of grain and other property as they shall deem proper.

191. NEGLECT OF DUTY—PENALTY.

6. In case any person, warehouseman, or railroad corporation, or any of their agents or employees, shall refuse or prevent the aforesaid State weighmaster or either of his assistants from having access to their scales, in the regular performance of their duties in supervising the weighing of any grain or other property in accordance with the tenor and meaning of this act, they shall forfeit the sum of $100 for each offense, to be recovered in an action of debt, before any justice of the peace, in the name of the people of the State of Illinois, such penalty or forfeiture to be paid to the county in which the suit is brought, and shall also be required to pay all costs of prosecution.

WEIGHING GRAIN IN BULK BY RAILROAD COMPANY.

An act relating to the receipt, shipment, transportation, and weighing of grain in bulk by railroad companies. (Approved June 15, 1887. In force July 1, 1887. L., 1887, p. 253; Legal News Ed., p. 186.)

192. ROAD RECEIVING FOR TRANSPORTATION SHALL FURNISH SUITABLE APPLIANCES FOR WEIGHING, ETC.

1. *Be it enacted by the people of the State of Illinois, represented in the general assembly*, That in all counties of the third class and in all cities having not less than 50,000 inhabitants, where bulk grain, mill stuffs, or seeds are delivered by any railroad transporting the same from initial points to another road for transportation to other points, such road or roads receiving the same for transportation to said points or other connections leading thereto shall provide suitable appliances for unloading, weighing and transferring such property from one car to another without mixing or in any way changing the identity of the property so transferred, and such property shall be accurately weighed in suitably covered hopper scales, which will determine the actual net weight of the entire contents of any carload of grain, mill stuffs, or seeds as a single draft, without gross or tare, and which weights shall always be given in the receipts or bills of lading and used as the basis of any freight contracts affecting such shipments between such railroad companies and the owners, agents, or shippers of such grain, mill stuffs, or seeds so transported and transferred.

193. WHERE ORIGINAL CAR RUNS THROUGH WITHOUT TRANSFER.

2. The practice of loading grain, mill stuffs, or seeds into foreign or connecting-line cars at the initial point from which the grain, mill stuffs, or seeds are originally shipped, or the running of the original car through without transfer, shall not relieve the railroad making the contract to transport the same to its destination or connection leading thereto from weighing and transferring such property in the manner aforesaid, unless the shipper, owner, or agent of such grain, mill stuffs, or seeds shall otherwise order or direct.

194. LIABILITY OF RAILROAD COMPANY FOR NEGLECT OR FAILURE—PROCEEDINGS.

3. Any railroad company neglecting or refusing to comply promptly with any and all of the requirements of either sections 1 or 2 of this act shall be liable in damages to the party interested, to be recovered by the party damaged in an action of assumpsit, and such party may proceed by mandamus against any railroad company so refusing or neglecting to comply with the requirements of this act; and if the shipper, owner, or agent of any such grain, mill stuffs, or seeds shall fail or neglect to proceed by mandamus it shall then be the duty of the railroad and warehouse commissioners of this State, upon complaint of the party or parties interested, to proceed against the railroad failing or refusing to comply with the provisions of this act; and all the powers heretofore conferred by law upon the board of railroad and warehouse commissioners of this State shall be applicable in the conduct of any legal proceeding commenced by such commissioners under this act.

195. PENALTY, HOW RECOVERED.

4. Any railroad company so refusing or neglecting as aforesaid shall be liable to a penalty of not less than $100 nor more than $500 for each neglect or refusal as aforesaid, to be recovered in an action of assumpsit in the name of the people of the State of Illinois for the use of the county in which such act or acts of neglect or refusal shall occur, and it shall be the duty of the railroad and warehouse commissioners to cause prosecutions for such penalties to be instituted and prosecuted.

[At this point Mr. SHERMAN yielded the floor for the day.]

Monday, April 13, 1914.

Mr. SHERMAN. Mr. President, I will resume where I left off on Friday last.

The points at which the grain trade has developed have been established through the natural and artificial advantages that have grown up in the course of years. The Kansas City grain trade has come with the development of the West and Southwest. Along with the settlement of the country the facilities of the common carriers have increased correspondingly to keep pace with the demands of freight moving. The same can be said of all the points of the West and Middle West. The city of Chicago has built her grain trade from 1848 or 1850, when it was comparatively nothing to its present volume. Some 48 lines of steam road come in and depart from this point alone. In the northwestern grain market Chicago has grown not only because of these carriers, Mr. President, but because of the natural course of trade incident to the advantages of location. It is the central point of a large production area. It is at one of the points of Lake transportation. It gives for eight months of the year the advantages of water-borne freight east on the Lakes. This is materially cheaper than either railway transportation or by way of ocean freight. The transportation on the Lakes is appreciably cheaper than that on the ocean because of the low cost of operation, as well as the low expense of the original cost of the boats carrying the merchandise. These several reasons have developed Chicago, as well as Minneapolis, Duluth, Indianapolis, Toledo, Cleveland, Erie, Buffalo, Philadelphia, Baltimore, and other points where the grain trade has a tendency naturally to collect itself and avail itself of the transportation advantages.

The grain exchange is likewise a natural development. I do not subscribe to the idea so often expressed that a grain exchange is necessarily a hostile organization to the producer or the consumer of the commodity handled. If the grain exchanges of the country, known by various names, such as boards of trade, chambers of commerce, and the like, were absolutely prohibited, either by State or Federal law, it would not change the course of business; it would only make the transaction of business a great deal more inconvenient and injure the producer by impairing the markets.

A board of trade is at all times a place where the buyer and the seller meet mutually to accommodate themselves to the transaction of the several lines of business in which they are engaged. It is a market place. The board of trade or the merchants' exchange in St. Louis or Chicago, as the case may be, together with other exchanges of a like kind, are only places for the transaction of business conveniently. The membership is composed of those engaged in the grain trade. The board of trade itself in Chicago transacts no business; it has no responsibility for the contractural acts of its members. It was not organized for the purpose of conducting business; it was organized as a place where the factors, the commission men, or by whatever name they may be denominated, habitually meet and transact their business. It enjoins on its members honesty, responsibility, and fair dealing. The members sell and they buy during certain hours. This convenience is furnished by the board of trade. It is true it is incorporated and has been the subject of a great deal of adverse criticism. It has encountered the evil opinion for a good many years of certain witnesses who have investigated it or sought to investigate it, and who have testified before committees, either general or special, both of State legislatures and of Congress. These witnesses have various opinions, generally hostile, when they are called for the purpose of breaking down the board of trade. I shall not criticize the motives of these witnesses. All I shall try to do is to present these places of exchange in their proper light in this regard.

The Board of Trade of Chicago was organized in 1858, and has been a body corporate since that time. It exists by virtue of an act of the Legislature of Illinois. The various grain exchanges of the country in other States have been organized in like manner. They have that corporate existence in order, first, to declare the purposes of the exchange, to furnish a membership which shall be protected, and to have a place of meeting over which they will exercise control. When this has been accomplished they have given each member a place in which he can transact his business.

Necessarily where there is a board of trade or a grain exchange at a collecting and distributing point in this country public elevators or warehouses are found. All of the public elevators are regulated by law. They are not owned by the boards of trade or exchanges. No grain goes into those elevators unless inspected under the inspection systems of the various States. The only complaint I have heard of late years of the elevators in the large centers, Mr. President, is the lack of capacity. There is need in nearly every large grain market in the West and Northwest for more elevator capacity. There is a very large capacity at the principal points already, and new elevators are constantly being built in response to the increased demand for storage capacity.

The board of trade—and I speak especially now of the one in Chicago—does not inspect grain; it does not handle grain; it neither buys nor sells grain. The Senate committee report on page 3, paragraph 13, is so grossly erroneous as to excite surprise. The Chicago Board of Trade never received a dollar from the State inspection service nor from any other inspection service. It has no interest itself in the inspection of grain, receives no fees therefor, nor does it have anything to do with the warehouses in that city. Such a statement in a committee report is inexcusable. It is based on the ignorance or malice of witnesses unworthy of consideration. This charge is no more baseless than others in the report, however. I wish to remark here that the board of trade has, at its own expense, prosecuted those who have violated the statutes of the State or of the Nation. It has prosecuted many times those who have used the market for gambling purposes. It helped to keep within the law the public warehouses, whether or not they were combined, as has been stated by witnesses, whose testimony has been alluded to by some Senators who have argued for this bill. It has instituted suits against them. It has sought by restraining order, and sought successfully by such suits, to keep them within the performance of their lawful duties and to prevent them from having an interest adverse to those seeking storage. It has prosecuted at least one case, which served as a precedent for many others, at a considerable expense, borne by the members of the association.

I am not apologizing for nor defending the warehouses of the city of Chicago for what they did in 1897 and prior to that time, or up to the time they were prevented by a restraining order from buying and storing their own grain and thereby becoming competitors with the general grain trade of the country. That prosecution, however, commenced by a bill in chancery in the State court and taken to the court of last resort in that State, was instituted by the board of trade. The board of trade assisted the State's attorney of Cook County, in which the prosecution was begun, and the attorney general, with its counsel and with the evidence that it had discovered for the purpose of successfully prosecuting this bill in chancery to a final conclusion. When the restraining order was violated this same much-criticized board of trade caused the offender, under the restraining order, to be brought before the court on certain contempt charges, and finally a ruling was had on one branch of the litigation. I need not go into the details of that litigation; it covered a series of many years, but finally the outcome as to every phase of it was successful. The judicial proceedings are well known to those who are familiar with the subject, and I do no more than allude to them; but in the final case, where the merits of the controversy were settled beyond cavil, the attorney general of the State, Mr. Hamlin, the State's attorney of Cook County, and Mr. H. S. Robbins, who was the attorney of the board of trade for some years and who is mentioned in some of the testimony, appeared both in the trial court and in the supreme court and secured a ruling that forever keeps by lawful restraint the public elevators of the city of Chicago in the proper exercise of their duties as public warehousemen of grain.

This was not done by legislative investigation; it was not done by hostile associations; it was done by the board of trade, whose incorporation serves only to protect the men who are its members and entitled to seats on the floor during the time it transacts its business and guarantee honest dealings with the public. This litigation was had for the purpose of giving not only to that State, but to all the States of the great West and Northwest, which are tributary in their grain trade in all is parts to this gateway for the eastern and local markets as well, in that country, the advantage of public warehouses kept within the just performance of the duty which they assumed when they entered into that business under the constitution and the statutes of the State.

The criticism that has been made of the warehouses is one that I feel called upon to answer in part only. I think I can properly say, not by way of defense, but by way of statement of the fact, that for some years the warehouses of that city have discharged their duty. I say that generally they have not been those who have misled, deceived, or defrauded those who have stored grain or those engaged in the grain trade either of that State or of that city or of the States that have occasion to market their produce at that point.

Complaint is made here at some length that the public warehouses inspect out and ship much more of a high grade of grain than they receive of a like grade; that they receive grain of no grade—that is, unmerchantable grain—and that they inspect out or ship from the same elevator no grain that is not entitled to grade or that is unmerchantable.

The fact itself is true, either in whole or in part, as applied to certain elevators. That it proves or tends to prove dishonesty, deceit, or any unlawful or improper practice is a palpable error.

Some of these elevators are described as "hospitals." They do take grain and improve it; they clean it; they dry it; they purify it; they send it out in better condition than it was sent in. None of these warehouses, I think, probably without exception—at least none of the larger ones with which I have any acquaintance, and I am speaking now generally of those on which criticism is made here—ship no-grade grain. They ship no grain that is unmerchantable in the general markets of the country. It is argued, therefore, that it must go into grain that is graded in such a way as to make the unmerchantable product a part of the graded product that goes out on the market. That is the inference of the witnesses here to whom I have had access and whose statements I have examined, as far as I have been able to read them, in the reports of the several committees conducting these hearings.

I wish to say, first, that these witnesses are not entirely candid. They do not tell the whole truth. The suppression of a portion of the truth is often equivalent in its effects to a premeditated untruth. I would not charge these witnesses with intentionally doing this. They are interested in presenting that side of the case. In their zeal they forget to present the whole

truth. The whole truth is that none of the unmerchantable grain ever leaves the great grain markets of the country. At the collection point, it is true, the no-grade grain, the unmerchantable product, is collected, but it never leaves that point. There is a reason for keeping it there. There is no profit in shipping unmerchantable grain out of the collecting point. It never can be distributed to the markets of the country. It never goes out as grain. If a bushel of it ever leaves Minneapolis or Duluth or Chicago, it never goes out as grain. It goes out as some kind of animal food. It is separated from the good grain, it is made up, it is milled at the very point where it is collected, and it never goes into the markets of the country as grain. Such of the grain as goes out of the warehouse as grain that is of no grade, or of an unmerchantable character, when it is inspected in, is cleaned and improved in such a way that it properly passes to the grade that it takes on the out inspection.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. Yes, sir.

Mr. GRONNA. Is the Senator from Illinois now referring to the grain trade in the western country, in Duluth or——

Mr. SHERMAN. No; in Chicago. I mentioned Minneapolis and Duluth also.

Mr. GRONNA. The Senator evidently is not posted on the way grain is handled in the western country.

Mr. SHERMAN. Will the Senator from North Dakota tell me what he thinks is the way in which it is actually handled?

Mr. GRONNA. I will inform the Senator, if he will permit me.

Mr. SHERMAN. I am ready to be informed.

Mr. GRONNA. In the terminals, such as Minneapolis and Duluth, grain is inspected, and so far as foreign matter is concerned it has nothing whatever to do with the quality of grain. If a bushel of wheat contains 40 pounds of wheat and 20 pounds of foreign matter, there is no way in which the terminal elevator can improve that 40 pounds of wheat. It will be 40 pounds of wheat and no more; and in those cities, according to the rules, they apply the dockage, and whether it be seeds or other grain mixed with wheat there is a dockage made, so that it is impossible for the "hospitals" of which the Senator speaks to improve the wheat.

I deny absolutely that it is possible for any elevator or anyone to improve the quality of the grain. I admit that if the system is to buy grain without dockage, you may call it a lower grade, and thereby apply a lower price; but in no case has the elevator or the elevator man in the cities of Minneapolis or Duluth been able to show before any committee that there is a possibility of improving the grain itself.

Mr. SHERMAN. Mr. President, I have heard that same explanation and argument for more than 15 years. I am obliged to the Senator for interpolating it at this point, because it had to come at some place, and it is entirely proper that it should. I am likely posted outside of the limited area hereafter mentioned on the general method of handling grain sufficiently to explain why I am correct in my statement.

The practice known as dockage is purely local to certain points in the United States. I wish to say to the Senator that while it applies to his locality it has a very limited horizon. It affects his State and possibly one or two other States; but it is peculiarly local, I think, to two or three States. It affects probably three States—the two Dakotas and Iowa. There might possibly be other States that ship a small quantity of grain to primary market points in which dockage is practiced to a small extent.

So far as I know, from my knowledge of the grain trade—I am not a grain buyer and never was; but I have been necessarily placed where I must investigate the matter at times, both in private and in public affairs—there never has been any dockage known to the trade in the United States outside of one State. I think that dockage applies entirely to the products that go to that State, and applies to wheat. It has been adopted in Chicago in the last few months in grading northern spring wheat only, so the Chicago rules in grading that wheat are practically the same as Minnesota's. I believe the complaint usually is on wheat.

Dockage is purely a local custom. You may travel the tracks and the warehouses of the boards of trade at any point in or outside of the city of Chicago for days and years; you may search the records of those warehouses; you may search the testimony of witnesses who have been in the grain trade and those engaged in the grading of grain for 35 years and they will tell you uniformly, without exception, that there was no such thing as dockage in the city of Chicago until recently, as stated, and then only on northern spring, so as to be uniform with the great wheat market of Minneapolis. The Senator is correct on his basis, but the weight of authority in the grain trade, whether producer, handler, or miller, is that grain can be and is improved by various lawful processes in the warehouses of the country.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois further yield to the Senator from North Dakota?

Mr. SHERMAN. Certainly.

Mr. GRONNA. Is it not true that dockage does apply in the case to which the Senator referred just a moment ago?

Mr. SHERMAN. No, sir. I beg the Senator's pardon. Dockage does not apply at the warehouses nor in the board of trade, except as stated. If they buy grain that comes from a State in which dockage is part of the original contract, they are by force of circumstances obliged to buy the wheat in that condition.

Mr. GRONNA. I was speaking of the condition as it exists in the terminal elevators where these boards of trade and chambers of commerce operate.

Mr. SHERMAN. No, sir. Their is no such thing as dockage in Chicago. I challenge the statement, except as I have explained. It can not be sustained by evidence.

Mr. GRONNA. Has the Senator from Illinois before him any statement that more grain of a higher grade has been shipped out of the elevators in Chicago? Does not that refer to Duluth?

Mr. SHERMAN. The complaint made in the testimony reported by the committee applies to an elevator at Duluth and another, I think, at some point in Wisconsin, not in the city of Chicago.

Mr. GRONNA. That is what I maintain, and I so stated.

Mr. SHERMAN. But all of it has been used in the discussion here, and consequently it imposes upon anyone who undertakes to make some explanation of it the necessity of covering the points outside of the State of his residence as well as others. Undoubtedly more grain of a higher grade goes out of an elevator than comes in, because of cleaning, drying, separating inferior from better grain, and other proper practices. I see no reason why this should not be so. It costs something to do this. Some profit ought to be made to cover it.

So far as my knowledge extends, I believe dockage to be a custom prevalent in the State of Minnesota. I am not well acquainted with the origin of that custom. I understand, though not from any evidence I have here in the printed reports, that it had its origin in the improper condition in which the wheat sought the primary market. I have no desire to minimize the wrong, if one were committed in that way, as complained of in the testimony. I do not defend the warehouseman who took the foreign substance out of the wheat under the name of dockage, whether it were flax, barley, rye, or anything that had some merchantable value, and, after taking out the dockage, rendered no account of it to the shipper or owner of the grain, if anything remained above freight and the cost of cleaning and other expenses, nor have I any desire to defend those who again, after cleaning, deducted, as it appears from some of the testimony here, to make what would amount to a dockage at the beginning, keeping the results of the dockage, taking out the dockage that would have diminished the weight, and again deducting the amount after it left the car and went up to the elevator, making, in substance, a double dockage. Where that has been done, if there has been any double charge of that kind, I think it will be found that it has been discontinued. Personally, I have not adequate or exact information on that point, because in my part of the country, where I have had occasion to investigate the matter, no such practice of either kind has ever prevailed, except as explained.

Mr. McCUMBER. Mr. President—

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. Certainly.

Mr. McCUMBER. So that the Senator may make the system in vogue in Chicago clear to those who are not acquainted with the system as well as the Senator is, let me put a case to him.

Suppose a carload of No. 2 winter red is purchased in Chicago. Suppose that the berry, the grain itself, is a good quality of winter red; but suppose there is about 10 pounds of oats to the bushel, or anything else. It might be flax or wild oats or foul stuff; but we will say that there is mixed with it 10 pounds per bushel of oats, or one-fifth, how would it be graded in the city of Chicago?

Mr. SHERMAN. Where does the wheat come from in the case the Senator supposes?

Mr. McCUMBER. I am assuming that it comes from the section of the United States where you raise the winter red. We do not raise it at all in our section of the country.

Mr. SHERMAN. There are two kinds of winter red. I do not know that there would be any difference; but I should like to have the exact basis for the supposition.

Mr. McCUMBER. No; the principle would be just the same, no matter whether it was turkey red or winter red or soft winter or white winter, or what it might be.

Mr. SHERMAN. There is a hard winter red and then there is a softer winter red. They make a different flour when milled.

Mr. McCUMBER. Yes; but what I am getting at is this: I want to get your method of grading where the berry itself, or the grain, is a good quality, but there is a certain percentage either of foul stuff or of other character of grain. Would that depreciate its grade?

Mr. SHERMAN. It would.

Mr. McCUMBER. Would that depreciate the grade, and consequently the number of bushels, or would it have its weight according to the weight of the foul stuff and all in it?

Mr. SHERMAN. Mr. President, the viewpoint from which the opinions and practices of the Senator from North Dakota are drawn necessarily begins with dockage as one of the elements. You can exclude dockage as something that enters into the inspection system of Chicago, for instance, until very lately on northern spring wheat only. I will adhere to the State of Illinois. While I am somewhat familiar with other States of like kind, I will take that as an illustration.

The grading of grain, under the system followed for many years, has various points. One is the character of the berry, its moisture content, its freedom from foreign substance, the texture of the grain when examined, its color, freedom from shriveled grain, and I do not know how many more points. There are probably 8 or 10 points. I do not think the practical inspector considers all of them; but in making the grade they do consider not only the condition of the grain itself, the berry, but the purity or impurity in which it is found in the bulk. That is what prompted me, at the time the Senator from North Dakota was discussing this matter some days ago, to propound the inquiry—which I did not do for the purpose of provoking him—whether he thought dirty grain was just as good as clean grain. I made the inquiry from my viewpoint. I can understand why, from his viewpoint, he would think I was not entirely sincere in propounding the question in that way. I did not mean it in that sense. I meant that in our system of grading the foreign substance in the grain is considered as one point in fixing the grade—not solely to be considered in that way, but one point. The dockage has nothing to do with it, except as explained. If dockage is made, it removes the purity from foreign substances as an element in grading.

If a given quantity of grain were taken out of the cars, ordinarily with the bucket or tube or with something that makes the test, and the quantity of foreign substance found in it runs above a certain percentage, it falls a grade because of its impurity; whereas under the dockage system the dockage is taken out, and the balance, if it weighs 56 or some given number of pounds to the measured bushel, would be considered as clean grain; if it had been entirely fanned out and presented to the purchaser clean and free from foreign substances, dockage would likely never have been practiced. So the two methods are entirely different.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois further yield to the Senator from North Dakota?

Mr. SHERMAN. Certainly.

Mr. McCUMBER. Does not the Senator, therefore, believe that the dockage system really gives you a better and more accurate method of determining the character and the justice in the matter of sales and purchases and less opportunity for manipulation than under a system in which you use the foul stuff to determine the grade?

Mr. SHERMAN. Not necessarily. If you take the dockage system you might ignore the moisture, which to those who ship long distances becomes very material; you ignore the climatic and soil conditions under which the grain is produced, and especially shriveled grain, and you might ignore some of its flour-making qualities when milled.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois further yield to the Senator from North Dakota?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. I want to correct the Senator there. I think he is in error upon that point, because in the terminals where the dockage system is adopted the rules all refer to dryness and soundness and the character of the berry itself.

Mr. SHERMAN. As I have already intimated, I am not discussing from my information the question of dockage, because I am not familiar with it. We never had such a thing in the part of the country over which my investigations necessarily have been conducted in the last 15 or 20 years; so whatever I say on dockage is not to be taken as an authority, I am sure. I am only saying that, generally, we have had until very lately no such method to assist us in grading grain.

The very grave charge that we meet is these complaints about grain that comes in the elevator at one grade and goes out at a higher grade. I think those cases grow out of conditions that can not be controlled. I think the conditions in the case of wheat relate so largely to climatic and soil conditions under which the wheat grows and is harvested and marketed that the differences the witnesses describe are not necessarily to be imputed to bad faith, but to changes that occur after the wheat reaches the distributing point, is cleaned, improved, and is shipped to some distant market.

There is a charge made here by some of the witnesses, and made quite frequently, that the inspections by the boards of trade in Illinois and many other States are the State inspections. This is so manifestly untrue that I shall attribute such evidence and charges to ignorance and content myself with denying it in toto. I regret to be compelled to take up so much of the time of the Senate this afternoon, and it is not willingly, I assure you, that I go into this matter. It is from no pleasure of mine, but from necessity.

The grain trade of the different cities concerned in the change sought to be made by this bill is a very large factor in the commercial, manufacturing, and financial life of these cities and the great grain-producing areas of the United States. The charge of bad faith, of dishonesty, is made by some of these witnesses. It grazes at least the edge, although a close reading of what the witnesses say shows that they, to use a popular expression a few days ago, "skate over very thin ice." However, the charge is made that the State inspectors are the same as the board of trade inspectors. That is sought to be explained in some instances by saying that the State inspectors are under the influence and control of the boards of trade or the different grain exchanges of the country.

I have been intimately acquainted with the inspection system in my own State for nearly 20 years. It has its weaknesses. There is nothing perfect about it or anything else devised by mortals. There is no governmental operation that is perfect.

The Federal Government is no more nearly perfect than the State government. Here is this much-abused practice of seeds coming from the Department of Agriculture. That is a standing joke for the humorists of the world. Every cartoonist and paragrapher have taken a fall out of it. I have asked for them in my time for constituents of mine before I ever saw this august body, before I ever had the superlative pleasure of dictating my speeches to a shorthand reporter in the Senate. That is all it is. I realize that. I am used to it. I can do it with more pleasure in my office any day. Before I had that pleasure, Mr. President, I distributed for my Congressman in my district divers seeds of all kinds; and it is material to consider what they got. They did not get what they sent for at all times.

To be specific, a few days ago an indignant constituent wrote me that instead of flower seeds a paternalistic Government had sent him vegetable seeds. He had asked for marigolds and hollyhocks and some of the old-fashioned kinds of flowers that would make glad the heart of man in that neighborhood. He complained that instead of marigold seed he got carrot seed; instead of hollyhocks he got turnips. Where did he get them from? From the United States Government, distributed from within almost the shadow of the Dome of this Capitol; distributed by some routine clerk, acting under the head of what? Bureaus—more bureau government.

So there are no Government departments or bureaus that are perfect. They make their mistakes; and the further you get from the officer who is performing the duty, and the more correspondence you have to depend on, and the less face-to-face communication you have with the public officer, the more routine and mechanical and inefficient the service becomes.

If you can face an inspector, if you are a shipper of grain and can appeal in person or by your commission man or your agent, whoever he may be, if you can make an appeal in person or through your proper representative from the original inspector who gives the grade to your grain and take it before some other authority, the chief inspector, or where other jurisdictions are given to some authority that will reinspect the grain, but through your agents or by yourself face the person who has to grade it, you will come nearer getting your just dues than you will if you are 3,000 miles or 1,000 miles, as people are on the Pacific coast or in the Mississippi Valley, from the authority.

It is largely sentiment, it is said, on the part of those who oppose the absorption of this power by the Federal Government creating a grain-inspection bureau as an annex to the Department of Agriculture here. It is not sentiment. It is practical operation. It is the practical thing in all government to keep it in the hands of the State wherever it can be done, to the end that those who have to deal with the inspector and with the existing system of the State may reach at all times and places in the most effective way those who are to perform that service.

They are not controlled, let me say, by the board of trade. One witness testified quite abundantly, and without going quite so far I might believe that he was well informed on the situation. He undertakes to name and criticize the railroad and warehouse commissioners of that State, and I am adhering to that not by choice but because it is the most pertinent. I could take the same in the State of Missouri, containing two great primary markets of the country, and it would work out the same way. In the State of Missouri those commissioners are elected by the people. In the State of Illinois they are appointed by the governor of the State. For more than 25 years I have known personally the members of the railroad and warehouse commission of the State of Illinois. I knew the last three who preceded those who are now exercising a like power. The witness gave the name of one of them, Mr. Bernard A. Eckhart, a citizen of Chicago, and intimates that he has exercised improper influences over his inspectors and over the entire inspection system necessarily because he is connected with the grain trade.

Mr. Eckhart is connected with the grain trade in this way, and this way only: He is a miller and has been a miller for many years. He buys the grain needed from every part of the world—not only from the Dakotas, but elsewhere—milling it into the various grades of flour that go on the market.

It is insisted in the testimony that Mr. Eckhart has not acted properly and that he is an unfit man; that the inspections made under his administration have not been fair to the shipper. If you will go in the country where he lives and has lived all his business life, you will find no such statements made by those who know him and have transacted business with him. If you will go to those to whom he has shipped his product from his mill for many years, you will find from his customers no complaint. If you go to his associates with whom he is associated in the banking business and ask them, you will find no complaint. You will say that is natural; they are his associates. But go to others in the like business, not only in the city of Chicago but elsewhere, and wherever he is known there is no man in the Middle West in business who stands higher in his honesty, in his business capacity, in his fairness, than Mr. Eckhart, for some years a member of the Board of Railway and Warehouse Commissioners of Illinois.

Another one, whose name I shall not give at this time, served until the 1st day of January. Immediately on leaving that service as chairman of the railroad and warehouse commission, even by an administration in whose political activities he had no part, as he was a member of an adverse and now a minority political party, he was taken, when he ceased to serve us on that board, and is now performing important services for the Interstate Commerce Commission. A commissioner who is alleged to have violated the rules of fairness and all State grain-inspection laws would not be translated into this line of activity here under the Federal Government if he, with Mr. Eckhart, constituting two out of the three members of the board, were of the kind that these witnesses intimate in their testimony reported from the committee.

I wish to say, Mr. President, that these inspectors who have passed upon the grain in Chicago for many years have no connection whatever with the Board of Trade of Chicago nor with any of the members of the board of trade. They are appointed, they take an oath, and are placed under bond to perform their duties as other sworn officers of the State or National Government, with the same high sense of duty that the average officer has who undertakes conscientiously to fill the full measure of his responsibility.

I wish here, in justice to the testimony of some of these witnesses, to read what I regard as equally good testimony. Mr. J. C. F. Merrill at present is the secretary of the Board of Trade in Chicago. He was formerly the president of the board of trade. I wish to read from an article he prepared in 1911. It appears in the American Produce Exchange number of the American Academy of Political and Social Science Annals, 1911:

The practice of classifying grain—

He says—

into grades, more commonly called inspection of grain, is distinctly American in its origin. In the year 1858 the Board of Trade of the City of Chicago created a department for the classifying of grades numerically according to specified requirements of color, quality, and general condition, and at the same time certifying to those grades. This same general scheme, with small changes to meet local conditions, spread throughout the country, greatly facilitating trade between widely scattered markets and individuals. State inspection of grain also had its beginning at Chicago, it being established by the State of Illinois in 1871.

The law in this case followed what it has in so many other cases. Every useful law that is remedial and progressive in its character always follows the line of the development made by sound, competent business men engaged in the pursuit to which the law applies. The whole system of bank reserves is only based on the percentage of reserve required in quantity of cash held available by a prudent banker if there were no law to require him to keep a reserve. Every prudent banker in the country would keep, without any law, a certain amount of cash available to take care of the current business for the day and to meet whatever emergency might arise from time to time.

So out of the necessities of the grain trade, out of the examination of the quality of grain, the law, when it was enacted in 1871, proceeded in accordance with the development of the grain trade. Every sound law does no more than regulate. It does not prohibit any lawful industry. All the grain-inspection laws of the several States have undertaken to do is to regulate, not to prohibit, and to follow out in that connection the rules of conduct that have been developed by prudent men engaged in the occupation so regulated.

Mr. Merrill continues:

The principal primary markets of the country are situated in the States which actively control the grading of grain by legal enactment.

The Atlantic seaboard and Gulf cities from which grain is exported, as well as the primary markets of Detroit, Toledo, Cleveland, Cincinnati, and Buffalo, established exchange inspection soon after the Chicago Board of Trade put it into effect. The reliability of inspection certificates is of first importance. Primarily, inspectors operated on their own individual responsibility, the certificates of each being valued according to his reputation for ability and honesty. But misunderstandings between sellers and buyers of grain, and a more or less general desire in the trade to trust official commercial standards rather than the honesty of individuals, suggested some established system of inspection, with the result first of exchange inspection, to be followed in the several States mentioned by legislative enactment, to give to such system the force and security of law.

Uniformity, in a broad sense throughout the country, has been a recognized necessity from the first.

Let me say here parenthetically there is no controversy between those who favor this bill and those who oppose it on the desirability of uniformity. There ought to be uniformity in the standards. The principle of the Lever bill in the House gives uniformity. It seems the same as that introduced by the Senator from Oklahoma [Mr. GORE]. I have not read them one along with the other, but I believe them to be exactly similar. The uniformity of grades is the useful part of every regulation. The uniformity can be secured by fixing the standards, and in that event every State having an inspection system can be compelled to grade up to the standard fixed by the Department of Agriculture. When that is done you have uniformity. You have uniformity under the supervision of the General Government and not the inspection of the General Government. I favor uniformity of standards and Government supervision, to be worked out so as not to destroy or impair our State inspection systems.

In the main—

Mr. Merrill continues—

the same rules have been adopted and the same standards established in all markets. Local conditions, however, have to some extent dictated differences calculated to meet local needs. These differences, minor in their origin, have a tendency to increase, at least to increase in their effect, as the trade became larger the need of uniform phraseology as well as to recognize the importance of a strict application of the inspection rules.

The Grain Dealers' National Association, which has many hundred members throughout many States, with a strong representation of board of trade and exchange members, together with the Chief Grain Inspectors' Association, set themselves the task of bringing about uniformity of practice throughout all of the States and markets east of the Rocky Mountains. It has energetically continued the work until, with very minor exceptions, it has become an accomplished fact. West of the Rockies, probably due to the dry harvest season, grain is stored in sacks when thrashed and piled in bins for longer periods, and remains in the sacks until used, even being exported in that way. Its quality is quite unlike that grown east of the mountains, and requires entirely different rules. Grain arriving at its initial market when graded is likely to remain of that grade until finally disposed of.

It may lose its identity through being stored in bins with grain of like grade and quality to be inspected out of store of the same grain when shipped or used, or if susceptible of improvement by cleaning or blending with other lots or parcels it may pass to a higher grade, or if becoming infested by weevil or from heating, or in any way deteriorates in quality, it will be degraded, but as a general statement when inspected out of store for shipment or use its grade is likely to be found unchanged.

I call special attention to this statement by Mr. Merrill, because he has been engaged in the grain trade all his life and it puts in a much more accurate way than I can the answer to the question propounded by the Senator from North Dakota [Mr.

McCUMBER], if grain can legitimately be improved when bought under the dockage system if the dockage system prevails. I apprehend it would be taken on the quality of the grain itself after making due allowance for the foreign substances, and it could not be improved if the clean grain ran the same quality throughout the bulk, because, as they very strenuously say, the grain remains the same, and the dockage or dirt being removed the grain is there in its original quality. It ought to be remembered that much grain in bulk varies in the quality of the grain itself. Where, however, the inspection is upon a different basis or the quality and condition of the grain itself varies, it is improved, and I am not sure but that even with dockage the grain could in many cases be improved.

The grain when cleaned necessarily removes from it the foreign substances composed of weed seed, oats, flaxseed from the Northwest, rye, chaff, barley sometimes, and a great variety of dirt. It is a comprehensive term. When dirt is analyzed it is found to be composed of a great variety of things. It is a good deal like boarding-house hash; it has to be taken in its entirety and not be inspected too closely. Nevertheless, when it is taken out, the quality of the grain that is left advances in grade.

I am speaking now entirely of the wheat raised in my part of the country. The light grains are taken out by the modern process, and that necessarily improves the quality of the grain left. The former varies; the better flour-making wheat is left behind. All foreign stuff, including the inferior wheat, is taken out, and necessarily the wheat that remains is entitled to be advanced in its grade.

Continuing the reading from Mr. Merrill:

The classification of grain into grades is but the expression of expert judgment. Difference in the judgment of different men when, as in Chicago, 50 or more at times are required, constitutes the variation sometimes complained of as amounting to inefficient. It will be readily seen that 50 men, working singly and apart from each other, may differ in instances to a degree which those less expert may recognize; hence any system which gets away from the judgment of individuals and in its place puts the combined judgment of several of equal experience and ability may fairly be held to be an improvement. Track inspection is the judgment of an individual. Room inspection is the combined judgment of several. Room inspection—sometimes called office inspection—has the added advantage of laboratory aid, when it is needed, as in determining the percentage of moisture or of mixture which other grain or any of the several conditions which require careful analysis and exact determination. Frozen moisture in grain is difficult to judge even approximately under favorable conditions, but wholly impossible to determine by one whose sensibilities are numbed through exposure. The judgment of an expert inspector who has been on the track several hours in the early morning with a zero temperature is practically of no value in determining the moisture content of new-crop uncured frozen corn. The laboratory test, so easily accomplished under the room system, is exact. The efficiency of the room method rests upon exactness in sampling the cars, for the inspectors fix the grade of car as represented by the sample taken from it for that purpose.

The capability of the samplers to judge of variations found in different parts of the same car requires that they also shall be expert judges of quality. With laboratory aid and with the presence of several inspectors to render combined judgment, there is small chance for error in grading. But with cars loaded full, even to the roof, a most common occurrence, it is impossible in every instance to secure a true sample, one which accurately represents the quality of the entire carload. The track inspector is equally handicapped when cars are so loaded; therefore errors due to this cause, which is the chief one and responsible for more mistakes than any other, are not greater under the room method. The railroads are responsible in a large measure for this difficulty. They require loading to a given weight, in accordance with the capacity of the car, usually to within 10 per cent of its marked rating. Wheat and other heavy grains can be so loaded and leave enough room for accurate sampling, but oats, especially in years when the test weight per bushel is light, gives the inspection departments much trouble. Within the experience of the writer the minimum carload has mounted from 16,000 pounds to 10 per cent below the sixty, eighty, and one hundred thousand pound cars, respectively, which comprise mainly the equipment of all roads at the present time. Railroad tariffs provide for minimum loads of 10 per cent below marked capacity of cars. To avoid payment of a penalty, when necessary to do so cars are loaded full. Railroad tariffs which provide usual tariff rates on such weight as cars may contain when properly loaded for thorough sampling for grading purposes.

These and kindred difficulties of the inspection departments pertain entirely to the "in inspection"; that is, the grain arriving from the country to be inspected for the first time. The "out inspection"—that is, grain loaded at market centers for shipment—does not involve the same difficulty. It is sampled as it runs into the car or vessel, its true qualities thus being easily noted. Occasional error where the volume of business is large must be expected, yet mistakes are few in number when compared with the magnitude of the business done. Last year in August the receipts of oats in Chicago were above 1,000,000 bushels per day; to this add receipts of all other grains, amounting in all to approximately 3,000 cars per day, and the importance of the function of grain inspection as carried on in the several markets of the country where it is practiced becomes evident.

The mere fact of placing the inspection system under the Federal Government will not change by the conduct of a single inspector the method of doing business in Chicago. I might enlarge the statement and say it will not change the method of doing business in a single one of the great primary markets for the staple grains of this country. No one would for a moment favor impeding and clogging the commercial channels through which the collection and distribution of grain is made in this country. All it can usefully do is to fix uniformity of standards and then require the men who are now actually engaged in the inspection service to grade up to those standards and thereby secure the uniformity desired.

Mr. Merrill continues:

Its value to the producer and to the consumer of grain is apparent. It was said a few years ago by an Englishman of prominence in the grain trade that of all the inventions of human ingenuity in the grain business the American system of grading is the greatest. I have said that it is distinctly an American institution. Canada is the only country which has fully adopted it. Nearly all foreign countries prominent in the exportation of grain handle it as it is done in our Pacific States, in bags. Some of these countries have adopted it in part, and whenever they shall have adopted the method of handling and storing grain in bulk it will of very necessity be also adopted. The Australian Government and also that of South Africa have made a formal investigation of our methods within the current year.

Bear in mind the testimony of this witness is not that of 1909, 1908, and prior years, but now, or 1911 and 1912, while the very testimony used to support this bill was taken January 16. The larger pamphlet I hold in my hand is dated 1908 and runs along through until April of that year. Since that time six years have elapsed. Six years is an age in commercial life. Six years, the way business changes, the way the methods change of transacting business—six years in the city of Chicago or the city of New York—is an age in the practical affairs of commerce. Go out to some part of the city that is visible to the naked eye, that can give you tangible evidence to the physical senses six years after you had been there, and you do not recognize the landmarks in the cities of New York and Chicago in places where these currents of trade change and where the improvements keep pace with the change. So in six years' time the course of trade and improvements advance; the evidence on which this bill is based, taken in 1908, and the arguments made to sustain it are a little stale and are not directly applicable to the reasons that are urged for its passage.

Sir Thomas Price—

Mr. Merrill continues—

commissioner of harbors and railways for the Transvaal, made a tour of this country in the early months of this year—

That is, in 1911, three years after the testimony is taken that is quoted here—

for the purpose of inspecting at Chicago and at country stations in Illinois terminals and country elevators. He remarked to the writer that our system was most complete and our advancement from the older method of handling in bags marvelous. In foreign markets commerce in grain is carried in contracts known as "rye terms," the final adjustment of which is a decision of a committee which determines if the commodity is of the quality contracted for.

Now, here is where the trouble comes in. No exporter from this country wishes to sell his grain in a foreign market on "rye terms." He is troubled with the same trouble that the shipper in North Dakota is. The shipper in North Dakota wants his inspection made in his country under his eye, and wants the buyer to take his inspections whether they are right or not. That is where the trouble comes in. In other words, it is a part of the same old contention that the buyer shall take the article as sound and ought to give the price that the seller wants, and it ought to be graded according to the seller's views of it. It is the old contest between the buyer and the seller. The grain comes down to Chicago, and the buyer is not satisfied with the grade. It goes to Duluth or Minneapolis, and he is not satisfied with the grade. The shipper takes it for export and cleans it and puts it in a condition where it can be sent to a foreign market, and when he undertakes to export the small surplus of our total production that goes abroad he is met with the claim that he must sell on "rye terms." That means, abroad, that when the grain is delivered its quality is to be fixed by a committee of inspectors in the foreign country. To avoid that the contracts are entered into in this country with the clause that the official inspection certificates are to be final on the quality of the grain. Out of that complaint grows the criticism read in the report of the committee.

We find in the evidence an account of an association in Europe to improve the quality of our grain exports from the United States and help our export trade. The efforts of foreign purchasers may be unselfish and nonmercenary, but it is open to question as a basis to legislate for our own people.

Mr. Patterson seems to be quoted, if I remember correctly, on both sides. Mr. Patterson, after testifying that our system in this country of the official inspection of grain is the best that human ingenuity has devised, turns around a short time afterwards and criticizes it and finds that our system has destroyed the export trade of this country.

I think it is pretty generally understood that our export trade is very small in all of the staple grains. Our export trade of corn is remarkably small; our wheat export is even smaller yet. The corn exports have been steadily diminishing for many years. At one time it was supposed that the United States

controlled the area of corn production that made it a merchantable product in the markets of the world. That is an error. Many millions of bushels of corn are produced in the South Temperate Zone, in Argentina, and similar latitudes, where both soil and climatic conditions are favorable. So Europe supplies herself largely, both as to price and as to quality, by imports from South America. Consequently we have had to develop the uses of corn in this country. At one time corn had a very limited use. When its consumption was practically confined to food purposes for man and beast the price was low. We can remember when corn was not worth the husking in some parts of the United States; it was used for fuel. I can remember very well when I was husking corn of taking it out of the field and selling it for 17 cents a bushel at one time and at another for 14 cents a bushel, and it was better corn when shelled than that which ordinarily now goes on the market.

In this country the newer the soil is the more it produces. Virgin soils better the quality of the grain. In this country we have not reached the point, as they have in the Old World, where we fertilize our soil and restore it and build it up in such a way that our grain goes back to the original type when the soil was new. Let me state that the testimony, not only of the buyers and of the commission men, but also of the millers, on this question is invariably that where the northern spring wheat comes into the market from the Dakotas or comes across the line from Canada, as the soil is growing older the quality of the wheat is deteriorating; that it is not as firm; that it is not as good, running a general average, for flour-making purposes in the mills as it was when the soil was newer. We must restore the fertility of the soil; then we shall produce a better grain. Mr. Merrill continues—

While this business necessarily is carried on with honor on the part of the buyer, yet it is well known that he rarely gets the worst of the trade. The seller can never know the final outcome of the transaction until the arrival of the grain and the action of the committee. Many bitter complaints are made by sellers on this side of their treatment in this regard on the other side of the Atlantic.

I wish to add here, before reading further from this article, that probably not more than 4 per cent of the corn crop of the great Mississippi Valley country is exported; 5 per cent would be a strong limit. It was about 1½ per cent of the 1911 corn crop. The other 95 or 96 per cent of it is consumed in this country. The domestic market is the market for us to develop; the domestic market is the one for us to keep in view when we are speaking of inspections. I do not believe, for my part, that any complaint of a foreign buyer would justify us in making a rash experiment in the absorption of the inspection system of the States just to meet the demands of the export trade.

I do not know how many merchantable products are made out of corn alone. According to the last return I had there were 101 of them. That included every possible use to which it can be applied, not only the Kentucky use that brings hilarity and gladness and subsequent repentance, but what is wasted for bread, as the old lady said down across the Ohio River.

One hundred and one uses of corn, and possibly more, constitute to-day the limit of its commercial use. So that as we have developed its commercial uses our export has fallen off, because with these uses the domestic demand has increased. I now continue reading from Mr. Merrill's statement:

Because the foreign buyer of grain on "rye terms" has the advantage of the sellers he naturally objects to buying on American terms, which are "loading inspection certificate final." American sellers of grain abroad, for reasons stated, almost without exception, refuse to sell on foreign terms. But the foreign buyer is so notoriously a buyer of the lower priced article, if he be offered standard-quality grain, with the representation that it will undoubtedly arrive in a safe condition, and at the same time is offered an "off grade" at a little less price, even though he be told that the risk attending the shipment of it should be considered, that its safe arrival can not be promised, he will, almost without exception, buy the cheaper article. And if he be told that he can insure safe arrival as to condition for less than half a cent per bushel, he will decline to incur even so small an expense and assume the risk himself. With full and fair warning he makes the contract, and when it results unsatisfactorily to him or, more likely, to his customer, to whom he sells "to arrive," much and loud complaint is made about "American certificates," and talk will be heard of "posting" the market from which the grain was exported and which certificates the grain. The writer, acting in an official capacity, has had occasion to inquire into and investigate foreign complaints about American grain, and is just the result as to facts outlined above. It is not claimed that our business practices are always free from regrettable instances. That would be impossible. It is but fair to say that foreign buyers are as much at fault as our sellers to them on this side. The major part of the complaints made relate to winter and spring shipments of maize, or Indian corn. From the beginning of the exportation of this cereal to within the space of 10 years the United States had so large a surplus of this grain that the larger portion of—indeed, practically all—that was sold abroad was of the previous year's crop, well cured and qualified to bear shipment, with safe arrival assured as to condition. Foreign buyers confidently relied upon it to do so. Our maximum of overproduction was reached in the year 1896, at which time we had several hundred millions of bushels of previous crop corn on hand at the beginning of winter, and the price for No. 2, which was the standard contract grade, sold as low as 19½ cents per bushel. Since that time our own consumption has steadily and rapidly increased, and notwithstanding we have also increased our production until, the last crop, that of 1910, exceeded three thousand million bushels as against two thousand millions at the time of the low prices referred to. Practically speaking, there is now no previous year crop corn on hand in this country on December 1. The effect of this is that the foreign buyer as well as the home dealer must of very necessity, if he buy corn at all, take from the new crop uncured, moist corn, unfitted as yet to bear prolonged shipment, especially across the ocean. It would appear that the United Kingdom and European buyers are slow to appreciate the simple fact, and because of successful purchases of former years continue to buy uncured corn with confidence. The buyer is fully advised of the risk he assumes, and he is plainly told that only artificially dried corn will take the place of the dry corn of summer; but as this adds materially to the cost, he buys the lower-price grade and takes the risk. And, as before stated, when the purchase does not turn out right, he complains bitterly and asserts that our inspection system is faulty. Indeed, the same English gentleman, quoted herein as complimenting our system of grading, now expresses his belief that our practices have become so very reprehensible and uncertain that the Federal Government should assume the function of inspecting grain.

If the foreign buyer would insist upon buying on the basis of uniform inspection rules, and would use care in buying those grades which will safely bear shipment, or when buying new-crop corn would do so on a specified moisture content of not above 17 per cent in winter and 14 per cent in spring months, he would, as shown by experience, have no trouble, the safe arrival of the grain being thus assured. Moisture-content certificates are now obtainable in all markets. The United States Government maintains laboratories at all shipping centers, and nearly all exchanges likewise possess them. Shippers may use either. The Government renders the service free. With the advent of summer the trouble disappears, nature having completed the cure through the natural drying of the corn as it reposes in the crib of the grower unshelled. But, by way of emphasis as stated, the foreign buyer persistently prefers to buy cheaper corn, cheaper because of the higher moisture content. The fault is his own. He may eliminate that of which he complains by buying a higher grade of grain, that which has been kiln dried to a safe shipping condition. It is a mistake, in view of these and other facts, to attach too much importance to complaints of this nature. There is small reason for our representatives in Washington asserting, as some of them have, that our commerce is being injured by our exporters. The trouble with the whole matter is not original with them. It has its origin primarily abroad. The foreign buyer can always buy any grade or quality he wants to buy, and he has no excuse deserving of respect when he buys a cheap article or when he neglects to use ordinary prudence in making contracts.

Mr. McCUMBER. Would the Senator object if I called his attention to some of the evidence in this case? A buyer and exporter of grain sent a sample to London to get an offer upon the grain that was raised in the vicinity producing the sample. The offer received was considerably above the market price, provided the foreign purchaser could get a hundred thousand bushels of that character of grain. This dealer tried to see if he could export that amount of the sample grain from New York, but was informed by the New York exporters that he could not do so without mixing it, because if he gave the foreign purchasers a high standard of grain it would fix that standard in their minds and the dealers here would have great difficulty in then measuring up to the foreign demand thereafter, and that therefore it was better to send them a lower character of grain.

Mr. SHERMAN. Certainly.

Mr. McCUMBER. That is in the testimony.

Mr. SHERMAN. Does the Senator wish to read from testimony?

Mr. McCUMBER. No; I have stated it.

Mr. SHERMAN. I understand the Senator from North Dakota has nothing to read additional to that which was referred to and read during the course of his address here?

Mr. McCUMBER. I do not know whether or not I included that in my address, but I think I did.

Mr. SHERMAN. The Senator either referred to it or read it, I remember.

Mr. McCUMBER. Yes; it is in the testimony.

Mr. SHERMAN. This is entirely consistent with the uniform course of trade, or such a small part of it as relates to our exports. If 100,000 bushels of No. 1 corn should be bought under the conditions referred to by the Senator from North Dakota, it would probably lead to complaint. If 100,000 bushels of that grade were bought, such a market could not be sustained. The uniform experience and evidence of every exporter is that foreign buyers persist in buying the inferior grades. They prefer the lower prices of those grades. The isolated case of the dealer mentioned could not change the general course of the export trade, which is, after all, fixed by the foreign buyer and not the seller. It is most improbable that the American seller can dictate terms to the European buyer, when the latter has the markets of the world to choose from. The case loses its strength when it is remembered the buyer fixes the terms of his purchase. If he wants high grades, he can get them. But a solitary instance could not induce an exporter to depart from the established course of trade. Such a market would not be created so as to pay.

Mr. McCUMBER. So that there may be no mistake, I will say that the particular grain referred to in the instance cited by me was wheat and not corn.

Mr. SHERMAN. Very well. I will let the answer stand just as I gave it. The reason would be just as pertinent. Mr. Merrill continues:

Double inspection—

Referring to Senate bill 120—

would be imposed on a large quantity of grain, inasmuch as present systems would be continued. This, so far as it would apply to the initial grading, would be borne by the farmers, for all expenses incidental to marketing produce is deducted from the price originally paid the producer. And, likewise, in its application to the final disposition of the grain if interstate business, the buyer would pay for it in the price. If double inspection was thus supplied to all of the grain received and shipped from Chicago alone, it would amount to $200,000 per annum at the current rate of 50 cents per 1,000 bushels.

I now wish to read from an article written by the chief grain inspector of Illinois, W. Scott Cowen, who, in the same number of the Annals of the American Academy of Political and Social Science, on page 78, gives a description of the grain inspection under the laws of that State. I wish to insert in the RECORD here, by way of apology for taking the time to quote from these articles, that at no place have I been able to discover similar facts in any of the committee reports. Some of these gentlemen have testified; I think, possibly, Mr. Merrill testified, but he did so in 1908 or 1909, and at no later date is there anything in the hearings from him or the grain trade as affecting this bill. The only way, therefore, that I can put the matter in the RECORD so as to complete the case is to read from these different articles giving the net result of the experience of these men. I read first from page 80:

The essential and material elements of correct grain inspection are uniformity and accuracy; and under any system which does not permit of a constant personal supervision of the work of all inspectors these results can not be obtained. The tendency of the inspector at the track was to follow an absolutely safe course and to be sure that when a car was given a certain grade it was fully entitled to receive it. In "line" cars the tendency was never to give the grain the benefit of a reasonable doubt, to which, in my opinion, it is entitled.

I want to suggest here that Mr. Cowen criticizes some of the defects in the service as he found them in the course of his experience. He furnished a remedy, and the criticisms which have been made have no just basis since the change in the method of inspection. I now continue the reading:

At the elevator on outgoing shipments the opposite condition prevailed. Here the grain always received the benefit of every doubt, and it was the duty of the high-salaried elevator superintendent by scientific mixing to see that the "doubt" usually existed. It was, therefore, between these in inspections and out inspections, the men working under direct opposite pressure that there was a constant growing part, the farmers' produce receiving a rigid inspection when received at the market and a lax inspection from the elevator when the grain was released for shipment.

Recognizing these conditions as prevailing in the Illinois department when I assumed charge, I at once gave the subject serious consideration. The first move was to develop a school of instruction for the inspectors and by the use of type samples of the different grain and grades seek to instill into their minds a greater degree of uniformity and accuracy. The inspectors were required to report frequently at the office of the chief inspector, where these type samples, and ofttimes samples of grain that they themselves had previously inspected, were placed before them and they were required to record their respective decisions as to the different grades. When errors were made they were shown to the inspector making them and their mistakes in judgment carefully explained. These examinations, from an educational standpoint, proved very beneficial, as the differences of opinion were at these meetings fully discussed and adjusted and the inspectors were thus enabled to develop more accurate and uniform conclusions.

Improvements were quite noticeable as the result of these reviews; still the inspection as a whole was far from satisfactory. Further investigations were made, visits were paid to the inspection departments of other States, and frequent conferences held with the grain committee of the board of trade. As a result I became thoroughly convinced that there was but one final solution to the entire problem and that there must be a careful review made of every car inspected and no distinction should be made between grain arriving and that being shipped out.

Thus originated the system of "office" inspection that is used in Illinois to-day, a system that preserves annually to the producers of grain large sums of money and renders to the trade generally a service at once complete and satisfactory. This plan in general provides that samples of every car or boat of grain inspected in Chicago shall be subject to review by the most competent inspectors in the department, and that reinspections or appeals may be allowed to those desiring them with the least possible delay.

"Office" inspection consists in collecting samples of all cars of grain arriving daily on all of the different railroads entering the city of Chicago; bringing these samples to the main office of the inspection department, where are assembled a corps of the most competent inspectors procurable; and there under most favorable conditions of light, temperature, and atmosphere the samples are taken charge of by the inspectors and the grain carefully graded therefrom. The collectors of the samples are divided into groups of men, the number in each group being adjusted in accordance with the average daily receipts on the respective railroads to which they are assigned. Each group of samplers is under the control and direction of a chief sampler, who in most instances had previously been a regular grain inspector. This chief sampler is held responsible for the work of his assistants and the strictest discipline is enforced. To add to and increase the efficiency of these several groups of samplers there is a supervising sampler, who was previously a regular grain inspector, whose duty it is to travel daily from one road to another as seems necessary to observe and "keep tab" on the work done by each group and see that every man does his full duty.

The agents of the different railroads deliver each morning to the chief sampler of each group of railroad notices of the cars in the yards ready for sampling on that particular day, and these notices are brought to the main office with the samples. The samples consist of 2-quart bags filled with grain drawn from different parts of the car and representing its average contents. In case of differently marked conditions in the grain or if a car shows that it has been "plugged" for the purpose of deception several samples are drawn to indicate the various differences of quality and the condition of the contents. In case of a bulkhead car each compartment is sampled as if from an entire car. These samples are hurried by the first train into the city and are met at each railroad station by an express wagon operated for the department and delivered at once at the main office.

The position of a "track grain sampler" is in no way an easy or an inferior one. It is of the greatest importance and fully as responsible a position as that of the grain inspector who grades the samples upon their arrival at the main office. The sampler's work must necessarily be correct as to the samples of the contents of the cars, as the inspector at the office depends entirely upon the accuracy of the samples placed before him in making the grades. A grain sampler must be in good health and strong physically; able to endure exposure in all kinds of weather. He must also be intelligent, industrious, and full of enthusiasm, always recognizing the responsibility resting upon him and willing to endure many hardships in the performance of his important duties.

On the arrival of the samples at the main office they are immediately taken in charge by the inspectors. The bags containing them are placed upon a shelf attached to each inspector's table. They are then emptied one at a time into a tin grain pan or receiver and immediately inspected and graded. In case of what is termed a "line car"—that is to say, a car so nearly on the dividing line between any two particular grades that the inspector hesitates or is in doubt as to the grade to which it is entitled—he calls on the chief grain inspector or the supervising inspector, who is always present, and their combined judgment determines the grade.

Frequently all of the inspectors are called around the table holding some particularly difficult sample, and each inspector is required to make a grade for it and give his reason therefor. In this way a full and free expression of opinion is obtained, and through the interchange of such opinions educational suggestions are developed and consequently a greater uniformity of opinion results, as well as greater accuracy.

Immediately after the grade has been determined and the same noted upon a card, signed by the inspector making the grade, this card is placed in the bag to which the sample has been returned and passed to a table at which is seated the record writer, who takes the card and enters all of the notations thereon upon a record sheet. These notations consist of the car number, name of the railroad over which the car arrived, the grade given the grain, and the reasons given for so grading the sample, with the name of the inspector who graded it and the sample hook on which it is to be hung.

The sample is then carried to what is called the "splitting department," where a group of men stand at tables especially built for the purpose. These men take the samples and divide them into equal parts. One-half is placed in a paper bag on which is written the car number and the initials of the railroad over which the car arrived, the grade fixed, and the name of the firm to whom the grain is consigned. The railroad notice is placed inside this paper bag along with the sample. To verify the first inspection, the samples are once more carefully reviewed by two inspectors stationed in the splitting department whose duty is to closely examine the notations written on the bags to see that they are correct. They also review the contents, and if an error has been made it is then corrected.

If all these precautions are necessary under the present system to assure a correct grading, what must have been the chaotic conditions under the old system, when there was no check whatever on the inspector's work, working, as he did, alone and dependent entirely upon his own unassisted judgment? It is surprising now that grain dealers exercised the patience which they did for so many years with such a system.

I read this part of the chief inspector's statement to show that some complaints in former years were well founded. I read it for the further purpose of showing that at present the causes of complaint do not exist. I continue the quotation from Mr. Cowen:

After this second inspection or review the samples are passed to an authorized agent, whose duty it is to place them in baskets for delivery to the board of trade. Messengers then hurry them to the exchange floor of the board of trade where they are placed on the tables of the firms to whom they have been consigned. The other half of the sample is returned to the bag from which it was taken and carried to the sample room and hung upon a revolving sample rack. Each sample being numbered, it is placed upon a hook having the number corresponding to that of the sample, where it can be readily located if necessary. These samples are preserved upon these racks for 24 hours, and emptied.

When reinspection is now asked for, a decision can be obtained within 30 minutes, while formerly it required from 2 to 13 days, during which time the burden of risk, frequently very expensive, was entirely on the shipper. The regular inspection yards being located long distances outside of the city limits the cars had to be switched to what are called "the inner yards" for reinspection, involving the risk and loss of time just mentioned. These delays were frequently not only the cause of demurrage charges but also of the grain getting out of condition, making it necessary in such cases to finally fix a lower grade than the one originally made. This would not have occurred if the grain could have been reinspected more quickly. Note the contrast with the present which by its prompt and efficient service absolutely eliminates all such delay and prevents the loss resulting therefrom.

The belt-line road that has been built in Chicago for the purpose of facilitating the switching and transfer of incoming cars and many other improvements and added facilities have made it possible for much more rapid work and less delay than in former years. We have constantly, in the transportation

and inspection system in Chicago, worked toward that end both in the administration of affairs and in legislation designed to keep pace with the development of the grain business. Continuing the quotation from Mr. Cowen:

This is a general description of the work of inspecting grain arriving, which is performed much more rapidly than it can be described. It has developed to a much greater degree than ever before known on the Chicago market. That accuracy and uniformity in the inspection of grain was much desired by all intelligent and honest dealers, and has obviated the many complaints that heretofore were received because of the lack of uniformity and correctness.

A satisfactory system of inspecting grain "arriving" at Chicago having been developed, the inspection of that "loaded out" of the elevators was next given attention. It had long been claimed that the inspection in and out of elevators was lacking in uniformity, it being asserted that the inspection in was much more severe than the inspection out. To overcome this condition it was determined to review or reinspect the work of the house inspectors stationed at the different elevators. To accomplish this an order was issued requiring carefully drawn samples to be taken from each car or vessel of the grain inspected out; these samples are delivered by special messengers daily at the main office where they are at once reinspected by a board of inspectors under the personal supervision of the chief. If the work of the inspector at an elevator is not approved by this board of review, the grades given by him are changed to agree with their decision, the house inspector being notified accordingly, a record is kept of each car or vessel. In this way the inspectors' work is checked up, and the inspection department placed in a position where it can intelligently answer any complaints or criticisms that may be made at any future time respecting any particular shipment or parcel of grain so inspected. This does away with the objection, dating back so many years, to the effect that the purchasers of elevator grain received only the very lowest or "skin" grade. It is believed the department can now assure a just and uniform grading of grain both in and out.

Since the adoption of the present system the results have surpassed my most sanguine expectations. Complaints from shippers and purchasers have almost entirely ceased. Many errors that under previous methods were unavoidable are now prevented.

I wish to read from the same article by Mr. Cowen respecting the length of service of the inspectors in the Chicago grain-inspection business:

In the Illinois department the men intrusted with the work of inspecting are all old in the service, and a number of them were connected with the board of trade and engaged in passing upon the quality and condition of grain even before the State department was founded, 40 years ago. The others have all worked their way up to their present positions from those of messengers and helpers on the tracks, and have been carefully schooled in the profession. The average length of service of the supervising inspectors employed in the department is over 34 years, of the office inspectors 28 years, of the second assistant inspectors 22 years, and of the third assistant inspectors, those of more recent promotion from the ranks of helpers, 10 years.

* * * * * * *

The position of the Illinois inspection department in its relation to the public is one of peculiar difficulty and responsibility. It stands as an arbitrator between buyer and seller, between producer and consumer, and practically fixes the value of the immense quantities of grain passing under its supervision. At times it has been subjected to violent pressure in one direction from the receivers and again in a contrary direction from eastern and foreign buyers, and to harsh and often unmerited criticism from both.

Notwithstanding the criticism that has been voiced against it, the aim at all times of those in charge has been to secure such fair interpretation and impartial application of existing rules as to do exact justice to all parties interested and at the same time to maintain the present enviable reputation borne by the certificates of the department in the markets of the world. The reputation of Chicago inspection has been of slow and steady growth, has practically changed the business methods of the grain trade wherever American cereals are consumed, and it is not too much to say that the preeminence of Chicago as a grain market is due in a great measure to the public confidence in the integrity and accuracy of the work of her inspectors as well as to her favorable location, her unsurpassed facilities, or the push and enterprise of her citizens.

I wish to add here what I said in a general way on Friday last—that the grain-inspection certificates from official inspectors going out of the different points where inspection is had in that State are accepted on the market as evidence of the quality and grade of the grain purporting to be given on the face of the certificates. These warehouse certificates are negotiable, and they pass from hand to hand on the strength of the grade there represented.

I wish to read further from an article by George F. Stone, secretary of the Board of Trade of Chicago, appearing in the same number of the proceedings of the American Academy of Political and Social Science. I am reading from page 193:

To indicate the growth of the business connected with the Chicago Board of Trade and also the development of the immense territory tributary to Chicago, I would state that the quantity of flour shipped from Chicago in 1848 aggregated 45,200 barrels; in 1910, 7,038,351 barrels. The quantity of wheat shipped in 1848 aggregated 2,160,000 bushels; in 1910, 18,679,100 bushels. The quantity of corn shipped in 1848 was 550,460 bushels; in 1910, 78,623,100 bushels; the quantity received, 102,592,850 bushels. Within the same period of time the shipment of oats increased from 65,280 bushels to 77,890,100 bushels. The receipts of oats during the year 1910 aggregated 101,859,000 bushels. The receipts of wheat, and of flour in its wheat equivalent, of corn, oats, rye, and barley during the year 1910 aggregated 294,858,724 bushels. The shipment of pork in 1853 aggregated about 18,000,000 pounds. Like shipments in 1910, about 600,000,000 pounds. The shipments of lard in 1853 aggregated 1,847,852 pounds; the quantity shipped in 1910 aggregated 268,702,900 pounds. As indicating the growth of the trade in cattle and hogs, Chicago received in 1865, 339,000 head of cattle and 730,000 head of hogs. In 1910 the receipts of cattle aggregated 3,052,958 head, and the receipts of hogs 5,926,315 head. Total receipts of live stock, comprising cattle, calves, hogs, sheep, and horses, at Chicago during the year 1910 aggregated 14,452,490 head, valued at $357,145,681; and from 1866 to 1910, inclusive, 462,984,309 head, valued at $8,582,329,245. Prior to the year 1853 we possessed no record exhibiting the volume of trade in pork, lard, butter, or wool, but the increase in the actual transactions in these products is something marvelous.

The statistical information comprised in the annual reports of the Chicago Board of Trade not only relates directly to the trade of Chicago in grain, provisions, live stock, hay, flour, lumber, cured meats, dressed beef, butter, cheese, hides, grass seeds, etc., but also has reference to such commodities in other principal markets, both domestic and foreign. This varied official information essential to a comprehensive understanding of the scope and importance of the business transacted and fostered under the rules of the association, is daily and hourly, and, in many instances, instantaneously, at the service of the members of the board to guide them to an intelligent conduct of their business and to enable them to fully provide the producer with this great range of information, designed to aid him in intelligently marketing his products and in instructing his commission merchant as to the conduct of consignments made to that commission merchant. Telegraphic facilities are also provided for unhindered and prompt communication with shippers, with customers, with purchasers, and with consumers. Representatives of the press have constant, unhindered access to all this information in order that the public may be kept fully informed regarding values and the general movement of merchandise dealt in by members of the board.

No commercial or financial annual statement can be a complete and an intelligent one without an official knowledge of the volume and farm value of the chief agricultural crops which constitute the basis of the Nation's prosperity. Much minute care is bestowed upon these compilations. Their relation to our financial and commercial affairs is an intimate and a vital one. They disclose the source of our national wealth; the energy, enterprise, and character of our farming population. They set forth not only the inducements which our Western States present for the investment of capital, but inducements to the worthy and ambitious to make their homes where nature lavishes her rewards upon those who, with honest and industrious effort, seek her favors.

The full significance of this showing no one can fully comprehend save the careful and observant student of political economy. It is being realized as never before that the farmer is the true wealth producer; the fruits of his toil sustain our commercial and industrial life and, in a far-reaching and profound sense, furnish the vitalizing forces of our national progress.

The volume and value of the chief grain crops of the West fix rates of interest, determine to a large extent rates of transportation and the volume of interstate commerce; they measure the extent of credits given by merchants and bankers, and place a proper value on all kinds of collaterals; in fact, directly and indirectly, the crops of the Mississippi Valley affect every financial and industrial interest from one end of the land to the other. In this constant and vital relationship the Chicago Board of Trade occupies a preeminent position. The Chicago Board of Trade is the grain and provision clearing house of the world. It stands between the producer on the one hand and the consumer throughout the civilized world on the other. Behind the multiplicity of its transactions are not only our own chief grain crops, but those of other surplus grain-producing countries. On the bulletin of this exchange is posted the price of wheat, maize, oats, provisions, etc., in every considerable market throughout the world. This information, with absolutely no restriction and free of cost to the public, is sent broadcast for the benefit of producer, consumer, buyer, and seller alike, without prejudice and without partiality.

I wish to make the statement here that those who write the market reports in Chicago, the reporters who are skilled in that line as the result of many years of reportorial work, go in where this information is accessible and are given it without cost, as freely as the members of the board of trade have it or those concerned. The market reports published by the great metropolitan dailies showing the condition of the grain trade, quantity, movements, prices, production, quality, everything concerning foreign markets, the weather conditions, the shipment of the export surplus, the conditions in South America, in the Danube country, all over Europe, world-wide conditions in grain-producing countries, all of the thousand and one things, from the fly and the frost and crop conditions and weather and storms to the average production that leaves a surplus available for export—those are all touched off by cable and by telegraphic wire by those who are expert in all the various lines of that kind of production throughout the world. They are wired and cabled into Chicago, put upon the boards, and the newspaper market reporters go wherever that information is available, put it in the metropolitan papers, and it goes out to the public free of charge.

For that the members of the Board of Trade of Chicago are stigmatized as rascals by some of the witnesses. It is said here that some of the great fortunes have been built up by those who have practiced devious ways in the grain trade. The majority of the great fortunes of Chicago, with few exceptions, have not been built up out of the grain trade. There are few millionaires in Chicago who can point distinctively to grain operations out of which they made their fortune. The fortunes of that city are made in other lines—in real estate, in banking, in transportation, in dressing meats, in a hundred and one different occupations. In that city, as well as in other cities of the Middle West, the millionaires, with few exceptions, have become so because of following other lines of trade.

It is no small task to build a modern elevator. It is no inexpensive undertaking. A modern elevator requires great capacity, great durability of construction; it requires more care in fireproofing; it requires a vastly more complicated and ex-

pensive mechanism in the equipment and internal machinery used for the purposes of conducting its business. It is no longer the wooden warehouse of our boyhood days. It is now one of the best built and most complicated places the world has ever known for the storage of millions of bushels of grain.

From the days when Joseph's brethren came down to Egypt to buy corn to the present time the grain trade is a constant development. In other days there were famines. Men perished with their families by millions in the time that history has recorded. The modern market equalizes dearth and plenty. It collects the surplus to fill the deficit throughout the civilized world. With the modern warehouse and transportation system, with the modern system of grain exchanges in all the great cities of the country, from Indianapolis to Cleveland, Toledo, Detroit, Minneapolis, Chicago, St. Louis, Kansas City, and Omaha, with the development of the carriers leading out from those points, famine is no longer possible in a civilized country with the modern system of collecting and distributing food products and collecting a surplus to be availed of where there is a deficit in supplies.

For all this, for this market that has been built up, the men who have risked the work of their lives and their fortunes through many weary years are stigmatized as a band of rascals by witnesses who have testified before Senate and House committees. Who are they? Some of them are known. I would transgress the limits of decorum of debate provided in this body if I repeated what is said of some of them. Some of them are gentlemen who got into the market and failed themselves, because they did not know how to transact business. They thought it was a game, like the great American game of poker. They did not study the market. They went in, and with them it was a game of chance. They failed because they undertook to deal with men who kept market conditions in hand, who knew when and how and where the oats area was, who knew the limitations and the production of corn and wheat and rye and barley. Because they knew the amount of the visible supply and what it was likely to be at a given time, in the language of those who followed that hazardous occupation they adjusted themselves to the probable, and, of course, the men who had not the wide information failed.

The statement has been made in my presence a number of times that Senate bill 120 is one that is peculiarly advocated by the farmer. A large part of the States of the Middle West are farming communities. A large part of the people of my own State are farmers. All of my family are farmers. All of the acquaintances of my early days in the township are farmers. I was raised as a farmer. I have shucked a good deal of corn myself, Mr. President. I was raised over near the Indiana State line, where they raise good corn huskers. I think I know what the farmers want. I am taking the chances on correctly interpreting their will. Probably I have as much at stake politically as any other member of the Senate. If I make a mistake in interpreting the farmers' wants in my own State, they will visit the punishment on me.

I want to say that in all the time this debate has proceeded here, during all the publicity that has been given, I had yet the first letter to receive from a farmer until one this morning. In all the months this matter has been pending not a solitary farmer has written me in favor of this bill. I have had some protests, it is true. No farmer has protested against the bill. No farmer has commended it. They have remained silent. Some men who are engaged in the grain trade have criticized the bill. They said: "It will dislocate the course of business. It will embarrass commerce. It will provide double inspection, or it will pull up by the roots all of the existing State-inspection systems." If the farmers knew the added costs of inspection under this bill would at last be taken out of their pockets, they would oppose this bill. They will pay the increased expense of inspection, every dollar of it.

One dealer writing to me says that he prefers to remain under the inspection of officers whom he can reach nearer home than to be obliged to communicate a thousand miles with the head of a bureau in Washington. Another writes me and says that he is opposed to the centralizing tendency implied in this bill; that it is a State function, and he believes in keeping the States in the exercise of their legitimate powers, rather than to have them absorbed by a centralized Government administered at Washington. I do not blame him. I am in sympathy with him, not only on this point, but on a good many other things.

I continue reading from Mr. Stone:

No other department of business is conducted so openly, so absolutely aboveboard, and so directly with reference to the common welfare. No department of business is so free from restraint of trade. It has no monopolistic feature whatever, and permits the unhindered and healthful play of the forces of competition. It has no credit system. Cash attends the consummation of every trade, and in the event of sales for delivery at a future time, our rules provide that ample security may be obtained to protect the buyer or seller, as the case may be. The breadth and activity of our market give to registered warehouse receipts, protected by law, a convertible and instantaneous value as collateral security.

I balance this testimony against that of these witnesses, some of whom indicate before they are through testifying their extreme rancor or their lack of understanding of the way business is transacted on the board. [Continuing reading:]

This system, with all its safeguards, besides providing an economical and safe marketing of the products of the farm, primarily for the benefit of the producer, safely employs an enormous amount of funds seeking investment by our great moneyed institutions. Call loans made on these warehouse receipts, fortified by the State statutes and recognized by the rules of this board, are most desirable, and are so regarded by our national banks. No business is more legitimate, no business is more conservative, no business is more vitally allied to the varied industries and commerce of our city, no business is more embedded in honor or intrenched in the soundness of a contract than the business conducted under the rules of this organization. No contract, either written or oral, is more binding than the contract to which a member of this association is a party. No informality, no absence of legal technicalities will avail under our rules to absolve a member from an undeviating compliance with every term and every feature of his business obligation. Every pretext for the avoidance of such obligation is brushed aside by a jury, not of a court, but of business men—his peers—and is not permitted to obscure the spirit and intent of his promises or to release him from his proper responsibility as a man and as a merchant.

I am taking this time because to the constituency that I in part represent this bill is of vital concern. It does not arouse any considerable interest among many Senators in the States having no primary markets. The passage of this bill means the destruction of the inspection system in every grain-producing State where the system exists and where these primary markets are found. Every State can have an inspection system if it wishes to create it. The occasion, however, does not cause its creation unless there is a primary market for the collection and distribution of grain.

With matters in this condition there has been a constant development of legislation. In 1913 the Railroad and Warehouse Commission of Illinois ceased to exist. There was substituted for it a commission known as the public utilities commission, very similar to a like commission in the State of Wisconsin. It has jurisdiction over every occupation impressed with a public interest, railroads, common carriers of every kind by land and water, everything that needs a franchise for its operation—all the gas and electric light companies, the public warehouses, and in general everything that we comprise under the term "public utility." A board has been appointed, and is in operation, succeeding to the power of the old railroad and warehouse commission. It now has power to control and regulate the inspection of grain. The same system prevails, with such added improvements from time to time as experience has suggested.

I have here a letter from the utilities commission of my State. I desire to read it. It is as follows:

STATE PUBLIC UTILITIES COMMISSION OF ILLINOIS,
Springfield, March 13, 1914.

HON. LAWRENCE Y. SHERMAN.
United States Senate, Washington, D. C.

DEAR SIR: Your letter of March 4 to Gov. Dunne has been referred to the undersigned, who has charge of the Illinois grain-inspection department, which is under the jurisdiction of this commission.

Not being at all familiar with the McCumber grain-inspection bill, I am somewhat at a loss as to how it would affect the inspection of grain in Illinois by our department. However, for your information permit me to say that in order to bring about uniformity in the inspection and grading of corn, the Secretary of Agriculture, by an act of Congress, was authorized to fix and promulgate certain grades for commercial corn, to be applied July 1, 1914, in interstate business.

As soon as advised of this action the undersigned called a conference in Chicago of representatives of the board of trade, the different grain dealers' associations, and producers.

This takes in every grain dealer of every kind in the State, farmers' elevators, and those buying as representatives of commission men in Chicago or otherwise.

I continue reading from the letter:

It was the unanimous opinion expressed at this conference that the Illinois grain-inspection department should adopt the Federal grades, and upon that recommendation this commission issued an order, a copy of which is inclosed herewith, which adopts in toto the grades for corn promulgated by the United States Department of Agriculture.

I have no doubt but that the policy of this commission will be, as is already indicated by the action referred to above, to adopt any further grades for grain which may be promulgated by the United States Department of Agriculture. This commission is not only desirous of securing uniformity for all grades of grain in Illinois, but throughout the United States, and will cooperate with the Federal and State Governments to that end.

I have not been able to get other than newspaper reports of the investigation which has been conducted in Washington relative to the Chicago Board of Trade. I infer, however, that this investigation is largely directed toward the dealing in futures and is not directed at the efficiency of the grain-inspection department of this State.

You state that Peoria and other cities of Illinois are affected. For your information, permit me to call your attention to the peculiar wording of the Illinois statute as regards grain inspection. The official

State inspection can not be installed in any county of Illinois unless the board of supervisors of that county petition the commission to make such installation of supervision; hence the situation as it now is, i. e., State inspection is only in Chicago and East St. Louis; Peoria, Cairo, and other points preferring local inspection to State inspection. Therefore, if there is any criticism of the inspection of grain originating at Peoria or Cairo, it should not be directed to this commission, but to the legislature for having failed to compel a uniform State inspection throughout the State.

In conclusion, when you have occasion to speak for Illinois, you may feel entirely warranted in saying that it is the purpose of this commission, having in charge State grain inspection, to cause the same to be as efficient, thorough, complete, and satisfactory as is possible.

The writer has been all his life interested in the production, shipment, and marketing of grain, and is giving the inspection department personal attention, with the view of making it efficient, and wherever possible making the grades uniform with those fixed by the Federal Government.

The fact that the inspection service of this department is satisfactory is attested by the further fact that no complaints have been received by this commission criticizing the inspection since the commission was appointed January 1.

Any further information which you may desire will be very gladly furnished.

Cordially, yours, FRANK H. FUNK, *Commissioner.*

This is the order made by the Illinois Public Utilities Commission:

It is hereby ordered by the Public Utilities Commission of Illinois that the following grades of corn, which have been fixed and promulgated by the United States Department of Agriculture, be, and hereby are, fixed and promulgated as the grades for commercial corn to be used by the Illinois State grain-inspection department on and after July 1, 1914, and that such grades shall supersede any grades governing the inspection of corn which are in existence prior to said date;

Except that the rules for grading corn now in effect will apply on all corn in store in public elevators in the city of Chicago prior to July 1, 1914, for the period of 90 days subsequent to that date; and

Except that for corn applied on contracts made priod to July 1, 1914, for delivery during 90 days subsequent thereto the grades and inspection may be in accordance with the rules and grades for corn in force at the time the contract was made, and in no case shall corn be inspected "out" as of any higher grade than it was inspected "in" as in accordance with the warehouse law:

Grades for commercial corn.

Grade classification (white, yellow, and mixed corn).	Moisture.	Maximum percentages of—		
		Damaged corn.	Foreign material, including dirt, cob, other grains, finely broken corn, etc.	Cracked corn, not including finely broken corn.[1]
No. 1	14.0	[2] 2	1	2
No. 2	15.5	[3] 4	1	3
No. 3	17.5	[3] 6	2	4
No. 4	19.5	[3] 8	2	4
No. 5	21.5	[4] 10	3	5
No. 6	23.0	[5] 15	5	7

"Sample." See General Rule No. 6, for sample grade.

[1] See General Order 9.

[2] Exclusive of heat damaged or mahogany kernels.

[3] May include heat damaged or mahogany kernels not to exceed one-half per cent.

[4] May include heat damaged or mahogany kernels not to exceed 1 per cent.

[5] May include heat damaged or mahogany kernels not to exceed 3 per cent.

GENERAL RULES.

1. The corn in grades No. 1 to No. 5, inclusive, must be sweet.
2. White corn, all grades, shall be at least 98 per cent white.
3. Yellow corn, all grades, shall be at least 95 per cent yellow.
4. Mixed corn, all grades, shall include corn of various colors not coming within the limits for color as provided for under white or yellow corn.
5. In addition to the various limits indicated, No. 6 corn may be musty, sour, and may also include corn of inferior quality, such as immature and badly blistered.
6. All corn that does not meet the requirements of either of the six numerical grades by reason of an excessive percentage of moisture, damaged kernels, foreign matter, or "cracked" corn, or corn that is hot, heat damaged, fire burnt, infested with live weevils, or otherwise distinctly low quality, shall be classed as sample grade.
7. In No. 6 and sample grade reasons for so grading shall be stated on the inspector's certificate.
8. Finely broken corn shall include all broken particles of corn that will pass through a perforated metal sieve with round holes nine sixty-fourths of an inch in diameter.
9. "Cracked" corn shall include all coarsely broken pieces of kernels that will pass through a perforated metal sieve with round holes one-quarter of an inch in diameter, except that the finely broken corn as provided for under rule 8 shall not be considered as "cracked" corn.
10. It is understood that the damaged corn, the foreign material, including pieces of cob, dirt, finely broken corn, other grains, etc., and the coarsely broken or "cracked" corn as provided for under the various grades shall be such as occur naturally in corn when handled under good commercial conditions.
11. Moisture percentages as provided for in these grade specifications shall conform to results obtained by the standard method and tester as described in Circular 72, Bureau of Plant Industry, United States Department of Agriculture.

The chief grain inspector of Illinois is hereby directed to publish the rules governing the grades of corn herein established in at least three daily newspapers in the city of Chicago, as is provided by law, and to notify the employees of his department of the proposed change, and take such other action as may be necessary to carry this order into effect.

Dated Springfield, Ill., March 5, 1914.

JAMES E. QUAN, *Chairman,*
OWEN P. THOMPSON,
WALTER A. SHAW,
RICHARD YATES,
FRANK H. FUNK,
Commissioners.

Again, March 19, 1914, from the same authority I quote as follows:

STATE PUBLIC UTILITIES COMMISSION OF ILLINOIS,
Springfield, March 19, 1914.

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I have yours of the 16th inclosing copy of the McCumber bill, providing for the Federal inspection of grain.

I agree with you in toto, that the proper way to provide for the inspection of grain is to have it done by the several State grain-inspection departments under the supervision and concurrence with the standards promulgated by the United States Department of Agriculture. This will prevent double standards and duplication of departments and employees.

You are at liberty to use any statement or information contained in this or my letter of March 13.

It is my understanding that at the last convention of the National Grain Dealers' Association it was practically the unanimous opinion that uniformity of grades throughout the United States was greatly to be desired, and that as far as practicable the grades for grain promulgated by the United States Department of Agriculture should be adopted by the several State inspection departments.

I should be very glad, indeed, to have you furnish me a copy of the proceedings before the special committee at which a man named Greeley, ex-member of the Chicago Board of Trade, testified so bitterly against the Chicago Board of Trade.

Very truly, yours,

FRANK H. FUNK.

Mr. Funk, who has charge of the grain-inspection department of the commission named, is a farmer. Both his family and his immediate relatives have for many years been leaders in the great corn-belt region in the production, improvement, and marketing of corn.

I wish now to read from the secretary of the Illinois Grain Dealers' Association a letter dated March 30, 1914:

The grain trade of Illinois are very much interested just at this time in the passage of the Lever bill, providing for Federal supervision of existing systems for grain inspection.

Your support of the Lever bill and opposition to the McCumber bill meets with the approval of practically every grain dealer in the State of Illinois. The country shippers, represented by the State associations of Ohio, Indiana, Illinois, Iowa, Nebraska, Kansas, and Oklahoma, have been working for Federal supervision for a number of years, and it is believed that such a measure of protection will be entirely satisfactory.

Mr. McCUMBER. Mr. President——

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. I yield.

Mr. McCUMBER. Will the Senator indicate why, if the system is so perfect, as they claim it to be, they themselves want governmental supervision?

Mr. SHERMAN. They want the uniformity that comes from supervision. They oppose double inspection, which must result unless the State abandons the system it has developed and perfected in more than 40 years. The large public elevators of Chicago could not be operated under Federal law, and this would compel the State inspection to continue. Supervision would not interfere with the harmonious action of both measures.

Mr. McCUMBER. No; they want, first, standard grades which shall be uniform, and then they want Federal supervision, as the Senator has just read. Now, why do they want Federal supervision if they know that their system is perfect now and they can trust themselves?

Mr. SHERMAN. The Federal supervision is desired, and that is the purport of the letter, only in order to bring the State systems of inspection to the uniform standards that are promulgated by the Department of Agriculture, and at the same time it keeps the instrumentalities of inspection where they are, to be reached by the people who are directly affected. Supervision gives all the benefits of uniformity in grades without destroying or hindering the grain trade of the country.

[At this point Mr. SHERMAN yielded the floor for the day.]

Tuesday, April 14, 1914.

Mr. SHERMAN. Mr. President, the reason why the different State inspection systems are in conflict with Senate bill 120 is because the inspection of the grain is now made through the instrumentality of these several State systems on an actual examination. The grades are fixed by the inspectors, and they are the instruments of inspection. They belong to the several States. What the States desire is that their systems shall not be destroyed, but that there shall be a uniformity of standards of grades; and when that is done all the useful purposes de-

signed by the bill now pending are executed. These purposes of the different State inspection systems are perpetuated and provided for in the Lever bill now pending in the House. The Lever bill represents the views of the Department of Agriculture, the arm of the Federal Government that is asked by Senate bill 120 to absorb the inspection systems of the States. The Department of Agriculture opposes grain inspection but favors supervision. There is a great deal of difference between the destruction of a State system of inspection and the standardization and the uniformity of a system by which they grade the grain.

I complete reading the letter from the Illinois Grain Dealers' Association:

The utilities commission of Illinois have adopted the proposed Federal grades of corn, effective July 1 next.

Now, with Federal supervision, this would give us one system of inspection—interstate and intrastate. The supervision proposed by the Lever bill would not entail any additional expense—or, at least, but little—while a double system of inspection would entail great expense. The grain dealers of Illinois approve of your opposition, and urge your continued support of the Lever bill.

Another thing: There is a bill before the Senate known as the Pomerene bill of lading. This bill was passed by the last Senate and is now, as I am informed, out of committee, but there seems to be difficulty in getting it up for passage. The grain trade, country wide, would greatly appreciate the passage of the Pomerene bill, and your support is earnestly solicited.

Very truly, yours,

ILLINOIS GRAIN DEALERS' ASSOCIATION,
S. W. STRONG, *Secretary.*

I might go a little further in this letter and state that the Grain Dealers' Association of the State of Illinois is composed of grain handlers at every point in the State. It comprises a very extensive membership, and it fairly represents the condition of the grain trade in that State.

I read next from a letter of Mr. Canby, the president of the Chicago Board of Trade. It might be said that Mr. Canby is not more interested in this controversy than those who criticize him and the board of trade. The quality of interest renders on the rules of evidence the witnesses equally credible. But Mr. Canby has not got in the report of the committee. None of the printed testimony so far has given him a hearing. This grows out of the fact, I shall assume, that the report of this committee made on the 4th day of February, 1914, was upon the evidence already taken. But little of the evidence reached up to the time of 1912, two years ago. A large part of it was from five to six years old on which this committee report was made.

Mr. Canby, in a letter of March 9, 1914, says:

CHICAGO, *March 9, 1914.*

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

MY DEAR SENATOR: * * * In regard to this general subject I would say that the only certain element entering into the grading of wheat is that of test weight. The other elements are determined according to the judgment of the inspector. As a consequence there is at times a conflict of judgment as to the grading of wheat, and there always will be, from time to time, when there is an opportunity for difference of opinion. Inspectors disagree with each other, and sometimes an inspector will reverse his previous grading. For this reason there is always the opportunity offered to appeal from the decision of an inspector to that of the chief inspector. This situation would not be changed by having an inspector called a "Federal inspector" instead of a "State inspector," for, presumably, they would be approximately the same men performing the service.

In regard to the question of inspection and grading in Chicago, I would say that this work is entirely under the control of the State. The board of trade as an organization, and none of its members, can control the State inspection. Furthermore, no one would dare to attempt to influence the action of an inspector. The public-utilities commissioners of Illinois are honorable and upright men, and if anyone has any complaint to make about the service of the inspection department, which is under their jurisdiction, it should be made to them. I beg to assure you that the Chicago Board of Trade is not only most desirous to have at all times the most efficient results, but they will cooperate with any association to prevent anything but the best resuls.

If in the course of any speech made by any of the Senators, reference should be made to any statements by one S. H. Greeley before the Rules Committee of the House last week, you can state that in our opinion he is unworthy of credence, owing to his radical abuse of many things of which he has no specific knowledge. He was a member of this board for a long time, but by his actions has lost the respect of the great majority of his former fellow members. You can state most positively that there is no market in this country or in the world where the standard of inspection to-day and the grading of grain is more carefully performed with better results than in the city of Chicago.

I remain, very truly, yours,

C. H. CANBY, *President.*

Before the reading of the letter was concluded Mr. SHERMAN said:

I will insert the rest of the letter without reading.

The PRESIDING OFFICER (Mr. SHAFROTH in the chair). If there be no objection, it will be inserted in the RECORD. The Chair hears none.

Mr. SHERMAN. I wish to economize time as much as possible.

I next read from a letter of Mr. J. C. F. Merrill, present secretary of the board of trade, under date of February 24, 1914, omitting the formal introduction:

CHICAGO, *February 24, 1914.*

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

DEAR SENATOR SHERMAN: * * * Exchanges, State and local associations of grain handlers have generally united in opposing it, and thus far have succeeded. Senator MCCUMBER lives in one of the three surplus-grain States having no primary market within the State, hence the desirability of a Federal inspector at the North Dakota-Minnesota State line.

I am giving this as the view of the writer of the letter, and not for the purpose of criticizing the Senator from North Dakota.

It smacks strongly of exploiting the entire grain interests of the country for the convenience of one State. Senator MCCUMBER, in a public address at Indianapolis some years ago, said: "I know nothing of the conditions in your State or in any State except my own." Not a broad basis to rest his action on. The entire grain interest east of the Rocky Mountains has for two years past agreed to Government supervision of existing grain-inspection departments. A committee representing farmers and all classes of grain handlers is now drawing up such a bill and the Department of Agriculture of the United States is assisting, Secretary Houston having met the committee in conference and approves the action.

This was written last February. Since that time the bill has been perfected through the joint action of the persons named in this letter and the department, and it is now pending in the House under the name of the Lever bill. The Gore bill which is pending in the Senate, I think, is identically the same bill.

The public elevators of Illinois, our large class A houses, could not be operated under Federal law; therefore the present Illinois State grain-inspection department, of necessity, would continue. Double inspection, costing a quarter of million dollars at Chicago alone, and that annoyance that commonly exists between concurrent authority applied to the same thing and other objections, would be the result. Supervision, the harmonious blending of the two, will not interfere with the operation of our public houses, and will secure freedom from Federal interference of interstate shipments of grain so inspected and supervised on the charge of misbranding. It, in short, will give us the benefits without the annoyances of Federal inspection. True, it will not secure to North Dakota inspectors at the State line, but there will be no need of them. Federal supervision will result in uniformity of inspection; the same application of the same rules to the same kind of grain throughout the country, therefore no need of stopping cars at State boundary lines where there is no market for purpose of grading only.

Mr. MCCUMBER. Mr. President, with the Senator's permission——

Mr. SHERMAN. Certainly; I yield.

Mr. MCCUMBER. I might indicate that the error in the first premise, which called for inspection at the State line, according to the writer's view, evidently permeates his conclusion, and, inasmuch as there is no provision in the McCumber bill requiring any inspection at the State line, but only at the terminals and by the very men who are now inspecting under the present system, one can see how far-fetched is the conclusion which is drawn by the writer of that letter.

Mr. SHERMAN. I should like to inquire of the Senator from North Dakota if he expects an inspector or a deputy inspector to be within the limits of the State of North Dakota in the event of the passage of this bill?

Mr. MCCUMBER. Certainly not. If the Senator will read the bill, he will see that it refers only to those great terminals where inspection is now made. It does not change in any respect the present system except that it changes the persons making the inspection.

Mr. SHERMAN. However, if I have a correct recollection of the bill, it would permit, in the discretion of the Secretary of Agriculture, the placing of an inspector or the creation of an inspection point at any place in the United States, unless the bill has been materially amended since I read it over.

Mr. MCCUMBER. Would the Senator like an answer?

Mr. SHERMAN. Certainly.

Mr. MCCUMBER. I suppose the Senator wants to be accurate, and we want to meet on common ground. The very beginning of the bill shows that it is to be operative only at the great terminal markets. Then, in my own State there are places, for instance, where there are milling centers; and if they desire inspection, and if they should pay for the inspection at those points which have business enough to justify it, the Government might give them an inspection for their particular business at a smaller place.

Mr. SHERMAN. I think we are probably meeting on common ground on that point, and I read from section 2 in order to verify this hope:

That said Secretary shall also appoint, in accordance with the rules of the civil service, at each of the following cities.

Enumerating them, which I omit, concluding that part of the section with this language:

And at such other important centers of interstate trade and commerce in grain as he may consider necessary or proper for carrying out the provisions of this act, one chief grain inspector—

Who else?

and such assistants as may be required to inspect and grade grains as herein provided.

I know where these things end, and so does every other Senator. Just as soon as this is an act of Congress, wherever these complaints have arisen petitions and personal applications will immediately begin to exert their pressure upon the Secretary of Agriculture. They will demand the establishment of inspection points in the several States where inspection does not now exist. They thereby avoid the expense of creating one by the State. Sections 8, 9, and 13 are to be read together.

It is true that the grain trade, the producer, handler, or consumer finally pays the charge; but, in addition to that, there is always some expense that in the end falls on the Government. It is rare that these departments in the Federal Government are self-sustaining. It is only in recent years that the Postal Service has sustained itself. Uniformly, if you search the appropriations for the Post Office Department of the Government for 50 years, you will find out of that 50 precious few years where it has been self-supporting. It is the inevitable result of all experience of governmental operations that they run so as to create a deficit, and finally call upon Congress for appropriations in a deficiency bill. Just as soon as it begins to bear heavily upon the grain producers and handlers that soon will there be a demand that the Government bear the charge of inspection, not only at the points enumerated in section 2, but the new points that will be created by the pressure brought to bear upon the Secretary of Agriculture.

The Secretary of Agriculture is no demigod who has come down from heaven to administer affairs in this world. He is a human being like anybody else. He will have the same emotions and wear the same kind of clothes and be subject to the same political influences as all other people in this world. I have long since divested myself of the delusion that by simply calling a man a Federal officer you can thereby expect to produce perfection in his official conduct. It will be like all other appropriations of the Government. Eventually deficiency appropriations will appear in this Chamber and at the other end of the Capitol.

I will not undertake to investigate motives, but I think the general phrase in section 2, after the enumeration of certain points, is designed to cover inspection within the States from which this complaint comes. At what point will this inspection be made? On the State line? Probably if there is a collection point for freight, that would justify the request. If there be on any of the railway lines within or passing through the surplus grain-producing States a point where freight naturally collects, so that the inspector could reach the cars, there is where it will be had. I would not go the length to say that at each purchase point, at each crossroads, down at every little elevator where grain is received from the farmer there will be a demand for an inspector. I do not think that is a fair argument, although some of the witnesses here in their testimony seem to infer that that would be the case. I think, in the event of the establishment of inspection points other than the ones specifically named in section 2, it would be at such important points as would justify it reasonably, where, for instance, there are a number of common carriers collecting grain in cars in such a way that an inspector could economically and efficiently perform the service. I think that is the fair way to look at it.

That, however, will lead to an increase of the inspection service as now conducted. In the same eight States that have inspection systems that are now in operation they are conducted efficiently and economically. If it be spread out under the provisions of this bill, it will follow the course of all other developments of Federal power and bureaus.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. Certainly.

Mr. McCUMBER. That the Senator's suspicion may be allayed, let me say to him most frankly that it would be an impossibility to have anywhere within the confines of my State or within the confines of the State of South Dakota or Montana any general inspection point. Not a carload of grain goes out of those three States that does not go either to Chicago, Minneapolis, or Duluth, if it goes into the market at all. Our general roads, the large roads, that handle all our grain will pass the State lines at 20 different points. There will be neither facilities nor would there be any possible demand for them, because as they all center eventually in one of those three great places, it can be done with a great deal better facility and to better advantage in those places. So there could not be a place in my State, except some little milling places of consumption, where they might have a Government employee, and there they could have it provided the business at that mill was sufficient to justify them in asking and paying for an inspector.

Mr. SHERMAN. I have no doubt the Senator is well informed and in good faith in the statement, but I think his constituents would be very much disappointed in that construction of the bill. I do not think that is what the States concerned really expect.

Mr. McCUMBER. I want to assure the Senator that my constituents would not be disappointed. They never would expect anything of that kind. In all their discussions in the State nothing of that kind has ever been suggested.

Mr. SHERMAN. The difficulty is the grain is inspected at a distant point. At that point it is no longer the farmer's grain. He has long since been paid the price and parted with its ownership. Whenever it fails to rise to the grade the producer, or, rather, the grain buyer, expected, then there is consequent dissatisfaction. I am not complaining that it is in bad faith at all. It rises from the inherent disposition of human nature. There is always a feeling that some unfairness has been practiced. It is sold in the primary market at a distant point 400 or 500 miles away, as the case may be, and naturally they think unless it rises to their grade something unfair has been practiced on them. So I do not believe the dissatisfaction that has led to this bill would be at all appeased by continuing the inspection at the points where it now is.

I read from Mr. Merrill, secretary of the board of trade, a letter dated March 23, 1914:

CHICAGO, *March 23, 1914.*

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

MY DEAR SENATOR SHERMAN: I appeared before the Senate committee during the Sixty-first Congress, but unfortunately at the moment do not happen to have the record in my office. I think probably it is at my residence. Senator Dolliver, as chairman, stated that Senator McCUMBER had been invited by the committee to be present as a matter of courtesy. During my representation to the committee Senator CRAWFORD turned to this evidence and read it in detail, showing the quantities of each grade of wheat unloaded into the house and the quantity of each grade of wheat loaded out of the house, and asked me if I thought such practice was honorable. My reply was that it was absolutely so and very beneficial, whereupon almost the full committee of Senators looked at me in surprise. I then explained that this house was a cleaning house, sometimes called a "hospital," because it cured defects and disabilities; that the buyer for this house would not buy grain possessing inherent disability, such as must or mold; that he bought wheat which by cleaning could be made of prime quality, or he bought wheat testing a pound or two per bushel by the minimum weight allowed for No. 2 or No. 1 and by mixing it uniformly with other wheat testing a pound or two or more above would produce an average within the requirements of the rules; in other words, I explained the house did the work the farmer should have done for himself, and which had he done before selling his grade the latter would receive on its arrival at the market place the highest grade its quality would entitle it to. I further stated to the committee that it was not Federal legislation the farmer needed, it was simply a "fanning mill"; that the possession of that inexpensive implement and its use would cure his ills and that he might not with propriety ask a legislative cure for his ills which he himself created and which he himself might easily cure. I explained that these cleaning houses are numerous in all primary markets, and because of their number competition between their buyers is keen and strong and results in the highest possible price being paid for the grain in the dirt, based on its value when cleaned.

In the Northwest, where our spring wheat is grown, the inspection rules require the inspector to weigh a suitable quantity to enable him to accurately determine the weight per bushel of the seed in each bushel, and certify to the same on his certificate in order that the seller and buyer both might be officially advised of the real amount of wheat in each 60-pound weight of the mixture of wheat and seeds; and this question of dockage was the original source of all of this movement toward Federal inspection. The Dakota farmers believed, or professed to, that the State grain-inspection department of the State of Minnesota was robbing them by certifying to more weed seeds in their wheat than existed, and what Senator McCUMBER really wants is a law under which the Secretary can be induced, if possible, to place Federal inspectors at the State line.

I know the Senator will not answer this again. I am reading it only because it is a part of the letter.

So that North Dakota wheat may go to market with Federal grade predetermined, and this is why supervision of existing Federal authorities, which in effect would be a unification of Federal and State authority instead of conflicting authority, does not please him. I think I told you that the grain trade of the country is in favor of supervision, but it is very largely opposed to the creation of an entirely new Federal department.

You know, Senator, that spring-sown grains or crops have to contend with weeds to a greater degree than fall-sown crops, for the reason that much, indeed most of the weeds are tender annuals and are killed by the frost of winter, and the grain is therefore comparatively clean in the spring, and being already established, makes a growth sufficient to prevent germination of other weed seeds, whereas with spring wheat, if the germination period be cool or dry, the "fittest to survive" rather than the "survival of the fittest" occurs and the weeds get the start of the wheat and flourish equally well and sometimes better, thus producing a heavy mixture of foul-weed seeds and the wheat.

* * * * * * *

If you have read in the RECORD, to which you have referred, on page 103, the charge of Mr. Greeley against the Chicago elevators, and have read what Senator Dolliver said to him, on page 104, and have also noted that on page 105 Senator Money told him that he would like to have him go home and attend to his own affairs and wash his linen at home, etc., you will then understand the impropriety of Senator MCCUMBER mentioning his name and giving his evidence as a credible witness; and further stating that, as he was then speaking, he understood that he had been subpœnaed before a House committee, whereas the fact was, he applied to be heard and again delivered about the same tirade against the Chicago elevator men that he did in 1908; indeed, it has become a mania with him and he is entirely an irresponsible witness.

Should you have the RECORD before you of the Congress succeeding the one of the RECORD to which you refer and should turn to my evidence, you will find that the committee asked me about Mr. Greeley, and that my reply was that he was a friend of mine; that he was a good husband and kind father, but wholly incompetent to give them fair evidence on the question.

I wish to explain here that the inspection in Illinois originally developed in Chicago. It was afterwards extended by an act of the legislature which the present occupant of the floor had something to do with in framing and passing in the Illinois Assembly of that State. The inspection system has extended to other counties in the State upon the application of the several county boards. It was deemed expensive to apply it to all the counties in which there was a grain market, but whenever the local market had reached that condition, in the opinion of those petitioning the county board, they could have local inspection in that county on making that application. Accordingly East St. Louis applied for and received inspection. The city of Decatur, I believe, very recently has applied and been given an inspection point. Other points where local inspection is had are wholly upon the buyers' and sellers' contract, among which is Cairo. I have from the president of the Cairo Board of Trade a telegram dated March 10, 1914, which I ask to insert without reading, as they all follow the same line.

The PRESIDING OFFICER. If there be no objection, the telegram will be inserted in the RECORD.

The telegram is as follows:

CAIRO, ILL., *March 10, 1914.*

Hon. LAWRENCE Y. SHERMAN,
Washington, D. C.:

The McCumber bill will work irreparable injury to the grain trade and the producers. May we ask your earnest cooperation in defeating the measure? Understand the Agricultural Department will introduce a bill prepared after a careful study of the subject following conferences with grain dealers and farmers.

H. S. ANTRIM,
President Cairo Board of Trade.

Mr. SHERMAN. Mr. President, from Peoria, Ill.—from T. A. Grier & Co., grain men—I have a letter of February 24, 1914, covering the same ground, which I desire to insert in the RECORD without reading at length.

The PRESIDING OFFICER. If there be no objection, the request will be considered as granted.

The letter referred to is as follows:

PEORIA, ILL., *February 24, 1914.*

Hon. L. Y. SHERMAN,
Senator, Washington, D. C.

DEAR SIR: We understand that Senator McCumber's bill—Senate bill 120—for Federal inspection of grain has been reported favorably by the committee and is liable to be put upon its passage in the Senate sometime in the very near future.

We would appreciate it very much if you would look into this matter very carefully, as we believe that this bill should not be passed at this time, for the reason that the Secretary of Agriculture has investigated the matter of grades on grain and has promulgated certain grades for corn, to take effect July 1 in interstate business, and that this department is now investigating the proper grades for other grains, such as wheat, oats, barley, rye, etc., and as soon as this department has ascertained the proper standards for these grades they will promulgate rules for them.

It occurs to us that the passage of the McCumber bill at this time would complicate matters decidedly, as the Secretary of Agriculture has expressed himself as not being ready to promulgate standard grades on other grain than corn. We believe that this is a matter that the Secretary of Agriculture should decide, and if he thinks it is necessary to have a bill passed for a Federal inspection of grain he will certainly at the proper time let it be known. But at this time his investigation has not been pursued to a point where he could undertake the inspection of all grain.

We are not sure but that the present method of inspecting grain by various boards of trade and State boards is not the best method, under strict supervision by the Government, but we are quite sure that the investigation by the Agricultural Department has not reached a point where they could take over the inspection of grain without great loss to the department and to the grain interests of the country.

We would appreciate it if you would look into this matter, and, if you find it as stated, if you will do what you can to prevent the McCumber bill being passed.

Yours, truly,

T. A. GRIER & CO.

Mr. SHERMAN. I read a small portion of this letter, because I deem it material in the presentation of the reasons against this bill:

It occurs to us that the passage of the McCumber bill at this time would complicate matters decidedly, as the Secretary of Agriculture has expressed himself as not being ready to promulgate standard grades on other grain than corn. We believe that this is a matter that the Secretary of Agriculture should decide, and if he thinks it is necessary to have a bill passed for the Federal inspection of grain, he will certainly at the proper time let it be known. But at this time his investigation has not been pursued to a point where he could undertake the inspection of all grain.

This was written last February. Since that time the remarks I have already made, applied to the Lever bill, would explain how this correspondence is material to the bill. I read from the Peoria Board of Trade a letter dated February 27, 1914, and also ask that it be printed without reading at length.

The PRESIDING OFFICER. If there is no objection, the request will be granted.

The letter referred to is as follows:

PEORIA BOARD OF TRADE,
Peoria, Ill., February 27, 1914.

Hon. L. Y. SHERMAN, *Washington, D. C.*

DEAR SIR: At a meeting of our board of directors a resolution was unanimously passed requesting you to use your influence, if you find our position correct, to defeat the McCumber bill, that we understand will soon be introduced in the United States Senate, "to regulate the inspection of grain." The Federal Government, through the Agricultural Department, has under consideration now the adoption of rules and regulations governing the inspection of grain, and has spent six or seven years of active research and investigation to determine the best possible method to bring about the desired result. The grain dealers and growers, through their accredited representatives, have, after several conferences with the Federal representatives, been given to understand that the tentative rules as promulgated by the Agricultural Department would be put into effect by the Government July 1 next. We believe the Federal Government is competent, after so long an investigation of the subject, to put on our statutes a law that will best subserve all interests in one of the greatest industries in our country, and that any interference at this time would be in bad faith and likely to destroy all the labor of the Department of Agriculture as well as representative grain men who have given much time and consideration to the subject.

Trusting you will give the matter your careful consideration and aid the Department of Agriculture and the grain trade of our country in their endeavor,

Respectfully,

N. R. MOORE, *President.*
JOHN R. LOFGREN, *Secretary.*

Mr. SHERMAN. I present a letter, dated February 25, 1914, from Mr. C. H. Feltman, who is a grain commission man of the city of Peoria, Ill. I ask that this letter, which follows the same line as the others, be introduced into the RECORD without reading.

The PRESIDING OFFICER. In the absence of objection, the request will be granted.

The letter referred to is as follows:

PEORIA, ILL., *February 25, 1914.*

Hon. L. Y. SHERMAN, *Washington, D. C.*

MY DEAR SENATOR: You are probably aware that the Agricultural Department of the United States made an exhaustive study gathering data to intelligently grade grain. I believe this work covered a period of seven years.

Several conferences and conventions were held at which Government officials, grain consumers, producers, and dealers were present, and finally the Agricultural Department put forth a set of rules governing the grading of corn. Other rules will shortly follow, covering the grading of other grains, and a bill will shortly be introduced providing for the Government supervision of inspection at all grain centers. I have personally attended four of these conferences, and it is due the Government officials to say that no men could have more honestly done their work and been more fair to the consumer and producer.

I am informed the Federal inspection bill introduced by Senator MCCUMBER, of North Dakota, is liable to be called in the Senate at any time. In view of the work which has been done by the Agricultural Department to accomplish the same end and soon to be put into effect it seems to me and the grain producers and consumers generally that the passage of the McCumber bill or any other similar bill would be inoportune at this time and tend to embarrass and complicate the exhaustive work already done.

I hope you can agree that it would be unwise and unnecessary to pass the McCumber bill at this time.

Very sincerely, yours,

C. H. FELTMAN.

Mr. SHERMAN. I also present a letter from P. B. & C. C. Miles, of Peoria, Ill., written February 24, 1914, which I ask may be inserted in the RECORD without reading.

The PRESIDING OFFICER. If there is no objection, permission is granted. The Chair hears none.

The letter referred to is as follows:

PEORIA, ILL., *February 24, 1914.*

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

DEAR SIR: We understand that the McCumber bill concerning inspection of grain is likely to be called up very soon for action. We address you in this matter to call you attention to the fact that the intention of the Government, shown by the action of its Agricultural Department—which has been working closely with the National Grain Dealers' Association for years with a view of bettering the grading of grain—has resulted in the adoption by the Government of standard rules for the grading of corn, with similar action to be taken on other grain as rapidly as it can be done. Also that there is a bill now being prepared for the supervision of grain inspection under rules that are now being made, which will be presented to Congress very soon.

We believe the passage of the McCumber bill as presented would result in a general mix-up of the proposition, in view of the agreement of the Agricultural Department and its attitude toward the grain trade. We hope it will be clear to you that the McCumber bill should not pass, and that you will do what you consistently can to prevent it. We feel sure that the Agricultural Department and the grain trade as a body

will be able to meet all demands, and that the final result will give general satisfaction.

Yours, truly,

P. B. & C. C. MILES,
Per CHAS. C. MILES, *Vice President.*

Mr. SHERMAN. I present a letter from the Warren Commission Co., of Peoria, Ill., dated February 27, 1914, which I will not read, but will ask to have printed in the RECORD.

The PRESIDING OFFICER. If there is no objection, the request will be granted. The Chair hears none.

The letter referred to is as follows:

PEORIA, ILL., *February 27, 1914.*

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

DEAR SIR: We are advised that the McCumber Federal-inspection bill is apt to be called up in the Senate for consideration most any day. You are undoubtedly in touch with the situation in regard to this matter; but not knowing that this is absolutely the case, we would like to say that we believe that this bill, if passed by the Senate, would directly conflict with the intention of the Government as expressed through its Agriculture Department, which has been working harmoniously with the grain trade for some time. This work has resulted in the adoption of Government corn rules, with standards of other grains to follow.

There is also a bill being drawn up for the supervising of inspection under these rules, which we understand will be presented for passage within a few days and will take care of the situation in good shape, as we see it. We believe that the passage of the McCumber bill would place the Government in an embarrassing position, in view of its agreement and attitude toward the grain trade.

We strongly urge your cooperation in the above matter, and will thank you for your efforts along this line, which will solve the problem, we think, to the satisfaction of everyone concerned.

Yours, truly,

WARREN COMMISSION CO.

Mr. SHERMAN. Mr. President, I particularly wish to refer to the testimony of Mr. Greeley. Mr. Greeley, like many another witness, testifies too much. I refer especially to his testimony on page 93 of the hearings, conducted from January to April, 1908, before the Committee on Agriculture and Forestry of the Senate. Mr. Greeley says that he fought the Elevator Trust for 17 years when he was in Chicago on the board of trade. He was then acting in the capacity of an independent commission merchant.

Mr. Greeley was asked by former Senator Dolliver:

Are there no commission merchants in Chicago except yourself that take your view of it?
Mr. GREELEY. Very few of them. You can find very few.
Senator DOLLIVER. How do you account for that?
Mr. GREELEY. They do not dare do it.
Senator DOLLIVER. There are thousands of them?
Mr. GREELEY. Yes, sir; but they have not the courage.
Senator DOLLIVER. They are honest men, intelligent men?
Mr. GREELEY. These men are too powerful for them to fight.

I wish to stop right here, Mr. President, actuated solely by a desire to get at the truth—I have no interest in these men; they are only a part of my constituents; numerically they are in the minority; those who live outside of the city of Chicago who are not engaged in the grain business as commission men or as members of the board of trade are very greatly in the majority in that State—but in the interests of truth let me inquire whether Mr. Greeley is correct when he says that the commission men, several thousand of whom are in Chicago, have not the courage to fight the elevator men?

This testimony was given in 1908. If Mr. Greeley had the information which it is to be presumed a man of his experience ought to have, he would have known that the cases to which I referred on Friday which curbed the elevator companies and put an end to their unauthorized practices were wholly fought from the trial court to the court of last resort by these same commission men, most of whom are members of the Chicago Board of Trade, men against whom Mr. Greeley gives this testimony. They were members of the board of trade; and there is hardly a commission man in the city of Chicago handling grain who is not, if he handles any considerable volume, a member of the board of trade.

This struggle with the elevator men began in the early nineties; it reached its period of final litigation in 1897 and 1898 and along in 1902 to 1904. The supreme court of that State, at the time Mr. Greeley testified, had curbed the assumed power, I repeat, upon the application, the complaint, the testimony, and the enjoining order obtained by these same commission men. They had the courage of their convictions, and in the exercise of that courage they broke up the very practices of which this witness in his testimony complains. Mr. Greeley continues:

I feel from my experience—and it is somewhat large, and I have talked with a great many people upon the subject—that in this particular instance, and not as a general proposition, we could be no worse off under any circumstances, and we are arguing to the belief that we can be a great deal better off.

Under Senate bill No. 120, if it were passed, is the point to which his testimony is applying. Mr. Greeley continues:

Thirdly, we believe that under a system of Government supervision, which is regular and effective and along the same lines, a system may be introduced by the Government which will become general at all market centers, whereby governmental tests and governmental examinations and the governmental stamp of approval and education may be put upon the various kinds of grain raised in this country, so that the education and the stamp of approval and the improvement will lend dignity and standing to the receipts which have that stamp.

Then Mr. Greeley goes off into a discussion of sales for future delivery, which I do not care to follow, except to generalize and to say that his testimony shows a lamentable misunderstanding of the criminal code in the State of Illinois, for if a man did the things that Mr. Greeley testifies could be done in that State he would be indicted for gambling. The anti-option law, or the law against betting on futures, in that State would entirely prohibit and does prohibit the commission of acts which Mr. Greeley in his testimony says are valid. Under the laws of that State a person who sells grain for future delivery must actually intend to deliver the grain and the buyer to receive it. If he is merely betting upon the difference in the market at a given time, if May wheat or corn is sold with no intention on the part of the seller to deliver or the buyer to receive, but it is understood that settlements will be made upon the difference in prices at the maturity of the time of delivery, that is gambling under the laws of that State. Still, Mr. Greeley says that is justified.

There is another thing about Brother Greeley.

Mr. McCUMBER. Will the Senator allow me to ask him a question?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. I ask it purely for information to see if I have the evidence correctly.

Mr. SHERMAN. I yield to the Senator for that purpose.

Mr. McCUMBER. The Senator from Illinois states that a contract for future delivery without an intention to make actual delivery is, according to the laws, of course, of the State of Illinois—and it would be in Minnesota and in other places—gambling?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. Now, I want to ask the Senator if the number of sales in bushels in the city of Chicago is not twenty times the number of bushels that are actually delivered in that city?

Mr. SHERMAN. They are; and maybe more, and it is a perfectly lawful transaction. I will tell the Senator why.

Mr. McCUMBER. Will the Senator tell me that it is possible to deliver twenty times as many bushels as are received?

Mr. SHERMAN. Yes, sir. It can be done and is continually done. Suppose I buy down in the middle or the central part of the State a carload of corn-fed native northern steers for the Chicago or the New York market. If you go on the market, somebody buys and somebody sells. There are 20 steers at the place where they are bought. If they are sold at Chicago, they go to the stockyards, are examined, and again sold by a commission man and the twenty again pass into somebody's else hands. That is 40 head. They pass into somebody's else hands at Buffalo or New York City and that is 60 head. By the time they get to England the transaction has involved 80 head. In the market reports that govern the movement of live stock on the hoof from the great beef-producing centers in the Mississippi Valley, you get the same multiplication of the head of steers; every time a warehouse certificate at Chicago is transferred from one to another it is a multiplication of the number of bushels and grades called for in that certificate; every time you handle a $20 gold certificate, every time you pay a debt with it, every time it clears out of the bank—it is like a check—every time it passes from one hand to another, Mr. President, it adds to the clearings of that bank center; it adds to the volume of business. My $10 check may pass through 20 hands before it reaches the bank it is drawn on. It is equal to $200, but I have not written $200 in checks.

The actual circulation of money in the United States explains just as much this proposition as does anything else. We have three thousand million dollars of live money in the United States.

The clearing-house centers of the United States show that is one hundred and sixty-eight billions, when you aggregate it, as the result of the clearing houses of the United States; in other words, for every dollar there is in circulation in this country there are $56 that are handled in the actual centers of trade. Every time an official evidence of a warehouse certificate passes from one hand to another—and it might pass a thousand times in the course of a summer—there are that many multiplications of the number of bushels called for in the warehouse certificate, just as there are on the face of the coin or on the bill which circulates as money.

Mr. McCUMBER. May I trouble the Senator again?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. I beg to call the Senator's attention to the fact that wheat does not pass like currency. Wheat is consumed, while the gold dollar is not eaten up as it passes from hand to hand. Wheat is bought from the producer to go to a miller to be converted into flour. Now, does the Senator mean to tell me that wheat sold in Chicago by A to B in order to get to Z must pass through 26 hands and be sold and resold? I assume that if it had to be resold 26 times before it go to Z, then, necessarily, there would be 26 times as many bushels, but all the time somebody is living on the difference in the measurement of the sales from A to Z, which is always speculative.

Mr. SHERMAN. I am familiar with that view of it, and I want to say that in that aspect of the matter the Senator from North Dakota is looking through one end of the telescope while I am looking through the opposite end. He sees it from the viewpoint of North Dakota. I look through it from the viewpoint of the primary market. The fact that future sales are permitted under the laws and are made by contracts between honest men and are executed in a reasonable manner is one of the most potent factors in the maintenance of a permanent market for everything that is merchantable in this country known to the trade. The warehouse certificate passes from hand to hand like a check. It may be in one miller's or commission man's hands to-day and tomorrow in another's. It may change many times. "Selling short" is not a crime. The "selling short" on the Chicago market sale of anything from a dozen of eggs to a million bushels of wheat is not necessarily a crime. It depends upon the intent of the parties to the contract.

In regard to the consumption, wheat, for instance, in the form of flour, reaches at last the point where it passes out as a physical factor from the wheat supply in the country; that is true, but up to the time it reaches the man who mills it how many times does it pass through the hands of different holders? Nobody knows; nobody can tell. I can remember the time quite well, and so can all Senators of my age and those older can remember it better than we can, when for a great many products raised on the farm there was no permanent market, when during some parts of the season you could not sell certain products at all. To-day there is not a thing which the farmer raises out of the ground or which the truckman produces from his garden fit for stock or human food that does not have a market of some kind at some sort of a price. The vilest kind of grain, the dirtiest, most shriveled kind of grain that comes from the Senator's State will find a market. It will go into the elevators; it will go into the market in Chicago; it will be inspected in as low grade or no grade grain. What becomes of it? Oh, they say, it is improved, doctored, put in the "hospital," and sent out as No. 2 or No. 3. That grain is no longer merchantable, but the residuum, after all the dirt is taken out, is milled and turned into stock food to the extent of hundreds of thousands of bushels. I can take you into mills where such wheat or other grain year after year is ground up into stock feed and never answers any other purpose after it goes out of the elevators. It goes out, that is true; but it does not enter into the grades. Of course, that brings us back to the question of dockage that was raised a day or two ago.

The question of selling futures and selling short, as the saying is, brings up the old question of hedging. There is not a miller transacting any business worthy of consideration who does not hedge every time he buys any considerable quantity of grain for milling purposes. It is the only way anybody engaged in that business can insure himself against loss. He can not go to any insurance company and protect himself. No company has ever been developed to carry that class of hazards. The necessities of commerce created a method of protection. The only thing he can do is to go upon the markets of the country, so that when he buys wheat at 95 cents he immediately goes out and sells short wheat at 95 cents, or whatever the price is, taking a chance on the grain having the same time of maturity as his contract—May wheat or June wheat—as the case may be. Thus every time there is a rise or fall he gains and loses, the one balancing the other, so that practically he has a species of commercial insurance, arising out of the fluctuations of the market, that keeps him whole in the conduct of his business from year to year. The very fact that he is allowed to hedge in that way prevents him from becoming a grain speculator.

That accounts in considerable part for the apparent discrepancy between the actual quantity of wheat and the quantity of wheat handled. Every hedging transaction doubles the apparent quantity of the actual grain concerned in the contracts. All of the large milling interests naturally go into "the pit" to buy the wheat. When the miller wants to secure a million bushels he does not go down into the country and buy a wagonload at a time. That is the way the old water mills used to run in the days of my grandfather. Those days and methods have passed away forever in this country; but still this bill and some of the arguments made to sustain it are based on the theory that we are living 75 years ago.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER (Mr. STERLING in the chair). Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. Yes, sir.

Mr. GRONNA. I want to ask the Senator from Illinois if he believes that the farmers indorse the system of buying and selling wheat as he has just described it?

Mr. SHERMAN. Which system?

Mr. GRONNA. The system of "hedging," as the Senator calls it.

Mr. SHERMAN. Well, I can tell the Senator about the farmers about whom I know.

Mr. GRONNA. I simply want to ask the Senator the question, if he believes the farmers indorse the system?

Mr. SHERMAN. I can tell the Senator about the farmers of whom I know. I have no complaint against hedging and have not had in 15 years from the farmers of my State nor from the millers; from the little miller at a crossroads to the largest miller in the Mississippi Valley, I have not had a complaint; they all indorse or acquiesce in it.

Mr. GRONNA. If the Senator will allow me further, he was comparing the system of selling steers with the system of selling grain. In the method of selling stock, is it not true that the stock is always delivered whenever there is a sale made?

Mr. SHERMAN. No; it is not true; it may be "sold short" just like anything else.

Mr. GRONNA. Well, of course we learn something every day; but this is the first time I have ever heard that statement.

Mr. SHERMAN. Very likely stock is not "sold short" in all parts of the United States, but I believe men sell stock when they do not own the steers and will not have them for three or six months.

Mr. McCUMBER Do they sell them by number or by weight?

Mr. SHERMAN. By gross weight; that they shall not fall below or shall approximate an average weight; that they shall be native northern steers, fed corn for a certain number of days. The contracts are written out.

Mr. GRONNA. Is not the Senator confusing the sale with the contract? There is a contract made under which the man who has the steers is permitted to keep them, fatten them, and then to deliver them at a certain time.

Mr. SHERMAN. No; I beg the Senator's pardon; that is one way, where a man has stock actually on his farm, and he sells it for June delivery, but begins to feed it at once, or at the time stipulated, and it is provided that they shall be fed corn for so long. That is the old way; but the potential steer is in sight, as he will be next June.

Mr. GRONNA. Does the Senator mean that in the stockyards in Chicago, or the stockyards in any large city, it is a common practice to buy stock without delivery?

Mr. SHERMAN. Men may both buy and sell who have not a hoof of an animal in the world. They depend on the market to get the stock. It may not be practiced at the yards; but men in stock-feeding countries sell when they own no animals, depending on their knowledge of the capacity of the place to fill out the agreed number of carloads when the time comes.

Mr. GRONNA. Does the Senator from Illinois indorse that system?

Mr. SHERMAN. I do; and I indorse hedging, and I indorse "selling short," where the persons intend to deliver the grain or the article contracted for; and I will take my chance in my section of the country; and I think I know what the sentiment is. A contractor who agrees to put up an office building may not have a foot or a pound of material or a day's labor when he signs the contract. He "sells short" a million dollars, and depends on his agreement with the steel mills or quarries or laborers or the market only to deliver the completed building within the stipulated time.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. The Senator is very kind in yielding, and his argument is very fair, indeed.

Mr. SHERMAN. It facilitates matters, for we want to get things right.

Mr. McCUMBER. I want to carry the Senator's thought a little further in the matter of hedging. Hedging is always indulged in on the basis of something having already been bought, so that there is at least one delivery in that case?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. And an assumed delivery in the future?

Mr. SHERMAN. Yes, sir.

Mr. McCUMBER. Now, I have heard no complaint as to hedging, and this bill, of course, does not at all deal with or touch that method of business. In fact, I agree with the Senator that it is probably a good method of insurance if the transaction is made in good faith with the intention to deliver——

Mr. SHERMAN. I assume that.

Mr. McCUMBER. And not merely a gambling contract. I want the Senator to understand that I am not disagreeing with him in that respect, nor does this bill touch that in any way.

Mr. SHERMAN. I only referred to that because it is necessarily connected with some of the conclusions drawn by Mr. Greeley in his testimony. I think the sale for future delivery is a good deal like having a horse; if you are going to prohibit a man from having a horse because some horses can travel faster than a walk, then you make life in Kentucky and some other points very undesirable for a gentleman of leisure. [Laughter.]

Take another illustration: Whether or not playing the great American game of draw poker is gambling depends upon the intent with which you play it. If you play it with the broken ends, the stubs of matches the heads of which have been broken off, they do not have any value, and that is not a crime. Even the police here in this Capital of our Republic, who are sweeping the city with a fine-tooth comb, could not yank me and my brother Senator if we wanted to sit down and play for broken match heads. That would not be a crime, because there would be nothing of value involved; the intent governs; but if we were to redeem the match heads when the game was over, then it would be gambling, and we would properly be punished. That is the law of many States as to "selling short," whether it be grain, live stock, corporate stocks, or anything else. It is a question of intention. If the intent of the vendor and the vendee is to deliver and to receive, and not to bet upon the fluctuations of the market at the end of the matured period, it is lawful. However, according to my friend Greeley, who testified here, you do not need to have the intention at all; you can bet on the difference of what the market is going to be three months from now, and it is lawful to do so.

Here is another thing that I think it is proper to consider in weighing his testimony: After describing the manner in which the public warehouses transact their business and keep a lot of weevil-infested wheat year after year in order to bear the market—something which nobody but Greeley ever heard of; if there was any wheat of that kind it was kept in "the hospital"; it was not kept as a permanent article of commerce or for the purposes indicated by him—but after describing the way these different varieties of grain were stored he goes on to say:

> The aim was for the elevator man to sell it ahead for future delivery at a premium; and when the future delivery day came, when he was to deliver the receipts on his contract, the grain would be of such inferior quality (made from a manufactured article in what they term a "hospital" or private elevator) that the man who had bought the grain would, as we term it in the trade, "liquidate," or sell out. The elevator people stood ready to buy at the depreciated price, and would then resell for another deferred delivery to another speculative bull or bear. He in turn would pay a premium for that next deferred delivery, and thus a tax would be added to the grain for the privilege of buying that future.
>
> Thus was introduced an endless chain, from month to month, of forced liquidations on the part of the people who bought this grain. That went to such an extent from 1887 to 1893, and the depreciation of the grain by the forced liquidations of the speculative public became of such enormous importance, that corn on these western prairies sold for 8 cents a bushel. I sold oats in the Chicago market myself for 13 cents and the best grade of corn for 19½ cents a bushel.

I have heard of "the crime of 1873" ever since I grew old enough to appreciate anything, and I have heard the quantitative theory of money expounded by distinguished professors and financiers. I went through the free-silver difficulty. I can remember somewhat connectedly the time when the rag-money baby was dandled on a great many people's knees. I can remember when they proposed to pay the bonds and the indebtedness of the United States by issuing additional promises to pay, payable in nothing of intrinsic value, and redeemable nowhere this side of the crack of doom. I heard all those things; but of all phantasmagoria that ever darkened the face of learning or bedeviled the Senate, nothing ever rose to the hideous dignity of what follows:

> That produced the panic of 1893.

Here you are. Out of the 100,000,000 people in the United States this man is the only one who was sufficiently informed and had the understanding, for which Solomon prayed, to discover it.

I will leave Mr. Greeley to his own devices. I should like to examine him in a court of justice under oath. It would be worth a day's travel, and paying railroad fare, to be permitted to do so.

Mr. Greeley has another obsession. It is that every State officer in Illinois, legislative and executive, is permeated with chronic rascality. Whenever I find a man who thinks everybody else in the whole world is a rascal, I am disposed to watch his testimony a little. That has been the result of my experience of 30 years in business.

Mr. Greeley indicts all public officers, beginning with the railroad and warehouse commissioners and the inspectors of grain, and goes through the list. Mr. Greeley is a citizen of Chicago, Cook County, Ill. I read from page 104 of the hearings:

> Senator DOLLIVER. I want to know whether you expect us to furnish you with an inspector that is less subservient to local influence about these transactions than your State officials, your prosecuting attorneys, your grand juries, and your officers of law.
>
> Mr. GREELEY. Your governor, your State's attorney, your railroad and warehouse commission, and your attorney general all knew of that violation.
>
> Senator DOLLIVER. They are all under the influence of this style of doing business, are they?
>
> Mr. GREELEY. They refused the prosecution; and when the case came up for grand jury investigation by the State's attorney, on the evidence to be submitted to the grand jury, there appeared before the State's attorney Mr. Percy Eckert, who is the law partner of Roy West, who is the campaign manager for Mr. Deneen, who is governor of the State, who was nominated, and his nomination seconded by Jim Patten, of the Grain Trust.

Why, that is like the house that Jack built.

I said something of Mr. Eckhart yesterday. I will say something of Mr. Deneen to-day. He was formerly governor of the State; governor for eight years, by grace of the voters of the State. Before that time he was for eight years the State's attorney of Cook County. For eight years of his life he examined and cross-examined and prosecuted and jailed and penitentiaried and hung the miscreants, the pickpockets, the thieves, the criminals that infest every great metropolis, in the greatest single jurisdiction of criminal business under one office in the United States.

The only complaint I ever heard of him was that he prosecuted too severely, and once in a while it was claimed a man got a little bit more than was coming to him, according to the ledger balance of criminality. I am skeptical on this. It is very difficult for a man to be convicted of crime. The law is quite scrupulous of a defendant's rights in a criminal case. That does not often happen in this country, but that was the complaint.

He was afterwards elected governor. I do not use the term in an offensive sense, but I wish to say that he was, as seen and defined by some of his critics, a reform governor of the State. Many existing evil practices in public affairs were broken up under his administration. The grain-inspection system of the State was put upon a civil-service basis, beginning with the year 1905, the first year of his administration. The old evils of which complaint is made here, and which I never defended for a moment, ceased upon that improvement. He placed the performance of his executive duties on a high level.

I was affiliated, in my political activities, with that element of the party in that State. I encountered, in common with those with whom I was associated, a great deal of trouble. It did not come from the elements about which Mr. Greeley testifies and condemns. It came from the other element of the party that was dominant in the State a part of the time. All of our difficulties, all of our criticisms, all of the opposition to these improvements that were subsequently made came from the adverse and subsequently the minority element of the dominant party in the State.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. Yes, sir.

Mr. GRONNA. May I ask the Senator from Illinois if any of the men belonging to the wheat combine were executed during the term of Gov. Deneen?

Mr. SHERMAN. I have no doubt but that the Senator from North Dakota would like to have them executed, but we are not quite so savage in my State. I will tell you what we do with them: We indict all criminals in our State; we fine them and punish them as they merit. They have gone the ways provided by the statute for those who refuse to travel the straight and narrow path of righteousness. I believe we are quite normal in our administration of criminal justice in Illinois.

Senator Dolliver asks:

> How long would one of our little inspectors last in an atmosphere of that sort?

I suspect the Senator is growing a little sarcastic by this time. I was not well acquainted with him, but I apprehend that there began to dawn on him something like the same view that some of the rest of us have—that merely issuing a commission to a man by the Federal Government does not change him very much. He has the same foibles and weaknesses that he always has;

and if he gets into an atmosphere where he is going to lean, he will lean anyhow.

Senator MONEY. I would like to ask another question.
Senator DOLLIVER. I want this question answered.
Senator MONEY. All right; excuse me.
Senator DOLLIVER. What do you say to that as a practical question? How long would a salaried official last under influences that have corrupted your governor, your grand juries, your prosecuting attorneys, and the whole business community of Chicago?

This is the indictment which has been read here, contained in the evidence. That is my excuse for taking the time of the Senate. You have indicted a whole city. You have indicted 2,800 000 people. You have indicted all the voters. You have indicted every public officer of Cook County during this period. You, Mr. Greeley, and others with you have indicted the whole State of Illinois. You have indicted every public officer of the State. You are in the condition where you perform the impossible, because Edmund Burke said, "You can not indict a whole people"; and still that is what this witness and others are doing in their testimony.

The witness was asked how long such a salaried official would last under these influences, and he replied:

Mr. GREELEY. I do not know how long he will last. I know he lasts a long time now; and we want to take a chance on how long he will last. We are taking a chance with all you people.
Senator MONEY. I would like to ask you this question, if you please: What steps have you taken personally to go before the grand jury and lay these things before them?
Mr. GREELEY. I furnished the money, got up a collection, and secured the evidence.
Senator MONEY. Did you go into the grand jury room and tell them that you were aware of a violation of law?
Mr. GREELEY. No, sir; a man more capable than I of that proceeding took the initiative—Mr. John Hill.
Senator MONEY. He went before them?
Mr. GREELEY. Yes, sir.
Senator MONEY. And the grand jury examined him?
Mr. GREELEY. No, sir; he was never permitted to go before the grand jury.
Senator MONEY. Can not a citizen go before a grand jury and testify to a violation of law?
Mr. GREELEY. I do not believe he can.

A horrible condition!

Senator MONEY. But the law gives him the right to do so.
Mr. GREELEY. Well, the law may give him the right, and the law prevents these men from dealing in grain, but you can not get it enforced.

It was some time from January to April, 1908, that Mr. Greeley testified to this, when under the decisions of the court that I have here—I will not stop to read them; they are inhibited, not by criminal penalties, but by a restraining order issued out of a court of chancery, under the pains and penalties of contempt, from dealing in grain or performing a variety of other things named in the order.

Mr. Greeley goes along in his testimony, childlike and bland, innocent, confiding, victimized. He does not know what has happened. He testifies in 1908, when in 1906 the last order was made and the last decision of the court was had that settled the question forever in that jurisdiction.

Senator MONEY. If you are going to have a Federal official there, you would have a Federal grand jury, would you not, and it would be composed of those same citizens?
Mr. GREELEY. It is a violation, I believe, of the State law.
Senator MONEY. But here are the same citizens on the grand jury for the Federal courts that make up the grand jury for the State courts, and if you get the same identical class of men that were on the last jury of that county in your Federal court, they would not allow anybody to go before them, either.

In other words, Mr. Greeley proves too much.

Now Mr. Brafford comes along. Mr. Brafford is a grain buyer of Indianapolis, Ind. Mr. Brafford says:

New York and all the other export markets sell their grades final to Europe. I spoke about that a while ago. The inspector, while he is a sworn official in all the markets, is employed and discharged by a subcommittee on all the exchanges that is usually made up of large dealers, and therefore they are directly interested. We feel that that is not quite right. For example, if you have a suit for damages in Indiana against a city or a village we do not allow a man that pays a cent of taxes to sit on the jury. Our sheriff goes to the country and subpœnas a venire out in the country, so that we do not get a taxpayer, because we feel that he is interested. But there are these men who hire and discharge these inspectors who are to inspect all this grain, who make money out of it, and they are the men that are getting the benefit of this.

The most humiliating thing that has happened in the Senate of the United States is to read the testimony of a man who comes before a committee of the Senate and testifies to such inane, illimitable, insufferable nonsense as that—that these same men on the board of trade, these commission men, these elevator men, who are in a conspiracy, are the ones who appoint and discharge the grain inspectors under the State inspection system of Illinois or Minnesota. A man who possesses that sublime and ineffable degree of ignorance can not furnish testimony that will convince me of the justice of such a bill as this.

Senator Dolliver reminds him that this is not true in Chicago. He says:

The inspectors there seem to be appointed by the State board of warehouse commissioners.
Mr. BRAFFORD. I am sorry to say that those inspectors are a football of the governors out there a good deal of the time; and they are under the influence of the Chicago Board of Trade.

Senator Dolliver intervenes:

You do not mean to say that the governor of Illinois—

Mr. Brafford hastens to cover.

Mr. BRAFFORD. I do not mean that; I mean the men he appoints, the three warehouse commissioners. I do not believe the United States Government would allow that. We never hear anything said about it in the case of meats. We have inspectors there at Kingan's; and I never heard of a complaint about our Government meat inspectors there.

These three men he is talking about are the ones whom I mentioned yesterday or Friday. One of them is Mr. Eckhart, who has been in business all his life in the city of Chicago. He is a miller. He sells his product everywhere. He buys wheat from every place on the market. He buys on futures, hedges, and does all these things, I suppose, that are anathematized by some as the crowning summit of infamy in the business transactions of Chicago.

Mr. James A. Willoughby, known to the people of his State, and especially southern Illinois, for many years. No one ever questioned his integrity.

Who are the others? Orville F. Berry was another one of these commissioners, a resident of that State. I am not going beyond the bounds here in saying that when the railroad and warehouse commission was legislated out of existence and the public-utilities commission succeeded to its powers, controlling the public utilities of that State along with many others, he was not an applicant for reappointment and did not serve longer on it. He was translated from that service to the Interstate Commerce Commission, and is serving under them now in the settlement of rate questions in the western roads leading out of Chicago. He has been known to Illinois people as a public officer for more than 30 years.

These are the men that these witnesses indict.

Mr. Brafford continues, on page 252, and says:

If we find we are going to lose money, we have to discount it. We do not in the beginning. The competition is so strong between the country dealers that we overreach ourselves, and we sometimes buy grain that we ought not to buy. For instance, we have done that this year on corn. We bought corn that was too wet to ship.

He exhibits more than usual restraint for not charging the wet corn to the State inspections.

Mr. Macfadden, on page 199, gives us some further information. He testifies about Minnesota. Mr. Macfadden, I think, is from the State of North Dakota. He says, speaking of the time when the Legislature of North Dakota memorialized the Legislature of Minnesota to have a finding by the Minnesota Legislature that grain inspectors were fair and honest:

That was a very easy matter, you know. The influence of the Minneapolis mills and the elevator companies there is powerful.
Senator DOLLIVER. Is it so powerful as to entirely destroy the moral responsibility of the legislature?
Mr. MACFADDEN. Absolutely.
Senator DOLLIVER. That is a bad atmosphere to send a civil-service inspector into.
Mr. MACFADDEN. It certainly is.
Senator BANKHEAD. I would not like to risk a Government inspector in a crowd like that.

The trouble with these gentlemen is that they have no confidence in the Minnesota Legislature. They could have little confidence in the State officials; none in the elevator companies; none in the Minneapolis Board of Trade, the chamber of commerce, or whatever the agency is called; none in the State government of Illinois; none in any of the Cook County officials in the city of Chicago.

In other words, according to them, in none of the great primary markets of the country is there a single honest public official. St. Louis and Kansas City are under the ban. The State of Missouri is an ignoble failure. Illinois is infested with criminals in public office. Minnesota is the same way. Buffalo, N. Y., and New York Cty are the same way. Baltimore is under suspicion. Indianapolis is as bad as any. So you can call the roll of the places that are furnishing the primary markets, where a permanent market can be had any day of the year for anything from the West and Northwest. Every one of them is indicted by a total of five witnesses, who have come here and testify and indict one community after another of millions of people; and that is to be the basis of legislation in this body. If such testimony is made the basis of legislation here I shall be surprised.

Mr. Messerole, on page 156, does the same thing. Time will not permit me to read this. I have frequently apologized for the time I have taken. I am doing so because the committee

reported out this bill on evidence from 2 to 6 years old. They did not hear anything about modern conditions. They did not get any of the improvements. They went on the idea that the criminal communities of which they speak are sodden in their vices, and have remained in the same deplorable condition the witnesses described, I presume. You would not give us a chance to be heard. That is the reason I am taking the time of the Senate, as I lawfully and in a parliamentary way may, to put into the RECORD in some way where it is accessible what is said by these men who are doing business to-day, men who transact business in the second largest city on the Western Hemisphere, men who by their business, their energy, ability, and their bank clearings have shown themselves abundantly able to take care, in a lawful and honest way, of such business as legitimately comes to that city.

If it be said that these practices continue, who is hurt by it ultimately? In the ledger of the world, balanced in the scales of common honesty, any place that habitually practices dishonesty will at last lose the market and lose the business that belongs to that center. The commission men, the board of trade, the elevators, the common carriers that center in that State, in Minneapolis, or Chicago, or any of the other primary markets of the country, can not hold their business if they are dishonest. Business is voluntary. It is not compulsory. If there be a band of conspirators who are robbing the producer, it is only a short shrift that they have between present conditions and the loss of the market.

I will leave now this question of the indictment of a whole community as an organized band of criminals administering public office in State and county government and take up another, that of the mixing and improvement of grain. I wish to refer very briefly to some authorities.

I read from the report of 1908, on pages 22 and 23. This matter was mentioned here a few days ago. I need not preface the statement by saying anything about dockage, because I have already made complaint that there is no such thing in the market in our country, and outside of a very limited area I do not believe it is known in the grain markets of the United States.

Mr. James L. King, of the Commercial Exchange of Philadelphia, says:

> The mixing of grain as carried on at the present time is of great advantage to everyone. A few years ago, for instance, it was impossible to get for off-grade corn more than about 10 cents a bushel. It would hardly bring the freight to Philadelphia. To-day, by reason of the drying and mixing processes which have been introduced, the receivers of the corn there are enabled to pay in the worst seasons anywhere from 28 to 35 cents a bushel for off-grade corn. With the character of the corn crop which has been raised in the United States for three or four years past it seems impossible to raise corn that is free of moisture.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. I do.

Mr. GRONNA. I dislike very much to interrupt the Senator——

Mr. SHERMAN. That is all right.

Mr. GRONNA. I have interrupted the Senator so frequently; but the Senator is making a statement I hardly think he can substantiate when he says that the system of dockage does not exist. As a matter of fact, it does exist in the spring-wheat belt. I want to inform the Senator that the majority of the spring wheat sold is sold under a system of dockage.

Mr. SHERMAN. I did not say that dockage did not exist. I said, as the Senator will find if he will refer to the record kept by the reporter, that it existed only in a very limited area. In all the rest of the United States the thing is not known. It is not known in the Chicago market except as explained.

Mr. GRONNA. The Senator is correct in stating that it exists in a limited area. The Senator first stated that it does not exist in our country. It does exist in a limited area.

Mr. SHERMAN. The Senator misunderstood me. I meant "in my country." I said "in our country."

Mr. GRONNA. But the fact of the matter is that it exists in the so-called spring-wheat belt, and the majority of the spring wheat is sold under that system.

Mr. SHERMAN. There is no northern spring wheat in this country, except possibly that grown to a small extent in northern Iowa, in the two Dakotas, and such as comes in from Canada and Minnesota. That is the northern spring wheat belt of the country.

Mr. GRONNA. Yes.

Mr. SHERMAN. The market for all that area, as stated here by some one to-day, is Minneapolis and Duluth. Dockage applies there.

Mr. GRONNA. Yes.

Mr. SHERMAN. Do not get the idea that that is the United States. It is not. There is a considerable area, enough to make a respectable route for a circus, outside of that belt. There are 15 or 20 kinds of wheat outside of northern spring wheat. Every area with certain soil, air, sun, and climatic conditions has a wheat of its own. The Pacific coast has grades of its own. The wheat of the southern Mississippi Valley is different from that of the middle Mississippi Valley, and you have your northern wheat in the Northwest in the area spoken of. That is a kind unto itself. If that is sold at the two markets named under dockage, it does not prove that because of dockage in that limited part of the country you ought to impose this bill upon all the country. That is the argument.

Mr. GRONNA. Mr. President, just so that we may understand each other, does the Senator mean to say that there is from fifteen to twenty times as much spring wheat raised in other parts of the country as there is in Minnesota, North Dakota, and South Dakota?

Mr. SHERMAN. No; I did not say fifteen or twenty times as much, or any specific number of times. I said there were 15 or 20 different kinds of wheat. I said it was a part, and I will say it is only a part, of the United States. It is not a majority. It is a minor fraction.

Mr. GRONNA. I want to inform the Senator that it is a majority.

Mr. SHERMAN. It is a majority of the spring wheat.

Mr. GRONNA. Of the spring wheat; yes. I referred particularly to spring wheat.

Mr. SHERMAN. It is not a majority of all the wheat produced in the United States, is it?

Mr. GRONNA. Oh, no.

Mr. SHERMAN. I very much doubt whether it is. My recollection of the general area of production, measured by bushels, is that it is a considerable area.

Mr. NELSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Minnesota?

Mr. SHERMAN. Yes, sir.

Mr. NELSON. Taking one year with another, you may safely say that the proportion of spring wheat to winter wheat in the country is a little less than a third.

Mr. SHERMAN. I am very much obliged.

Mr. NELSON. Sometimes it comes up to a third, but ordinarily it is a little less than a third.

Mr. SHERMAN. From the testimony of Mr. England, who is connected with the board of trade of the city of Baltimore, I read. He says:

> To properly dispose of this class of grain, it is necessary that it should be cleaned, dried, and mixed to a uniform grade.

He is speaking of the different varieties of grain that come in. I will not stop to read the whole of it. He explains that they come in from all areas of production, different kinds from different countries, with different moisture content, with different fiber of the grain, and a dozen other things that he mentions. He says:

> The large warehouses or elevators at terminal markets have at considerable expense availed of every modern mechanical appliance whereby this beneficial work can be done at a minimum cost and in a manner not possible upon the farm. Such handling of the lower grades of grain enhances the value of the poorer qualities to the farmer, and without such methods a large percentage of the grain exported in ordinary seasons would be unfit for human food and would necessarily be kept upon the farm for cheaper uses. This method of handling the poorer qualities explains a misunderstood fact in all markets, whereby under the most correct and upright methods the amount of the higher grades of grain shipped out can be much larger than the number of bushels of the same grades received from the producing sections. This entirely legitimate and proper commercial handling and disposition of the lower grades of grain is manifestly in the interest of the producer, as is evidenced by the fact that since the adoption of modern grain-cleaning machinery and appliances for drying the value of out-of-condition grain in the terminal markets has relatively enhanced in comparison with that of grain of unquestioned quality and condition.

It is the same as the testimony of Mr. Merrill that I read on yesterday, and I will not repeat it. On the question of dockage I read now, and I will be very brief with it, because I can state the conclusion of the witnesses with taking but little time. I read from a subcommittee hearing of the Committee on Agriculture and Forestry, known as Senate Report 223, a hearing which took place in 1912. On page 23 Mr. E. H. Culver testified. Mr. Culver is the president of the association of grain inspectors, living at Toledo, Ohio, and I will read what he says, referring to dockage:

> Senator MCCUMBER. There is dockage as it is taken from the car, is there not, in both Duluth and Superior and Minneapolis?

The question is answered:

> Mr. CULVER. There is dockage in both. There is only one State in the United States that docks grain and that is the State of Minnesota, which is done under their State laws.

Mr. A. E. Reynolds, who is a grain man, was called and he wishes to emphasize one matter. He says:

You see, the misunderstanding is in regard to dockage, and really we attribute the origin of this bill to the dockage system that is in vogue only in that small space of the Northwest. I wish to say to the committee that nowhere in the United States, excepting there, do we know of such a thing as dockage to take care of filth or anything that is in grain. That is all taken care of in the grade itself. There are grades of, say, four grains that can easily be made to No. 2 by taking out this foreign stuff—all oats, mustard, cockle, or whatever it may be—and only in your section of the Northwest, Senator, is the practice in vogue of docking to take care of that.

I shall very briefly read from the report of February 4, 1914, made at the present session of Congress to the Senate. A great number of conclusions are arrived at; they are some 39 in number. As that document is printed I shall not refer to it at any great length. No. 37 says:

Those who are charged—

This is the committee report—

and, in our opinion, justly charged, with profiting by the misuse of the authority and powers placed in their hands under the present system are the only ones who are objecting to Federal inspection.

The principal objection to this finding of the committee is it is not true.

The Illinois Grain Dealers' Association, or any member whose letter is quoted, is not profiting by the misuse of power in the hands of its members.

Neither the Board of Trade of Chicago nor any of its members is so profiting.

The officers connected with the several State inspection systems are not profiting by a misuse of power. This charge of the committee is in effect a claim that such officers are corrupt.

Why should such a report be made? Why should it be believed?

Now, against that conclusion I bring the evidence in part of board of trade men who are members of that organization and in part of those outside handling independent elevators, not connected in any way with what are known as line elevators, that are only subsidiary points for the large elevator in Chicago, reaching down through some of the trunk lines across th and other States. Taking the independent elevator, with the Secretary of Agriculture, they got together in the Illinois Grain Dealers' Association. They favor uniformity of grade. They favor keeping their instruments of inspection. They favor their Government fixing the standard, but they are against the absorption by the Government of the several systems developed and maintained by the State.

The thirteenth paragraph, an inspector "earned for the (Chicago) Board of Trade in that time (one day) $73 at the regular charge for inspection." As a committee report, this is so amazing an error as to destroy the value of the whole report framed in such a spirit of ignorance or lack of accurate information.

The Chicago Board of Trade has never taken a dollar from the inspection service of Illinois. All the fees of that service go to and are accounted for by the State.

Can it be said that all these men are interested in these abuses, and that is the charge in No. 37? I do not consider that part of the report sustained by the evidence. Five witnesses here testify. They testified in 1908, but we are not legislating for 1908. That generation has taken care of these problems. We are legislating for 1914. I am trying this case here upon the evidence of 1914, 1913, 1912, and 1911, upon business as it is now conducted, not how it was conducted in days past.

You must give the people who live inside of a State a little credit for common honesty, for a little progressive principle, for learning something, for developing their system, and some ability for self-government. If that is taken away and we have got to look to a bureau here in Washington every time somebody grades No. 2 wheat No. 3, then we will decay like ancient Rome rotted when she centralized her power and the outlying States were mere provinces subject to imperial edicts. I am against the further consolidation in bureaus here in this Capital of powers that can be administered by a State. A great deal of work has been done already to fix rates.

Mr. McCUMBER. May I ask the Senator, as he has spoken of the Lever bill, to whom is the final appeal taken in grades under the Lever bill?

Mr. SHERMAN. It may be taken to the Secretary of Agriculture, though very few would ever reach him.

Mr. McCUMBER. That is about as centralized as you can get under any bill. It is not taken to him in a final case only, but there is a provision made for an appeal to be taken right at the center, which will dispose of nine hundred and ninety-nine out of a thousand cases.

Mr. SHERMAN. Under the Lever bill the supervisors would hear the appeals at the grain centers designated, no doubt. I have learned a long time ago that it does not make any difference how many obstacles you may strike in falling down stairs, you finally get to the bottom at last. So it is only a question of hitting a few more projections. There is this difference in the two bills on that point: You keep your instrument of inspection inside the State under the Lever bill, and only the appeals are heard which question the grading in conformity with Government standards will be heard. Where do you get it from, otherwise?

You say that you can keep politics out of it; that there is no politics now under civil service in this administration; that there is a chance for anybody. See the examination of fourth-class postmasters. It is a screaming, howling vaudeville. Talk to me about civil service being a cure-all, and that simply by some sort of legerdemain you translate a man from a spoilsman into a saint! We know better. You can not do it. One party is just as bad as another in that. I know the element in my own party that are spoilsmen clear through. The party in now has got them. I think they have more of them than we have. They have been out longer; they are hungrier; their appetites are harder to control.

I am only going to take the time to read now, in conclusion, from a letter written by the Baltimore——

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. I do.

Mr. GRONNA. Before the Senator from Illinois concludes I wish to say I am quite sure he is just as anxious as I am to see that the grain business is regulated in a proper way. I simply want to call his attention to the fact that the committee did not make its report upon this bill on testimony which was given years ago. In order to show that I have here before me to-day a petition sent to me signed by 77 farmers from the little village of Wheelock, N. Dak., condemning the system of grain inspection as it is being carried on in the terminal markets.

That, it seems to me, Mr. President, is evidence that ought to be recognized. I tell the Senator, if he were aware, that the farmers are actually opposed to the present system, and that they believe it should be corrected, I believe the Senator from Illinois would be the first one to help them correct any abuse that might exist.

Mr. SHERMAN. I do not question the good faith of the petitioners in the paper which the Senator from North Dakota holds in his hand, but I am in favor of giving such relief practically without doing damage to any existing institution. I am for the principle of the Lever bill. I firmly believe it can be worked out so as to provide every remedy which those petitioners desire.

The Baltimore Chamber of Commerce, in a letter to Senator Dolliver, makes an explanation which I will read. It is dated January 27, 1909. I do not think this is printed in any of the committee reports. I have been unable to find it. I procured it from the Baltimore Chamber of Commerce, through Mr. England, who is connected with that board. There are certain cars, giving the number, of grain testified to by various witnesses—the four or five that I alluded to. It is said that they graded at one place a certain grade and then a lower grade than at the initial point, and further, when they got to the destination, they graded down. Mr. Brafford, of Indianapolis, uses this language:

We hate to charge that the inspector there—

Referring to Baltimore—

is influenced by the men that employ him, but the chances are that this might happen.

He does not make the charge. I have said that a large part of the testimony of witnesses here stops short of the direct charge. It is by innuendo, by casting suspicion. I would think more of them if they came out directly and made the charge that these men were criminally or improperly influenced than by these insinuations that are more difficult to meet, since they create simply the shadow without giving you the substance on which you can defend yourself.

Mr. England continues:

It needs be observed that by this language Mr. Brafford has not charged the Baltimore Chamber of Commerce or its inspector with anything; he has simply stated his surmise that certain things "might" happen.

Now, here are the cars that are followed. I believe I could if given time through the secretary of the Chicago Board of Trade trace every car mentioned by this witness and show what happened to it, and show that Mr. Greeley knows no more about the actual condition in the grain grade affecting those cars than he does about the cause of the panic of 1893. I would hate to do business on his judgment. I know, Mr. Presi-

dent. I would never be foolish enough to run for office on his judgment. Here is a comparison of the dates of shipment and dates of arrival at destination of grain which Mr. Brafford shipped to this port in 1907 and 1908. Then follows the number in the printed pamphlet, the hearings of 1908, giving the car number:

Car Erie 76927 was shipped November 29, and arrived at Baltimore December 12, being in transit 13 days; car M. K. 17275 was shipped November 29, and arrived December 16, being in transit 17 days; car B. & O. 65272 was shipped November 29, and arrived December 12, being in transit 13 days. These three cars graded new No. 4 white corn at Indianapolis and mixed corn. No. 2 white corn, and mixed corn, respectively, at Baltimore. The other shipments, being the acknowledged basis of Mr. Brafford's complaint, were made in 1908.

I am omitting, and ask to print those; I want to save time. I desire to read just as little of these matters as possible.

They were in transit, these latter cars, in 1908 at various intervals from 35 to 39 days; one 23 days.

It is a fact well known that grain, particularly corn, is liable to deteriorate when in closed cars for a considerable time. This was particularly true of the corn crop of 1907, on account of immature grain and excessive moisture.

It is a peculiarity of the corn crop when the season is of that character that the grain does not well mature on the cob, and especially when it no longer rests in the crib as it used to in the older days, but goes merely from the field into the market, that it contains more moisture inevitably and when it gets in the laboratory for analysis the moisture content is extremely high—

This fact was well known to the grain trade generally, and Mr. Brafford was aware of it, but for some reason he failed to make reference to the peculiarities of the corn crop of that year, although admitting that grain in transit "might heat."

That the grading of the cars complained of by Mr. Brafford was fair is evidenced by the certificates of the branch laboratory in this city of the United States Department of Agriculture (annexed herewith), which show that the corn in car 59147 contained 20.6 per cent moisture and weighed 50½ pounds per measured bushel; car 70771 contained 21.8 per cent moisture and weighed 48½ pounds per bushel; and car 10733 contained 19 per cent moisture and weighed 52 pounds per bushel. Car 46723 graded mixed corn, and this being the regular contract grade there can be no complaint in regard to it.

We desire to say specifically respecting that portion of the report to which your attention has been called that the grades of grain are not changed by the Baltimore Chamber of Commerce "at any time," but, on the contrary, it is not unusual for the standards to remain unchanged for a term of years. When modifications are required by reason of the general average quality of the grain crop or by causes affecting all localities changes are only made at the beginning of a crop season, and never during the time when the crop movement is on.

This answers all the charges made that changes in the grades are made fraudulently for the purpose of making trouble for the producer or the handler at the other end of the line.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. I yield.

Mr. McCUMBER. Let me make the testimony of Mr. Brafford clear. Mr. Brafford testifies not that this was an improper grade at Baltimore necessarily, but if that car was No. 2 when it started it could not get to be No. 4 when it arrived in Baltimore; that if it was of a grade which required only a given amount of moisture, it could not possibly change that much. Therefore there was either error in the first inspection or error in the second inspection. In fact, instead of getting more moist, as a rule, in traveling the grain gets dryer and is of even a better grade, unless it is tipped off into the river or something of that kind.

Mr. SHERMAN. The Senator is in error about corn in 1907. Many times it contained more moisture at the destination than it did at the initial point. A comparison of moisture is very material in late years, since long-time holding in the crib has stopped. There is no more of the long-time cribbing there used to be. Corn is similar to other grain; it goes almost out of the field into the elevator. That is the reason why of late years more complaints are made. It is harder to handle. It requires more care on the part of the shipper and elevator man and everybody to keep it in order. The moisture content in corn is very material. I will read from the grade established by the United States Government here at Washington in order to make more lucid that point.

For instance, No. 1 corn is graded with a maximum moisture of 14; No. 2 with maximum of 15.5; No. 3, 17.5; No. 4, 19.5; No. 5, 21.5; and No. 6, 23. As the moisture increases the grade goes down.

That is the maximum allowed in No. 1 corn. In No. 2 corn the maximum moisture is 15, and the other points grade proportionately. In No. 6 corn the moisture content is 23. If corn in 1907 absorbed moisture, that often depends upon the climatic or atmospheric condition. It depends largely on how the conditions were when it reached the coast. If it was Indiana or Illinois corn, there was a lower altitude by 400 feet, because that country is over 400 feet above sea level. At Baltimore it is practically on sea level, and where that atmospheric condition pervades it, the corn and other grain might absorb moisture under unfavorable conditions of humidity there or in transit.

Let me call your attention to one thing to show how rapidly moisture permeates grain. In the old times, when you and I were boys in Illinois [Mr. STERLING in the chair], and had on our cowhide boots at that time, and came in wet at night from a day's plowing, what did we do? Leave them to dry and shrink, so as to produce expletives and suffering in the morning when we put them on? No; we filled them up with oats. I have a thousand times filled my boots with dry oats so that the oats would absorb the moisture and we would have dry boots in the morning.

When the Senator says that corn shipped from the initial point to a destination at Baltimore could not by moisture test alone lose these grades he is mistaken, because corn can properly be graded down on the moisture test. If you reach the 23 per cent moisture, you can have No. 3 or 4 grade instead of a No. 2, which is the usually established grade of this grain.

I wish to offer without reading, in connection with the report of the Committee on Agriculture and Forestry dated February 4, 1914, a letter from Charles England dated March 20, 1914, at Baltimore, with the accompanying copy of the answer to the different statements of fact or alleged fact made in the report of this committee, 39 in number, together with the letter written by Mr. England dated January 27, 1909, to Senator Dolliver, at Washington. I wish to offer them all and make them a part of the RECORD.

The PRESIDING OFFICER. There being no objection, it will be so ordered.

The matter referred to is as follows:

BALTIMORE CHAMBER OF COMMERCE,
OFFICE OF THE SECRETARY,
Baltimore, March 20, 1914.

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

SIR: Referring to the recent discussion in the Senate on Senate bill 120, providing for Federal inspection of grain, I beg to say that the arguments of Senator McCUMBER in behalf of his measure and the evidence submitted by him was practically all submitted at the hearings by the Senate Committee on Agriculture and Forestry January 16, February 16, and April 2, 3, 4, and 8, 1908; also before the Committee on Interstate and Foreign Commerce of the House of Representatives March 3–16, 1908, and to which reply was made by representatives of the grain interests of the United States and others.

The Senate Committee on Agriculture and Forestry of the present session of Congress did not give hearings on Senate bill 120, which, as we understand, was submitted to the Senate with the report used in 1909, accompanying Senate bill 382. As this report makes certain criticisms in regard to the inspection of grain at Baltimore, also Chicago, we are taking the liberty of inclosing you herewith copies of statements in regard to same, which were submitted to the United States Senate in January, 1909, refuting certain statements in the report.

Thanking you in advance for your consideration of this matter.

Yours, respectfully,

CHARLES ENGLAND.

CHICAGO, *January 23, 1909.*

Replies to and observations on Senate Document No. 754 by the grain committee of the Board of Trade of the city of Chicago (the numbers appearing paragraphically represent replies or comments upon statements correspondingly numbered in the report):

No. 1. The result of climatic influences and soil differences of the three spring wheat States of the Northwest, Middle West (soft wheat), and hard winter Southwest States necessitates entirely different rules. The same rules can not be made to apply to the radically different varieties. In corn and oats there is no difference in the rules therefore none in the grading.

No. 2. Values are determined in primary markets, both by exhibiting samples on which inspectors have fixed the grade and the grade or inspection, but more on the sample than on the grade. The Illinois Board of Railroad and Warehouse Commissioners determine the rules governing grades; the Chicago Board of Trade can only use such influence as it may possess, and being about evenly divided politically, always has a strong and efficient minority to prevent action othen than indicated for the benefit of the State at large. The commission houses who make a specialty of receiving grain from country dealers and farmers zealously protect and defend the interests of their clients, as other interests contend for their rights. All inspection rules governing the classification of grain in Illinois are determined in mass meeting held, due notice of which is given for the purpose, at which recommendations to the State board of railroad and warehouse commissioners are adopted. The commission, after due notice, act upon the said recommendations.

No. 3. The Illinois law provides for the appointment by the Government of the railroad and warehouse commission, comprised of 3 members. The commission appoints 1 chief inspector, 3 first assistants, and about 25 second assistants, none of which, under the law, can be members of the board of trade or engaged in dealing in grain. Seventeen of these have served an average of 26 years, the remainder an average of 9 years. Their experience and efficiency retain them in service, regardless of their political affiliations. No relation whatever exists between inspectors and commission merchants or dealers.

Nos. 4 and 5. The conditions in Chicago are exactly the reverse. Receiving and shipping interests are sufficiently large to protect the producer and the consumer and efficiently does so.

No. 6. There is no difference in the standard and the practice in grading "in" and "out" grain. The inspectors are frequently changed from place to place and work on both "in" and "out" work. The Chicago Board of Trade, through its grain committee, maintains an efficient sampling department, which constantly scrutinizes the work of the State department and reports promptly to the chief inspector any and all errors of classification or tendency to depart from a strict application of the rules.

No. 7. Dirty grain is cleaned and damp grain is dried and inferior grain of any kind, if susceptible of improvement, is improved and benefited, the lax method of the farmer in sending it to market being thus corrected and the work performed for him. In this manner grain is raised from a lower to a higher grade. Competition in the Chicago market forces the prices paid for this grain as it arrives to its full value when cleaned, less a close working margin of profit for doing the work.

No. 8. Repeated fraud and dishonesty is here charged. No proof—none is possible as applicable to Chicago conditions. A very great injustice is done here.

No. 9. The foreign importers who buy the grain, in most instances, do not complain. They almost invariably refuse the higher grade and buy the cheaper. This is a widely known fact. Their methods in selling to smaller dealers in their own country give rise to most of the complaints they make. Americans should not be condemned for the unfair methods of many of the foreign importers. Canadian fyfe and blue-stemmed wheat, because partly of being grown on virgin soil, but mainly because of its higher perfection of quality, due to having grown in more northerly latitudes, outclasses wheat of North Dakota and Minnesota, and naturally commands a higher price. Argentina has no system of inspection and classification and sells by sample. Their wheat usually tests above standard weight per measure bushel. American wheat, more particularly northwest, usually tests below. The charge of fraud in this paragraph is without foundation.

No. 10. Large quantities of wheat are steadily going from Chicago elevators to mills, and have done so for years, and at the present time daily shipments of this class run up to 100,000 to 200,000 bushels. This is a sufficient answer to this charge.

No. 11. The farmers of the Northwest spring-wheat section each need more a fanning mill than Federal inspection laws. Because of marketing dirty wheat they set up the very conditions about which they complain, and when the work of cleaning they should do is done in terminal elevators, and dirty, seedy, and no-grade grain is made clean and wholesome No. 2 grade, the claims they set forth in this paragraph should not be made. Much of low-grade grain is marketed for local use as animal food, and for starch and other manufactures.

No. 12. May I ask if you know or not if the market price advanced during the three months covered by this statement? Eight hundred thousand bushels, at 10 cents, equals the grain shown, besides a portion of the profit would be legitimate, due to cleaning and improving the quality. The United States Supreme Court has said: "It is legitimate to buy wheat for a rise."

No. 13. The Chicago Board of Trade has not derived a single dollar of income from inspection of grain in 38 years, our present Illinois railroad and warehouse law having been enacted in 1871. The statement in this paragraph was originally written—as admitted to the writer of this—to Senator McCUMBER as a hearsay and a figure of speech. It is a charge against the State of Illinois, in fact, although evidently intended for the Chicago Board of Trade. To anyone familiar with the work of inspection of grain the statements of this paragraph are so impossible of truth as to appear comical. The inspectors, under the Illinois law, are bonded, for the purpose of indemnifying owners of the grain they classify, in case of loss due to errors on their part in performing their duties. Can anyone intelligently conceive of any of these inspectors grading the quarter of a million bushels approximately contained in these 250 cars as a guess, as herein charged, and assume the large liability of loss under their bonds? Public officers do not assume unnecessary risks of this nature.

No. 14. The exchanges of the country possess no power to compel purchases by the public from their members. Self-interest alone dictates the selling and the buying, as in all commerce. If to the greater interest of consumers to buy direct from producers or country dealers, the way to do so is wide open. The fact that they buy on the exchanges is sufficient answer to the charges contained in this paragraph.

No. 15. No surplus whatever of any of the cereals produced in the United States for some years past has remained over as being on hand when succeeding crop was available. Foreign countries continue to take all the surplus that we raise, and there is no occasion to be deceived by the noisy utterances of Mr. Patterson, or of certain German agitators. It was not long ago that Mr. Patterson as loudly complimented our inspection system as he now condemns it. More depends upon the quality of our crops than on any inspection system. Last year's corn crop—1907—was the most immature the United States ever produced. It gave much trouble in handling to all, both domestic and foreign. The present crop is the reverse in quality, and it is probable it will give excellent satisfaction. Argentina, Canada, and Australia are all rapidly developing, and are largely increasing their production. The United States 15 years ago, with fifteen hundred million crop of corn, had more exportable surplus than it had this year with a twenty-six hundred million crop, and in the near future it is probable will have no exportable grain surplus. We should conduct our affairs for the benefit of our own people rather than in the interest of foreign traders who buy but a small per cent of the total crop produced in any year.

No. 16. Conditions would be identical if Government certificates were in vogue. The Government can not legislate quality into grain nor create a specific which will prevent deterioration of quality under adverse conditions.

No. 17. The testimony of country dealers disputes this statement. I refer you to Mr. George A. Wells, secretary of the Iowa Grain Dealers' Association, for data received from some hundreds of your constituents. Comparatively, there are few country dealers who favor Federal inspection. A poll of the Illinois Grain Dealers' Association shows strong opposition to it.

No. 18. Contentions in this paragraph are answered in the foregoing. Supply and demand are prime factors in determining final values, domestic demand and producers' attitude being more potent than foreign inquiry.

No. 19. It is well known that "rye terms" is the desideratum of Mr. Patterson and his associates rather than Federal inspection. The wide difference in climatic and soil influences in this country effectually prevents evenness of quality of grain shipped to our various outports, and the foreigners are asking something absolutely impossible. Evidently they are not well informed about material changes going on in this country which largely affect conditions. For example, the disappearance in your own State of the corncribs from country stations should point clearly to you the fact that the well-cured old corn, so abundant in former years, does not exist now, hence we export uncured new-crop corn with its increased liability of deterioration while in transit, this being the real cause of the decline alleged in their complaint of inferiority of quality. No advantage has been taken of them. They have very plainly been told about the danger of such shipments, and safe arrival as to condition can be insured to them for the small charge of about one-half cent per bushel; yet they buy the corn and assume the risk and yet complain and ask for a Federal inspection law as a panacea. Uncured new-crop corn under Federal inspection would result no better. The German outcry about hard winter wheat rests on an equally flimsy foundation. Is it fair to tax Americans to save foreign buyers the cost of supervision by their agents or representatives?

No. 20. Illinois State inspection only at Chicago. No charge is possible of the kind claimed in this paragraph.

No. 21. Does not apply to Chicago or the great Middle West.

No. 22. Exporters, like other commercial men, offer various qualities of goods, and foreign buyers are notorious for accepting the lowest-priced article and rarely will pay a premium for a higher quality with safe arrival guaranteed. This is a most common occurrence.

No. 23. Grain dealers can no more thrive on fraud than other commercial men. A little reflection will convince anyone that the claims made in this paragraph can not reasonably be accepted by anyone. The Illinois law requires the grading of the entire car in accordance with the poorest quality found in the car. At Chicago cars are accurately sampled with long tube tryers or probes, and the samples thus obtained are submitted to a board of three inspectors as a final act in inspection.

No. 24. Exchanges with hundreds of members (Chicago has 1,700) could not long keep secret such an arrangement as is here stated, and no one will assume to claim that there is the slightest evidence of such a banding together. Farmers are known to have clubs and otherwise organize, and also, in the aggregate, own and operate hundreds of country elevators in the Middle West. There are many in Iowa.

No. 25. Line elevators exist only in the Northwest, with a possible two or three small exceptions in Nebraska. They are the product of newly settled sections, and their history is that they give way under competition and disintegrate.

No. 26. In Illinois is no dockage. If the farmer will clean his grain, no dockage will be required and it will grade No. 2. Ills which he may prevent he can not consistently ask a cure for.

No. 27. Large Federal creations, with their incidental political jobbery, are not inviting. Their evils and incapacity are too well known.

No. 28. Note long-continued service of Chicago inspectors under Illinois law.

No. 29. An efficient system, established 51 years ago, business prudence would dictate should be retained—not be cast aside in a day and a new untried Federal creation accepted in place thereof.

No. 30. In Illinois there is no loose system. No frauds or injustice. As great a certainty now exists as could possibly be expected under Federal laws.

Nos. 31 and 32. The Illinois law does not permit any machinery of any kind in its public elevators. It cost the Chicago Board of Trade a large sum to litigate this question to a finish in the courts. Grain of like quality and grade is stored together in the public elevators, and the farmer has a wide-open avenue of approach to these storehouses—has equal rights with all. His grain will come out of them of the same quality he puts in. A public elevator proprietor can not store his own grain in the same elevator under this law.

No. 33. A horse may be led to water, etc. Federal law can not be forced into use. Illinois can be forced to pay Federal inspection fees under a Federal law, but can not be forced to use the certificates. Double inspection will be the inevitable result in this great primary market if this law is enacted. Your claim that 90 per cent of the grain would be interstate is not true to the fact: more nearly 50 per cent of the grain arriving at Chicago is interstate.

Nos. 34 and 35. Our Illinois law provides that all questions of doubt shall be resolved in favor of the grain. The demand for Federal inspection is wholly selfish on the part of the foreign buyer. The cost of an agent or representative would be saved to him and the producer would eventually stand the tax of maintenance of Federal inspection, for all expenses incidental to the handling of grain are deducted from it.

No. 36. Inspection of meat and inspection of grain are entirely different propositions, and can not be compared. One relates to soundness—a sanitary question—the other to classification and grades.

No. 37. The great Middle West, through the grain dealers' associations, exchanges, and boards of trade, have evidenced by resolution an almost unanimous sentiment against Federal inspection.

No. 38. Federal inspection could not guarantee conditions superior to those now resulting from Illinois law. Expert judgment, based on experience, is in finality the only guaranty of correct inspection.

Nos. 39 and 40. That grain is not inspected in the State where it is produced is due to the location of distributing and terminal markets and by force of circumstances and necessity. A large proportion of grain raised each year is sold near by, without regard to grades, because it goes directly to interior mills, manufacturers, and feeders or to the country merchants on their judgment and by consent of the producer. The surplus is sent to the nearest distributing and terminal markets offering the best net results to the producer and handler. That these methods are efficient and correct is evidenced by freedom of interchange of business from year to year and the very small percentage of complaints of irregularity, when the immense volume handled each year is considered.

—

JANUARY 27, 1909.

Hon. J. P. DOLLIVER,
United States Senate, Washington, D. C.

DEAR SIR: The Baltimore Chamber of Commerce desires to direct your attention to a portion of the report made by you to the Senate January 15, 1909, being report No. 771 to accompany a bill (S. 382) to provide for the inspection and grading of grain entering into interstate commerce and to secure uniformity in standards and classification of grain, and for other purposes.

The portion of the report to which we specifically desire to call your attention are paragraphs 20 and 21, reading as follows:

"20. This rigid and easy inspection system opens up another avenue of fraud. The rules can be changed by the board at any time, and grain which, when started on its journey toward a terminal, would measure up to a certain grade, will fall short on its arrival, and grain already in the elevator will be raised a grade by this elastic process.

"21. As an example of the effect of this system we cite one single fact established by this testimony before the committee. An attempt was made a short time ago on the part of the Baltimore grain interest to divert export trade from the port of New York to the port of Baltimore. This was accomplished by greater liberality in inspecting into the elevators at Baltimore. The exporters got rather heavily loaded. The foreign demand did not meet their expectations, and considerable losses were liable to follow. They met these losses by a very simple device—that of raising the grade of the grain and putting it on the market at a higher grade than it was entitled to. The dealers prevented losses to themselves by this transaction, but entailed many times the amount of their savings by depreciating the value of our high grade of grains."

There is, so far as we have been able to ascertain, nothing in the hearings before the Senate Committee on Agriculture and Forestry, so far as concerns the grain trade of the city of Baltimore, which justifies either of these statements. The only testimony which is material or relevant in any degree to the two paragraphs of the report above quoted is that of Mr. Brafford, a grain dealer of Indiana. The language of Mr. Brafford, it is submitted, does not warrant the inferences which your report has placed upon it. Though led on by suggestive and favorable questions, Mr. Brafford's conjectures are only possibilities. The strongest statement made by Mr. Brafford respecting Baltimore is that certain alleged facts justify the possible deduction that "grain is not graded the same in Baltimore all the time or else our man in the West is mistaken." (Hearings, p. 247.) It should be observed that these words place the erroneous grading of the cars of Mr. Brafford, if such grading there was, either upon his own employee at point of origin or on the inspection department of the Baltimore Chamber of Commerce.

The inspectors of the Baltimore Chamber of Commerce are sworn and bonded inspectors; considering this fact, and also the large amount of grain which they grade and their long service and experience, we respectfully suggest that the mistake, if such there was, was more likely to have been with the consignor's representative than a member of the inspection department of the Baltimore Chamber of Commerce.

It was further said by Mr. Brafford (p. 247): "We hate to charge that the inspector there (Baltimore) is influenced by the men that employ him, but the chances are that this might happen." It needs be observed that by this language Mr. Brafford has not charged the Baltimore Chamber of Commerce or its inspector with anything; he has simply stated his surmise that certain things "might" happen. The true reason for the surmises of Mr. Brafford is to be found in his reply to Senator PERKINS's question to the effect that climatic influences "might, to a certain extent," change the grade of the grain, and also that the grain in transit "might heat" (p. 248). A further reason results from a comparison of the dates of shipments and dates of arrivals at destination of the grain which Mr. Brafford shipped to this port in 1907 and 1908. The exhibits submitted by Mr. Brafford show that car Erie 76927 was shipped November 29 and arrived at Baltimore December 12, being in transit 13 days; car M. K. 17275 was shipped November 29 and arrived December 16, being in transit 17 days; car B. & O 65272 was shipped November 29 and arrived December 12, being in transit 13 days. These three cars graded new No. 4 white corn at Indianapolis and mixed corn No. 2 white corn and mixed corn, respectively, at Baltimore. The other shipments, being the acknowledged basis of Mr. Brafford's complaint, were made in 1908. Car N. Y. C. & H. R. 59147 was shipped February 3 and arrived March 14, being in transit 39 days; car S. P. 70771 was shipped February 5 and arrived March 5, being in transit 1 month; car C. H. & D. 10733 was shipped February 5 and arrived March 13, being in transit 35 days; car C. H. & D. 76723 was shipped February 5 and arrived February 28, being in transit 23 days. The corn shipped in February graded, respectively, at Indianapolis, 3 mixed corn, 3 yellow corn, 3 yellow corn and mixed corn; the same cars being in transit an average of over one month, on arrival three graded steamer mixed corn and one graded mixed corn.

It is a fact well known that grain, particularly corn, is liable to deteriorate when in closed cars for a considerable time. This was particularly true of the corn crop of 1907 on account of immature grain and excessive moisture. This fact was well known to the grain trade generally, and Mr. Brafford was aware of it, but for some reason he failed to make reference to the peculiarities of the corn crop of that year, although admitting that grain in transit "might heat."

That the grading of the cars complained of by Mr. Brafford was fair is evidenced by the certificates of the branch laboratory in this city of the United States Department of Agriculture (annexed herewith), which show that the corn in car 59147 contained 20.6 per cent moisture and weighed 50½ pounds per measured bushel, car 70771 contained 21.8 per cent moisture and weighed 48½ pounds per bushel, and car 10733 contained 19 per cent moisture and weighed 52 pounds per bushel. Car 46723 graded mixed corn, and, this being the regular contract grade, there can be no complaint in regard to it.

We desire to say specifically respecting that portion of the report to which your attention has been called, that the grades of grain are not changed by the Baltimore Chamber of Commerce "at any time," but, on the contrary, it is not unusual for the standards to remain unchanged for a term of years. When modifications are required by reason of the general average quality of the grain crop or by causes affecting all localities, changes are only made at the beginning of a crop season, and never during the time when the crop movement is on.

We wish to deny positively that at any time there was "an attempt made * * * on the part of the Baltimore grain interest to divert export trade from the port of New York to the port of Baltimore." As grain merchants the members of the Baltimore Chamber of Commerce are interested in securing by all fair and legitimate means tonnage of grain for export through and via this port. They are not now or have they ever been engaged in attempting to secure tonnage from other ports as such. The charge that this port has attempted to secure export trade from New York is not in accordance with the facts, except to the extent that the merchants of this port have competed openly, honestly, and fairly for grain traffic.

We further deny the statement that there was ever a "greater liberality in inspecting into the elevators at Baltimore," for the grading rules when once fixed remain the same, as above stated. These rules are published not only for the guidance of the inspectors who have no knowledge of market values nor of the ownership of the grain, but also for the guidance of shippers and others interested therein.

The statement that "the exporters got rather heavily loaded" is not in accordance with the facts, for during the crop season mentioned (1907–1908) the exporters were not heavily loaded, for sales of the stocks on hand had been made for export. There was some delay in the arrival of chartered vessels, but such delay had no effect whatever upon the grade of grain, but simply required the grain exporters at this port to pay storage charges in the elevators pending the arrival of ships.

We have already referred to the fact that during the crop season there is no varying of the grades of grain, and we deny most emphatically that any corn or other grain at this port was ever put "on the market at a higher grade than it was entitled to." The statement that the dealers prevented losses to themselves by this transaction (raising grades), but entailed many times the amount of their savings by depreciating the value of our high grade of grains, is not justified, because our exporters, who are a recognized class, have no greater voice in the making of grades than the receivers, who are not exporters. No one can depreciate the grain, either as to its grade or its price, the former being fixed, as stated, and the latter being entirely a question of demand and supply.

There are many other matters in the report above mentioned which we do not believe are justified, either by the testimony before the Senate Committee on Agriculture and Forestry or by the facts; certainly not with respect to the port of Baltimore. These matters are general and some allowance ought perhaps be made for referring to all grain markets in general terms. The particular paragraphs to which we take exception, and to which we most strenuously object, are made respecting this port alone, and this communication is sent you for the purpose of placing you in possession of such facts that you may, if you see fit, so act in relation to this particular matter that your reputation for judicial fairness may not be beclouded by allegations which are not justified, either by the surmises of one who appeared before the Committee on Agriculture and Forestry or by the facts; further, only a partial hearing was given this chamber by your committee, and although promised an opportunity to present further facts, such was not accorded, and we were therefore unable to deny the statements which are the basis of paragraphs 20 and 21 of your report. Again, no consideration seems to have been given in your report to any of the statements made by those representatives of terminal markets who had an opportunity to appear before the committee.

We have the monor to remain,

Very respectfully,

BALTIMORE CHAMBER OF COMMERCE,
By CHARLES ENGLAND, *President.*

Inclosed certificates, laboratory Nos. 3332, 3506, and 3566.

Mr. SHERMAN. Now, Mr. President, I am going to conclude. I regret greatly the time I have been compelled to take. It is not a matter of delight. It is no pleasure for me to make remarks in the Senate under such conditions, but I regard it as a duty to preserve in the RECORD some of this evidence that brings the criticisms made by the grain-inspection system of my own and other States into the RECORD in such a way that it may be answered properly.

It is said finally by these witnesses and others that the grain-inspection certificates in the city of Chicago are not taken in the eastern markets. I challenge that statement on the evidence. I need not testify myself. I might not be a credible witness. I know in the last four years, both from commercial transactions in which I was myself engaged with business associates, that these witnesses are in error. We bought many hundreds of thousands of dollars' worth of merchandise and saw many hundred thousand dollars' worth of grain pass to the consumer. I know from the city of Peoria, from Chicago, from East St. Louis, from St. Louis, Mo., and from Kansas City their grain-inspection certificates go without a challenge to the eastern markets; that they pass unquestioned for the face value of the grain that they purport to evidence in the warehouse of the kind named. We bought during the time I mentioned many hundred thousand dollars' worth of flour from mills all the way from Minneapolis to southern Kansas, both kinds of grain, the northern spring and the southwestern wheat, milled into flour. We had occasion to examine these inspections, because it became material, on the contract under which bonds were given by the miller to deliver a given quantity of flour at given intervals and places, to know his ability to perform it. He bought grain on certificates under the State inspection of Missouri, of Minnesota, and of Illinois, so that he might be able to perform in due season the terms of his contract; and in four years I wish to say that at no time was there difficulty because of the grade of the grain. We examined the flour and had it analyzed in laboratories in Minneapolis, in New York, in Chicago, and in St. Louis; and the test made of the flour will always tell you whether there was honest inspection of the wheat or not. The Senator from Minnesota [Mr. NELSON] knows much better than I do with his long experience that that is so. You can not make flour that will stand the test in the bake shops unless it is the right kind of wheat.

I now conclude all that I have to say, feeling that the only apology I might make is for the great length of time taken. It is a very uninteresting subject, very unattractive to most persons, but it is so vitally connected with the people of the great Middle West and the Northwest, in which these primary markets are found, that any Senator from such a State would be derelict in the performance of his duty did he leave anything undone in the presentation of this question.

Methods of Handling Reclamation Projects in Australia.

EXTENSION OF REMARKS

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 12, 1914.

Mr. FALCONER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by Elwood Mead on Methods of Handling Reclamation Projects in Australia.

The address is as follows:

ADDRESS BY ELWOOD MEAD ON METHODS OF HANDLING RECLAMATION PROJECTS IN AUSTRALIA.

Mr. Chairman and gentlemen, it is an unusual pleasure and honor to be able to come back to the State in which I began my life work, where I have always had a great many pleasant associations, and be able here to meet many old friends, and with them to meet the honored Senator and governor of the State where I did the most of my work in this country. It was an unexpected honor and privilege, and grew out of a conversation with Gov. Johnson, of California.

I have been for seven years in the service of one of the Australian States which has shown great wisdom and sagacity in its attention to irrigation matters, and in telling him of the methods pursued in that State in keeping settlers on irrigated land he asked me if I would come here and repeat to this convention what I had told him. This State is the foremost of the irrigation States of Australia, having more irrigated land and a larger investment in irrigation works than all of the other Australian States combined. And seven years ago it was confronted by very much the same problems that confront many of the Western States here. A large sum of money had been invested in irrigation work. The water was available; the land was there; but neither was the land cultivated or the water used. The difficulty was the lack of people. There was not in the country one-tenth of the farmers needed to cultivate that land and use the water, and the problem which confronted that country was how it could honestly invite settlers on distant lands to come there to unknown conditions and assure them that if they did come they would have more than a reasonable chance of success; and that country did what this country has failed to do. We have never yet here made a study of colonization and settlement. Partly because of the great area of rich, fertile, and cheap lands that have been available in the past this was not necessary, and since conditions have changed the need for this, the importance of it, has been neglected. For that reason I believe that the experience of this State and the methods pursued have a direct relation to the questions that you are to consider in this convention.

In dealing with these questions they realized that the men who came there—and many of them come 7,000 to 14,000 miles—would know nothing of the conditions in the country and would know nothing of prices or values. The methods of agriculture would be different, and if they were left alone to find out right methods for themselves inevitably much time and money would be wasted. The question was how to prevent that; how to enable the settler to become self-supporting in the shortest possible time, and so bring to the lowest limit the encroachment on his meager savings for living expenses.

It was evident, first, that the men who would come from abroad would have limited capital, and it was the purpose of the State to make the opportunities open to every man who had industry regardless of his capital. It was not to make development for those who had an accumulation of money or those who could pay their own way, but to open up under irrigated areas the same opportunities for the men seeking a home and hoping to win it by industry that had been presented to the earlier settlers of the country when they had free public lands open to them. In order to do that it was absolutely necessary to reduce to the shortest possible time the period from which the settler leaves his old home to the time he is established and earning a living in his new one, and to do that you must first provide him with his farm and next with a house. If you leave the settler to hunt around and make the bargain for material to construct the house, you inevitably cause him great loss of time and money. So the State said it would build the house for the settler. Plans of 14 houses of different design and cost were prepared. These the State builds for the settler on his payment of a deposit equal to one-fourth of the cost. The next thing which the settler needs is to have a portion of his land graded and seeded. No newcomer in irrigation can grade land properly. His first attempts are costly and usually of little value. So the State obviated that by putting in alfalfa one-fourth of each holding, the settler paying one-fourth of the cost and having 10 years in which to pay the remainder.

As a result of this policy we have had settler after settler who has come to us, gone into his new home, and been earning a living and making his expenses within 30 days of the time that he landed in the country.

Furthermore the State places at the disposal of these settlers immediately on their arrival the services of a man whose business it is to endeavor to place every settler in the position best suited to his ability, so as not to place the orchardist on grazing land or to place the dairyman on fruit land, but to deal with them entirely on honor and not to accept the application of a man unless he has reason to believe that he will be a success. The State also gives expert practical advice in the purchase of work horses and dairy cows, so that the settler, if he desires, can make those purchases promptly and be protected from the unscrupulous dealer.

These provisions meet the problem, but there still remains to be solved the human side of the difficulty. The industrious and thrifty man who understands his business needs little more; these aids are sufficient. But such generous assistance inevitably attracts a great many visionary or indolent men, who believe that if the Government goes this far and gives them a house and a farm and a portion of the land cultivated, in some mysterious way they have received an endowment, and all they have to do is to remain there and be supported. It is essential to the successful operation of any such enterprise that this should be avoided, and so another feature of this scheme is the placing in every settlement of a tactful practical farmer, whose business it is to be the friend and adviser of these settlers, to tell them what to do and how to do it; but it is also his business to watch the settlers and keep track of their operations, to ascertain those who are industrious and those who are indolent, and to make frequent reports to the central office regarding them. The settlers know of this; they see these reports and they have an opportunity to comment on them if they so desire. The settlers know that these reports are made a matter of permanent record and that they are the basis, or very largely the basis, of the dealings with them of the commission in charge of this matter.

The effort is first to have these settlers become self-supporting as soon as possible. The effort is next to have them bring all of their land under cultivation and to get a full return from their investment as early as possible, and what is being striven for there is to have each farm fully in cultivation in two years. We have not succeeded in that entirely, but I am going to give you the published results later on. The settler who takes irrigable land has a keen struggle before him. He has the land to cultivate and grade, the completion of his ditches and fences and farm buildings, and that means a large amount of unproductive labor, and if you leave the settler to struggle with all that his progress would be slow. But as an incentive to industry, and as a perfectly safe means of assistance, the State then offers to each settler a loan equal to 60 per cent of the value of all the permanent improvements he places on his land. So the settler who, through his industry and labor, has put up buildings and fences and improved the place to the extent of $500 can go to the State and get a loan of $300 and use it to meet expenses, and it enables hundreds of them to go forward without anxiety, without delay, and without hardship to the settler or his family.

Looking at this proposition and thinking of the results that come from it, and realizing the absolute necessity for this assistance, our commission has from time to time wondered how it was possible in this country—with, as a rule, higher priced land, higher priced water, and with certainly very much higher interest rates—for the settler here to be able to struggle along and overcome those initial obstacles without any assistance whatever; and one of the things that I desired to investigate when I came here was just what was the experience of the beginner with small capital. The result of that investigation since I have come here is that the stumblingblock of your development, the main reason for the discrediting of irrigation securities and the difficulties that are being encountered, is the fact that you have failed to realize the difficulties that confront the farmer and to realize the difference and difficulty that is coming in this country through the increased cost of water, owing to the greater magnitude of the works built, the higher prices of living, the higher prices of land, and the higher interest rates that have to be borne. The next step is to completely reorganize your methods of land settlement and to bring the

projects already completed or partly completed into full development.

The results there have been these: We have been able to draw settlers from all quarters of the globe; until recently it has been impossible for the State to acquire and prepare land and keep out of the way of the settlers coming; at the end of three years practically all our settlers, nine out of ten of them, are on their feet and are no longer any anxiety to us. The Government has been so pleased with the management and success of this policy that they are now preparing to enter upon new works of greater magnitude than those built in the past and give still more liberal terms to the settlers who come on those lands. In this initial experiment the settler is given 31½ years to complete his payments; during that time he pays each year 6 per cent on the cost; of that, 4½ per cent is interest, 1½ per cent goes into the sinking fund, which discharges the entire debt in 31½ years. The State is now considering extending that period to 40 years and requiring only interest for the first principal. On houses the interest rate is 5 per cent, and the settler is given 20 years in which to complete payment. For the improvement of the land the interest is 5 per cent, and the settler is given 10 years to complete payment. Loans are 5 per cent, and the settler is given 20 years to complete payments. So that you will see he not only has a system but he is relieved at the outset of the great burden of excessive payments. This State does not require any payments for water rights. It is the belief of the Government—that I believe experience has fully justified—that certainly in the earlier years of development it is far better for these canals to be managed by competent public authorities. The settlers have all they can do to deal with the improvement of their homes and in making their payments. To sell them at that time an interest in the canal simply adds to the burden of their debt and gives them no advantage whatever. We have tested that by offering our settlers an opportunity to assume control of a portion of this system and they have declined. Hence, all they have to meet in their payments for water is 4 per cent interest on the cost of the work and actual operating expenses. That accounts for the water charges on our systems being the lowest, considering the character of the service and the best service to be found anywhere in the world.

You will realize that in a development of this kind it requires a large sum of money to meet these advances, and there I think we come to what is a feature of irrigation development that we must all realize. Too many have regarded irrigation enterprises as a matter in which there could be a quick return; but with the building of irrigation works comes an immense amount of labor and improvements, expenditure in the improvement of the land, before it becomes a real irrigation proposition. It is a matter of not a few years, but a matter of a great many years. It is only when they are organized and have adequate financial backing that they become a perfectly safe and sound enterprise, and it is the failure to realize that that has brought so many into difficulty—not the ultimate value of the property, but the failure to provide for the earlier needs both of the settler and of the Government. That country is remote from all centers; it is now undeveloped country; there are great opportunities in the live-stock business, and all the local money, all the capitalist money, is absorbed in that enterprise. I think there is need for some financial management here. The money used for this enterprise comes largely from the State savings banks. The State has a savings bank, in which are deposited quite largely the accumulations of its wageworkers. The State pays 3½ per cent interest on small accounts and 3 per cent on large accounts. It has on deposit now about $110,000,000. Nearly all of that money is loaned out at 5 per cent as farm loans or for urban development—workmen's homes within the limits of the city—all practically loaned out for the purpose of upbuilding the State, for improvement purposes. The bank has been running a great many years. Its expenses do not near absorb the difference between the 3½ and 3 per cent it pays and the 4½ and 5 per cent that it charges. It has now so large an accumulation in its reserve fund that its condition is absolutely beyond question.

When hearing that you had established in this country a postal savings bank system, it seemed to me there could be no more wise or no more sensible and safe use for that money to arrange in some way for its safe loan in the upbuilding of the agriculture of the western country. We have through this country an immense amount of money invested in enterprises absolutely sound and absolutely right, lacking only cultivation of the land and use of the water to make them profitable, and it seems that the great problem before the West to-day is to bring these enterprises into full use. If you are to do this by the extension of such aid as I have indicated, then there must, of course, come first of all some public, thorough, and impartial investigation of these enterprises to determine which of them have an adequate water supply, which have lands suited to irrigation, and which can supply land and water at prices which settlers can be asked to pay. If the unsafe and discredited enterprises are eliminated—and assistance of this kind is only for those that are legitimate and have right conditions back of them—I see no reason why better results should not come here than have come to Australia, because you do not have to go half way around the world to find your settlers; they are here in great numbers; they are eager for land; and the hard conditions that confront them here in obtaining it are driving them away from here; they are going to Canada; to Australia; to take advantage of the liberal and generous offers presented to them there. Unless something of this kind is done, I feel that they will go in increasing numbers. You must realize in this matter that you are entering into competition world-wide. There never was a time in the history of the world when the settler was as valuable as he is now and when there was as much brain enlisted in the enterprise. South Africa is offering this inducement. I see from the newspapers that the Canadian Pacific Railway extends aid to the amount of $2,000 to each of the settlers on its irrigated lands. Even far-off Argentina is investigating this matter with a view to taking similar action. Now, here is a democracy—a rich country—and, as a matter of business and humanity and as a matter of taking care of her own and continuing this as a land of opportunity, I believe this is one of the most important steps to be taken in the reclamation of our arid lands.

The "Constellation."

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 2, 1914.

Mr. LINTHICUM. Mr. Speaker, I wish to congratulate the Committee on Naval Affairs upon the insertion in this bill and the passage by the House of the measure I introduced providing $50,000 for the repair and reconstruction of the old frigate *Constellation*. I especially take pleasure in noting that it was my colleague, Mr. TALBOTT of Maryland, who so ably presented the need for the restoration of this old ship, for it is due to his work and his constant attention to the matter that the wisdom of this appropriation was made plain to the Committee on Naval Affairs and provided for in this bill.

From September 6 to 14 of this year we shall hold in Baltimore the National Star Spangled Banner Centennial, in commemoration of the British attack on North Point and Fort McHenry and the writing by Francis Scott Key of our national anthem. For this reason the people of Baltimore are particularly interested in the repair of the *Constellation*, for the Secretary of the Navy has promised to send her to participate in that celebration, and our waters will again welcome the old craft that began her brilliant career soon after she slid from the ways in the harbor of Spring Gardens, of our city.

The old *Constellation*, now used as a stationary training ship at Newport, R. I., is one of the few remaining sacred veterans of our first navy. She was launched September 7, 1797, and from that date forward her career was one of the most eventful in the annals of our vessels of war. She was ever the favored benefactor of an inscrutable Providence and good fortune, and the happy Jack-tar who clambered enthusiastically over her side to her spotless, holystoned deck felt a stimulating confidence that he was on the "lucky ship" of the American Navy. The sailorman is a curious mixture of practical belief and odd superstitions, and it was this reputation for good luck that made the *Constellation* the preference of every jackie and the envy of every sister ship in our Navy.

It was a whimsical, capricious fate that directed her course, for both in war and in peace it was given to her to play memorable rôles. Beginning with her active war service in the West Indies, in her very first conflict with the enemy—that with *L'Insurgente*—she added luster to our flag and brought our

Navy at home and abroad in high repute. It is a singular instance that her last important cruise was a mission of peace and good will, for it was this venerable warrior that in 1880, laden with supplies of food, carried succor to the starving thousands of Ireland. And between these missions of war and peace she holds a record of eventful services that will forever perpetuate her name in our Nation's memory. Let us glance at her long career, covering a period of more than a century.

HER HISTORY.

Although not launched until the fall of 1797, in June of the year following the *Constellation* sailed under command of Capt. Thomas Truxtun to join the West India Squadron. Seven months later—February 9, 1798—near St. Kitts, she received her baptism of fire, in which, through her superior gunnery, she captured the French frigate *L'Insurgente* after a spirited fight lasting 1 hour and 14 minutes. In this engagement the *Constellation* had 2 killed and 3 wounded, while the French loss was 29 killed and 41 wounded.

As a result of her activity, during the same month of that year she took the French vessels *Le Diligent* and *L'Union*.

On February 1, 1800, she encountered the French frigate *La Vengeance* off Guadeloupe. After five hours' combat, the French vessel withdrew from the action badly damaged. Owing to darkness and the loss of the mainmast of the *Constellation* the enemy escaped, reaching Curacao in a sinking condition. The loss on the *Constellation* was 14 killed and 25 wounded; on the *La Vengeance*, 50 killed and 110 wounded. For this victory Congress awarded a gold medal to Capt. Truxtun.

We next hear of the *Constellation* as a participant in the blockade of Tripoli in 1802, where she was a part of the Mediterranean Squadron, remaining attached to that service until 1804. She was instrumental in bringing the haughty dey to terms, and in securing for American ships and American seamen that immunity and freedom from molestation which few of the other nations of Europe enjoyed from the pirates of the Mediterranean.

There is a few years of peace and then we arrive at open hostilities with England. During January, 1813, under command of Capt. Charles Stewart, she found the British fleet becalmed and anchored off Willoughby Point, Hampton Roads. While awaiting a turn in the tide, the *Constellation* grounded and was taken up and anchored under the forts of Norfolk, and although unable to leave port until the close of the war, 1815, she did most excellent service with her boats and by landing parties ashore, June 20–23, 1813, assisting in the capture of 43 prisoners, sinking three boats, and wounding 90 of the enemy from the squadrons of Admirals Cockburn and Warren.

In 1819 the *Constellation* turned her bow southward on a diplomatic mission to the Rio de la Plata. Then followed 13 years of unbroken peace. In 1832 she put on her fighting togs and went to Naples as one of the fleet sent to enforce the demands of the United States.

The slavery trade on the high seas was outlawed, but by no means extinct. Under cover of secrecy an extensive and profitable traffic was developing in bringing slaves from the coast of Africa to the United States and other countries. In 1859 the *Constellation* was, among other vessels, assigned to the duty of breaking up this illegal and inhuman trade, and she remained in this work until 1861, cruising through the tropic, fever-ridden waters of the coast of Africa. It fell to her lot to capture the notorious slaver *Cora*.

She withdrew from her pursuit of unlawful slavers to engage in more dangerous business. Our Civil War was now upon us and the American merchant marine of the northern States was the prey of Confederate privateers and cruisers. To the *Constellation* was assigned the duty of watching for these allies of the Confederacy, and she remained in that work until 1865, when, her days of active usefulness and efficiency being over, she was made receiving ship at Norfolk and Philadelphia, where she stayed until 1868. In 1872 she was brought to the Washington Navy Yard, where she was used as a gunnery ship. From 1873 to 1892 she became a practice ship for midshipmen, and in 1892 was sent to Newport as a training ship for naval apprentices, where she now serves that purpose.

Where is the vessel among our retired sea fighters that can boast a longer or more brilliant record? And with this history before us who can fail in patriotic veneration for the vessel which has been among the foremost in creating throughout the world admiration and respect for the Navy of the United States?

GREATER USEFULNESS.

I doubt not that the work in which the *Constellation* is now used in schooling naval apprentices for those sterner duties at sea in the career before them is befitting her honorable past. It reminds me of old men who, having passed the age of martial usefulness, are unable to do more than teach the young and vigorous those arts of war in which they once excelled. And I doubt not that this old vessel, rich in her associations, is a wholesome inspiration to the young men who trod her decks preparing for actual service at sea on a modern man-of-war.

But in my opinion this old frigate with her glorious memories is capable of even a wider field of usefulness. Better than any other object I know of, she can inspire the multitudes of our land with those lessons of pride and patriotism that have made for the glory of our flag and the honor of our country. In my opinion, she should be kept at the cradle of her infancy, where she will be ever accessible to those who wish to view her and dwell again upon those memories of her exalted past. And I am sure that her presence at our centennial celebration will add immensely to the interest of that event.

COMPARED WITH MODERN DREADNAUGHT.

The *Constellation* was a great ship in her day. She was a wooden sailing vessel 161 feet long, 40 feet wide, 19 feet draft, 1,452 tons, 48 guns—28 14-pounders, 12 12-pounders, and 8 guns, probably 9-pounder swivels. Her normal crew was about 300, but the extra guns she carried required additional men, and her crew at the time of her fight with *L'Insurgente* numbered 409. She cost $314,312. The energy of her largest guns, 24-pounders, was 120 foot-tons, and the energy of all her guns fired at once was 4,440 foot-tons. But she is a mere pigmy beside the powerful dreadnaughts we are building to-day. For the purpose of illustrating a century of the world's progress in naval building, let us compare her with the *New York*, our most formidable battleship of the present.

The *New York*, battleship No. 34, is a great ship of to-day, and there are sister ships, and even greater ships building.

The *New York* is 573 feet long, 95 feet wide, 28 feet draft, 27,000 tons displacement, and her 28,000 horsepower steam engines weigh more than twice as much as the old *Constellation* and drive her at a speed of 20 knots per hour, displacing in one hour 5,400,000 tons of water. The muzzle energy of one of her 14-inch rifle projectiles is 65,000 foot-tons, 16 times the total energy of all the guns of the *Constellation*, and the total energy of all the *New York's* guns is 731,353 foot-tons, 160 times that of the *Constellation*, and shooting 15 times as far.

This terrible projectile of the *New York's* guns, 14 inches in diameter, weighs 1,400 pounds and leaves the muzzle of the gun with a velocity of nearly 3,000 feet per second and 65,000 foot-tons of energy. The energy stored up in this projectile is equal to the work required to raise 65,000 tons 1 foot in 1 minute; or it is equal to the energy created by 65,000 tons falling 1 foot or 1 ton falling 65,000 feet—12 miles. To resist the terrible effects of this projectile, there is required a great armor belt of hardest steel covering the vital parts of a ship, its machinery, magazines, ammunition hoists, etc., and at 6,000 yards it requires over 20 inches of hardest steel to prevent a shell from passing through. This steel armor, the toughest the brain and ingenuity of man can devise, is equal to 60 inches of ordinary iron or steel.

The approximate cost of the *New York*, with equipment and stores on board, is $12,000,000, about 40 times the cost of the *Constellation*.

It will be seen from this comparison that the *Constellation*, a superb type of the fighting craft of our forefathers, is now but a mere infant in size and strength compared with our modern dreadnaughts. Yet despite her smallness and limited gun power, we can not help but admire the skill and efficiency with which our sires used those vessels and those weapons, which at that time were the best they could produce. Though our present-day fighters exceed in bulk and in gun power those of the diminutive *Constellation*, the spirit of those men of a century ago can not possibly be excelled. Their deeds come down to us as a splendid heritage worthy of emulation. We may build fighting vessels in the future, by contrast with which the great battleship *New York* of the present day will be vastly inferior in size and whose gun power it may be impossible and dreadful to contemplate, but as a fighting unit the sea will never be sailed by vessels superior to the old *Constellation*. And the spirit of their crews will need be valiant indeed to equal that of the men who sailed the old frigate, whose restoration this act of Congress authorizes.

I hope and believe that the restoration of the *Constellation* will prove worthy the outlay involved and that this and the generations to follow will view with love and admiration this old frigate, rising specter-like from the past, whose achievements and glory were the pride of our Nation.

Hay-Pauncefote Treaty.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. GREENE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, May 16, 1914.

Mr. GREENE of Massachusetts. Mr. Speaker, availing myself of the authority granted to me to extend my remarks in the CONGRESSIONAL RECORD on the "Panama Canal tolls question," I submit as a part of my remarks an article written by Hon. David Jayne Hill, former ambassador to Germany, published in the Saturday Evening Post at Philadelphia on May 16, 1914, entitled "The meaning of the Hay-Pauncefote treaty."

A careful reading of this entire article will, in my opinion, convince any unprejudiced individual of the entire right of the United States to control and regulate the uses of the Panama Canal without consulting with or submitting to any interference by any other nation. I call, however, particular attention to the following language which appears in this valuable article, which in its entirety bristles with important facts bearing upon this most valuable constructive proposition, connecting the great Atlantic and Pacific Oceans by a great American waterway, built upon the sole authority of the Congress of the United States, through territory of the United States, with money appropriated from the Treasury of the United States, without the aid or assistance of any other nation, and under the direction of Col. George W. Goethals, an honored graduate of the noted United States Military Academy at West Point, who is very properly now honored by appointment by the President as the governor of the Canal Zone.

When the Senate declined to ratify without amendment his first treaty, Secretary Hay reopened negotiations with Great Britain on the understanding that the canal was to be exclusively American; that the right of fortification was not to be denied; and that neutralization as a general principle could not be interpreted as excluding the owners of an object from unlimited control over it so long as all neuters were subjected to equal treatment. Great Britain and all others were to be treated with strict equality, but the United States was to have a free hand in the management of its own property. In pursuance of this purpose the draft of the second Hay-Pauncefote treaty withdrew from the obscurity of a merely parenthetical clause the statement that the Clayton-Bulwer treaty was superseded and brought to the front as the first article the plain declaration:

> The high contracting parties agree that the present treaty shall supersede the aforementioned convention the 19th of April, 1850.

In communicating the new treaty to the Senate for ratification Mr. Hay said:

> The whole theory of the treaty is that the canal is to be an entirely American canal.
>
> The enormous cost of constructing it is to be borne by the United States alone. When constructed it is to be exclusively the property of the United States, and is to be managed, controlled, and defended by it.

Under these circumstances, and considering that now by the new treaty—the Hay-Pauncefote treaty of November 18, 1901—Great Britain is relieved of all responsibility and burden of maintaining its neutrality and security, it was thought fair to omit the prohibition that "no fortifications shall be erected commanding the canal or the waters adjacent."

There were, then, from Mr. Hay's point of view, no limitations whatever on the enjoyment by the United States of "all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal, as provided for in the second article of the new treaty."

THE MEANING OF THE HAY-PAUNCEFOTE TREATY.

[By David Jayne Hill.]

Without touching on the expediency of either affirming or surrendering such rights as the United States may possess in the Panama Canal, it may be useful at this time to inquire what are the respective rights of the United States and Great Britain under the Hay-Pauncefote treaty.

THE CLAYTON-BULWER TREATY.

In 1850 the occupation by Great Britain of territory in the vicinity of a possible future canal connecting the Atlantic and the Pacific led to negotiation of a treaty between the United States and Great Britain, signed on April 19 of that year, which contained the following provisions:

"The Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal; agreeing that neither will ever erect or maintain any fortifications commanding the same or the vicinity thereof, or occupy, or fortify, or colonize, or assume, or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America," and so on.

So long as this convention remained in force—that is, down to the year 1900—it was impossible for either Great Britain or the United States to build an isthmian canal over which it could, without a violation of the treaty, exercise such rights of control and defense as would justify the expenditure of the cost of construction by either nation.

Meanwhile, under rights obtained from Colombia, a French company began, but afterwards abandoned, the construction of a canal across the Isthmus of Panama.

In 1900 the Government of the United States desired to construct an isthmian canal for the purpose of connecting its Atlantic and Pacific coasts by a waterway through which its ships of war and its domestic commerce might be transferred from ocean to ocean. This was to be an American canal, constructed and controlled by the Government of the United States. The obstacle to procedure was the Clayton-Bulwer treaty, by which the United States was solemnly bound not to exercise the control it now desired to exercise.

THE ABROGATION OF THE CLAYTON-BULWER TREATY.

The task was intrusted to the Secretary of State, Mr. John Hay, to open negotiations with Great Britain for the purpose of liberating the Government of the United States from its agreement with Great Britain, in order that it might be free to proceed with the construction of a canal under its own exclusive control.

Would Great Britain agree to release the United States from the then existing obligations? That was the question which Secretary Hay was called on to face. On the one hand, Great Britain might be reluctant to permit the United States to construct and control a waterway between the two oceans through which American ships might at all times pass freely and from which British ships might sometimes be excluded.

On the other hand, Great Britain, as the greatest of maritime powers, might profit greatly by the construction of such a canal; and there was the possibility that the United States, whose position in the Western Hemisphere had been profoundly modified in the 50 years that had elapsed since the signing of the Clayton-Bulwer treaty, might consider it expedient to denounce that treaty, on the ground that treaties, even when alleged to be perpetual, are morally binding only rebus sic stantibus, and cease to be so when conditions have essentially changed.

In the conduct of the negotiations Mr. Hay discovered that Great Britain was deeply interested in the construction of a canal at the expense of the United States, and would readily consent to it on condition that the general principle of neutralization, which had been definitely specified in the Clayton-Bulwer treaty, should be recognized in a new convention.

Accordingly a new treaty was signed on February 5, 1900, designed to take the place of the Clayton-Bulwer treaty, in which it was agreed that a canal might be constructed "under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations or through subscription to or purchase of stock or shares."

THE FIRST HAY-PAUNCEFOTE TREATY.

Though the treaty of February 5, 1900, released the Government of the United States from some of the obligations of the Clayton-Bulwer treaty, it did not release it from all.

In the second article it was declared:

"The high contracting parties, desiring to preserve and maintain the 'general principle' of neutralization established in article 8 of the Clayton-Bulwer convention, which convention is hereby superseded, adopt, as the basis of such neutralization, the following rules."

The rules, substantially as embodied in the Suez Canal convention, signed by nine powers in 1888, then follow. The first one reads:

"The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and war of all nations, on terms of entire equality; so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions and charges of traffic, or otherwise."

The seventh rule reads:

"No fortifications shall be erected commanding the canal or the waters adjacent. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder."

Evidently here, as in the Clayton-Bulwer treaty, Great Britain shared with the United States the power to determine the conditions under which the canal should be used. It was distinctly agreed that all nations, without qualification of any kind, and therefore plainly including the United States, were to be treated on terms of entire equality with the United States.

The language is plain and explicit and can have no other meaning. So complete is the condominium in the control of the canal that Great Britain in the first Hay-Pauncefote treaty still possessed and exercised the right to forbid the fortification of the canal, as well as to share on terms of entire equality all the privileges of the United States, both in war and peace.

THE SECOND HAY-PAUNCEFOTE TREATY.

Though it is well known that the first Hay-Pauncefote treaty was not ratified by the Senate of the United States and was returned to Secretary Hay with several proposed amendments, the language of that treaty has so impressed itself on the memory of many persons that they persist in quoting its words as constituting the present obligations of the United States, unmindful of the fact that it was never ratified.

It is therefore of the highest importance to a comprehension of this subject that we should not only distinguish between the unratified treaty of February 5, 1900, and the treaty of November 18, 1901, which was duly ratified and is now in force, but that we should closely follow the steps of the transition from the one to the other by which the the relations of the two Governments were radically modified.

Without encumbering this brief exposition with the discussion of the first Hay-Pauncefote treaty before the committee of the Senate, it may be sufficient to point out the nature of the modifications actually adopted, with the reasons for making them.

When the Senate declined to ratify without amendment his first treaty, Secretary Hay reopened the negotiations with Great Britain on the understanding that the canal was to be exclusively American; that the right of fortification was not to be denied; and that neutralization as a general principle could not be interpreted as excluding the owners of an object from unlimited control over it, so long as all neuters were subjected to equal treatment. Great Britain and all others were to be treated with strict equality, but the United States was to have a free hand in the management of its own property.

In pursuance of this purpose the draft of the second Hay-Pauncefote treaty withdrew from the obscurity of a merely parenthetical clause

the statement that the Clayton-Bulwer treaty was superseded, and brought to the front, as the first article, the plain declaration:

"The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th of April, 1850."

It is, therefore, useless to look back of the Hay-Pauncefote treaty of November 18, 1901, for any light on the present rights and treaty relations of the United States and Great Britain. So far as the Clayton-Bulwer treaty and the first Hay-Pauncefote treaty are concerned, they have no existence and no effect. The rights of the two countries respecting the canal are, therefore, to be determined solely by an interpretation of the second Hay-Pauncefote treaty, which alone is still in force.

Happily we have clear and authentic written evidence of the intentions of both sides in this negotiation. In communicating the new treaty to the Senate for ratification Mr. Hay says:

"The whole theory of the treaty is that the canal is to be an entirely American canal. The enormous cost of constructing it is to be borne by the United States alone. When constructed it is to be exclusively the property of the United States, and is to be managed, controlled, and defended by it. Under these circumstances, and considering that now, by the new treaty Great Britain is relieved of all responsibility and burden of maintaining its neutrality and security, it was thought entirely fair to omit the prohibition that 'No fortifications shall be erected commanding the canal or the waters adjacent.'"

There are, then, from Mr. Hay's point of view, no limitations whatever on the enjoyment by the United States of "all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal," as provided for in the second article of the new treaty. The Clayton-Bulwer treaty casts no shadow on the new convention, which is based on a new conception of the relations of the two Governments to the canal.

That the British Government took the same view is evident from the difference between the two Hay-Pauncefote treaties and the statements of Lord Lansdowne, the British minister of foreign affairs, in his communications to Lord Pauncefote.

THE CHANGES IN THE TREATY AS RATIFIED.

Lord Lansdowne's memorandum for the instruction of Lord Pauncefote, dated August 3, 1901, reveals how completely the British Government had modified its point of view since the negotiations began.

"In form," says Lord Lansdowne, "the new draft differs from the convention of 1900, under which the high contracting parties, after agreeing that the canal might be constructed by the United States, undertook to adopt certain rules as the basis on which the canal was to be neutralized. In the new draft the United States intimate their readiness 'to adopt' somewhat similar rules as the basis of the neutralization of the canal. It would appear to follow that the whole responsibility for upholding these rules, and thereby maintaining the neutrality of the canal, would henceforth be assumed by the Government of the United States. The change of form is an important one; but in view of the fact that the whole cost of construction of the canal is to be borne by that Government, which is also to be charged with such measures as may be necessary to protect it against lawlessness and disorder, His Majesty's Government are not likely to object to it."

In brief, the rules for the use of the canal, instead of being laid down, as in the first treaty, by the United States and Great Britain jointly, in this new treaty are now to be laid down by the United States alone, the reason for this being that the cost of constructing, maintaining, and defending the canal is now to be borne solely by the United States. The bilateral agreement becomes a unilateral regulation. In exchange for the added burdens assumed by the United States, Great Britain surrenders all rights in the canal except those explicitly accorded under the rules adopted by the United States.

This radical change in the ground conception of the treaty seemed to Lord Lansdowne to require a corresponding change in the phraseology of the rules. Accordingly, in the draft of the treaty sent by the British Foreign Office to Lord Pauncefote, Lord Lansdowne proposed to change the expression in the first rule from—

"The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and war of all nations, on terms of entire equality; so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions and charges of traffic, or otherwise"—

to the form—

"The canal shall be free and open to the vessels of commerce and war of all nations which shall agree to observe these rules, on terms of entire equality; so that there shall be no discrimination against any nation so agreeing," and so on.

The significance of this change is evident. The rules in question were now to be adopted by the United States alone. The canal was not to be thrown open to "all nations," but only to "all nations which shall agree to observe these rules." Not only so, but the expression, "in time of war as in time of peace," which appeared in the first treaty, is now dropped, thus giving the United States in time of war the right, if necessary, to close the canal even to those nations that agree to observe the rules laid down by the United States.

Clearly the United States Government in this new treaty occupies an entirely different position from the one it occupied in the previous treaty. It now possesses the right not only to fortify the canal but to close the canal in time of war. It is recognized as sole proprietor, and as such is empowered not only to adopt rules but by its own means and at its own cost to enforce the observance of them.

What, then, is the position in the new form of the treaty of all other nations, Great Britain included? "All nations which shall agree to observe the rules," now adopted by the United States alone, and no others, are, according to Lord Lansdowne, to enjoy the use of the canal. A distinction is here made that did not appear in the first treaty. In the first treaty the United States and Great Britain together adopted rules that opened the canal to "all nations, on terms of entire equality." In the second treaty the United States alone adopts the rules; and, as sole owner of the canal, offers terms of entire equality to all nations that shall agree to observe them.

Does the equality here referred to mean equality with the Government of the United States or equality among those agreeing to observe the rules? This is, without doubt, the critical point in the interpretation of the treaty, and it is necessary to proceed with extreme caution and absolute freedom from prejudice of any kind.

It would appear that the right to fortify the canal and to adopt rules for its use, with the power of closing it in time of war for purposes of defense, places the Government of the United States in a position quite different from that which it occupied when all these prerogatives were denied. The consideration offered by the United States to Great Britain for these new advantages was the assumption of the whole burden of maintaining and defending the canal as a piece of national property, thus relieving and discharging Great Britain from any obligation whatever, except observance of the rules.

A close examination shows that not one of the rules the nations were to agree to observe could be regarded as applying to the owner of the canal; so that the expression, "all nations which shall agree to observe these rules," can hardly be regarded as including the United States.

The purpose and character of the rules seem to forbid such inclusion. They are almost exclusively prohibitions that could not well apply to the United States as sole proprietor of the canal, whose whole interest would be to secure the observance of the rules and could not in any way be promoted by violating them—such as blockading the canal, committing acts of hostility within it, the revictualing of belligerent vessels, delay in transit, the treatment of prizes of war, the embarkation or debarkation of troops and munitions of war, and so on, and the occupation of waters adjacent to the canal by belligerent vessels—all of which relate to acts interfering with the control of the canal. Such rules have from their very nature no application to the United States, which, therefore, can not fairly be regarded as included in the expression, "all nations which shall agree to observe these rules."

We have, then, apparently two classes of powers designated in the provisions of this treaty: (1) The sole builder, owner, and controller of the canal, on the one hand, and (2) the nations that agree to observe the rules it has adopted, on the other. Does the United States consent in this treaty to extend to other nations entire equality with itself in the use of the canal, or only entire equality among themselves as equal and neutral powers?

The answer to this question is to be found in the statements relating to the effect of the treaty by those who commented on it at the time when it was negotiated. Lord Lansdowne, in his instructions to Lord Pauncefote, states very clearly his reason for changing "all nations" into "all nations which shall agree to observe these rules." His reason is—with the new conception of the treaty as giving to the United States complete control of the canal, thus making it exclusively American—that Great Britain would be placed at a disadvantage if all nations, without distinction, were to enjoy the privileges of the canal without any obligation to observe the rules.

"The omission of the words under which this country [Great Britain] became jointly bound to defend the neutrality of the canal, and the abrogation of the Clayton-Bulwer treaty," Lord Lansdowne admits, "would materially diminish the obligations of Great Britain. This," he adds, "is a most important consideration. But," he continues, "having assumed the whole burden of defending the canal, the United States would have a treaty right to interfere with the canal in time of war or apprehended war. Great Britain alone, in spite of her vast possessions on the American Continent and the extent of her interests in the East, would be absolutely precluded from resorting to any such action or from taking measures to secure her interests in and near the canal," though other powers not bound by the treaty would be free to take such action as they pleased.

"I would therefore suggest," he concludes, "the insertion, in rule 1, after 'all nations,' of the words 'which shall agree to observe these rules.' This addition will impose on the other powers the same self-denying ordinance as Great Britain is desired to accept, and will furnish an additional security to the neutrality of the canal, which it will be the duty of the United States to maintain."

What, then, is the substance of this self-denying ordinance on the part of Great Britain and this new burden assumed by the United States? Is it not the complete and unrestricted surrender of the control of the canal to the one power that takes the place of the two powers which before acted jointly, so that all other powers must agree to observe its rules on a plane of equality among themselves?

The Government of the United States objected to requiring all nations desiring the use of the canal to agree to observe its rules, on the ground that such an agreement would make those nations parties to the contract and thus give them contract rights in the canal. Mr. Hay proposed to change the reading of Lord Lansdowne's suggestion to "all nations observing these rules"; thus preserving the distinction already made plain in Lord Lansdowne's amendment between the nation adopting and the nations observing the rules, but without making them parties to the contract.

The question still remains: Did the assumption of the full control of the canal by the United States in any way affect the pledge of the United States Government in the first Hay-Pauncefote treaty to accord to all nations terms of entire equality with itself?

The change in the relations between the high contracting parties expressed in the new treaty seems to imply a change in this respect also; and Lord Lansdowne appears to have thought it did, for he proposed the insertion in the new treaty of the words, now for the first time suggested: "Such conditions and charges of traffic shall be just and equitable."

If it was clearly understood that the United States and all nations observing the rules were to be subject to identical conditions and charges of traffic, would there have been any occasion to demand of the United States that these should be just and equitable? Could the United States Government, on the assumption that "entire equality" applies to itself and other nations, have any motive for imposing conditions and charges of traffic that were not just and equitable on its own citizens?

This new insertion apparently implies the conviction that entire equality with the United States was no longer, as in the first Hay-Pauncefote treaty, a prerogative of the other powers, including Great Britain; and that the only way to guard against excesses by the United States was not, as might otherwise be expected, to write into the treaty the simple words, "No other conditions or charges of traffic are to be demanded than those paid by vessels of the United States," but, instead, the far feebler proviso, quite meaningless if entire equality were already accorded: "Such conditions and charges of traffic shall be just and equitable."

Undoubtedly Great Britain was, to use Lord Lansdowne's expression, making a "self-denying ordinance." The new treaty was radically different from the old. The compensation to Great Britain, however, was twofold. Without these changes the canal would probably never be built, and Great Britain was desirous that it should be built; but, in addition, Great Britain was relieved of responsibilities by placing the control exclusively in the hands of the United States.

Could Great Britain expect, under these circumstances, to obtain entire equality in all the advantages of the canal? What compensation in that case would the United States receive for assuming not only the cost of construction but the responsibilities Great Britain thus evaded?

If the transaction is to be esteemed a fair bargain, such as should preserve the honor of both nations—and it is difficult to see how the

honor of one can be involved without involving the honor of the other—it was just that the United States should receive some compensation for undertaking single-handed to open a great waterway between the oceans that all nations observing its rules should use on equal terms. This was duly recognized by Lord Lansdowne, and there is not a word in the entire correspondence that is not inspired by a spirit of equity on both sides.

It would be as dishonorable to interpret unjustly the meaning of this treaty, and to insist that one side never really gave up anything, as to have made the treaty itself dishonorable or dishonoring to either side. In authorizing the signature of the treaty, as finally agreed on, Lord Lansdowne, in his final instructions to Lord Pauncefote, reverts to the words "all nations" and Mr. Hay's change in the form he had suggested, by remarking:

"His Majesty's Government were prepared to accept this amendment, which seemed to us equally efficacious for the purpose which we had in view, namely, that of insuring that Great Britain should not be placed in a less advantageous position than other powers."

It would seem absurd to claim for Great Britain all that was voluntarily surrendered in her self-denying ordinance. Her rights appear thereby to have been reduced to the use of the canal on terms of equality with all nations observing the rules, with the added proviso that "Such conditions and charges of traffic shall be just and equitable." All other rights in the canal are accorded by the treaty now in force to the Government of the United States, whose only duties to foreign nations are defined in the following paragraph:

"The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality; so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions and charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable."

THE PRINCIPLE OF NEUTRALIZATION UNAFFECTED.

It was not intended that these changes in the treaty should affect the general principle of neutralization; and Mr. Hay, in recognition of the concessions made by Great Britain in the treaty of November 18, 1901, voluntarily proposed, and it was formally agreed in the fourth article, that no change of territorial sovereignty should affect the obligations of the high contracting parties under the present treaty.

Since the ratification of the second Hay-Pauncefote treaty the United States has acquired by purchase from the Republic of Panama the right to exercise sovereign authority over the Canal Zone and the adjacent waters within the 3-mile limit; but this in no way affects the general principle of neutralization.

It is important, however, to comprehend the meaning of the term "neutralization" and the powers implied in the control of neutralized territory. Belgium, Switzerland, and Luxemburg are neutralized States; but their domestic concerns are in no way affected by this fact. Their duty consists solely in maintaining and defending their neutrality as between foreign powers. Their sovereign rights are in no way abridged. Within their own territory all of these rights remain intact.

No other power has a right to interfere with the relation between their treasuries and their domestic commerce. They are under a solemn obligation, voluntarily assumed, to treat other powers alike, so far as privileges within their territory are concerned, and especially not to permit their territory to be used as a military base or source of supplies for belligerents. This is precisely what the Government of the United States is pledged to do in respect to all nations observing the rules of neutralization adopted by the United States, namely, to furnish equal treatment and equal service in the canal.

If it were contended that the Government of the United States should enjoy no privileges in the canal other than those possessed by the nations observing its rules, there would be no historic example of neutralization and no intelligible definition of the term on which such a contention could be based. This contention would impose on the builders of the canal such servitude to noncontractants as was never yet imposed by any power on the owner of any neutralized object.

What, under that interpretation, would become of the agreement in the second article, that "the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal"?

It is true that all these rights are subject to the provisions of the present treaty; but they are not subject to theories and definitions not in harmony with these provisions, and they can not be in any way legally limited, except by the clear and express stipulations of the treaty itself.

It has been claimed as a restriction on these rights that the preamble of the treaty now in force expressly states that its purpose is "to remove any objection which may arise out of the convention of the 19th of April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the general principle of neutralization established in article 8 of that convention"; and that therefore article 8 of that treaty is still in force.

A careful examination of the article in question shows that this can not possibly be the case; and that it is merely the general principle of neutralization, and not at all the specific form of neutralization presented in that article, which the second Hay-Pauncefote treaty is designed not to impair.

Article 8 of the Clayton-Bulwer treaty contemplates the construction of a canal by neither Government, but by some company to be formed for that purpose, under the protection of both Governments. The canal is, in return for this equal protection, to be "open to the citizens and subjects of the United States and Great Britain on equal terms."

Both Governments are pledged not to exercise any control over this tertium quid. Suppose, then, such a company had built the canal, would there be any doubt about its right to pass its own ships freely through its own waterway? Would there be any impairment of the general principle of neutralization so long as all the protectors of the canal were equally served?

The difference between the Clayton-Bulwer treaty and the second Hay-Pauncefote treaty consists precisely in this: In the Clayton-Bulwer treaty the United States and Great Britain were joint protectors of a tertium quid, while in the second Hay-Pauncefote treaty the United States Government becomes, by a new and special agreement with Great Britain, both the sole owner and the sole protector of a canal built entirely at its own expense, while Great Britain ceases to bear any burden or accept any responsibility as protector of the canal.

That the right to equal treatment agreed on in the Clayton-Bulwer treaty is based solely on participation in this obligation to protect the canal is evident from the last words of the article in question.

The article reads: "* * * shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford."

With the falling away of this protection, which in the first Hay-Pauncefote treaty was still joint between the United States and Great Britain, and was to be shared by other powers also, disappears entirely the specific form of neutrality embodied in the Clayton-Bulwer treaty; and only the general principle, as already defined, remains, namely, that the owner grants entire equality to all nations observing the rules.

THE REMOVAL OF ALL AMBIGUITIES.

If it be claimed that the language of the second Hay-Pauncefote treaty is ambiguous, and that therefore the broadest possible construction should be placed on it, there is a very simple method of ending all controversy regarding the obligations of the treaty.

Let it be assumed that the Government of the United States is in honor bound to treat the vessels of all nations precisely as it treats its own; what results from this concession? If such conditions and charges of traffic are to be just and equitable, it is proper that every gross ton of shipping passing through the canal should bear its due proportion of the total interest charge and cost of maintenance, operation, and defense of the canal.

If it be a point of honor on account of the obligations of the treaty for the Government of the United States to accord to the vessels of all nations the same treatment that is accorded to its own vessels, it is also a point of honor for all nations availing themselves of the use of the canal to make good to the Treasury of the United States their share of the cost of the service rendered.

It would, therefore, be fitting for the Government of the United States, if this construction is to be placed on the treaty, to add a rule requiring the nations using the canal to pledge themselves, as a condition of enjoying its benefits, to pay from their respective treasuries such sums as may be necessary to meet any deficit in the annual budget of the canal in proportion to the gross tonnage of the vessels sailing under their respective flags.

Mine Workers of Colorado.

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 9, 1914.

Mr. BUCHANAN of Illinois. Mr. Speaker, the outrages perpetrated on the mine workers of Colorado are attracting the sympathy of all humane citizens of our country and arousing a sentiment that bodes ill to the system of the Rockefellers and other financial and commercial pirates. This crowd of commercial highbinders, through the system, has committed the most heinous crimes—even murder—to enslave the wageworkers. The slaughter of the defenseless women and children in Colorado is more brutal and vicious than the acts complained of by our people in Mexico, and a greater offense to the underlying principles of a democratic republican government. I here insert resolutions expressing in strong language the protest of the Chicago Federation of Labor:

Whereas for more than six months the United Mine Workers have been on strike in the coal fields of Colorado, which coal fields are owned and controlled by the Rockefeller interests. During this time gunmen, thugs, criminals, and State militiamen have been arresting, torturing, and murdering these inoffensive and practically defenseless men, women, and children; and

Whereas, with the aid and assistance of Gov. Ammons, of Colorado, the coal companies dominated by the Rockefellers and their military hirelings have instituted a reign of terror. Civil government has been prostituted and replaced by "gunman" government; civil rights, justice, and liberty have been denied. The gunmen militia, to show their contempt for the Stars and Strips, riddled it with bullets, a "salute" to our flag which is tolerated because it happened in Colorado. The Constitution of the United States has been violated and treated with contempt by the commanding officers of the militia, who claim to be the "Jesus Christs" of Colorado, which is certainly a new way of defining the "divine right" to enslave the workers; and

Whereas on April 21, 1914, the Rockefeller mine guards, gunmen, thugs, militiamen, and murderers at Ludlow, Colo., perpetrated one of the most fiendish and dastardly massacres when they set fire to the tent colony where the wives and children of the miners were sheltered. These brutal and inhuman monsters stood guard, rifle in hand, to shoot down any attempt to escape while the flames and smoke wiped out a score of lives; and

Whereas this brutal warfare on defenseless women and children is the crowning infamy of a most bloodthirsty and uncivilized act, and is the answer of the Rockefeller interests, assisted by the officials and militia of a sovereign State, to the workers, who, through their organization, striving to observe the laws of the State and Nation, are seeking to secure the consideration they are entitled to: Therefore be it

Resolved, By the Chicago Federation of Labor, at its regular meeting held Sunday, May 3, 1914, that we condemn the brutal and inhuman actions of John D. Rockefeller and his son, John D., jr., in maintaining a condition whereby the murdering and burning of the men, women, and children of Colorado is brought about; and be it further

Resolved, That we believe it to be the duty of the President of the United States to confiscate the coal mines of Colorado and operate them in the interest of the people until Congress enacts legislation providing for the Government ownership of natural resources; and be it further

Resolved, That we ask the President of the United States, that during the time the Federal troops are in Colorado, that the safeguarding of the lives and homes of the workers be paramount to the pretenses

of the protection of property now so boldly asserted by the anarchists and outlaws invading that State; and be it further

Resolved, That we unqualifiedly demand of the President that the right of citizens to carry arms as provided for in the Constitution be not abridged; and be it further

Resolved, That we pledge our moral and financial support to the miners of Colorado in the absence of civil government and in every lawful effort they make to elevate their material and moral conditions. We urge them to be steadfast and true to themselves, their wives, children, their homes, and their fellow workers.

Respectfully submitted.

BY THE EXECUTIVE BOARD.

Amended. That copies be sent to the Members of the United States Senate and House of Representatives.

The above resolution and amendment were adopted by a unanimous rising vote.

[SEAL.]

CHICAGO FEDERATION OF LABOR,
JOHN FITZPATRICK, *President*.
E. N. NOCKELS, *Secretary*.

Protection to Exporters.

EXTENSION OF REMARKS

OF

HON. KENNETH D. McKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 12, 1914.

Mr. McKELLAR. Mr. Speaker, the Harter Act was passed in 1893. The original purpose of this act was to protect exporters, and as it originally passed the House of Representatives it would have effected this purpose, but some other adroit and skillful amendments were placed on it in the Senate nullifying this purpose. Before this act the laws of the United States forbade shipowners to exempt themselves in any way from liability for loss or damage at sea due to their own faults, errors, or negligence. It was not intended by the promoters of this act in 1893 that this should be changed, but, as a matter of fact, by the amendments passed in the Senate the law as to negligence was changed. It is the object of the present bill introduced by me, which is simply a reproduction of Senator NELSON'S former bill, to restore the law that existed prior to 1893, and in addition thereto give our courts jurisdiction and power to make the law effective.

The first section of the Harter Act is very sweeping, providing—

> That it shall not be lawful for the manager, agent, master, or owner of any vessel transporting merchandise or property from or between ports of the United States and foreign ports to insert in any bill of lading or shipping document any clause, covenant, or agreement whereby it, he, or they shall be relieved from liability for loss or damages arising from negligence, fault, or failure in proper loading, stowage, custody, care, or proper delivery of any and all lawful merchandise or property committed to its or their charge. Any and all words or clauses of such import inserted in bills of lading or shipping receipts shall be null and void and of no effect.

From this section, following Senator NELSON'S bill, I have struck out the words "from or," which limits the act to vessels transporting merchandise from ports of the United States to foreign ports and omitting "between different ports in the United States." At the end of the section I have added:

> Or from faults or errors in the navigation or management of vessels, or whereby its or their liability is limited to less than the market value of such merchandise or property at the time and place of shipment.

It will thus be seen that under the first amendment of this section vessels engaged in coastwise trade are omitted from the act, and this is done because under the law only American vessels can engage in coastwise trade. Our coastwise trade being entirely in the hands of American vessels, any contract they may make is entirely within the control of American courts. But if these same vessels engage in foreign trade, then they come within the provisions of the act.

The next change in the first section prohibits any vessel engaged in foreign trade contracting for an exemption from liability or for loss or damages arising from faults or errors in the navigation or management of said vessel; and it also prohibits the limitation of liability to less than the market value of such merchandise at the time and place of shipment.

It seems to me a mere statement of this amendment to the Harter Act ought to convince any reasonable mind of the justice and wisdom of such an amendment. It was the law before the Harter Act, and was changed by an amendment to the Harter Act, probably without such an intention on the part of those who favored the bill. Surely, if merchandise is lost through the faults or errors in the navigation or management of vessels, the owners of such merchandise ought to be allowed to recover. Take the case of the *Titanic*, where admittedly the management of the vessel was negligent. Surely, there ought to be a right of recovery against the owners thereof. It is the law now that railroads shall be held for their negligence. It is the law that individuals shall be held for their negligence. It is the law that steamboats on navigable rivers are thus held. It is the law that street car companies and every other kind of carriers are thus held; and there is no reason why ocean vessels using our ports, and nearly all of which, at least 93 per cent of which, fly foreign flags, should not be so held.

And if they are held for their own negligence, then, of course, they should not be allowed to evade the law by limiting their liability for less than the market value of such merchandise or property? I am not sure that this amendment goes far enough. They ought to be required to protect human life in the same way they are required to protect property. Relieving them, as they are now relieved, from their own negligence is virtually licensing them to be negligent.

But it is claimed that we ought to pass legislation which will encourage the upbuilding of American merchant marine. This is the old and threadbare argument of those who live on special privilege from the Government. We ought to build up our own merchant marine, but we can never do this by giving the merchant marine of foreign countries license to be reckless with life and property. Be that as it may, however, the fact is, our foreign business is now done almost entirely, about 93 per cent, in foreign bottoms, and we ought to hold these vessels to the strictest accountability, and certainly not license them to be negligent. They are combined in a trust now, and up to date it seems that no law has been able to reach them. Surely, if they use our ports we ought to prohibit them from being negligent with lives and property of our citizens.

The amendment in the third section simply makes the distinction between vessels engaged in coastwise trade and vessels engaged in foreign trade.

The amendment to section 4 is one that ought to commend itself to every American citizen, and doubtless does, unless he is an owner or interested in these vessels. The law, as it is now, requires a bill of lading or shipping document to show the merchandise to be delivered, and so forth. The amendment merely provides that every such bill of lading shall contain the provision to the effect that the shipment is subject to all the terms and provisions of and all exemptions from liability contained in this act; and no stipulation or agreement purporting to oust or lessen the jurisdiction of the courts of the United States or any State thereof having jurisdiction at the port of loading in respect to the bill of lading or shipping document shall be null and void and of no effect. In other words, we deliver our goods to be transported in foreign vessels, and under the present law, we fix the terms under which it shall be done, but we do not provide that this law shall be construed in American courts. The amendment does so provide and it seems to me that the mere statement should commend itself to every fair-minded American citizen.

Examining the files of the Committee on the Merchant Marine and Fisheries we find that only the Chambers of Commerce of Philadelphia, New Orleans, Seattle, Tacoma, Baltimore, San Francisco, New York, and Galveston have filed protests with the committee against the passage of this bill. We all know how these protests from chambers of commerce are obtained. The vessel owners, or those interested in their ownership, are usually members of such exchanges and go before a few members or the management of the exchanges and get these resolutions passed.

It must be understood that there is not a single shipper or exporter of freight to foreign ports protesting against the passage of the bill, but the great body of shippers and exporters throughout the whole country are vitally interested in having their merchandise going to foreign ports protected by a law prohibiting the carriers from contracting against their own negligence and requiring such vessels to meet the owners of such merchandise in American courts.

I represent one of the largest lumber markets of the world. I also represent one of the largest cotton markets of the world—Memphis. The exports from Memphis are enormous. Our merchants ship vast quantities of cotton and lumber and other products abroad. They have a right to a contract prohibiting these vessels from contracting against their own negligence in the control and management of said vessels. They also have the right to have liability of such vessels determined in American courts.

In conclusion, I quote as follows from a recent article on this subject:

> The special indulgence of shipowners granted by the Harter Act as it stands is a menace to the safety of the public at sea. All other

common carriers are held liable in this country for the faults, errors, and negligence of their servants. No proposal to exempt railroads from such liability would be seriously entertained in Congress or in any legislature in this country. Yet the effect of such exemption is bound to be the same, in a general way, with any class of common carriers. In fact, it is the same in all kinds of business or personal activity, and this is universally recognized. Almost all corporations and persons are or can be made liable for damages resulting from negligence on the part of themselves or their servants. Without such liability the practical incentive for care and precaution is removed. In all activities there is a natural tendency toward the relaxation of vigilance. There is also a constant tendency to get the business done in the easiest and cheapest way. These tendencies can only be counteracted by the persistent and unremitting pressure of actual responsibility.

Accidents at sea almost invariably result in loss of property. Loss of life is a much less frequent result. All the precautions that can be taken to prevent the loss of property are doubly effective in preventing the loss of life. There is no surer way of preventing loss of life at sea than by compelling all reasonable precautions to prevent loss of property. All such precautions are thoroughly and effectively compelled by making shipowners actually responsible for property losses and damages arising from faults and negligence of their servants. Under all the conditions of ocean navigation to-day, safety of life and property can really be obtained. The public realize that this is so and demand safety. Shipowners, of course, know better than any other class of people how to provide safety at sea, but business considerations lead them to equip and manage their vessels as economically as possible in all matters that do not affect the comfort or luxury of passengers. Hence the shipowners provide just about as much in the way of safety appurtenances and equipment as the laws require (laws of foreign countries, for the most part, but affecting the lives of our own people), and navigate their vessels in ways and methods established with regard to the extent of the responsibility they are obliged to assume.

As a part of my remarks, I wish to append hereto an argument made before a Senate committee, which argument, I think, is very much to the point.

ARGUMENT IN SUPPORT OF SENATE BILL 7208, "A BILL TO AMEND AN ACT ENTITLED 'AN ACT RELATING TO NAVIGATION OF VESSELS, BILLS OF LADING, AND TO CERTAIN OBLIGATIONS, DUTIES, AND RIGHTS IN CONNECTION WITH THE CARRIAGE OF PROPERTY,' APPROVED FEBRUARY 13, 1893."

SENATE BILL 7208—A NECESSARY AMENDMENT OF THE HARTER ACT.

The bill (S. 7208, 62d Cong., 2d sess.), introduced in the Senate on July 1, 1912, by Senator Nelson, chairman of the Committee on Commerce, and referred to that committee, is simply an amendment of the statute of February 13, 1893 (27 Stat. L., 445), generally known as the Harter Act. The proposed measure (the Nelson bill) makes only such changes in the Harter Act as are necessary to make the owners of vessels transporting merchandise or property between United States ports and foreign ports liable for loss or damage arising from faults or errors in the navigation or management of the vessels, according to the market value of the property affected. This is a matter of simple justice, long delayed, to the shippers. It is simply bringing back the Harter Act, for the most part, to the purpose intended by the House of Representatives when it passed the original Harter bill on December 15, 1892.

TEXT OF THE BILL.

The full text of the Nelson bill is as follows:

A bill to amend an act entitled "An act relating to navigation of vessels, bills of lading, and to certain obligations, duties, and rights in connection with the carriage of property," approved February 13, 1893.

Be it enacted, etc., That an act entitled "An act relating to navigation of vessels, bills of lading, and to certain obligations, duties, and rights in connection with the carriage of property," approved February 13, 1893, be amended in section 1 so that said section shall read:

"SECTION 1. That it shall not be lawful for the manager, agent, master, or owner of any vessel transporting merchandise or property between the ports of the United States and foreign ports to insert in any bill of lading or shipping document any clause, covenant, or agreement whereby it, he, or they shall be relieved from liability for loss or damage arising from negligence, fault, or failure in proper loading, stowage, custody, care, or proper delivery of any and all lawful merchandise or property committed to its or their charge, or from faults or errors in the navigation or management of said vessel, or whereby its or their liability is limited to less than the market value of such merchandise or property at the time and place of shipment. Any and all words and clauses of such import inserted in bills of lading or shipping receipts shall be null and void and of no effect."

SEC. 2. That said act be further amended in section three so that said section shall read:

"SEC. 3. That if the owner of any vessel transporting merchandise or property to or from any port in the United States of America shall exercise due diligence to make the said vessel in all respects seaworthy and properly manned, equipped, and supplied, neither the vessel, her owner, or owners, agent, charterers, or master shall become or be held responsible for damages or loss resulting from latent defects in said vessel from dangers of the sea or other navigable waters, acts of God, or public enemies, or the inherent defect, quality, or vice of the thing carried, or from insufficiency of package, or seizure under legal process, or for loss resulting from any act or omission of the shipper or owner of the goods, his agent or representative, or from saving or attempting to safe life or property at sea, or from any deviation in rendering such service; and when the vessel is engaged in transporting merchandise or property between ports in the United States of America, neither the said vessel, her owner or owners, agent, or charterers shall become or be held responsible for damages or loss resulting from faults or errors in navigation or in the management of said vessel."

SEC. 3. That said act be further amended in section 4 so that said section shall read:

"SEC. 4. That it shall be the duty of the owner or owners, master, or agent of any vessel transporting merchandise or property between ports of the United States and foreign ports to issue to shippers of any lawful merchandise a bill of lading or shipping document stating among other things the marks necessary for identification, number of packages, or quantity, stating whether it be carrier's or shipper's weight and apparent order or condition of such merchandise or property delivered to and received by the owner, master, or agent of the vessel for transportation; and such document shall be prima facie evidence of the receipt of the merchandise therein described. Every bill of lading or shipping receipt relating to the carriage of merchandise or property from a port in the United States to a foreign port shall contain a provision to the effect that the shipment is subject to all the terms and provisions of, and all the exemptions from, liability contained in this act; and any stipulation or agreement purporting to oust or lessen the jurisdiction of the courts of the United States or of any State thereof having jurisdiction at the port of loading, in respect of the bill of lading or shipping document, shall be null and void and of no effect."

THE CHANGES EFFECTED BY THE NELSON BILL.

The exact changes made by this bill in the Harter Act are as follows:

In section 1, in the clause providing that it shall not be lawful for the owners or managers of the vessels in question to insert in bills of lading any clauses relieving themselves from liability for loss or damage arising from negligence or faults of certain kinds, the Nelson bill adds the words:

"or from faults or errors in the navigation or management of said vessel, or whereby its or their liability is limited to less than the market value of such merchandise or property at the time and place of shipment."

The effect of this is to make it impossible for foreign shipowners, through clauses or stipulations in their bills of lading, to exempt themselves from liability for the fair and actual value of merchandise lost or damaged through negligence in loading, storage, custody, care, or delivery of the merchandise, or through faults or errors in the navigation or management of the vessel. This change, written with regard to court decisions and other laws, establishes the purpose of section 1 just as it was when passed by the House of Representatives in 1892. The only other change in section 1 made by the Nelson bill is the omission, in the first sentence of the section, of the words "from or" from the clause "from or between ports of the United States and foreign ports." This omission simply removes words that are entirely superfluous and makes no change in the effect of the section.

In section 3 the words "or master" are added to the clause "neither the vessel, her owner or owners, agent, or charterers, shall become or be held responsible," etc., after the word "charterers." In the continuation of this clause—which in the existing law reads "responsible for damage or loss resulting from faults or errors in navigation or in the management of said vessel, nor shall the vessel, her owner or owners, charterers, agent, or master, be held liable for losses arising from dangers of the sea," etc—the words "faults or errors in navigation or in the management of" are omitted (to establish the purpose of the proposed amendment of section 1 in the light of the court decision), the words "latent defects in" are inserted immediately before the words "in said vessel" (as an act of justice to shipowners); and, after these words, the words "nor shall the vessel, her owner or owners, charterers, agent, or master be held liable for losses arising" are omitted as entirely unnecessary after the addition of the words "or master" earlier in the clause (to simplify the language of the section).

The only other change in section 3 is the addition of the following clause at the end:

"And where the vessel is engaged in transporting merchandise or property between ports in the United States of America, neither the said vessel, her owner or owners, agent, or charterers shall become or be held responsible for damages or loss resulting from faults or errors in navigation or in the management of said vessel."

The effect of this additional clause is to continue the exemption, existing under the present law, of liability for damage or loss resulting from faults or errors in navigation or management for vessels carrying merchandise from one port of the United States to another; that is, for vessels engaged in domestic trade, such as the lake and coastwise traffic, and not in foreign trade. That is to say, the Nelson bill, by including this provision, limits the scope of its effect in this respect to vessels engaged in transporting merchandise or property between ports in the United States and foreign ports, or the foreign trade of the United States. The vessels engaged in this foreign trade are almost entirely of foreign ownership (it appears that about 93 per cent of our foreign trade is carried in foreign ships), and these, under the great latitude of foreign laws, have exacted the most unreasonable and burdensome bills of lading, in which, among other vexatious features, they have stipulated that the American shippers should have their claims adjudicated according to the laws of the country of the flag of the vessel.

With the final provision in section 3 the Nelson bill does not add in any way to the existing liabilities of domestic carriers in the coastwise and lake trade. American shippers have not had so much difficulty in securing proper adjustment of losses with these carriers, who, because of the conditions of their traffic and the extent to which they compete with railroads, generally assume in their bills of lading the proper responsibility, such as the Nelson bill imposes on ocean carriers, who in fairness ought to be obliged to assume it.

After the changes mentioned above the only other change made in the existing law by the Nelson bill is in section 4, by the addition of the following sentence at the end:

"Every bill of lading or shipping receipt relating to the carriage of merchandise or property from a port in the United States to a foreign port shall contain a provision to the effect that the shipment is subject to all the terms and provisions of, and all the exemptions from liability contained in, this act, and any stipulation or agreement purporting to oust or lessen the jurisdiction of the courts of the United States or of any State thereof having jurisdiction at the port of loading in respect of the bill of lading or shipping document shall be null and void and of no effect."

The purpose and effect of this provision is to secure proper enforcement of the law in the foreign trade. By compelling the incorporation in bills of lading of the provisions of the act these provisions will become binding in Great Britain and other foreign countries under the rights of contract and the laws in those countries.

THE ORIGINAL PURPOSE OF THE HARTER ACT.

Prior to 1893 the laws of the United States forbade shipowners to exempt themselves in any way from liability for loss or damage at sea due to their own faults, errors, or negligence. This situation was decidedly changed by the Harter Act. But it was not intended by its proponents that the Harter Act should change the situation referred to. The purpose of the Harter Act when introduced in the House of Repre-

sentatives in 1892 was to make it unlawful for shipowners to insert in bills of lading clauses relieving themselves from liability for losses arising from negligence or limiting their liability to less than full indemnity. This act was not necessary for those shippers who could sue in this country, because our courts have uniformly refused to sustain such clauses. But such clauses are valid in England and elsewhere, and foreign shipowners had compelled the insertion of these clauses in bills of lading, and also of another clause providing that the liability of the carrier under the bill of lading should be governed by the law of England and adjudicated in the courts of that country (or of other foreign country when the ship was registered in that country). Such unjust special clauses in bills of lading were enforced by the foreign shipowners through the power of their practical monopoly of ocean transportation between the United States and foreign countries. Humiliating and burdensome as such conditions were, American shippers were forced to submit in order to get their merchandise carried.

When the Harter bill in its original form was taken up for consideration in the House of Representatives on February 14, 1892, Mr. Lind, of Minnesota, said:

"I will state briefly the purpose of the bill. As the gentleman is aware, nearly all the carrying of flour and other western commodities from this country to Europe is done by foreign steamships. These steamship companies have in recent years exacted the most unreasonable bills of lading that can be imagined—bills of lading in which they exempt themselves not only from risk of every character incident to transportation, but from every liability on account of their own negligence. More than that, they stipulate in their bills of lading that the American shipper shall have his rights or his claims, whatever they may be, adjudicated according to the laws of Great Britain, and only in the courts of that country. This bill simply provides that it shall not be lawful for vessels engaged in foreign commerce to exact bills of lading of that character."

The conditions which led to the introduction of the Harter bill in its original form were clearly and concisely stated in the report of the Committee on Interstate and Foreign Commerce of the House of Representatives in 1892, recommending the passage of the bill. This report quoted from the petition addressed a short time before by the Glasgow Corn Trade Association to the Marquis of Salisbury the following:

"That, taking advantage of this practical monopoly, the owners of the steamship lines combine to adopt clauses in their bills of lading very seriously and unduly limiting their obligations as carriers of the goods, and refuse to accept consignments for carriage on any other terms than those dictated by themselves.

"That this policy has been gradually extended by the steamship owners until at the present time their bills of lading are so unreasonable and unjust in their terms as to exempt them from almost every conceivable risk and responsibility as carriers of goods.

"For example, many of these bills of lading provide, in addition to the usual and reasonable exceptions, that the carriers shall not be liable for loss or damage occasioned by negligence of the master, pilot, stevedores, crew, or others in their employment; nor for bad stowage; nor for defect or insufficiency of the hull, machinery, or fittings of a vessel, whether occurring before or after receiving the goods on board; nor for the admission of water into the vessel by any cause, and whether for the purpose of extinguishing fire or for any other purpose, and whether occurring previously or subsequently to the vessel sailing; nor for the difference between the quality, marks, or brands of flour or other goods shipped and those of the goods actually found to be on board of the steamer (the marks, numbers, or description in the bill of lading notwithstanding); nor for loss of weight; nor for detention, delay, or deviation."

THE ORIGINAL PROVISIONS OF THE HARTER ACT.

It was, of course, not the original purpose of the Harter Act to impose on shipowners liability for losses not due to negligence—that is, such as might come from acts of God and public enemies or perils of the sea and from errors of judgment in navigation or management of the vessel which ordinary care and skill could not prevent. Accordingly the Harter Act, as passed by the House of Representatives on December 15, 1892, contained the following provisions:

"*Be it enacted, etc.*, That it shall not be lawful for any common carrier or manager, agent, master, or owners of any common carrier, whether by land or water, to insert in any bill of lading or shipping document any clause, covenant, or agreement whereby it, he, or they shall be relieved from liability for loss or damage arising from negligence, fault, or failure in proper loading, stowing, custody, care in transport, or proper delivery of any and all lawful merchandise or property committed to its or their charge, nor shall it be lawful to limit its or their liability to less than a full indemnity to the legal claimant for any loss or damage therefrom, and any and all words or clauses of such import inserted in bills of lading or shipping receipts shall be null and void and of no effect.

* * * * * * * *

"SEC. 3. That if any vessel transporting merchandise or property between ports in the United States of America and foreign ports shall, on starting on her voyage, be in all respects seaworthy and properly manned, equipped, and supplied, neither the vessel, her owner or owners, agent, or master shall become or be held responsible for damage or loss resulting from error of judgment in navigation or in the management of said vessel, if navigated with ordinary skill and care, from the time of her leaving her usual place of loading on her intended voyage until her arrival at the usual place of discharge at her port of delivery, nor shall the owner or owners, the vessel, or master be held liable for losses arising from dangers of the sea, acts of God, or public enemies, or in saving life, and it may be stipulated in bills of lading and shipping receipts that the vessel may render services to property in distress afloat and tow same to the nearest and most convenient port of safety without incurring penalties from deviation in rendering such service."

THE VITAL AMENDMENTS IN THE SENATE.

The measure then went to the Senate and was there referred to the Committee on Commerce, which, after consideration, reported the bill favorably to the Senate with some amendments, which were accepted by the Senate and subsequently concurred in by the House of Representatives, so that the measure was enacted just as the Senate committee reported it. Some of the amendments were merely verbal and did not alter materially the effect of the measure; but a few amendments were vital in the changes they effected. One of these decisive amendments was to strike out of section 1 the words "nor shall it be lawful to limit its or their liability to less than a full indemnity to the legal claimant for any loss or damage therefrom." Another amendment in this section was to strike out the words "in transport," after the word "care." As amended and enacted, this section 1 then read as follows:

"*Be it enacted, etc.*, That it shall not be lawful for the manager, agent, master, or owner of any vessel transporting merchandise or property from or between ports of the United States and foreign ports to insert in any bill of lading or shipping document any clause, covenant, or agreement whereby it, he, or they shall be relieved from liability for loss or damage arising from negligence, fault, or failure in proper loading, stowage, custody, care, or proper delivery of any and all lawful merchandise or property committed to its or their charge. Any and all words or clauses of such import inserted in bills of lading or shipping receipts shall be null and void and of no effect."

Another vital amendment was in section 3, to insert the words "faults or errors" in place of the words "error of judgment" immediately before the words "in navigation or in the management of said vessel," etc. After this and other changes, section 3, as amended and enacted, read as follows:

"SEC. 3. That if the owner of any vessel transporting merchandise or property to or from any port of the United States of America shall exercise due diligence to make the said vessel in all respects seaworthy and properly manned, equipped, and supplied, neither the vessel, her owner or owners, agent, or charterers shall become or be held responsible for damage or loss resulting from faults or errors in navigation or in the management of said vessel, nor shall the vessel, her owner or owners, charterers, agent, or master be held liable for losses arising from dangers of the sea or other navigable waters, acts of God, or public enemies, or the inherent defect, quality, or vice of the thing carried, or from insufficiency of package, or seizure under legal process, or for loss resulting from any act or omission of the shipper or owner of the goods, his agent or representative, or from saving or attempting to save life or property at sea, or from any deviation in rendering such service."

THE EFFECT OF THE SENATE AMENDMENTS.

The word "faults," thus skillfully introduced into section 3, has, as a result of much adjudication in the courts, a legal meaning and effect so broad as to include acts which really constitute negligence. The effect, then, of this section as enacted was to prevent American shippers from recovering damages for losses due to faults or errors of navigation or management. This was a result entirely different from that which was intended to be secured by the passage of the act. The enactment in its distorted form really left the American exporters in a worse situation than they were in before. Before the enactment they had a right under the common law to recover damages for losses due to faults or errors in navigation or management, and this right could be effectively maintained in the courts of this country, although nullified in foreign courts by the clauses which the foreign shipowners required in bills of lading for their vessels. Since the enactment of the Harter Act American exporters and shippers have been almost powerless to recover damages for losses at sea caused by negligence of the servants of the ocean carriers. In almost all cases of suits for such damages, even where the losses are clearly the result of acts of negligence on the part of the ship's captain or crew, the defense is set up that due diligence was exercised to make the vessel in all respects seaworthy and properly manned, equipped, and supplied, and that the acts in question were "faults or errors in navigation or in the management of said vessel," and under the broad interpretation of this phrase judgment is denied to the shippers and the shipowners escape responsibility.

The full meaning and effect of the amendments made in the Senate were not made clear or understood in the House of Representatives, which concurred in the Senate amendments on the assumption that they were of minor importance. The only reason given to the House for the decisive change in section 3 above referred to was that shipowners ought not to be held responsible for losses at sea caused by unavoidable exhaustion of master and crew through extraordinary stress of weather. The argument that consideration for such circumstances required the extraordinary amendment made by the Senate committee is utterly fallacious and inadequate. The provisions of the bill as passed by the House, which exempted the vessel from responsibility for damage or loss "resulting from error of judgment in navigation or in the management of said vessel, if navigated with ordinary skill and care," would have fairly and entirely covered all the conditions arising from unavoidable exhaustion of master and crew; and the courts have never failed to give just consideration to such circumstances. Moreover, the substitution by the Senate committee of the clause exempting the vessel from responsibility for damage or loss "resulting from faults or errors in navigation or in the management of said vessel," covered vastly more than the conditions of unavoidable exhaustion referred to. The effect of this broad change has been so great that cases of exhaustion are the merest trifles in comparison. Soon after the enactment of this provision court decisions began to show the extensive and unjust features of this change. An examination of the decisions under section 3 of the Harter Act reveals clearly the discouragements and unfair burdens which American shippers now have to contend with from this section as it stands.

For example, in the case of the *Silvia* (171 U. S., 462), a steamship sailed with a porthole in her between decks unsecured, and water entered, damaging her cargo. It was held that as the porthole was capable of being speedily got at and closed if occasion should require, any subsequent neglect in not closing same was a "fault or error in the management of the vessel" within the meaning of section 3 of the Harter Act. The court said:

"This case does not require a comprehensive definition of the words 'navigation' and 'management' of a vessel within the meaning of the act of Congress. They might not include stowage of cargo not affecting the fitness of the ship to carry her cargo, but they do include, at the least, the control during the voyage of everything with which the vessel is equipped for the purpose of protecting her and her cargo against the inroad of the seas."

The following are a few of the decisions in which the protection of the act has been held to cover the negligent use or negligent failure to use the ordinary appliances of vessels provided for the protection of cargo.

The *Sandfield* (79 F. R., 371, affd. 92 F. R., 663). The opening of a sluice gate designed to empty the bilges was neglected for 20 days during heavy weather. The accumulating water overflowed the bilges and damaged the cargo. It was held that the neglect to open the sluice gate was neglect in the "management of the vessel" within section 3 of the Harter Act, and that the owners were exempted thereby from liability.

The *Mexican Prince* (82 F. R., 484; affd. 91 F. R., 1003). The *Mexican Prince* was a convertible-tank steamship built to carry both

fluids and dry cargo. Each tank or compartment was connected with a pipe line by a Kingston valve operated by a spindle from the deck. The ship sailed from Rio with her No. 2 tank full of ballast water and the neighboring compartments or tanks full of coffee in bags. After leaving Rio the ballast water was pumped out through the pipe line, but the valve in the offset leading into No. 3 tank was not closed and the ballast water from No. 2 ran into the No. 3 tank, damaging the coffee. Those in charge failed to properly test the valves by means of the pumps or by fully opening and closing them and counting the turns of the spindle, either of which tests would have shown that No. 3 valve was not closed. It was held that the damage to the coffee arose from neglect in the "management of the vessel," within the third section of the Harter Act, and that the ship was not responsible therefor.

The *British King* (89 F. R., 872; affd. 92 F. R., 1018). The cargo was damaged by water from a ballast tank which was found sprung and the rivets started after heavy weather. The court said:

"The secondary cause of the damage was the failure to take soundings and apply the pumps between 10 p. m. of the 20th and 8 a. m. of the 21st. Considering that the ship's carpenter and the officers who attended to the soundings had notice of an accumulation of 14 inches of water in the bilges in 4 hours from 6 p. m. to 10 p. m. of the 20th of April during heavy weather, and that this weather continued with equal or increasing severity during the night, it was a very plain lack of ordinary prudence and hence was negligence not to make any soundings during the following 10 hours up to 6 a. m. of the next day, during which time an accumulation of water at the same rate as during the preceding 4 hours must manifestly exceed 20 inches, which, as all knew, would be dangerous to the cargo. * * * Had soundings been properly repeated after 10 p. m. of the 20th, there is no question that the pumps would have controlled the leak, as they did the next day, and no damage would have arisen. The failure to take soundings and to apply the pumps, as the known facts showed to be necessary, was therefore the final and immediate cause of the damage. But for this negligence the ship and owners are not liable, under the third section of the Harter Act, because it was negligence in the 'management of the ship.'"

The *Mcrida* (107 F. R., 146). Hides were damaged by an accumulation of water in the bilges due to a failure to use the pumps. It was held to be a fault in the management of the vessel, and the vessel was exonerated.

American Sugar Refining Co. *v.* Rickerson (124, F. R., 188). The cargo was damaged by water which entered the hold through a manhole in a ballast tank. Shortly after sailing the sea cock was opened for the purpose of filling the ballast tank. Two hours would have been sufficient for this purpose, but the sea cock was negligently left open for 7½ hours, and the resulting pressure blew out the packing of the manhole joint. It was held to be negligence in the management of the vessel and the owner not liable.

The *Wildcroft* (130 F. R., 521; 201 U. S., 378). While the *Wildcroft* was discharging a cargo of sugar in Philadelphia she took in water for her boilers through a pipe line running to the engine-room tank, and on this pipe line was a valve connected to a pipe leading into the ship hold and used to pump out her bilges. The sugar was badly damaged by water, and the court found that the presence of such water could only be accounted for by the valve connecting the pipe leading to the engine-room tank and the pipe leading to the hold having been partly open, owing to some foreign substance, such as a piece of wood, having lodged in the seat of the valve when the bilges were last pumped, and that the failure to see that this valve was properly closed was a fault in the management of the vessel, and that the Harter Act exempted the vessel from liability for such fault.

Sun Co. *v.* Healy (163 F. R., 48). The tank steamship *Toledo* was discharging a bulk cargo of molasses at Hoboken. The molasses was being pumped out and, a sea valve not being properly closed, a large quantity of water entered the vessel, diluting and damaging the molasses. It was held that the failure to keep the valve properly closed was a fault in the management of the vessel, from liability for which the Harter Act protected the ship and her owner.

The *Indrani* (177 F. R., 914). This vessel arrived in New York with cargo stowed in the lower forepeak, which was used at times as a ballast tank and was connected with the pumps in the engine room by a pipe running through the ballast tanks under No. 1 and No. 2 holds. The vessel while passing through the Suez Canal had picked up a piece of cable with her propeller, which had been removed by a diver at Algiers. After arrival at destination and before the cargo had been discharged from the forepeak her master desired to examine the propeller, and to avoid the expense of going on dry dock decided to tip the vessel by the head so as to bring her propeller out of the water. To accomplish this the No. 1 ballast tank was filled with water, and, owing to the pipe which ran through such tank to the forepeak having been fractured during the voyage, the forepeak filled with water, which was not discovered for several days, damaging the cargo stowed therein. It was held to be a fault in the "management of the ship" and the vessel not liable.

On May 13, 1912, the Supreme Court of the United States delivered a unanimous opinion in the case of the *Jason* (Actieselskabet *Jason v.* John Arbuckle et al.). The decision in this case did not turn upon the question of the liability of the shipowner, but in its opinion the court said, in reference to the Harter Act:

"Prior to the Harter Act it was established that a common carrier by sea could not, by any agreement in the bill of lading, exempt himself from responding to the owner of cargo for damages arising from the negligence of the master or crew of the vessel. Liverpool & G. W. Steam Co. *v.* Phenix Ins. Co. (The *Montana*, 129 U. S., 398; 438, 32 L. ed. 788, 791, Sup. Ct. Rep., 469; following New York C. R. Co. *v.* Lockwood, 17 Wall., 357, 21 L. ed., 627.)

"But of course the responsibilities of the carrier were subject to modification by law, and with respect to vessels transporting merchandise from or between ports of the United States and foreign ports they were substantially modified by the Harter Act. The first three sections of this enactment are pertinent to the present discussion, and are set forth in full in the margin.

"Section 1 deals with the shipowner's responsibility for the proper loading, storage, custody, care, and delivery of the cargo, prohibits the insertion in any bill of lading of an agreement relieving him from responsibility for negligence in respect of these duties, and declares such agreements null and void. Section 2 prohibits the insertion in any bill of lading of an agreement lessening or avoiding the obligation of the shipowner to 'exercise due diligence [to] properly equip, man, provision, and outfit said vessel and to make said vessel seaworthy,' etc. Section 3 proceeds to limit the responsibility of a shipowner who shall have exercised due diligence to make his vessel seaworthy and properly manned, equipped, and supplied. Instead of merely sanctioning covenants and agreements limiting his liability, Congress went further and rendered such agreements unnecessary by repealing the liability itself, declaring that if the shipowners should exercise due diligence to make the vessel in all respects seaworthy, and properly manned, equipped, and supplied, neither the vessel, her owner or owners, etc., should be responsible for damage or loss resulting from faults or errors in navigation or in the management of the vessel, etc. The antithesis is worth noting. Congress says to the shipowners: 'In certain respects you shall not be relieved from the responsibilities incident to your public occupation as a common carrier, although the cargo owners agree that you shall be relieved; in certain other respects (provided you fulfill conditions specified) you shall be relieved from responsibility, even without a stipulation from the owners of cargo.'"

UNJUST BURDENS ON AMERICAN EXPORTERS.

The effect of the Harter Act has been constantly burdensome to American shippers ever since its enactment. The full force of its provisions has been made conclusive by court decisions. In practically all cases of damage or loss, whatever the actual facts may be, it is almost impossible to show that the shipowners have not used due diligence to make the vessel seaworthy and properly manned, equipped, and supplied; and it is almost always possible for the shipowners to allege, for the purpose of escaping liability, that the accident was due to faults or errors in navigation or in the management of the vessel. Shipowners naturally equip and manage their vessels in the most economical way, and it often happens, especially with foreign ships, that officers and crew are underpaid and overworked, though it is obviously difficult for cargo owners to prove such allegations. The real cause of many accidents to such vessels is incompetence of officers or crew, or what is actually unseaworthiness, yet under the Harter Act the shipowners defend themselves by pleading negligence of their servants, and such defense is usually effective because it can not be shown that due diligence was not exercised in obtaining efficient master and crew. It appears also that shipowners deliberately practice an unwise and unsafe economy in manning and equipping their vessels, with the expectation that if disaster occurs they can, under the Harter Act, plead as a defense the negligence of their servants.

The result is the establishment of a condition that imposes an unlooked-for and uncalled-for obstacle in the way of American exporters, and one which is contrary to American precedent and a wise public policy. The change which Congress made in the standard of duty has been unfortunate. Under the Harter Act as it stands severe losses have continued to fall upon American exporters, due entirely to the negligence of the shipowners' servants; and the exporters, without fault or negligence on their part, and while engaged in the difficult and important work of increasing the exports of American agricultural products and manufactures to foreign countries, are deprived of any recourse or recovery.

CONDITIONS NOW OBSOLETE PRODUCED THE EXEMPTION.

There is no shadow of occasion or need to-day, or for our country, for the provision in section 3 of the Harter Act relieving shipowners from responsibility for losses due to their negligence. This provision is a piece of legislation in imitation of the English policy, and is principally for the benefit of English and other foreign shipowners. The English policy in this respect is a very old one, and is based upon the natural situation and necessities of England. The isolated geographical position of England and the scarcity of her natural resources in food supplies forced her from a very early date to engage extensively in maritime adventure and commerce, and the maintenance of her prosperity and power has required that every possible encouragement be given to her merchant marine. Such encouragement has been given principally by means of special privileges in the way of limitation of ocean carriers' liability and by subsidies. Under the English laws ocean carriers are permitted to insert broad exceptions and conditions in their bills of lading, and under such legal privileges the objectionable clauses in bills of lading have been gradually enlarged so as to provide for the carriers' exemption from liability for loss from almost every accident of navigation, whether caused by negligence, inefficiency, or other reason.

This English policy of granting to shipowners a rather broad exemption from liability for losses at sea was established a great many years ago. At that time the conditions of ocean navigation were such as to afford some reason for such indulgence to the owners of ships. All navigation was by sailing vessels. The voyages were very long and all means of communication were slow and uncertain. Shipowners would be deprived of all communication from their vessels for months at a time, and captains could not receive orders from the owners and were obliged to act entirely on their own responsibility. It was true, as the shipowners stated, that they could have no control over their ships after they left port, and in those days the vessels of the merchant marine were owned principally by individuals and firms, and the loss of a vessel would frequently mean the loss of the entire capital of the owner.

Yet under the hard conditions of those former times shipowners in the United States were held liable for faults and errors in the navigation and management of their ships. It was considered contrary to a wise public policy to relieve them from such liability. At the present time conditions of ocean navigation have changed greatly. The sailing vessels have given way to steamers. Voyages are much briefer than ever before. Vessels no longer remain unheard from for long periods. Instead of slow mails, telegraphy, both by cable and wireless, is at the command of shipowners for communication with their captains and agents. With modern facilities and improved organization shipowners have to-day much better control over their vessels whether at sea or in distant ports, than they ever had before. If the servants of the shipowners from the nature of their work, are at times beyond the immediate reach of their employers' attention, the servants of other business enterprises are often similarly situated; and in all such cases the servants must, of course, be selected with regard to the circumstances of the work and in view of the responsibilities which properly rest upon owners and employers for the acts of their servants. And to-day the shipowners almost without exception are great corporations instead of individuals and firms of very limited resources. At no former time has there been less reason for exemption from liability for losses due to fault or negligence than exists to-day. Yet exemptions from such liability have increased under corporate ownership of the merchant marine and notwithstanding the improved facilities of navigation and management. This policy is not consistent with the welfare of the general public or of American business enterprise. There is no reason why ocean carriers should be treated differently from other carriers and other business concerns, all of whom are held responsible for the acts of their servants within the scope of their proper services and authority.

FULL RESPONSIBILITY ESTABLISHES SAFETY AT SEA.

The special indulgence to shipowners granted by the Harter Act as it stands is a menace to the safety of the public at sea. All other common carriers are held liable in this country for the faults, errors, and negligence of their servants. No proposal to exempt railroads from such liability would be seriously entertained in Congress or in any legislature in this country. Yet the effect of such exemption is bound to be the same, in a general way, with any class of common carriers. In fact it is the same in all kinds of business or personal activity, and this is universally recognized. Almost all corporations and persons are or can be made liable for damages resulting from negligence on the part of themselves or their servants. Without such liability the practical incentive for care and precaution is removed. In all activities there is a natural tendency toward the relaxation of vigilance. There is also a constant tendency to get the business done in the easiest and cheapest way. These tendencies can only be counteracted by the persistent and unremitting pressure of actual responsibility.

Accidents at sea almost invariably result in loss of property. Loss of life is a much less frequent result. All the precautions that can be taken to prevent loss of property are doubly effective in preventing loss of life. There is no surer way of preventing loss of life at sea than by compelling all reasonable precautions to prevent loss of property. All such precautions are thoroughly and effectively compelled by making shipowners actually responsible for property losses and damages arising from faults and negligence of their servants. Under all the conditions of ocean navigation to-day safety of life and property can really be obtained. The public realize that this is so and demand safety. Shipowners, of course, know better than any other class of people how to provide safety at sea, but business considerations lead them to equip and manage their vessels as economically as possible in all matters that do not affect the comfort or luxury of passengers. Hence the shipowners provide just about as much in the way of safety appurtenances and equipment as the laws require (laws of foreign countries, for the most part, but affecting the lives of our own people), and navigate their vessels in ways and methods established with regard to the extent of the responsibility they are obliged to assume.

It was known, even before the *Titanic* disaster, that in ocean steamships safety was being sacrificed for the sake of speed and luxury. Much legislation is now pending which is intended to secure safety of life at sea. However excellent these measures may be, the most effective legislation for the purpose must be that which will make the owners of vessels in ocean traffic responsible for faults or errors in navigation or management. This liability will make the interests of shipowners identical with the interests of the public. The shipowners will then make sincere, earnest, and constant efforts to avoid disaster, and will apply their superior knowledge and experience to this end. Whatever may be lacking in the rules and requirements imposed by Congress or the laws of foreign countries will be more than made up through the force and keenness of self-interest. The laws regarding safety, while doubtless very desirable on the whole, must almost necessarily be lacking in some respects. Even if they could be perfect originally, the conditions of ocean travel are so constantly and rapidly changing that lawmakers can scarcely keep up with them. Moreover, the laws and regulations for safety and the inspections to enforce them are frequently limited by necessity to vessels within a specified range of class and size, as, for example, to steam vessels of not less than a stated minimum tonnage.

In such cases all vessels outside of the specified range, as would be, in the example suggested, sailing vessels and very small steamers, would not be reached at all by the laws and regulations. But full responsibility for life or property lost through faults or negligence will automatically safeguard the navigation of all vessels of all classes, sizes, and conditions. When full responsibility is established and every accident is expensive to shipowners it will no longer pay to be careless and indifferent or to incur unnecessary risks; and the humanitarian impulses of the shipowners, which it is believed are not less pronounced than those of other business men, will run in the same channel with business considerations and meet the just expectations of the public.

THE PUBLIC DEMAND SAFETY AND THE SHIPPERS JUSTICE.

The great evil of the Harter Act as it stands is that by taking away from shipowners liability for the loss of property intrusted to them as common carriers for transportation the natural penalty for negligence is removed and with it the ever-present and controlling motive for prudence and care. This evil has for a long time caused uneasiness on the part of a large number among the general public and serious loss and disadvantage to thousands of American shippers of all sorts of merchandise. A number of the shippers have sought through the courts to recover damages for their losses incurred through the faults and negligence of ocean carriers and have made every possible effort to secure by judicial interpretation some modification of the evil feature of the Harter Act. The uneasiness and discontent among travelers and the general public has, since the great disaster of the *Titanic*, on April 15, 1912, increased to such a point that the most effective and complete provisions and precautions to secure safety of life and property at sea are now universally demanded.

ESPECIAL NEED FOR ENFORCING RESPONSIBILITY ON FOREIGN VESSELS.

It is generally agreed in this country that there is especial need for enforcing fair responsibility for life and property on the foreign vessels plying between our ports and foreign ports. The report, dated May 4, 1912, of the Committee on the Merchant Marine and Fisheries of the House of Representatives, accompanying the bill (H. R. 24025) relating to the inspection of steam vessels, said:

"In the opinion of the committee there is greater need for the rigid inspection of foreign vessels entering and clearing from our ports than there is for the inspection of vessels of the United States, in view of the fact that most of our oversea commerce, both passenger and freight, is carried in foreign ships. The great foreign passenger lines on the North Atlantic, and plying between European ports and our eastern seaboard, are largely dependent on the American traveler for their profitable business."

THE NELSON BILL RESTORES RESPONSIBILITY.

The Nelson bill (S. 7208) restores the act of February 13, 1893 (the Harter Act), to the form necessary to carry into effect the purpose of the House of Representatives at that time, will remove the injustice now prevailing in the relations between shippers and shipowners, and will undoubtedly give a greater degree of security to the increasing volume of the export trade of our country. Moreover, it will compel the precautions which protect life and afford the necessary complement of all other measures to this end.

There is overwhelming reason for the existing uneasiness and fear among the shippers and the public concerning losses and disasters at sea. The loss of the *Titanic*, great and impressive as it was, and thoroughly arousing the conscience and judgment of all of our people as it did, is but the latest and greatest in a long list of disasters at sea during the past 20 years. From this list many persons have been impressed with the idea that the enactment of the Harter Act in its present form has brought distinctly traceable results in a pitiable and dreadful toll of life and property needlessly lost at sea. For a number of years past the newspapers have been constantly reporting disasters to vessels at sea by stranding, collision, and other accidents, including very many cases of total loss, and it is well known by the people engaged in shipping and allied enterprises that the majority of the cases of stranding and collision are really the result of negligence, such as can only be overcome by the imposition of full responsibility on foreign shipowners.

Legislation of Benefit to Postal Employees.

EXTENSION OF REMARKS

OF

HON. MAURICE CONNOLLY,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 11, 1914.

Mr. CONNOLLY of Iowa. Mr. Speaker, the following legislation of benefit to postal employees has been enacted into law by a Democratic Congress:

The first session of the Sixty-second Congress, which was the first Democratic Congress in 16 years, was called into extra session by the President April 4, 1911. On April 27, 1911, Representative REILLY of Connecticut introduced a bill in Congress limiting the hours of labor of letter carriers and post-office clerks to 8 hours each day, the 8-hour service not to extend over a period of 10 consecutive hours. This bill was reported favorably by the subcommittee having it in charge on January 12, 1912, and was made a part of the Post Office appropriation bill, which was pending at that time in the House Committee on the Post Office and Post Roads, and was enacted into law August 24, 1912.

The antigag bill was introduced by Representative LLOYD, of Missouri, another Democrat, and this bill was also made a part of the Post Office appropriation bill, and became a law August 24, 1912.

The law which grants a day of rest each week to postal employees and prohibits the delivery of mail to the public on that day was also passed by the Sixty-second Congress, and became a law August 24, 1912. There was also placed in the Post Office appropriation bill of that year a provision providing for the promotion of 75 per cent of the letter carriers and post-office clerks to the highest grades in their respective offices. This was 25 per cent more appropriations than had been allowed under the former administration, which was Republican.

In that same Congress the first parcel-post law was passed against the organized opposition of the express companies and other large interests. This legislation had been demanded by the public for years, but no heed had been given to the petitions until the Democratic Congress made it a part of the Post Office appropriation bill, and it was included in the act of August 24, 1912.

The Post Office appropriation bill passed in the second regular session of the Sixty-second Congress contained a provision which abolished the $600 grade for clerks and carriers and made the initial salary in these positions $800 per annum. It also contained a provision to pay substitutes 40 cents an hour while working for employees absent from duty without pay and 30 cents an hour for vacation and auxiliary work. Provision was also made for promotion of 75 per cent of the clerks and carriers to the highest grades in their offices.

The Post Office appropriation bill for the fiscal year ending June 30, 1915, raises the pay of substitutes for vacation and auxiliary work to 35 cents an hour. It also provides for the promotion of 75 per cent of the employees to the highest grades. A bill which was introduced in the House by Mr. REILLY of Connecticut, and which provides compensation to postal employees injured or killed in the performance of their duty, was also made a part of the appropriation bill and is now a law.

Another bill which has been favorably reported by the Committee on the Judiciary is what is known as the McGillicuddy bill, which provides compensation for injuries, and also for employees who contract vocational diseases in the course of their employment. This is the most advanced step in compensation legislation that has ever been introduced in the Congress of the United States, and will when enacted into law be a

progressive step in giving proper protection to the toilers of the country who are in Government employ.

The first eight-hour law for postal employees was passed May 24, 1888, by the Fiftieth Congress, which was also Democratic and presided over by the late Hon. John G. Carlisle. This law was amended by the Republican Congress in April, 1900, by an amendment being offered to the Post Office appropriation bill by the chairman of the Post Office Committee, the late Hon. Eugene F. Loud, of California. It was charged at that time that the amendment was accepted without protest through a statement made by Mr. Loud that it was acceptable to the letter carriers of the country, and this statement was repudiated by the letter carriers and the officers of their association as well as the Democratic Members on the floor of the House when the deception became known. The amendment changed the eight hour a day law to 48 hours a week, but it worked so unsatisfactorily that it was left to die a natural death and was not enforced after the life of that appropriation bill, June 30, 1901.

Eight years later, however, a Republican Postmaster General, the Hon. Frank H. Hitchcock, had a case brought before the Court of Claims as a test case, and the court decided that the 48-hour law was still in force and effect. It has also been charged that this case was made up in secret and that the attorney who was presumed to represent the claimant was engaged through the good offices of the Postoffice Department, so that the attorneys on both sides of the case seemed to be working in accord with each other, as the claimant did not engage the attorney nor did he pay any fee that might have been charged in prosecuting the claim. The result was that the court decided against the claimant on May 31, 1910, and this decision virtually repealed the letter carriers' eight-hour law. This was the cause of Mr. REILLY of Connecticut introducing the eight-in-ten-hour bill, which was violently opposed by Post Office Department officials, but was enacted into law by the Democratic Congress.

The Sixty-second Congress also passed a law reclassifying and increasing the salaries of railway mail clerks, which has been a great benefit to the employees in this branch of the Postal Service. The salaries of the rural-delivery carriers have also been materially increased and the working conditions of these worthy employees of the Government have been materially improved.

These cases are cited simply to show that the welfare of the employees have been given due consideration through the enactment of beneficial legislation by the Democratic Congress, as in contrast to the inaction on the part of the Republican Congress when it had 16 years of opportunity to enact laws and failed to do so.

In such efforts in the interests of equity and fair dealing toward the employees of the Government in this very important department my sympathy and cooperation has been enlisted.

The Heroes of Vera Cruz.

EXTENSION OF REMARKS

OF

HON. H. GARLAND DUPRÉ,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 12, 1914.

Mr. DUPRÉ. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by the President of the United States on yesterday, in New York, at the memorial to the sailors and marines.

The address is as follows:

"Mr. Secretary, I know that the feelings which characterize all who stand about me and the whole Nation at this hour are not feelings which can be suitably expressed in terms of attempted oratory or eloquence. They are things too deep for ordinary speech. For my own part, I have a singular mixture of feelings. The feeling that is uppermost is one of profound grief that these lads should have had to go to their death, and yet there is mixed with that grief a profound pride that they should have gone as they did and if I may say it out of my heart, a touch of envy of those who were permitted so quietly, so nobly, to do their duty.

"Have you thought of it, men, here is the roster of the Navy, the list of the men, officers and enlisted men and marines, and suddenly there swim 19 stars out of the list—men who have suddenly gone into a firmament of memory, where we shall always see their names shine; not because they called upon us to admire them, but because they served us without asking any questions and in the performance of a duty which is laid upon us as well as upon them.

"Duty is not an uncommon thing, gentlemen. Men are performing it in the ordinary walks of life all around us all the time, and they are making great sacrifices to perform it. What gives men like these peculiar distinction is not merely that they did their duty, but that their duty had nothing to do with them or their own personal and peculiar interests.

THEY GAVE THEIR LIVES FOR US.

"They did not give their lives for themselves. They gave their lives for us, because we called upon them as a Nation to perform an unexpected duty. That is the way in which men grow distinguished and that is the only way, by serving somebody else than themselves. And what greater thing could you serve than a Nation such as this we love and are proud of.

"Are you sorry for these lads? Are you sorry for the way they will be remembered? Does it not quicken your pulses to think of the list of them? I hope to God none of you may join the list, but if you do, you will join an immortal company.

"So while we are profoundly sorrowful and while there goes out of our heart a very deep and affectionate sympathy for the friends and relatives of these lads who for the rest of their lives shall mourn them, though with a touch of pride we know why we do not go away from this occasion cast down, but with our heads lifted and our eyes on the future of this country, with absolute confidence of how it will be worked out. Not only upon the mere vague future of this country, but the immediate future.

"We have gone down to Mexico to serve mankind if we can find out the way. We do not want to fight the Mexicans. We want to serve the Mexicans if we can, because we know how we would like to be free and how we would like to be served if there were friends standing by ready to serve us. A war of aggression is not a war in which it is a proud thing to die, but a war of service is a thing in which it is a proud thing to die.

"Notice that these men were of our blood. I mean of our American blood, which is not drawn from any one country, which is not drawn from any one stock, which is not drawn from any one language of the modern world, but freemen everywhere have sent their sons and their brothers and their daughters to this country in order to make that great compounded Nation which consists of all the sturdy elements and of all the best elements of the whole globe.

AMERICANS, EVERY ONE OF THEM.

"I listened again to this list with a profound interest at the mixture of the names, for the names bear the marks of the several national stocks from which these men came. But they are not Irishmen or Germans or Frenchmen or Hebrews any more. They were not when they went to Vera Cruz; they were Americans, every one of them, and with no difference in their Americanism because of the stock from which they came. Therefore, they were in a peculiar sense of our blood and they proved it by showing that they were of our spirit—that no matter what their derivation, no matter where their people came from, they thought and wished and did the things that were American, and the flag under which they served was a flag in which all the blood of mankind is united to make a free nation.

"War, gentlemen, is only a sort of dramatic representation, a sort of dramatic symbol of a thousand forms of duty. I never went into battle, I never was under fire, but I fancy that there are some things just as hard to do as to go under fire.

"I fancy that it is just as hard to do your duty when men are sneering at you as when they are shooting at you. When they shoot at you they can only take your natural life; when they sneer at you they can wound your heart, and men who are brave enough, steadfast enough, steady in their principles enough, to go about their duty with regard to their fellow men, no matter whether there are hisses or cheers, men who can do what Rudyard Kipling in one of his poems wrote, 'Meet with triumph and disaster and treat those two impostors just the same,' are men for a nation to be proud of. Morally speaking, disaster and triumph are impostors. The cheers of the moment are not what a man ought to think about, but the verdict of his conscience and of the conscience of mankind.

"So when I look at you I feel as if I also and we all were enlisted men. Not enlisted in your particular branch of the service, but enlisted to serve the country, no matter what may come, what though we may waste our lives in the arduous en-

deavor. We are expected to put the utmost energy of every power that we have into the service of our fellow men, never sparing ourselves, not condescending to think of what is going to happen to ourselves, but ready, if need be, to go to the utter length of complete self-sacrifice.

"As I stand and look at you to-day and think of these spirits that have gone from us, I know that the road is clearer for the future. These boys have shown us the way and it is easier to walk on it because they have gone before and shown us how. May God grant to all of us that vision of patriotic service which here in solemnity and grief and pride is borne in upon our hearts and consciences."

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. J. THOMAS HEFLIN.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 13, 1914.

Mr. HEFLIN. Mr. Speaker, upon the request of Mrs. George B. Puller, of Washington, I wish to print in the RECORD the following article on woman suffrage, by Miss Mary B. Smith:

WOMAN SUFFRAGE.

[By Miss Mary B. Smith.]

I desire to present some facts as to the pernicious effects of woman suffrage in States where it now exists. There have been many theories upon this subject presented by the suffragists. It is my purpose to present facts and figures showing that woman suffrage, where it has been tried, not only does not better conditions but tends to have actually the reverse effect from a practical standpoint. I will first present some figures which prove conclusively that women do not vote as generally as men, where the franchise has been given them. Senator THOMAS, of Colorado, has said that he concedes that woman suffrage has not, and maintains that it will not, change conditions. I agree with the distinguished Senator up to a certain point, but I believe that I can show positively that woman suffrage will, in many instances, change conditions for the worse.

In the six suffrage States of California, Colorado, Wyoming, Utah, Idaho, and Washington—Oregon, Arizona, and Kansas did not have woman suffrage till voted on at election November 5, 1912—the Abstract of United States Census of 1910, pages 110 and 118, shows there were, in April, 1910, 3,170,152 men and women over 21 years of age, exclusive of Japanese and Chinese. The total vote actually cast for President November 5, 1912, in the six woman-suffrage States was 1,521,590, so 47.9 per cent of the men and women—exclusive of Japanese and Chinese—over 21 years of age in April, 1910, actually voted.

In the six adjoining and neighboring States of Kansas, Nebraska, Oregon, Nevada, South Dakota, and Missouri, where men alone vote, the total number of men 21 years of age and over, exclusive of Japanese and Chinese, was, in April, 1910—Abstract of Census, page 110—2,295,119; total vote in the six male-suffrage States for President November 5, 1912, 1,587,984; 69.1 per cent of the men over 21 years of age—exclusive of Japanese and Chinese—actually voted, or about 45 per cent more of the possible voters in the male-suffrage States voted than did the possible voters in the six adjoining woman-suffrage States. If 69.1 per cent of the men voted in the woman-suffrage States—as men in the adjoining male-suffrage States did vote—then an analysis of the figures show that only 19.1 per cent of the women over 21 years of age in the suffrage States actually voted. If more than 19.1 per cent of women did vote in the six woman-suffrage States, then less than 69.1 per cent of the men voted; so it is impossible to escape one or the other conclusion, that the women either do not vote as generally as the men when given the ballot, or, if they do, their voting does cause less interest to be taken in politics by men, and in either event the suffrage cause is harmful to a republic.

Our Western States being new States in which a great deal of land has been opened for settlement and made ready for irrigation, naturally has increased and is still increasing rapidly in population; so, in fact, there were a great many more men and women over 21 years of age November 5, 1911—one year prior to last presidential election—than the 1910 census shows. If the six woman-suffrage States and the six male-suffrage States above mentioned have increased in the same proportion from April, 1910, to November, 1911, one and one-half years, as they increased for 1900 to 1910—and no one can doubt it—then the six woman-suffrage States had, on November 1, 1911, 3,572,510 possible men and women voters, exclusive of Japanese and Chinese, for last presidential election, in which event only 42.5 per cent of the men and women over 21 years of age cared to vote.

In the six male-suffrage States previously named the total number of men over 21 years of age, exclusive of Japanese and Chinese—estimated—November 1, 1911, was 2,397,878, in which event 66.2 per cent of the men over 21 years of age actually voted, or 55.7 per cent more possible voters voted than in the six woman-suffrage States.

According to advice from Secretary of State Jordans's office at Sacramento, Cal., where the names and addresses of all registered voters are sent, in order that sample ballots can be mailed them according to law, 804,633 men and 180,000 women registered in California to vote at election November 5, 1912. (See Los Angeles Times, October 27, 1912.)

This shows that about 93 per cent of the men in California over 21 registered and only about 27 per cent of the women. The total vote for President November 5, 1912, all candidates in California, was 673,527; total registration, 984,633. Sixty-eight and four-tenths per cent of men and women who registered voted. If 68.4 per cent of the registered women actually voted—which is not likely, as women did not register as generally as men it is not to be supposed that they voted as generally—then only 18.3 per cent of the women over 21 years of age in April, 1910, voted November 5, 1912, in the State of California.

In San Francisco in the latter part of 1912, at a local-option election, out of 120,859 women over 21 years of age in the city, 40,655 women and 89,023 men registered; yet only 15,087 votes, all told, were cast for local option, and it is estimated that approximately 1 woman in 8 who was interested enough to register took the trouble to go to the polls.

At a city election in San Francisco November 11, 1913, 49,833 women registered and 19,678 voted, about one-quarter of the votes being cast by women. In 3 precints no women voted; in 49 out of 673 precincts there was an average of less than 10 votes per precinct by women. (Analysis of vote by Registrar of Elections Zemansky. See Los Angeles Times, November 20, 1913.) Census of 1910 shows there were 120,859 women over 21 years of age in San Francisco, so only 16.2 per cent voted in election of November 11, 1913.

At an election November 24, 1913, in Los Angeles, Cal., involving radical changes in the city charter, only 31,000 voters, men and women, out of 222,817 cast their ballots. This, too, after a citizens' committee of 1,000 advocated in all the newspapers the adoption of certain propositions and the defeat of others; 9 out of 10 of the reform measures were defeated. The Los Angeles Times of March 26, 1913, says:

> The vote of the women was disappointing. In some precincts it was a negligible quantity, while in others it was only about one-third of the total; yet suffragists carried on an active campaign, attended and spoke at all-day meetings, and even worked at their headquarters on Easter Sunday.

At an election, June 3, 1913, in Los Angeles for mayor, Rose was elected by 8,037 majority over Shenk. Los Angeles had "good government" officials for several years before women had the ballot. Rose ran on an "open-town" platform and Shenk on "good government." Every newspaper and practically every minister in the city was for Shenk and asked the voters to elect Shenk and have a clean city in the interest of the young men and women of Los Angeles.

The Los Angeles Times of June 5, 1913, gives the total vote as 84,055; nearly 100,000 under registration. The Times further says that, in spite of the excellent organization of Mrs. John S. Myers and her corps of assistants, the women did not turn out in any large numbers, and of those who did a considerable percentage appeared to favor the election of Rose. As there were 222,877 men and women over 21 years of age in Los Angeles (census of 1910), only 38.2 per cent of the men and women of voting age voted. The Los Angeles Express, June 4, 1913, had an editorial on the disgrace of electing Rose. At an election in Chicago, April 7, 1914, with the strenuous efforts of the suffragists to get out the female vote, only 158,686 women voted. Chicago had in 1910, 626,629 women over 21 years of age (letter from Director of Census February 28, 1914). About 25 per cent of the women of Chicago over 21 years of age voted. More than double that number of men did vote at the same election. Complaint has been made that it is not just to tax women when they have no vote. Only one-tenth of the taxes are paid by women, so if women had the ballot the women who pay taxes would not be as fairly and justly treated as they now are, for

then nine-tenths of the women who vote the tax would pay no taxes, while now nine-tenths of the taxes paid are paid by the men who vote the taxation. No injustice is possible when the taxes are laid by the voters who pay nine-tenths of the amount.

So many of our people are being misled on the liquor question by the suffragists that it is well to submit some facts on that subject. In no State in which women have voted on the question has State-wide prohibition ever been adopted. Nine States where men alone vote have State-wide prohibition. November 5, 1912, Colorado voted on State-wide prohibition; 75,877 votes were cast for the measure and 116,774 against. (See p. 159, Abstract of Votes, compiled from official returns by James B. Pearce, secretary of state, Denver, Colo.) If 58 per cent of the women over 21 years of age in Colorado had voted for prohibition, the measure would have become a law by 6,012 majority without a single male vote being cast for prohibition, there being 213,425 women over 21 years of age in Colorado. (P. 118, Abstract of Census, 1910.)

Wyoming legalized gambling for about 40 years after women had the ballot, and had neither State-wide prohibition nor local-option laws.

About six years prior to the adoption of woman suffrage in California Los Angeles voted on local option, and the measure was defeated nearly 2 to 1. About a month after women had the ballot in Los Angeles the question was again voted on and the saloons won by nearly 3 to 1.

December, 1912, Los Angeles voted on the question of abolishing free lunches in saloons, but the measure was defeated and lunches are still free in Los Angeles saloons. Missouri and Connecticut have State-wide laws prohibiting free lunches in saloons. Pasadena, Cal., for many years—in fact, practically for its entire history—had been a dry city, but soon after women were given the franchise the sale of liquor was legalized. Pasadena had in 1910 2,688 more women over 21 years of age than men—about 29 per cent.

December 2, 1913, Santa Monica, Cal., voted wet, ballots nearly 3 to 1 for liquor, to be sold on Sundays and nights. The Los Angeles Times of December 3 says the triumph of "demon rum" and the sparkling cabaret is attributed to the women, who voted 2 to 1 against a Sunday drought. Total vote for the saloons and Sunday liquor 2,173 against 814. Letter under date of December 13, 1913, from Director of United States Census shows that in 1910 Santa Monica had 2,462 males and 2,748 females over 21 years of age—286 more women than men, yet we have the sale of liquor legalized in cafés all night and on Sundays in a city of homes of less than 8,000 (7,847) people, and I doubt that a parallel can be found in any State where the franchise is limited to men.

Redondo, Cal., voted on local option October 14, 1913. The saloons won. Los Angeles Times of October 15 says that both sides claim the result was due to women's votes.

Anaheim, Cal. (population 2,628), voted on local option November 6, 1913. The saloons won. (See Los Angeles Times, Nov. 7, 1913.)

San Bernardino, Cal., voted for the saloon January 30, 1914. (See Los Angeles Times, Jan. 31, 1914.)

At an election in California April 13, 1914, out of 13 cities and towns voting on the liquor question, 9 voted "wet" and 4 small towns "dry." Hanford, population 4,829, and Merced, population 3,102, both of which had been dry, returned to the wet column. See Los Angeles Times, April 14, 1914. Only 1 small county—Lake County—in California is dry, and 10 counties out of 62 in Colorado are dry.

In Colorado Springs, Colo., where the sale of liquor was prohibited for many years, women voted on the question about two years ago, and liquor selling was legalized. Colorado Springs had 819 more women than men over 21 years of age in 1910. (Letter of Director of Census, Feb. 28, 1914.)

On pages 202 and 203, Annual Report of the Commissioner of Internal Revenue, you will find that in the 6 States that had woman suffrage January 1, 1912—California, Colorado, Wyoming, Idaho, Utah, and Washington—there were 26,295 liquor dealers paying special license to the Government for the fiscal year ending June 30, 1913. From page 24, Abstract of United States Census, 1910, you will find the 6 suffrage States above mentioned had a population of 5,163,473, 1 liquor dealer for every 196 people of the 6 States. For the remaining 42 States and District of Columbia there were 226,247 liquor dealers paying license for the same period. The 42 States and District of Columbia had a population of 86,808,793, or 1 liquor dealer for every 383 people, or about one-half the number of dealers per capita than the woman suffrage States require, and then we are told by the suffragists that they are not favorable to the liquor interests. Kansas, Oregon, and Arizona only adopted woman suffrage November 5, 1912. Kansas has been a prohibition State for more than 25 years.

At local-option elections in Illinois April 7, 1914, about eleven hundred saloons out of 3,000, where elections were held, were abolished. 12 dry counties were added to the 30 already dry, making 42 dry counties out of the 100 counties in Illinois.

Kentucky, where men alone vote, has 99 dry counties out of 120 in the State, and Missouri has 65 no-license counties out of 114 in that State.

Iowa has 77 dry counties out of 99 counties in the State; and in Minnesota, at election April 7, 1914, two-thirds of the counties where local-option elections were held voted dry, and towns that had licensed saloons for 60 years voted dry by men's votes.

Eight out of twelve counties in Michigan that voted on the liquor question April 6, 1914, voted dry, including Lansing, the capital of the State, by men's votes; while Springfield, the capital of Illinois, where there are 205 more women than men over 21 years of age, voted to retain the saloons.

California, where women have voted for more than two and one-half years, legalizes prize fighting and is one of the few States that has no pure-milk law.

About one-half of the people in the United States outside of the woman-suffrage States live in dry territory. Eugene W. Chafin, former candidate on the Prohibition ticket for President, said at Long Beach, Cal., February 15, 1914, that "the support expected by Prohibitionists in California from women had not yet developed." (See Los Angeles Times, Feb. 16, 1914.)

During the suffrage campaign in Ohio, Miss Margaret Foley, in addressing a meeting of union labor men, said: "Don't be afraid, boys; we're not going to take your beer away from you."

In Cleveland many of the suffragists insisted that it was only their enemies who said of them that they would vote against the saloons. In the recent campaign in Chicago—February, 1914—Miss Marion H. Drake, who was nominated for alderman in the first ward, was quoted in the newspapers as standing "for free lunch and saloons."

Last year the police board of Denver, Colo., passed a regulation prohibiting all unescorted women from entering after 8 p. m. cafés and restaurants where liquor was sold. Instantly a storm of protest arose, not by the refined, respectable women, not by the women of the streets, but by the political women. These political women complained that their "rights were being interfered with"; that they might be compelled to be on the streets after 8 p. m., and that it would be an outrage to prohibit them the use of restaurants after that hour. "Ladies," said the chief of police, addressing a committee of these women who visited him, "I can prove to you from the records here in my office that the women of Denver drink more whisky than men. Shall I open my books and show you?" They did not ask for proof. They withdrew their protest, and that regulation is in effect to-day.

Mrs. Crystal Eastman Benedict, a prominent woman suffragist of Wisconsin, made before the Manufacturers and Dealers' Club of Milwaukee, in addressing the assembled brewers, the statement: "Why all this hue and cry about woman suffrage injuring the brewing industry? Isn't it a little foolish?" Mrs. O. H. P. Belmont, in an address, said she welcomed the support of the brewers and praised Mrs. Benedict for her work among the representatives of that interest.

The president of the Equal Suffrage Association of Washington, Mrs. Smith, when visiting in Denver, declared that the women of the State of Washington won the vote chiefly through the influence of the breweries of the State, specially mentioning the Rainier Brewery at Seattle. Mrs. Smith said that the failure of the prohibition election in Denver convinced the liquor interests that they had nothing to fear from the women's vote. Los Angeles women voted heavily against prohibition, and Mrs. Shelley Tolhurst, a suffrage leader of Los Angeles, made a public speech in which she declared that the saloonkeepers need not fear the women's vote, while in San Francisco another suffrage leader declared that the suffragists would drink to their victory in California wine. Mrs. Minnie Reynolds, for the National Suffrage Association, recently challenged anyone to find a word concerning prohibition among the pamphlets issued by the association.

Hugh Fox, secretary of the United Brewers' Association, in a letter printed in the report of the hearing in December last before the Committee on Rules of the House on the resolution establishing a committee on woman suffrage, said:

The United Brewers' Association * * * states that the anti-suffragists have never received nor asked for contributions from them, although—

He adds:

we have had appeals from the other side.

May Wright Sewall said, October 20 last, in Milwaukee:

Votes for women will no more prohibit drink than they will prohibit food.

The San Francisco Bulletin of July 31 last says:

The equal-suffrage constitutional amendment has now been a part of the law of California for more than half a year. The women have voted at many saloon-closing and saloon-regulating elections, and in no instance have they, as a class, stood solidly against the liquor traffic.

Mrs. Grace Wilbur Trout, president of the Illinois Equal Suffrage Association and one of the leaders in the lobby at Springfield which brought about the enactment of the suffrage bill, said:

It is a great pleasure to remember that some of the firmest supporters of the suffrage measure in the forty-eighth general assembly were some of the so-called "wets."

The suffragists tell us on all occasions that if women had the ballot much better laws for the education and welfare of the child and youth of our country will be enacted. Let me cite a few instances to disprove such a theory:

At Berkeley, Cal., April 12, 1913, for the issuance of bonds for playgrounds, only about 1,500 of the 8,000 women of the city voted. The mayor, who has been a zealous worker for woman suffrage, reprimands the women for their negligence of this particular issue, which of all others should interest them. In a newspaper article he asks "Where were the mothers?" Berkeley has 1,301 more women than men over 21 years of age. (Letter, Feb. 28, 1914, Director of United States Census.)

At Pasadena, Cal., where there are 2,688 more women than men of voting age, the playgrounds that were the pride of Pasadena, and were established before women had the ballot, were discontinued last July on account of the failure of voters to vote money for the purchase of the grounds. (See Los Angeles Times, July 27, 1913.) No other playgrounds have been purchased or been provided for the children.

At an election November 12, 1913, Pasadena, Cal., failed to vote bonds to repair leaky roofs and make sanitary repairs on schoolhouses, to complete new schoolhouses under construction, and to make it possible to provide schools for the entire school year. The superintendent of schools said the school year would have to be cut a month or two, and some schools will have to close when rains begin. (See Los Angeles Times, Nov. 13, 1913.)

It happened to rain November 12 in Pasadena, and some thought the bonds might have carried had the vote been taken on a fair day when the ladies could more conveniently get to the polls; so it was decided to have another election to vote for bonds in a less amount than was voted on November 12. So on January 16, 1914—a fair day—another election was held and the bonds again defeated. So the voters of Pasadena have decided at two elections that the repair of leaky roofs and sanitary improvements, and so forth, of schoolhouses, as well as playgrounds for the children, are to be indefinitely postponed. A letter dated January 12, 1914, from the Director of the United States Census, states there were, in 1910, 9,262 males and 11,950 females over 21 years of age. The total vote for and against the bonds was 4,832. Only 22.7 per cent of the voters of Pasadena—population, 30,291—was interested enough to go to the polls at election of January 16.

We are told that the men of the country can not be trusted to make laws for the women and children; yet an average of four-fifths of the earnings of the men, over and above the necessities of the family, is spent on the women and children.

The suffragists continually tell us that if women had the ballot wars and internal strife would be a thing of the past, yet Colorado, which has had woman suffrage for a generation, is in the throes of civil war and has been for many months. The State has become so weakened in its fabric that it can not keep order and protect life and property within its borders, but has been compelled through the State authorities to call upon the President of the United States to send Government troops to administer affairs and bring order out of chaos. This is another proof of the failure of woman suffrage in the model suffrage State of Colorado, and refutes beyond any possibility of controversy the suffragists' claims.

Much has been said by suffragists about the recall of a mayor in Seattle—who has since been renominated and elected—and the abolishing of the Barbary Coast at San Francisco. Mayor Harper was recalled at Los Angeles about four years before women voted, on account of not enforcing the law against vice, and more than 50 cities in the country have abolished segregated vice districts in the past two years. Los Angeles abolished their segregated vice district about six years before women had the ballot, but it took Denver nearly 20 years after women voted to do away with its segregated vice district.

Helen M. Forster, in Los Angeles Times, November 7, 1913, under head of "Woman Lectures Women," commends Senator WORKS for daring to call attention to the neglect of citizenship by women voters, which, she says, are facts backed up by data and registration lists.

Denver Post, October 17, 1913, report of Mrs. Stewart Walling and Dr. Elizabeth Cassidy: Colorado reformatory rotten. Nothing but filth and graft found at Buena Vista. Merely a preparatory school for the penitentiary. The reformatory, submerged in politics, is a monument to graft, ignorance, stupidity, extravagance, and mismanagement. Building so infested with vermin that only fire could purify it.

The Daily News, of Denver, of October 13, 1913, says the Rev. A. E. Shattuck, of Grand Junction, has stirred up the animals in fine shape, by a public denunciation of conditions which he alleges exists in Grand Junction, Colo.

Here are a few of the opinions he expresses:

Lawlessness is pronounced among us.
Illicit liquor selling is notorious.
Gambling joints are in full swing.
Boys and girls roam our streets late at night in unrestrained violation of the curfew ordinance. (The mothers are possibly away from home attending to political affairs.)
Officials who hate unjust gain we need.

I believe that you will all agree with me that the main object of voting is to register the will of the majority, that it may be crystalized into the law of the land, and that any propaganda that tends to and does, in some instances, defeat the will of the majority is inimical to our form of government.

I think, from the instances cited, I have shown beyond question that women when given the ballot do not, and from their physical organization can never, vote as generally as men, however much she may desire to do so, on account of her duty of motherhood. When a man votes in a male-suffrage State, his vote counts one, but in a woman-suffrage State, unless his wife votes, his vote only counts one-half. If a single man, if the women of his class do not vote as generally as men of his class and opinions, his vote is of less effect than if women were not enfranchised. The fact that the different classes of women do not vote in so large a proportion as men of the different classes in the suffrage States tends to, and in many instances does, defeat the will of the majority, and no cause can be just or right that defeats the will of the majority. Woman's failure to vote as generally as men, where they have been given the ballot, in many cases causes laws to be enacted that are the will of the minority; and that is one of the great injustices of woman suffrage, for the laws made by minorities are injurious to our free institutions.

As an illustration, in San Francisco County, Cal., where the sentiment was not favorable to woman suffrage, only 35.5 per cent of the men and women over 21 years of age voted for President November 5, 1912, while in Los Angeles County, Cal., which had, in 1910, 346,158 men and women over 21 years of age, which gave a large majority for woman suffrage, 48.5 per cent of the men and women of voting age voted for President in November, 1912. The vote for Wilson in San Francisco County, which had in 1910, 297,269 men and women over 21 years of age, was 48,965; Roosevelt, 38,610; Debs, 15,354. Had 48.5 per cent of the men and women in San Francisco County voted, as did in Los Angeles County, there would have been cast 144,175 votes for the presidential candidates instead of 105,646, the actual number cast; and if 144,175 votes had been cast in the same proportion as the 105,646 votes were cast, Wilson would have received 18,288 more votes than he did and Roosevelt 14,478 more. And instead of Roosvelet carrying California by 174 votes Wilson would have had the State by 3,636 plurality.

Forty-three per cent of the men and women over 21 years of age, exclusive of Japanese and Chinese, voted in California November 5, 1912. In our big cities, where the liquor interests are large, in elections on the liquor question the saloons, breweries, hotels, and cafés that sell liquors, property owners who rent property to such interests, all allied trades and business, as well as gamblers, and so forth, see that their women go to the polls on election day nearly as a unit, besides inducing their women friends to vote, it being to their interests financially to vote, while women who have no monetary interest in the election fail to vote as generally as men of their class and opinions do vote. So the will of the majority in such an election may often be defeated, and the liquor interests win, while if men alone voted the saloons might be abolished. As an instance, in Los Angeles, as before mentioned, when men alone voted on local option, the saloons won by nearly 2 to 1, while with women voting the saloons won by nearly 3 to 1. The same applies to any political machine that seeks to gain ascendency for graft,

organized socialism, and so forth, that really want to gain an advantage and defeat the will of the majority.

But if women could ever vote as generally as men, there would be little or no change in our laws, for even if a wife once in a while voted in opposition to her husband and canceled his vote—in which event the family would have no voice in the laws at all—the final result of the whole vote would rarely be changed, and we would have the absurd spectacle of having two people doing what one alone could accomplish as well and save all the effort expended in the study of politics by women and the enormous expense of doubling the election cost.

Taxation in the District of Columbia.

EXTENSION OF REMARKS

OF

HON. BEN JOHNSON,

OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 12, 1914.

On the bill (H. R. 12873) relating to the assessment for taxation of real estate in the District of Columbia, and for other purposes.

Mr. JOHNSON of Kentucky. Mr. Speaker, I wish to address myself to House bill No. 12873, which was introduced by Mr. GEORGE, of New York, on February 3, 1914. The title of the bill is as follows:

A bill relating to the assessment of real property in the District of Columbia.

The bill, as shown by its title and by its provisions as well, related solely to the taxation of real estate. It may be well to state here that Mr. GEORGE, the author of the bill, is an advocate of the single-tax theory, to which his distinguished father, Henry George, gave such an impetus that it has gone all over the civilized world. A majority of the committee, myself included, did not share Mr. GEORGE'S views as to taxation; in fact, we differed in our views very extremely. Mr. GEORGE and the others upon the committee who agreed with him in his views of taxing real estate only, took issue with those of us who believe that all property, both real and personal, should be taxed. Those of the committee who entertained the latter views were in the majority of the committee; and, in consequence, prevailed in the committee in an endeavor to so amend the original bill as to have it embrace real estate as well as personal property, both tangible and intangible, the latter class including stocks, bonds, promissory notes, annuities, and all evidences of indebtedness.

The bill was reported from the committee to the House with the proposed amendments. No sooner had the bill come up for action; in fact, just so soon as the very first two lines of the bill had been read by the Clerk of the House, Mr. CROSSER, of Ohio, addressed the Chair, was recognized, and offered a substitute for the original bill and the amendments thereto which the committee had reported, those amendments being the ones which looked to the taxation of all kinds of property, including stocks, bonds, promissory notes, and so forth. The substitute which Mr. CROSSER offered exempted this latter class of property from taxation entirely. Thereupon I offered an amendment to the Crosser substitute. My amendment reads as follows:

Amend the substitute offered by the gentleman from Ohio [Mr. CROSSER] by striking out all of the substitute after the word "That," which first appears therein, and insert in lieu thereof the following: "There is hereby levied and imposed upon all taxable real estate in the District of Columbia an annual tax equal in rate to that which is now or which hereafter may be levied or imposed by Congress upon tangible personal property in the District of Columbia; and the same rate of taxation is hereby levied and imposed upon all intangible personal property in the District of Columbia which would be taxable under existing law were it tangible personal property, including moneys, credits, accounts, shares of stocks, bonds, annuities, and all other evidences of indebtedness. All laws which are now in force or which may hereafter be put in force in the District of Columbia governing or affecting the listing, return, or assessment of tangible personal property and the collection of tax thereon, and the penalties for failure relative to the listing, return, assessment, or collection of taxes relative thereto are hereby made applicable to intangible property. Hereafter all real estate in the District of Columbia shall be assessed annually at its real and true value. However, nothing herein shall be construed as to change the present manner of taxing banks, trust companies, lighting, heating, and street-railway companies, except that all real estate owned by any of said companies shall be assessed annually and taxed as of its real and true value. Neither shall anything herein be so constructed as to levy or impose any tax upon shares of the capital stock of any corporation which pays to the District of Columbia the required tax upon all of the property represented by its capital stock, or which corporation pays taxes to the District of Columbia as provided by law upon its earnings or receipts. In addition to the real estate which is now exempted by law from taxation in the District of Columbia there shall also be exempted from taxation every parsonage and rectory owned by a religious congregation or organization while it is used by its pastor, preacher, minister, or rabbi as a residence; and, in addition thereto, there shall be exempt from taxation in said District $500 of the value of each dwelling house occupied by the owner thereof as a residence; and, in lieu of the existing exemption as to personal property, there shall be exempt from taxation $500 worth of any kind of personal property (tangible or intangible) which any person may own. The word 'person' as used in the next preceding sentence shall not apply to any firm, copartnership, or corporation. All bonds issued either by the United State or by the District of Columbia are hereby exempted from the payment of tax to the District of Columbia. The assessment of real estate shall be commenced not later than the first Monday in November and concluded by the last day of February in each year. The words 'real estate' as herein used, in addition to their ordinary meaning, shall include any right of way over or right of occupany of the land of another. The words 'real and true value' as herein used shall be construed to mean the fair cash value of the property, or the equivalent thereof, estimated at the price it would bring at a fair, voluntary sale without regard to conflicting claims of title. Personal property of every description shall be assessed as of the 1st day of July in each year. All real estate in the District of Columbia subject to taxation shall be assessed and its taxable value and status determined as of the 1st day of January of each year for purposes of taxation for the fiscal year beginning the 1st day of July following. This act shall become effective on July 1 next after its final passage, and all laws or parts of laws inconsistent or in anywise in conflict herewith are hereby repealed to the extent to which they may be inconsistent or in conflict herewith."

It will be noticed that my amendment struck out all of the Crosser substitute except the first word thereof, which was the word "That." When that word was added to my amendment it became a complete amendment to the original George bill. My amendment was adopted yesterday afternoon. At that point the House adjourned until noon to-day. Upon the assembling of the House to-day the bill came up as unfinished business. The first vote taken was upon the substitution of my amendment for the original George bill. This motion was lost. There were 132 who voted for it, while 164 voted against it, thus demonstrating that those who are in favor of exempting from taxation that class of property which constitutes the greater portion of the fortune of the millionaire were in the majority. Upon the defeat of my amendment a vote upon ordering the original George bill, divested of all the proposed amendments, to a "third reading" was the next step in order. As there was then nothing left before the House for consideration except the original George bill, which dealt solely and entirely with the taxation of land and not of personal property of any sort, most of us who were in favor of taxing tangible personal property as well as that class of wealth which includes stocks, bonds, notes, and so forth, voted against ordering the bill to its "third reading," and the "third reading" was refused. This defeated the bill beyond resurrection.

Of the 131 Members who voted to tax stocks and bonds 112 are Democrats, and 19 are Republicans. Of the 164 who voted that stocks and bonds might escape taxation 84 are Democrats and 80 are Republicans. But of the Democrats who voted to let this class of property escape taxation a great number of them come from the adjoining States of Pennsylvania, Maryland, and Virginia, and from the large cities, notably Chicago and New York.

That is a concise history of the bill from its inception to defeat.

Now, Mr. Speaker, I wish to make some comment upon the merits of the bill and the proposed amendments thereto.

Under existing law the people of the United States, no matter where they reside, are compelled to participate in paying one-half of the expenses of the city of Washington, notwithstanding the fact that they have another tax upon them to support the Federal Government at Washington in all its branches and departments.

It costs about $13,000,000 every year to pay the expenses of the city of Washington. This amount is nearly double what it annually costs to run the whole government of the State of Kentucky, notwithstanding that the entire District of Columbia is smaller than the smallest county in Kentucky.

The second section of the George bill was the most objectionable part of that measure. That section is as follows:

SEC. 2. That upon the assessed value of all real estate the Commissioners of the District of Columbia shall hereafter annually levy a tax of such per cent as shall, with other revenues of said District, be sufficient to pay the portion to be borne by said District of the estimated expenses of the government thereof for the ensuing fiscal year and to satisfy the portion to be paid by said District of any debts thereof. Said tax rate shall be fixed by the said commissioners on or before the 16th day of October of each year for the ensuing fiscal year. If the commissioners shall neglect to fix said tax rate on or before said date, the tax rate for the preceding year shall be the rate of taxation for the ensuing year, to all intents and purposes the same as if fixed by the commissioners.

From that section it will be clearly seen that there is provision made to raise only so much revenue as will pay the "portion" which the District of Columbia must pay. That "portion" is one-half.

The same section of the George bill provides that the Commissioners of the District of Columbia shall not make a levy for a greater rate of taxation than will pay that "portion" (one-half), no matter how small and insignificant that rate might be. The Commissioners of the District of Columbia,

under the law, must be residents of the District of Columbia. They must be from amongst the general public of the District of Columbia. If these commissioners were to levy a tax rate greater than necessary to raise only one-half of the amount needed they would be ostracized by those from whose midst they came, and with whom they must daily associate while they are commissioners, and to whom they must return when they retire from office. It must be borne in mind that if the commissioners failed to collect by local taxation more than one-half of the amount required for the expenses of the city the other half must be paid by the people of the United States. It would be easy for the commissioners, by the provisions of the George bill, to collect only one half from their daily associates and have the other half paid by strangers. The commissioners are only human; and, in all human probability, would accept the opportunity offered by the George bill to collect only one half from their own people and the other half from the people in Kentucky and in the other States.

Under the present law property in the District of Columbia is taxable at the rate of $1.50 upon each $100 worth of property as it is assessed. However, real estate is taxed at only two-thirds of its value. This reduces the rate to $1 a hundred on real estate, provided it is assessed at two-thirds of its real value. But this is seldom done in assessing business property, is never done in assessing the "mansions" in the fashionable quarters; but the humble home is nearly always assessed at as much as it will sell for, and frequently for more.

It is contended by me and many other Members who have the interests of our constituents at heart that the people of the city of Washington should pay a "reasonable" rate of taxation upon their property, and that they should not be deliberately underassessed in order that they may fall short of having money enough to run the municipal government, and then ask that the people out in the States who never see Washington shall be additionally taxed for their benefit.

If property were "reasonably" assessed and taxed in Washington, the revenues would be all they would need. Consequently, they must keep down either the rate or the assessed values in order to avoid raising more revenue than the one-half with which they are now permitted to escape. Under the plan set out in the second section of the George bill the revenue collected would never exceed one-half of the total amount required. Therefore, if that section of the George bill had become law, the rate of taxation would have become less and less each year as the value of the property increased. The rate of taxation is, as I have said, now fixed by law. However, the same end can be accomplished by reducing the assessed value instead of reducing the rate. It is generally charged here that this is done, and that real estate in some sections of the city is assessed at 40 cents or less on the dollar. Even with all this, the taxes collected in Washington last year when added to the one-half paid by the people of the States amounted to a million and a third dollars more than was needed. But it is even charged that all the taxes which are levied and which could be collected are purposely not collected. Only a few weeks ago a back-tax collector here told me that he then had in his district thousands of dollars in uncollected taxes which he said was easy of collection, but that a superior officer would not permit either him or any of his associates to collect.

If Washington real estate were "reasonably" assessed and the taxes collected and she then fell short of her needs, I have no doubt all the country would be willing to come to her rescue in order that the Nation's Capital might be a "city beautiful"; but I, for one, can not come to believe that Washington should be underassessed for no other purpose than to have the people back in the States pay a heavier tax in order that Washington people may pay a lesser tax—a tax smaller than the people of other cities of approximately like size pay.

I have here a list of 40 cities in the United States. Opposite the name of each city I will put its rate of taxation, beginning with the city which has the smallest rate, and go on down the list, naming the cities in order as the rate of taxation increases, as follows:

Washington, on the $100	$1.00
Philadelphia, on the $100	1.50
St. Louis, on the $100	1.51
Pittsburgh, on the $100	1.53
Cincinnati, on the $100	1.56
Bridgeport, on the $100	1.65
Chicago, on the $100	1.71
Boston, on the $100	1.72
New Orleans, on the $100	1.72
Milwaukee, on the $100	1.76
St. Paul, on the $100	1.76
Minneapolis, on the $100	1.79
Lawrence, on the $100	1.80
New York, on the $100	1.82
Springfield, on the $100	1.82
Brooklyn, on the $100	1.85
Cleveland, on the $100	$1.88
New Haven, on the $100	1.90
Rochester, on the $100	1.93
Lowell, on the $100	1.94
Lincoln (Nebr.), on the $100	1.97
Baltimore, on the $100	1.98
Detroit, on the $100	1.99
Camden, on the $100	2.00
Syracuse, on the $100	2.00
Trenton, on the $100	2.00
Lynn (Mass.), on the $100	2.00
New Bedford, on the $100	2.02
Newark, on the $100	2.02
Fall River, on the $100	2.03
Cambridge, on the $100	2.04
Providence, on the $100	2.05
Jersey City, on the $100	2.12
Grand Rapids, on the $100	2.14
Tacoma, on the $100	2.17
Utica, on the $100	2.20
Des Moines, on the $100	2.22
Buffalo, on the $100	2.29
Charleston (S. C.), on the $100	2.50

And yet, after a showing of that kind, which places Washington as the least taxed of them all, there come those here to-day and defend Washington's millionaires from paying tax on their wealth.

The general average paid by the 40 cities which I have just named is $1.90 on each $100 worth of property, yet Washington complains of being overtaxed when she pays only a dollar on the hundred.

Under the original George bill the Commissioners of the District of Columbia could have reduced the rate upon real estate from that which I have just shown is the lowest rate in the country. If the George bill had become law, we would have had one rate upon real estate—the one fixed by the Commissioners of the District of Columbia—and another rate upon tangible personal property—the one fixed by law, $1.50 a $100—while intangible personal property such as stocks, bonds, notes, and so forth, would have gone untaxed. Uniformity is the fundamental principle of taxation. The farms, which comprise the estate of most Americans, should not, in my opinion, bear the burden of taxation while stocks, bonds, notes, and so forth, which comprise the bulk of the fortunes of the rich, should escape taxation altogether. Just so long as I am a representative of the people so long shall I resist the proposition that those who till the soil shall bear all the burdens of taxation.

Under the present law in the District of Columbia stocks and bonds bear no tax. If the George bill had passed, that law would have continued in force. If the amendment which I offered, and which was defeated by only 32 votes, had become the law, stocks and bonds would have been taxed, and perhaps Washington would no longer be styled the "Haven of the tax dodger," and perhaps the farmer, the laborer, the mechanic, the clerk, the school-teacher, the school child in Kentucky would escape a tax levied upon them to pay all the taxes in Washington which the owners of the property here are suffered not to pay.

Two years ago the committee of which I am chairman made an exhaustive inquiry into tax conditions in Washington, and found that the houses and lots here were worth, according to the information gotten by us, about $744,000,000, but were assessed at only about $330,000,000, or at $410,000,000 less than they were worth.

A local real estate concern—the most prominent of them all—admits that even the value of $744,000,000 is too small, and says that the real value is $1,210,000,000.

I have before me a clipping from the Evening Star of last Friday, May 8. In that I notice this language:

> The first proposition has as its foundation the H. J. Browne guess of 1912 that there were $744,000,000 of taxable realty values in Washington in that year, estimated on the full valuation basis as "full valuation" is understood throughout the United States in the assessments of its cities.

I also find this in that newspaper clipping:

> The George taxation report of 1912 alleges that "real property in the District of Columbia is assessed $414,000,000 below its true value, the true value being $744,000,000, while the assessment is only $330,000,000."

Two years ago the District Committee made a report, and in that report it is stated that the real, true value of the real estate in the District of Columbia is $744,000,000. Upon that statement the local newspapers have thrown a fit every time it is mentioned, and the statement that real estate is undervalued for assessment purposes $414,000,000 has been hooted at as being a most ridiculous and preposterous one.

I happen to have in my hand a little pamphlet, or brochure entitled "Story of the Heights." It deals with Massachusetts Avenue Heights, and on page 23 of that statement, issued by the Thomas J. Fisher Real Estate Co., is this wonderful statement:

> Real estate—the basis of all solid wealth—offers a wonderful profit in Washington. It never can shrink in value unless the Nation shrinks.

It is not like stocks and bonds and other securities. In 1903, according to Moody's Magazine, the stocks of this country dropped $3,000,000,000; in 1907 they shrank $7,000,000,000; in 1910 (last year) they went off $950,000,000.

Now, will you please listen to this further statement?

During the past 30 years, according to the Manufacturer's Record, of Baltimore, the value of Washington real estate never halted, but increased from $200,000,000 to $1,210,000,000.

We must take it for granted that every statement made in this pamphlet is true. It is issued by the Thomas J. Fisher Real Estate Co., as I have said, and its president but little more than a year ago was one of those who, out of righteous indignation (?), brought to the attention of the Commissioners of the District of Columbia the assertion that a local insurance company was issuing literature to the public which was not exactly accurate in every particular. I therefore take it for granted that the president of this institution, who raised that question with the Commissioners of the District of Columbia and caused an exhaustive examination to be made, is not going to permit to go out from his company a statement like that unless it be literally true. This pamphlet, or brochure, which I have, is quite an interesting document. On page 6 is a picture, not of the residence or of the house, but of the "mansion" of Senator George S. Nixon, of Nevada. Upon the other side, on page 7, we have the picture of the "mansion" of United States Senator FRANCIS G. NEWLANDS, of Nevada, adjoining these heights. Upon the next page we have the "mansion" of Mr. Charles C. Glover, president of the Riggs National Bank. On the next page we have a picture of the handsome "mansion" of "Mr. John R. McLean, of Cincinnati." Over on page 11 we have the picture of the extensive grounds and the "mansion" of Charles J. Bell, president of the American Security and Trust Co. Then on page 12 we find this language:

On the north side of Massachusetts Avenue and adjoining the heights on the northwest are the grounds of the Protestant Episcopal schools.

Perhaps that is offered as an inducement for people to buy property out there, but they fail to say that there never has been a student in that institution and there is not one now.

Then I find on page 13 of this very interesting little document this language:

Sheridan Circle—

That is the place out here on Massachusetts Avenue where they have a statue of Gen. Sheridan on a horse that looks as if he were dying with a sudden attack of the botts—

Sheridan Circle is the social center of Washington and Washington is the social center of the Nation. The truth of both statements is well known. Scores of successful Americans, whose individual fortunes range from ten to one hundred millions of dollars, within the last five years have built mansions along Massachusetts Avenue and around its newest and most attractive circle. And they still are coming; the flow hardly has begun.

In its issue of January 29, 1911, the New York Times in a Washington dispatch headed, "Is Washington cornering our multimillionaires? Remarkable growth of a colony whose wealthy recruits come from all parts of the country to the Nation's Capital," said:

"The pioneers of the millionaire colony here were the late Thomas F. Walsh, John R. McLean, the Leiters, and Mrs. A. C. Barney. In the building up of Sheridan Circle as the real social center of Washington much is due to Mrs. Barney, who built her beautiful studio house there—an art marvel. Now the entire circle is marked by an imposing row of marble mansions. Around Sheridan Circle the bonanza kings have spread their palace tents—the Hennen Jenningses, the Norman Williamses, and others."

The panoramic view given in this booklet shows Sheridan Circle in its rare residential beauty with the heights close by, toward which homes of equal magnificence are building. Soon the block or two of intervening space will fill with contemplated mansions for which most of it already has been bought at prices five times greater than will be asked at the start for more elevated and better sites on the heights. There the kings of wealth soon must raise their modern palaces and proceed along the royal avenue of their desire. Owing to this pressure for sites to the northwest the District of Columbia Commissioners on January 25, 1911, commenced the necessary condemnation proceedings to open Massachusetts Avenue its full width to the District line, more than 2 miles beyond Massachusetts Avenue Heights.

Coming to page 19, Mr. Speaker, I find this:

Many great fortunes have been made in the rise of its real estate by its citizens and a few outside investors familiar with its marvelous jumps in value due to the city's steady acquisition of the country's men of colossal fortunes and the very limited area available for their magnificent and rival homes.

The fortunes of the people who already have sought rest in a life of elegance and ease in the city by the Potomac are conservatively estimated at one thousand millions of dollars. And more came last year than ever before.

* * * * * * *

From "The Hub" have come the Larz Andersons, the Weekes, and others. Among the New Yorkers are the John Hays Hammonds, the Perry Belmonts, the Robert Roosevelts, the Duryeas, the George W. Vanderbilts, and the Oliver Cromwells; from Chicago have come the Leiters, the Pullmans, the Munns, Mrs. Robert Hitt, Mrs. Potter Palmer, and Mrs. Marshall Field; from Cleveland the William J. Boardmans; from Pittsburgh, George F. Westinghouse; from Colorado the Thomas F. Walshes; from Pennsylvania the Scott Townsends; from West Virginia the Stephen B. Elkinses, and dozens of others to swell the host of multimillionaires who for the most part have built their Aladdinlike homes along Massachusetts Avenue.

Another type of Washington millionaire constantly increasing in number is the Representative and senatorial millionaire who after a term in Washington rarely leaves it. They, too, have magnificent homes and are lavish entertainers. Of this type are Senator DU PONT, of Delaware; Senators NIXON and NEWLANDS, of Nevada; and almost the whole roll call of the upper House. The Senator ranks next to the Cabinet officer and often is socially more important. Cabinet officers, judges, higher Government officials, and members of the diplomatic corps are also home builders in Washington, Franklin MacVeagh, Secretary of the Treasury, being the most recent addition to this class, having just completed his palatial residence.

Mr. PAYNE. May I ask the gentleman if that is an advertising circular of some real-estate boomer?

Mr. JOHNSON of Kentucky. That is an advertising circular of a real-estate corporation whose president rose in your midst a little over a year ago and said nothing else than that no advertising schemes should go forth from the city of Washington unless they be absolutely true.

Mr. PAYNE. And the gentleman brings that in as evidence of the value of an official report here?

Mr. JOHNSON of Kentucky. I bring it here as a statement from a paper published in Baltimore, which I think is an authority upon the subject, which says that in the last 30 years the values of real estate in Washington have increased from $200,000,000 to $1,200,000,000.

I have here a map issued by this same real estate company showing the Massachusetts Heights section with the prices attached. The assessment shows that those properties are assessed for one-fourth and one-sixth, even, of what is asked for the lots shown upon this map.

Whenever we have "a hearing" relative to the school-teachers no man ever hears the masculine gender mentioned in the committee room. Everybody who appears before the committee on the part of the schools speaks of the "poor school marm," the female teacher of the schools. You would never suspect that there is a man in the whole school system. Just as soon as this bill or any other bill of a similar character comes before the House for consideration, then you begin to hear of "the poor widow."

Let me invite your attention to a very anomalous situation now staring us in the face. Here are Members of the House, here are members of the District Committee, who take this peculiar and, to me, inexplicable position that all intangible property should escape taxation because, perchance, some poor widow might be overtaxed, or because somebody with his or her little savings in a savings bank would, under the original bill, be taxed. Bear in mind I have provided an exemption to the extent of $500 in favor of this class. But only a few days ago there came before the committee a man by the name of George Horning, who is the "king bee" of all the loan sharks in the District of Columbia, who stated before that committee that he had $250,000 loaned out to small borrowers at 36 per cent a year. There were men—and they will appear in a little while upon the floor of this House—urging an increase in the rate of interest for that man, and to-day they are here asking that that man's $250,000 in securities shall escape taxation. But I say that the man who has $250,000 loaned out at a rate of interest which brings him in return an annual compensation for his money greater than the President's salary ought, at least, to pay tax upon the notes which he holds. I say that any other position is indefensible. To ask in one breath that this man's already extortionate rate of interest may be increased, and to demand in the next that he shall escape taxation entirely upon that $250,000 is too much for my conscience.

Mr. Speaker, threats have gone forth from Washington that I must be defeated for reelection to Congress because of my views upon these questions. This bill makes but another occasion upon which I freely give expression to my views concerning taxation.

If the people whom I have striven so hard to serve are of the opinion that my views are inimical to their interests, and that some one other than myself will and can serve them more faithfully and more efficiently than I have done, I can offer no complaint if they select another to serve them in my stead.

But if they believe that another will serve the rich tax-dodgers of Washington where I will not, and if they want the Kentuckian served instead of the Washingtonian, then I shall expect their hearty approval.

I am in possession of certain and positive information that influences from outside even Kentucky have been brought to bear in order to bring out opposition to me. I can not believe that the people in the fourth congressional district of Kentucky will quietly submit to this insolent outside attempt to dictate to them who their Representative in Congress shall be. Should they submit to this outside dictation they would lose their own independence and cease to be freemen; but, instead, become the unsuspecting tools of "outside interests."

This I know Kentuckians will never knowingly do.

The Duty of the Government in Protecting Marine Sea Food Life and Developing It.

EXTENSION OF REMARKS

OF

HON. EDWARD W. TOWNSEND,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 18, 1914.

Mr. TOWNSEND. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I insert an address of Hon. J. CHARLES LINTHICUM, at the sixth annual convention of the National Association of Shellfish Commissioners, at Hotel Rudolf, Atlantic City, N. J., Friday afternoon, May 8, 1914. The address is as follows:

[Address of Hon. J. CHARLES LINTHICUM at the sixth annual convention of the National Association of Shellfish Commissioners, at Hotel Rudolf, Atlantic City, N. J., Friday afternoon, May 8, 1914.]

THE DUTY OF THE GOVERNMENT IN PROTECTING MARINE SEA-FOOD LIFE AND DEVELOPING IT.

Mr. President, ladies, and gentlemen, I welcome this opportunity to appear before your association at this convention, for I realize that those interested in the work in which many of you gentlemen are engaged are the people who have given the closest attention and study to the problems relating to or affecting our marine life. I am sure, therefore, that in the light of your experience and study you have been convinced of the necessity for its protection and the wisdom and economy in its development. The object lessons on this subject with which I have been favored have given me certain definite ideas as to the obligations of the American people in the premises, and these force me to the conclusion that it is not only the duty of our Federal Government to protect our sea-food life, but that it is equally as important that we should extend national aid in its development along even wider and more diverse lines than those already followed.

IMPORTANCE OF SEA FOOD IN OUR DIET.

To many who have given little or no thought to the subject it may come as a surprise when I tell you that of our estimated population of 98,000,000 people in this country at least 3,000,000 may be safely said to derive their living from pursuits or business relating directly or indirectly to our sea-food life. Consider for a moment this vast number, and it will occur to you that they constitute an army more numerous than all those engaged in our Civil War. Then pause to consider the millions of people to whose diet the work of these 3,000,000 contribute and you will have some idea of the vast extent of this subject.

In the United States alone are approximately 16,000,000 people affiliated with the Catholic Church. Of this number practically all substitute in place of meat a diet of fish on Friday. It will be seen from these figures, therefore, that a large percentage of the American people are interested in fish as food, and this percentage has been perceptibly increased during late years by reason of the fact that, owing to the steadily advancing prices of meat, fish as a staple article of diet is becoming more and more popular. I refer specifically to fish because it is one kind of marine food that is consumed in almost unvarying amounts the entire year around. For this reason it presents itself at once as the principal subject for observation and discussion.

CONSERVATION OF OUR FOOD FISH.

Waste almost criminal in its character has distinguished the American people in the treatment of their food fish. A century ago the waters of almost every flowing stream in our country were alive with a variety of fish whose flesh offered delicious edible nourishment. Little more than a hundred years have passed and we are beginning to suffer the consequence of our profligacy toward this valuable gift of nature. The run of fish in our rivers has decreased from 20 to 80 per cent, and in some rivers they are on the verge of extermination. Even in those estuaries of the ocean whose supplies of marine life seemed inexhaustible this depletion is nearly on a par with that which has taken place in our rivers. That this depletion foreshadows eventual extinction is only too plainly apparent. The necessity for immediate conservation is upon us, and those who have given attention and study to the subject have been brought to realize that no measure can be enacted fully protective unless it be one of national scope. The great estuaries of the ocean and the waters which empty into them flow within the jurisdiction of two or more States; hence any effort to control these waters through the laws of one State alone is insufficient to meet the requirements of the situation.

Realizing this, it was my privilege to introduce in the House of Representatives two measures designed to correct existing abuses and to conserve the supply of food fish which frequent our interstate waters. These measures were prepared after consultation with the Federal Bureau of Fisheries, after having definitely determined the principal conditions needing correction, after deciding upon a remedy best adapted to cover those conditions, after securing the opinion of the law officer of the department of the Government that would be charged with the administration of the law as to the probable constitutionality of the measures. It is these measures that I shall attempt to explain to you this afternoon.

In my examination of the subject I found that some of the principal causes of the wanton destruction of our food fish was the lack of regulation of the fishing seasons; the use, without regulation, of gill and line nets; the setting, without restriction, of pound nets; the use of food fish in the manufacture of oil and fertilizer. The abuses enumerated are all to be found exemplified in the waters of the Chesapeake Basin, and inasmuch as I am more familiar with those waters than others, for the purpose of these remarks I shall chiefly take for illustration conditions found there. The abuses which I mention or shall have occasion to refer to, however, are by no means confined to the waters of the Chesapeake Basin. We find them, with slight variations, along the California coast, along the coast of Alaska, along the New England coast, along the waters of Long Island Sound, along our southern coast, and in the Gulf of Mexico. In fact, so prevalent and widespread are they that they make this a national problem.

Let me make plain at the outset of these remarks that my interest in the subject is not from the viewpoint of the fisherman-sportsman. I am not a member of any game or sportsmen's club, and I do not recall that within the past 15 years I have caught a fish or attempted to catch one. My whole interest in the question is from the side of the consumer and the commercial fisherman. To me it is purely an economic proposition. My study of the subject has brought clearly to me the realization that unless we institute some radical change in our present policy but a few years will intervene between now and the day when the fish-consuming public will be entirely deprived of one of its important sources of food and the commercial fisherman will find his business has vanished.

USE OF FOOD FISH FOR FERTILIZER AND OIL.

The first measure I introduced was one to prevent the interstate transportation of fish, or products or compounds thereof, when intended to be used for fertilizer or oil, or in the manufacture of fertilizer or oil.

Under this bill it is made unlawful for any person to ship, or offer to ship, from one State into another, or from this country to a foreign country, any fertilizer or oil composed in whole or in part of fish other than menhaden, which are sometimes known as pogies, fatbacks, mossbunkers, and such other fish as sharks, dogfish, skates, rays, sea robins, and sculpins. It will not apply to parts of food fish when such parts are merely the by-products of some industry. The law provides means by which it may be enforced and imposes penalties for its violation. It authorizes the Secretary of Commerce to promulgate such rules and regulations as may be necessary to carry it into effect.

The use of food fish in the manufacture of fertilizer and oil is one of the evils that has sprung up in connection with the fishing industry. I understand that the use of food fish in the manufacture of fertilizer and oil is not confined to any particular locality along our Atlantic or Pacific seaboard, but that conditions are peculiarly serious and aggravated in the Chesapeake. For instance, in the Chesapeake Basin, boats from the fish-fertilizer factories of Virginia hover near the fishing fleets and purchase for cash large quantities of herring, which, as you gentlemen know, are a perfectly good food fish. According to evidence produced at the hearing on my bill it was shown that the fertilizer-factory boats so dominate the fishermen that the latter are afraid to sell to others, as a result of which in some sections the fertilizer-factory boats enjoy a complete monopoly of the market. Under this monopoly they are able to purchase herring for less than they are offered others, and, indeed, so completely do the fertilizer boats control the market that the fishermen are compelled to decline to sell their fish to individual consumers or to boats sent out by the packing houses who wish to purchase and pack for food purposes. One instance was developed at the hearing where representatives of a fish-packing house were refused fish by the fishermen although they offered 50 cents more per barrel than was being paid these same fishermen by the fertilizer boats.

Such a condition may seem almost incredible at first glance, and I think it so struck the committee of Congress on that

occasion. But when you fully understand the situation the reason is apparent.

The fish-fertilizer factories are generally unable to secure sufficient fish for their purposes. They are, therefore, always willing purchasers. No matter what the state of the market, the fertilizer boats are usually prompt purchasers at their fixed prices. The boats representing the fish-packing houses, however, purchase only a certain quantity, and when those purchases are made desire no more. It is but natural that the fishermen should prefer to deal with the steady customer, to whom he can at all times deliver his catch, rather than with one whose purchases are limited.

Furthermore, I am told that the fish-fertilizer boats go to the fishing fleets on their fishing grounds, take off the catch, pay cash for it, and sail away, leaving the fishermen to continue their harvesting of the waters.

The use of food fish for fertilizer purposes has resulted in intense fishing, an increase in the number of line nets and their extension farther into the water, with the consequent effect of impeding the fish in their migrations up the river. This wholesale taking has been felt with severity on the upper waters, and for example I quote you the case of a firm of old and experienced fishermen in the Potomac River, whose catch of herring for the entire season of 1913 was less than their catch for one day 10 years before.

Nor is this sacrifice of good food fish confined solely to the herring. A representative of the Maryland State Game and Fish Protective Association, who visited the Susquehanna Flats, reports that he witnessed the purchase by the fertilizer factories of scowloads of fish during the entire spring run, and upon examination found these boats to contain not only herring but quantities of small white and yellow perch and other fish mixed in with them. In personal conversation with these fishermen they told him that they believed it wrong to catch and sell these fish for fertilizer purposes and wished it could be stopped by law, that they knew they were injuring themselves by thinking only of the present and giving no thought to the future, but while it was lawful and others were doing it they would continue to do it also.

And they will always continue this traffic until our National Government steps in and stops them. But if we confine to the State in which it originates the fertilizer and oil composed in whole or in part of food fish, we will have destroyed a very large part of the market of these fish-fertilizer factories, and they will be forced to refrain from using food fish in the manufacture of these products.

The situation in Maryland and Virginia relative to this fish-fertilizer question is a peculiar one. In Maryland we have only one small fish-fertilizer factory, while in Virginia there are a great many. Virginia has laws to prevent the catching of food fish in her waters for fertilizer purposes while we have none. The fish-fertilizer people of Virginia therefore send their boats to Maryland's jurisdiction, secure their food fish from our waters, and thus evade violation of the Virginia statute. There exists in some parts of Virginia, I regret to say, a disposition to encourage this evasion of the laws of the Old Dominion. I suppose that until human nature is remade we will always have with us those so deadened to the responsibilities of citizenship as to regard it as an honorable and clever thing to circumvent the spirit of the law by acting only upon its literal interpretation. If it is wrong to rob the waters of Virginia of their food fish for fertilizer and oil purposes, then it is equally as wrong morally to rob the waters of Maryland for those purposes, and this abuse of Maryland's waters by Virginia fishermen should be stopped. Maryland is powerless to stop it under her State laws, and this practice will doubtless continue until the Federal Government stops it through legislation along the lines I have suggested.

TAKING OF MIGRATORY FISH.

The second measure I introduced was framed for the purpose of correcting those abuses not specifically covered in the bill just described. Under this latter measure, numbered H. R. 7775, the Federal Government, following the principle of the migratory bird bill, would extend its protection to fish not remaining the entire year within the waters of any State or Territory, and authorizes the Department of Commerce to define the seasons and regulate the manner and conditions under which they may be taken or destroyed. Penalties are prescribed for violation of the law, authority is given the Secretary of Commerce to enforce it, and an appropriation of the Treasury is made available for carrying out its provisions.

The unsatisfactory conditions this bill purposes to cover do not pertain alone to the waters of the Chesapeake, but again I turn to the Chesapeake for examples and illustrations which make a measure of this kind necessary.

On the upper waters of the Potomac the fishermen complain that their catch is steadily diminishing year by year. The causes for this diminution may be readily found in the vast network of seines which extend from the Virginia shores of the bay athwart the path usually followed by fish coming in from the sea and which catch and prevent the fish in the course they would follow up the river. Four or five years ago the State of Virginia licensed approximately 2,500 of these line nets. Today, with the quantity of fish much reduced, Virginia is licensing over 4,000 of them. If the fish are fortunate enough to escape the network of seines which impede their progress, they have yet to get by the thousands of gill and pound nets that beset them at almost every mile of their progress up the bay to the river.

As an illustration of how great has been the decrease in the catch of shad and herring I call your attention to the statement of Neitzy Bros., of Washington, D. C., who report that in 1909 they caught 9,000 shad and 1,400,000 herring. In 1913 their catch had dwindled to 700 shad and 60,000 herring.

Another evidence of this depletion in the catch of shad was presented by a fisherman at the head of the bay, in the Susquehanna River, who shows that in 1882 he caught 19,000 shad, in 1883 only 17,000, and in 1912 his catch had dwindled to 7,200.

In 1909 the catch of shad in the State of Virginia was nearly 7,500,000 pounds, while in 1913 it was less than 3,000,000 pounds. In Maryland, in 1890, they got a catch of over 18,000,000 pounds, in 1900 their catch was reduced to a little over 3,000,000 pounds, while in 1912 the catch was less than 2,000,000 pounds. In other words, during a period of 25 years the catch fell off to 5,000,000 pounds.

It was brought out at the hearing on this bill, which was a long and most interesting one, and at which were present quite a number of commercial fishermen, as well as the representatives of game and fish protective associations and fish experts, that the general conditions along the coast of the country were alarming, and remedial legislation was sorely needed.

What the continuance of our present course will surely lead to was shown by a table which I submitted to the Committee on Merchant Marine and Fisheries on that occasion in reference to the sturgeon. This table was prepared by Dr. Hugh M. Smith, the United States Commissioner of Fisheries, and showed that from a catch of 13,000,000 pounds of sturgeon in 1890, it had fallen to less than 2,000,000 pounds in 1910, and the number was even then steadily decreasing. The almost complete extermination of this valuable food fish, whose meat not many years ago was known and commonly eaten by millions of American families, points the fate of our other food fish unless we correct present conditions.

It was conclusively shown at this hearing that it would be wisdom on the part of our National Government, and the inauguration of an important policy of economy, to adopt stringent measures for the protection of our food fish in those waters flowing through two or more States, because of the general failure or inability of the several States to agree upon legislation effectively protecting fish in such waters.

At the hearing on this measure before the House Committee on Merchant Marine and Fisheries there were present, as I have said, a number of commercial fishermen. These men strongly indorsed the provisions of my measure and urged its adoption by Congress. They were men who have been engaged in the fishing business for a period of many years, who have witnessed the steady decline of their business, who can unerringly foresee the dismal prospects of the future. These men see more clearly than others the obvious necessity for legislation such as I am advocating.

EVIDENCE OF FISH DEPLETION.

The State of Ohio has from early times permitted net fishing without regulations. One result of the lack of these regulations was the extension of nets in Lake Erie for almost interminable distances. One line of nets at Sandusky extended into Lake Erie for a distance of 10 miles from the shore. As a result of this indiscriminate net fishing the whitefish, the most valuable fish in Lake Erie, decreased over 80 per cent between 1885 and 1903.

Mr. Charles F. Holder, of Pasadena, Cal., author of a number of books on game fishes, and whose other literary works have given him a Nation-wide reputation, writes me that the same problems which confront us on the eastern coast face the people of the Pacific. He tells me that about 20 years ago he began to call the attention of the people of California to the danger of the extermination or exhaustion of their valuable food fishes. He explains that the Legislature of California gave its serious attention to the situation and passed laws which afford some measure of protection.

He told me that about 10 years ago the leaping tuna, or horse mackerel, which is one of the most important fishes in Europe in the Mediterranean Sea, was so common during the summer months off Santa Catalina Island, Cal., that they would be taken by the ton, not only in nets but on hand lines. As a result of the wholly improvident raids of the fishermen these fish are now so rare that no attempt is made to catch them. He says, furthermore, that the fish along Santa Catalina Island have decreased nearly 75 per cent in the last 20 years, and conditions there are menacing to the fish food supply of southern California.

Although the legislature passed remedial laws, Mr. Holder says that the fish commission of southern California has not even a rowboat to aid in seeing that the law is carried out. He complains that it is useless for the thoughtful people of California to advocate any extreme protection, as the State has not the means to see that the laws are enforced after such legislation is enacted. His conclusions lead him to believe that the only way to give the fish effective protection is for the United States Government to take charge of the matter.

At one of the hearings on my measures Dr. George W. Field, of Boston, Mass., commissioner for that State on fisheries and game, told us that many species of migratory fish, particularly those which frequent the tidal rivers and streams during their breeding seasons, are now commercially extinct in the waters of southern New England. He states that in 1872 small salmon, from 2 to 3 pounds, were taken in abundance on the south side of Cape Cod and in Massachusetts Bay, but that this was the last great run of that fish, as the salmon in the Connecticut and Merrimac Rivers are practically all destroyed. In the Connecticut River the last record of any quantity being taken was in 1878.

The sturgeon, he says, although formerly found in more or less abundance, has been for years extinct in Massachusetts rivers. The last records of any appreciable number being taken was in the Connecticut River in 1878. The fishery for this fish in the Merrimac River evidently lasted longer, for in 1882 an act was passed permitting the taking of sturgeon with seines of not less than 12-inch mesh.

The striped bass, he told us, has almost entirely disappeared from the rivers of New England, although the early colonists found them in abundance. After the year 1872 but few were taken in the Connecticut River. In 1880 they became extinct in the Merrimac River, and in the Taunton River few were taken after 1885. He cites that between 1865 and 1871—a period of seven years—the total catch in a weir at Waquoit was 489, and at the present time rarely a single specimen is caught.

The smelt, he tells us, is commercially extinct in Massachusetts, except in Fore and Back Rivers. He also adds that this fish was the subject of much protective legislation by the State, but these restrictions failed to prevent its decline.

The shad, it appears, were so numerous in the rivers and streams along the Massachusetts coast that in the early days they were used for fertilizer on the planting grounds. To-day no shad are taken in the Connecticut and the Merrimac, and only a few in the Taunton. After further detailing the need for corrective and remedial legislation, he concluded by observing that the most practical means of meeting the existing situation and avoiding complete extermination in the future was through Federal control of all migratory fishes.

INTERNATIONAL AGREEMENT FOR FISH PROTECTION.

Our National Government has not only given attention to the interstate protection of fish, but has turned its attention also to their international conservation. The waters of the Great Lakes and the St. Lawrence River fall under the joint control of our country and Great Britain. We have now pending in the House of Representatives a bill designed to give effect to the provisions of a treaty signed by the United States and Great Britain on April 1, 1908, which has especial relation to the waters contiguous to the United States and the Dominion of Canada. The regulations to give effect to the treaty referred to were prepared by the International Fisheries Commissioners. These regulations provide for closed seasons, the regulating and restricting of net and trap fishing, and forbid the catching of fish for fertilizer or oil purposes. The necessity for international agreement and uniform laws was made necessary by the total inadequacy of the laws of the several States bordering the Dominion. It was shown that the whitefish—the most important fish in all the Great Lakes—inhabit waters falling under seven different jurisdictions. Owing to the lack of protection the catch of that fish in Lake Erie has decreased 80 per cent and in Lake Ontario over 90 per cent. Agreements specifically entered into between the State of Washington and the Dominion Government were violated by the State of Washington within one week of the time they had been solemnly negotiated. It is such conditions as these that make necessary an international agreement covering the situation.

CONCLUSION.

Before concluding let me call attention to the fact that at the time of the framing of our Federal Constitution, so inconceivably boundless was the supply of fish in our rivers and coastal waters that their exhaustion or extermination through the agency of man was regarded not even as a remote possibility. A little more than 100 years have passed and we are beginning to realize the folly of our extravagance and how greatly mistaken were our forefathers in their views.

Our fish are one of the most valuable of our great national assets. Consider for a moment that apart from the rivers of the Central and Western States and the Great Lakes our country must secure its food supply of sea fish from a territory approximately 100 miles wide along the coastal States from Maine to the Gulf of Mexico and from the southern extremity of the coast of California northward to Alaska. The vast stretches of ocean are relatively uninhabited by marketable fish. This coastal area to which I have reference, so located as to facilitate the distribution of its products to all parts of the Nation, is, as a result of the practices of our people, showing a marked decline in its annual yield of fish. This decline is readily traceable to our unwise and unnecessary destruction brought about by the uneconomic and wasteful methods of capture and distribution. So grave is the problem that it has become a matter of national concern.

With no desire to place a stricture upon the governments of the several States, I confess that the general failure of the individual Commonwealths to energetically and effectively enforce laws passed by their governing bodies for the protection of fish has been the cause of endless regret to those whose foresight pointed the obvious result of the failure to protect this valuable asset.

The general complaint has been that where partisan or local influences have not been successful in thwarting the passage of remedial legislation in those States in which such legislation was enacted, there has existed a general and chronic disposition not to enforce the law. Sometimes, and in some cases, notably that of the Chesapeake, owing to the differences between two or more States, the fishermen, by an appeal to local or State pride, have been able to block legislative enactment that would curb their rapacity. These conditions have operated to prevent the molestation of the fishermen in the ungoverned destruction of the fish, and thus comparatively a few people scattered along our seaboard have been enabled to appropriate to their own use, in defiance of every reasonable consideration, this extremely valuable national asset which is the common property of all the people of the United States.

No State is rich enough to allow this sacrifice of the property of all her people for the temporary advantage of a few. Most of our coast States, however, have done so, and to this improvident policy on their part may be attributed the condition that their waters are now barren of those valuable fish that once inhabited them in abundance, that were an important economic asset, furnishing food for thousands.

I hold that these great, bountiful gifts of nature were bestowed for our use and profit, to be handled wisely and frugally. We are at liberty to use all that we require, but beyond that it is our duty to preserve the remainder for the generations to come. Providence has made the living the trustees of this vast natural wealth, charging them with the duty of holding it for posterity. We have no right to deprive those yet unborn of their birthright as, under our present practices of extravagance and folly, we are doing. It is a solemn, sacred duty we owe to humanity to use this trust economically and transmit it unimpaired to the future. Let us not forget that it is easier to destroy than to build; that the damage of a few moments often can not be repaired in years, sometimes in centuries. The most shameful reflection we can leave upon our memory, the greatest monument to our profligacy we can erect, is that which, under our present policy, we are building in robbing and ravishing the waters of our land of the bountiful supply of fish with which an all-wise nature endowed them.

As I was about to start to this convention, I was informed by friends who have just returned from the Chesapeake Bay, and through conversation with Dr. Smith, United States Commissioner of Fisheries, that this season so far has been the worst in the life experience of fishermen in the Chesapeake Basin. The catch of shad and herring have fallen off to a mere

remnant of former figures, and so deplorable are conditions in the upper waters of the Chesapeake that the United States fish station at Havre de Grace has taken only 50,000 shad eggs up to this time, when ordinarily they would have 50,000,000. Availing himself of the opportunity to view the fish nets in the lower Chesapeake Secretary Redfield visited the waters of the Virginia coast during the fishing season, and was shocked by what he found. A bewildering maze of nets, countless in number, effectually block the great majority of the fish in their efforts to get up the bay. These nets had increased excessively in number beyond that given in the last Government report, and the fishermen were reporting catches so decreased as to render the business commercially unprofitable.

Diplomatic and Consular Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 16, 1914,

On the bill (H. R. 15762) making appropriations for the Diplomatic and Consular Service for the fiscal year ending June 30, 1915.

Mr. CULLOP. Mr. Speaker, it has been charged on the floor of this House a number of times by gentlemen apparently at least sincere that this Government is responsible for losses sustained by investors in the Republic of Mexico. Upon what ground they base such charges none have ever yet disclosed.

The declaration of such a doctrine has much to do with arousing public opinion and aggravating the feeling over the situation in that unfortunate country, now torn to pieces by internal strife and warring factions.

Upon what hypothesis they base these conclusions we are unable to understand. Surely it will not be contended for a moment that if any individual has voluntarily invested in any kind of business in Mexico and sustains loss from any cause growing out of the internal dissentions there this Government is obligated to reimburse him for his loss. The Government did not require the investment; all such were voluntary on the part of those who made them, and hence this Government is neither expressly nor impliedly obligated to protect and guarantee such investments or reimburse such investor in case of loss, it matters not from what cause the same may have occurred, otherwise than by some act of the United States or its duly authorized agents.

No more reason can be given in such cases than could be given for the Government to reimburse a citizen for an unfortunate or improvident investment in this country. If such a doctrine should once obtain a footing or recognition, it would afford a panacea for all bad business ventures and entangle the Government in innumerable troubles by people who had made bad business ventures and destroy the exercise of caution in all business affairs. It would produce an era of paternalism such as the most radical socialist has never dreamed. The man who went to Mexico and invested took his chances; he chose his field for business exploitation; he selected it because, as he believed, it afforded better opportunities for larger returns than elsewhere. He accepted the hazard and hence must abide by the consequence. He knew, or ought to have known, of the internal dissensions constantly raging there, and hence must endure the result, however unfortunate it may have been.

If persons advertised the opportunities abounding in that country or exaggerated its resources and people were induced to invest by such representations, whether true or false, and loss ensued, that was a private and not a public matter for which this country would not be liable, although the individual or individuals making such representations might be required to respond in damages for such losses occasioned thereby.

If some one clothed with official power, such as referred to yesterday by the gentleman from Ohio [Mr. FESS], published circulars or advertised the glowing opportunities of that or any other country in the southern continent, such act on his part was that of a private individual and not of a public official. In such event he transcended his authority, the scope of his agency as a public official, and his principal would not be bound by any such act on the part of the agent.

This principle is too well settled to be open to dispute. If this Government became the guarantor of the investments of its citizens in other countries, no one could approximate the scope of its liability and it would soon become bankrupt. Thus it would become the guardian of all its citizens in business ventures and should have supervising authority over all their private business.

Imagine, therefore, the enforcement of such a doctrine and the result of such a censorship. It would require application to some constituted authority for every private investment. The Government would be engaging in private business and overseeing the business ventures of all its citizens.

It has been advanced by some that the United States Government would be liable for all losses sustained because of the war in Mexico. No doubt much of this has been inspired by persons who have sustained losses because of the unfortunate situation there and desire reimbursement. This Government is in no manner bound to respond to such demands or liable in any manner to such persons for such losses. All such acted upon their own initiative when they invested and must sustain the losses, if any, that occurred. If profits had been realized, they would have retained them, as they had a legal right to do, and hence they have not and can not have any claim or recourse against this Government for losses sustained.

The doctrine advanced by some for recoupment of such losses is untenable and can have no substantial foundation either in substance or in fact, and is not sustained either by custom or international procedure, and should not be. To do so would tend to endless complications between the Government and its citizens and open the way to great frauds.

The person who went to Mexico and engaged in business did so on his own responsibility; did so, because he believed it a profitable field for investment and promising large returns. He accepted the hazard, and if his hopes were not realized, he and not this Government must sustain the loss.

In every business venture there is more or less hazard, even in a country where there is a stable government, but in such an unsettled state of affairs as has existed in Mexico for years the hazard has been much greater and the uncertainty of success must have been apparent to every person who engaged in business ventures there. Fully advised of all these conditions, how could it be claimed that under such circumstances this Government would be liable for losses sustained on account of such unsettled conditions? Upon what theory could such a claim be sustained? It has no voice in the making of its laws, in the selection of its officials, or the adoption of its policies. If it is to be held responsible for losses sustained in private business ventures of people in foreign countries, it should have a voice in the defining and adoption of their policies, the enactment of their laws, and the selection of their officials. Simply because it has not taken part or interfered in its domestic quarrels, on account of which business has been interrupted, property destroyed, and losses sustained, does not make it responsible for them to those who have been so unfortunate as to have sustained them.

Employees of the Bureau of Animal Industry.

EXTENSION OF REMARKS

OF

HON. CLAUDE WEAVER,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 16, 1914,

On the bill (H. R. 9292) for the classification of employees of the Bureau of Animal Industry, known as the Lobeck bill.

Mr. WEAVER. Mr. Speaker, by unanimous consent of my colleagues, I will print in the CONGRESSIONAL RECORD the argument I made on April 21, 1914, before the Committee on Agriculture of this House at its hearings on the Lobeck bill (H. R. 9292), a bill for the classification of employees of the Bureau of Animal Industry. I will also print a letter received by me from the officers and members of Oklahoma Branch, No. 14, of the National Association of the Bureau of Animal Industry Employees, of Oklahoma City, Okla., the city of my residence.

I hope the Committee on Agriculture will very soon favorably report the Lobeck bill and that the Congress will speedily pass it, for, in my opinion, the employees of the Bureau of Animal

Industry, upon the plainest principles of common justice, are entitled to the remedial legislation which the Lobeck bill proposes.

ARGUMENT OF HON. CLAUDE WEAVER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OKLAHOMA, DELIVERED APRIL 21, 1914, BEFORE THE COMMITTEE ON AGRICULTURE OF THE HOUSE OF REPRESENTATIVES, IN SUPPORT OF THE LOBECK BILL (H. R. 9292).

Mr. WEAVER. I thank the committee for its courtesy in permitting me to make a short statement. I realize that the members of this committee are much better informed on questions of agriculture than a member of the Banking and Currency Committee like myself would be, and especially since quite a number of the members have been practical farmers from their youth upward. Congressional government is largely government by committees.

The great Committee on Agriculture of this House is charged with a responsibility, the importance of which can not be overestimated. I do not assume the rôle of expert, and, disclaiming superior knowledge, I desire in a plain, blunt way to present the cause of the employees of the Bureau of Animal Industry, sincerely believing in the justice of that cause. Those employees for whom I speak deal, on behalf of the Government, directly with live stock—with the live-stock industry that furnishes a great part of the food that sustains the life of our people.

Gentlemen, the live-stock industry in the United States is one of supreme importance as well as of tremendous magnitude. This country produces one-twelfth of the world's sheep, one-eighth of the world's cattle, and one-third of the world's hogs. During the six years from 1907 to 1912 the Bureau of Animal Industry of the United States Department of Agriculture, according to the official report of Dr. A. D. Melvin, chief of that bureau, has inspected in round numbers 321,000,000 animals. Of this number nearly 1,000,000 carcasses were rejected. In the reinspection of meat and meat-food products in their various preparations 37,000,000,000 pounds of animal food products were examined by skilled and competent employees of the bureau and 140,000,000 pounds rejected. Seven billion pounds of meats in that period of time have been exported under certificates. Packeries in 238 cities and towns in the United States are now under Government supervision and their products under Government inspection, and 2,400 veterinary inspectors and assistants are employed in this work. The appropriation of $3,000,000 has been inadequate to meet the ever-growing expenses of this field.

Let me call the attention of the committee to what the meat-inspection department of the Bureau of Animal Industry has done in a single year.

I will ask the privilege, since it is conceded that this matter is one of very great importance—this matter of meat inspection—in fact, Mr. HELGESEN stated a great economic truth when he said it was the most important of any department of the Government, because it affects not only human health but human life; this having been conceded, I will ask the privilege of placing in the record a statement of Dr. A. D. Melvin, Chief of the Bureau of Animal Industry, dated June 30, 1913, showing the magnitude of the work in the last year.

The CHAIRMAN. Without objection, that permission will be granted.

(This statement, marked "Exhibit A," is printed at the end of Mr. WEAVER's argument.)

STATEMENT OF PROVISIONS OF THE LOBECK BILL.

Mr. WEAVER. Mr. Chairman, in urging the committee to make a favorable report on the Lobeck bill, I desire to give some of the reasons why, as a Member of Congress, I shall support it myself, believing that these reasons may influence the committee in the same way that they have influenced my mind and judgment, resulting in the fixed conclusion that the bill is founded in the principles of equity and justice as well as in sound public policy for the maintenance and the upbuilding of this great department of the public service.

This bill, H. R. 9292, introduced by Congressman CHARLES LOBECK on November 14, 1913, which has already been presented by him with singular clearness and force of logic, supported by a cogent statement of the facts, is simple indeed in its terms. The bill provides for the classification, by statute fixed and permanent, of the salaries of (1) veterinary inspectors, (2) meat inspectors, (3) inspectors' assistants, (4) stock examiners, (5) skilled laborers, and (6) clerks employed in the Bureau of Animal Industry, Department of Agriculture, outside of the executive offices in the city of Washington, and within the classified service. Each class is to receive, automatically, at the end of each year's faithful and efficient service, an annual increase of $100 until a maximum is reached. The entrance salary of veterinary inspectors is $1,400 and the maximum $2,400. The entrance salary of meat inspectors is $1,000 and the maximum $1,600. The entrance salary of assistant inspectors is $840 and the maximum $1,600. The entrance salary of stock examiners is not fixed by the bill, and the maximum is $1,600. The entrance salary of skilled laborers is not fixed by the bill and the maximum is $1,200. I suggest that the bill should be amended to fix the entrance salary of both these classes. The entrance salary of the clerks outside of the executive offices in the city of Washington, D. C., within the classified service and actually employed as such in the Bureau of Animal Industry, is fixed at $900 and the maximum at $1,500.

The fundamental principle of the bill is apparent, and that is to reward faithful, efficient, and continuous service. Fidelity should be rewarded, and continuous service increases the skill of the employees and is the parent of efficiency.

So that under this graduated scale the employee has an incentive to fidelity, to endeavor, and to the concentration of all his powers on his work, and Carlyle has well said that work is alone noble.

Now, I do not claim, gentlemen of the committee, that these boys engaged in this work are better than Government employees engaged in other lines, or that they are entitled to greater consideration, but I do claim that they are entitled to as much consideration as any employees of any class, high or low, in all the range of the service of this great Government. I know many of these employees personally, and I know them well. They are able, skilled, and competent, because they obtained their positions by the test of rigid civil-service examination, from which political influences were altogether eliminated. They are sober, because the Government will not keep drunken men in its service, and because the civil-service rules deny examination to those addicted to intoxicants. They are law-abiding. They are moral. They take high rank for intelligence and good citizenship.

Moreover, they are engaged in a work of peculiar hazard and of peculiar hardship. Their work takes them over floors shoe-mouth deep in blood. They go from rooms that are steaming hot into rooms of Arctic cold. They handle meat infected with tuberculosis bacilli and other infectious germs. They are liable from exposure to such germs to contract typhoid fever, consumption, and other diseases. They are called to work at hours before dawn, when other Government employees are sleeping in their beds. They are liable to accidents from machinery, and some have been crippled and maimed. They are subject to blood poison from accidental wounds from knives used in inspection. For these reasons they ought to have more pay.

Now, what I want to call to the special attention of you gentlemen is the viewpoint of these men engaged in this work, in this service, the veterinary surgeons and inspectors and others engaged in the work of inspection. Of course, as a legal proposition, and technically speaking, they are not employed by Congress. They have no right of redress; they can not go into court; they have not even a legal status.

On the 30th of June, 1906, Congress passed a law as a part of the Agricultural bill creating this bureau, providing for this meat inspection, and appropriated $3,000,000 for it, and gave to the Department of Agriculture the right of expending that money and the right to carry out the design of Congress in this inspection, and following incidentally as the result, the right to employ all of the different men engaged in the work. Now, these men went into that work with a promise from the Department of Agriculture. They were under the civil service and had to stand an examination. Some were veterinarians, and of course had to be graduates, after studying three years in high-grade recognized schools. The Civil Service Commission and the Department of Agriculture announced to all who proposed to enter into this newly created branch of the service as veterinary inspectors with the entrance salary of $1,400, that promotion to $1,600 would be made after two years' satisfactory service, with promotion to $1,800 after satisfactory service for two years at $1,600 per annum. The above schedule was announced by the United States Civil Service Commission in the following publications:

First. A telegram posted at the McKillipp Veterinary College at Chicago, Ill., March 27, 1907.

Second. Notice No. 805 of examination of April 17, 1907.

Third. Civil Service Manual of Examinations, revised to July 1, 1907, section 217, page 66.

Fourth. Notice No. 133 of examination of July 24, 1907.

Fifth. Civil Service Manual revised to January 1, 1908, section 233, page 69.

Sixth. Notice No. 126 for examination of February 26, 1908.

Seventh. Civil Service Manual, revised to July 1, 1908, section 238, pages 69–70.

Eighth. Civil Service Manual, revised to January 1, 1909, section 248, page 72.

Ninth. Notice No. 34, for examination, January 20, 1909.

So that in every authorized publication of the department of this Government that alone had authority to employ these men the specific promise was made to them that by faithful and efficient service for a certain length of time automatically they would get an increase in pay. Now, that is a fundamental proposition, and the crux of the thing is that they have not received it.

SALARY SCHEDULE ANNOUNCED FOR INSPECTORS' ASSISTANTS.

The first announcement for the schedule for inspectors' assistants was contained in the notice for examination issued by the Civil Service Commission to be held on September 5, 1907 (Notice Form No. 1248), and the statement regarding the schedule of salaries read as follows:

"The United States Civil Service Commission announces an examination on September 5, 1907, at the places mentioned in the list printed hereon, to secure eligibles from which to make certifications to fill vacancies as they may occur in the position of inspector's assistant (male), at $840 per annum, in the Bureau of Animal Industry, Department of Agriculture. Promotion to $1,000 per annum is made after three years' satisfactory service at $840; promotion to $1,200 is made after three years' satisfactory service at $1,000 and after passing an examination for promotion."

All the notices of examinations for this position issued by the Civil Service Commission from September 5, 1907, up to and including the notice dated January 13, 1909, included the same announcement regarding the salary schedule. Those schedules were also published in the United States Civil Service Manual, as follows:

"Issue revised to January 1, 1908, section 143, page 52.
"Issue revised to July 1, 1908, section 144, page 51.
"Issue revised to January 1, 1909, section 150, page 53."

* * * * * * *

The CHAIRMAN. Do you contend that a promise of the Civil Service Commission is binding, either legally or morally, upon Congress?

Mr. WEAVER. No, sir; I am talking about a case of equity. I am talking about employees who went in through these promises from the only authority of the Government that had authority to employ them and did employ them. Of course, if you base it on a purely legal proposition, they have no case. I believe with Grotius, who said that "Equity is the correction of that wherein the law, by reason of its universality, is deficient."

Mr. HAWLEY. That is Blackstone, isn't it?

Mr. WEAVER. No; I am quoting from Grotius now, and Blackstone quoted the definition from him, and you read it in Blackstone.

Mr. HAUGEN. Can you state to what extent this contract has been repudiated?

Mr. WEAVER. Yes, sir; I can give you the result of it.

Mr. MAGUIRE. Are you quoting from the notices when you read there?

Mr. WEAVER. Yes. Now let me read you what the Bureau of Animal Industry says on that proposition. We will see what Dr. Melvin, Chief of the Bureau of Animal Industry, said in his report of November 19, 1912 [reading]:

"The number of employees in the service of the bureau at the beginning of the fiscal year (July 1, 1911) was 3,284. During the year there were 638 resignations and terminations, including 28 dismissals for cause. The accessions by appointment, reinstatement, and transfer numbered 665. The force on July 1, 1912, numbered 3,311, of whom 2,410 were engaged in the work of meat inspection.

"Owing to the rapid increase of the work of the bureau, the funds from which promotions are ordinarily made are consumed in providing for this extension of the work. It is only natural that employees entering the service under the impression that they are to receive promotion after satisfactory service should become dissatisfied and disgruntled at not being advanced in salary after a reasonable time."

Did they become dissatisfied?

Did they? I will put in the record a list showing where more than 300 thoroughly efficient, competent men in the employ of this department, engaged in work essential to the good of the public service, have resigned because of the fact that either they had failed to receive what they were pledged to receive, or that there was something more inviting in another field of work.

The CHAIRMAN. Have you carried that proposition further and made any inquiry to find what percentage of postal employees, for instance, have resigned?

Mr. WEAVER. No, sir; but I will discuss that question later if I have time.

Mr. HAUGEN. What is the number of employees who were deprived of this advance which you claim was promised to them?

Mr. WEAVER. I can put that in the record if we have the figures at hand.

Now, I was diverted from my point. Let me finish what this credible, disinterested witness, the Chief of the Bureau of Animal Industry, Dr. A. D. Melvin, says:

"In order to attract and hold capable men, as well as to reward efficient service, I consider it desirable that some definite schedule of promotions should be arranged for the different classes of employees, and that funds should be provided by Congress according to these schedules so that those who are giving their best efforts to the service may expect and realize promotions within a reasonable time."

Now, a great many of these men have failed to get what they were under the impression they would get, and through no fault of theirs, but for the reason that the Secretary of Agriculture has not had the money in his hands or at his disposal. He wanted these men to get the money. They ought to get the money. They ought to get what they are asking for, and this bill is simply a standardization; simply a proposition of classification whereby the man will know when he goes into the service what he is to expect.

The CHAIRMAN. Do you not realize this fact—if you will permit me—that the Secretary of Agriculture, in making his estimates to this committee and Congress, usually asks for such money as he wants, and is it not fair to this committee to say that this committee usually gives him just as much as he asks for, and in this particular instance did they not do that?

Mr. WEAVER. I think I can answer that question by an illustration—the story of the fellow who told the sheriff that they could not put him in jail for a certain charge, but he was in jail just the same when he made his observation. These men were promised the money and they never have gotten it, and that is the reason they are here now asking simply that when they go into the employment of the Government they may know in advance what they may expect. Other employees of the Government know that when they have served a certain length of time they will receive a certain promotion.

Mr. HAUGEN. In this report here the department has been charged with repudiation, and it is up to the man that makes the charge to prove his allegation.

Mr. WEAVER. Now, you probably have not understood me. I have not charged willful repudiation.

Mr. HAUGEN. Well, that charge has been made before this committee several times, and it is up to you people to prove that the department has repudiated its contract. That is fair to the department.

Mr. WEAVER. I would not have made that interpolation about equity if I had claimed that. The Department of Agriculture wants these men to have their money, and I think Congress, when it knows all the facts, will want them to have their money. The department has so many demands it diverted the money these boys should have received.

The CHAIRMAN. If that is true, Mr. Weaver, has not the department used, as the department says it has used, the $200,000 that we gave them in the current year, and are they not going to use the $100,000 that we gave in the bill for the next fiscal year as they told us they were going to use it?

Mr. WEAVER. I am not familiar with the workings of the department. I heard the last speaker make the statement that $90,000 out of the $100,000 within the discretion of the Department of Agriculture had been appropriated to other useful purposes, but not to carry out the contract or inducement to these men.

The CHAIRMAN. Then, you heard me read the testimony of Dr. Melvin on the subject.

Mr. WEAVER. I understood that it was after Dr. Melvin made that statement that these expenses came up and this $90,000 was diverted.

Mr. HAUGEN. I can not believe that the department is guilty of repudiation.

Mr. WEAVER. I do not either. Let me finish my statement. I do not charge that. This is a condition, not a theory, and that is what we are trying to remedy. Here is a provision to carry out this great efficient humanitarian work for the public health, for the preservation of the lives of the people by providing for proper inspection——

Mr. REILLY. This committee has to depend upon the recommendations of the Department of Agriculture in making appropriations. Now, why should we make a special exception for this special Bureau of Animal Industry?

Mr. WEAVER. I can answer that in a minute. Congress, as a rule, makes blanket appropriations, to be expended by the various departments according to the rules and regulations of the department. We do not make specific appropriations.

Mr. REILLY. Who is better capable of determining what the salary should be and when they should be increased than the chief of the department?

Mr. WEAVER. They are supposed to keep promises when they make them. A man is supposed to get what has been promised him.

Mr. REILLY. There is absolutely no record of any promise ever having been made by the Department of Agriculture.

Mr. WEAVER. Well, there are the identical records on that question. I have put the promises in the record.

Mr. HAUGEN. There is a record of a promise, but no record of repudiation.

Mr. WEAVER. Well, the men haven't got the money. You can not get away from that. If I show the promise, prove the promise, and that it was not kept, is that repudiation or not? I claim that the defect is in the law; that these men ought to know beforehand what they are going to get and when they are going to get it.

Now, if Congress will appropriate this money for certain expenditures, then it will not be a question of discretion as to how that money will be expended, and the Secretary of Agriculture will not ignore the just demands of these men in order to increase the service in some other branch.

The men in the Postal Service, the mail clerks and rural carriers, the employees in the Reclamation Service, in the Bureau of Public Health, the soldiers of the Army the officers in the Army, the marines in the Navy, the blue jacket and the admiral, all have a steadily advancing scale which is based on length of service and efficiency. Now, just a word on the question of efficiency. Any man who is not efficient ought not to stay in the service an hour, and when a man remains in the service for years, the presumption is that he is efficient.

Mr. HELGESEN. There were 28 dismissals for cause. That shows that they have the right to dismiss them, and that they do dismiss them sometimes.

Mr. WEAVER. I ask that the names of more than 300 men who have resigned be put in the record. I have the list here. When a man resigns that is not a dismissal. The efficient resign, the inefficient are dismissed.

Mr. MAGUIRE. For what year is that?

Mr. WEAVER. It is not for just a year. It is all the resignations since October, 1912, and there are over 300 of them.

Mr. MAGUIRE. Is that for a period of one year?

Mr. WEAVER. Is it for little more than a year. This is from the Department of Agriculture, a list of scientific and technical employees who have resigned from the Bureau of Animal Industry since October, 1912.

The CHAIRMAN. Is this a list of men engaged in this work?

Mr. WEAVER. Yes; they are all classified. This is an official list from the Department of Agriculture.

Mr. PATTON. Two hundred and some odd have resigned in a year.

Mr. WEAVER. Yes; I think so.

The CHAIRMAN. Is it your intention to put the names of these parties in the record?

Mr. WEAVER. I think it will be very useful in the hearings to have the names.

The CHAIRMAN. Well, without objection, it may be done.

(This official list from the Department of Agriculture of the scientific and technical employees who have resigned from the Bureau of Animal Industry since October, 1912, is marked "Exhibit B" and printed at the end of Mr. WEAVER's argument.)

Mr. WEAVER. Now, the chairman has suggested that the resignations are falling off. The records of the Secretary of Agriculture will show the contrary to be true. It is true that the percentage of resignations the first year, at the time of the formation of the bureau, shows a much larger percentage of resignations than since the first year, because it is natural that many employees engaging for the first time in the work, a work of unusual hardships and exposure, should become dissatisfied and resign. But the records show that the percentage of resignations for 1912 was 5.79 and the percentage of resignations for 1913 was 6.27. I place in the record a letter from Hon. David F. Houston, Secretary of Agriculture, of date April 11, 1914, to Hon. C. O. LOBECK, Member of the House of Representatives, and a statement accompanying the letter showing the number of employees in the Bureau of Animal Industry from 1906 to 1913, inclusive, showing the number of resignations each year and the percentage of the same.

DEPARTMENT OF AGRICULTURE,
Washington, April 11, 1914.

Hon. C. O. LOBECK,
House of Representatives.

DEAR MR. LOBECK: Referring to your letter of April 6, 1914, I am inclosing herewith a statement containing the number of employees in the Bureau of Animal Industry from 1906 to 1913, inclusive, showing the number of resignations each year and the percentage of same, together with a list of scientific and technical employees who have resigned from the Bureau of Animal Industry since October, 1912. I regret that we are unable to give you any information regarding the present salaries of the employees who have resigned, as no record is kept of them after they have severed their connection with the department.

Very truly, yours,

D. F. HOUSTON, *Secretary.*

A statement containing the number of employees in the Bureau of Animal Industry, United States Department of Agriculture, from 1906 to 1913, inclusive, showing the number of resignations each year and percentage of same.

Year.	Employees in bureau.	Resignations during year.	Percentage of resignations.
1906	1,455	228	15.66
1907	3,182	261	8.20

Mr. WEAVER. Now, Mr. Chairman, it looks like it is really a menace to this service when these men quit in this way—these efficient, thoroughly competent men, who have made this department famous all over the world as an efficient department—when they quit because it is not inviting to that class of men. These men entered the service with a definite promise for a definite increase of salary by continuing in the work a certain length of time. They continued in the work the specified time, but they have been denied the specified increase. And the worst feature of all, alarming, indeed, when we thoughtfully consider its effect on the service, is this: That the resignations are from the top, not the bottom; from the skillful, not from the unskilled, and the injury to the service is greater, not in arithmetical, but in geometrical, proportion. The strength of a chain is the strength of its weakest link. The speed of the flight of a caravan through the desert is the speed of the flight of the slowest camel. When these skilled Government employees quit their jobs men lacking in experi-

ence take their places, and the Bureau of Animal Industry walks on lame and lagging feet and the whole Department of Agriculture suffers thereby. Classify this branch of the service. Give these men fair compensation for their toil, for the laborer is worthy of his hire. Report this Lobeck bill to the House, and I will prophesy that the House will ratify your decision and these men will get justice and this branch of the public service be immeasurably strengthened and fortified.

I thank the committee very much for its kind attention.

EXHIBIT A.

STATEMENT OF DR. A. D. MELVIN, CHIEF OF THE BUREAU OF ANIMAL INDUSTRY, DATED JUNE 30, 1913, SHOWING THE MAGNITUDE OF THE WORK OF INSPECTION IN THE PRECEDING FISCAL YEAR.

THE MEAT INSPECTION DIVISION.

The Federal meat inspection is assigned to the Meat Inspection Division, of which Dr. R. P. Steddom is chief. The work of the year shows a slight decrease from that of the preceding year, doubtless due to the general decline in the number of meat-producing animals in the country.

THE FEDERAL MEAT INSPECTION.

Inspection was conducted during the year at 910 establishments in 251 cities and towns, as compared with 940 establishments in 259 cities and towns during the fiscal year 1912. Inspection was begun at 63 establishments and withdrawn from 115 establishments during the year. The causes of withdrawal were as follows: Discontinuance of slaughtering or of interstate business, 80 establishments; by request, 17; failure to comply with the provisions of the law and regulations, 17; because of exemption under the law, 1.

There is a decrease in the number of all species of animals slaughtered except sheep, which show an increase of over half a million. The decrease in the number of hogs slaughtered is nearly 2,700,000 and in cattle over 375,000. It is noteworthy that with a decrease of nearly 2,700,000 in the total number of animals slaughtered the number of carcasses condemned is nearly 47,000 greater in 1913 than in 1912. The increase in condemnations is greatest in hogs and is due principally to hog cholera. Tuberculosis continues to be the greatest cause of condemnations.

Statistics of the meat inspection for the year are given in the tables which follow:

Ante-mortem inspections of animals, fiscal year 1913.

Kind of animals.	Passed.	Suspected.[1]	Total inspected.
Cattle	7,125,467	44,585	7,170,052
Calves	2,090,412	3,089	2,093,501
Swine	32,277,682	94,593	32,372,275
Sheep	14,725,856	5,059	14,730,915
Goats	56,562	7	56,569
Total	56,275,979	147,333	56,423,312

[1] This term is used to designate animals found or suspected of being unfit for food on ante-mortem inspection, most of which are afterwards slaughtered under special supervision, the final disposition being determined on post-mortem inspection.

Post-mortem inspections, fiscal year 1913.

Kind of animals.	Passed for food.	Passed for lard and tallow only.	Condemned.	Total.
Cattle	7,099,080	5,961	50,775	7,155,816
Calves	2,089,217	51	9,216	2,098,484
Swine	31,968,407	145,194	173,937	32,287,538
Sheep	14,705,853	1,955	16,657	14,724,465
Goats	56,478	2	76	56,556
Total	55,919,035	153,163	250,661	56,322,859

Diseases and conditions for which condemnations were made on post-mortem inspection, fiscal year 1913.

Causes of condemnation.	Cattle.		Calves.	
	Carcasses.	Parts.	Carcasses.	Parts.
Tuberculosis	33,001	47,554	450	410
Actinomycosis	380	70,840	3	589
Tumors and abscesses	232	3,789	20	185
Septicemia, pyemia, and uremia	1,501		266	
Pregnancy and recent parturition	371			
Immaturity			3,848

Miscellaneous	591	2,784	124	45
Total	50,775	130,139	9,216	1,377

Diseases and conditions for which condemnations were made on post-mortem inspection, fiscal year 1913—Continued.

Causes of condemnation.	Swine.		Sheep.		Goats.	
	Carcasses.	Parts.	Carcasses.	Parts.	Carcasses.	Parts.
Tuberculosis	47,630	359,047	1			
Caseous lymphadenitis			2,340		14	
Hog cholera	88,547					
Tumors and abscesses	1,715	3,830	106	55	1	1
Septicemia, pyemia, and uremia	10,228		876		7	
Pregnancy and recent parturition	40		104			
Pneumonia, pleurisy, enteritis, hepatitis, peritonitis, metritis, etc	14,115		3,650		4	
Icterus	3,242		1,981		1	
Injuries, bruises, etc	1,046	6,911	1,150	185	6	
Sexual odor	2,315					
Asphyxiation	1,535		42			
Emaciation	1,256		5,586		40	
Cysticercus	72		555	453	1	
Miscellaneous	2,196	4,205	366	246	2	
Total	173,937	373,993	16,657	939	76	1

In addition to the foregoing, there were tanked the carcasses of animals found dead or in a dying condition, as follows: Cattle, 1,325; calves, 1,197; swine, 45,266; sheep, 5,990; goats, 16; total, 53,794.

The following table, showing meat and meat food products prepared and processed under the supervision of bureau employees, is a statement of work done rather than a report of the actual quantity of product prepared. The same product is sometimes duplicated by being reported in the various stages of preparation under more than one heading.

Meat and meat food products prepared and processed under bureau supervision, fiscal year 1913, in pounds.

Kind of product.	Weight.	Kind of product.	Weight.
Beef placed in cure	153,758,668	Lard oil	6,188,458
Pork placed in cure	2,545,357,914	Lard stearin	4,657,484
All other classes placed in cure	3,360,295	Lard compound	6,191,785
Sausage chopped	531,626,284	Lard substitute	662,783,844
Canned beef	87,364,417	Bakers' compound	1,826,254
Canned pork	23,469,386	Oleo stock and edible tallow	49,618,387
All other canned meats	4,403,486	Oleo oil	141,842,652
Meat extract	311,168	Oleo stearin	73,243,775
Steam and kettle rendered lard	1,114,334,643	Oleomargarine	145,356,382
Leaf lard	19,851,102	Miscellaneous products	1,430,592,450
Neutral lard	88,670,975	Total weight	7,094,809,809

The quantity of meat and meat food products condemned on reinspection because of having become sour, tainted, putrid, unclean, rancid, or otherwise unwholesome was as follows: Beef, 6,712,049 pounds; pork, 11,936,913 pounds; mutton, 146,061 pounds; veal, 56,429 pounds; goat meat, 478 pounds; total, 18,851,930 pounds.

For the export of meat and meat food products, 90,653 certificates of inspection were issued, covering 133,582,083 pounds of beef, 840,745,518 pounds of pork, and 2,855,335 pounds of mutton, a total of 977,182,936 pounds. This included 219,750,834 pounds specially prepared with preservatives as allowed by foreign Governments.

There were also issued 2,049 certificates for exports of 17,412,924 pounds of inedible animal products.

(The list referred to is as follows:)

EXHIBIT B.

List of scientific and technical employees who have resigned from the Bureau of Animal Industry, United States Department of Agriculture, since October, 1912.

Name.	Position.	Salary per annum.
White, James O	Inspector's assistant	$840
Brown, Arthur C	Veterinary inspector	1,400
Kanstoroom, David S	do	1,800
Thurgate, Edward A	Meat inspector	1,000
Bennett, Joseph S	Veterinary inspector	1,400
Orme, Frank W	do	1,400
Noback, Charles V	do	1,400
Rishel, Albert E	do	2,250
Pilchard, Mack R	Stock examiner	1,000
Hendren, Samuel	Veterinary inspector	1,800
Gladish, John J	Inspector's assistant	840
Trimble, Virges E	do	840
Morris, David T	Meat inspector	1,000
Martin, Edward E	Inspector's assistant	840
McEachran, William	Veterinary inspector	1,600
Moorman, Ross	Junior animal husbandman	1,380
Wing, Charles C	Veterinary inspector	1,400
Hansen, Christian N	Meat inspector	1,000
Heaton, Edward B	Junior dairyman	1,400
Textor, Roy	Agent in scabies eradication	720
Perry, Thomas E	Agent in tick eradication	900
Moore, James M	Agent in animal husbandry	1,000
Kinzy, Grover	Collaborator	300
Suddath, Robert O	Agent in tick eradication	840

List of scientific and technical employees who have resigned from the Bureau of Animal Industry, etc.—Continued.

Name.	Position.	Salary per annum.
Skinner, James D.	Meat inspector	$1,000
Grundy, George G	Veterinary inspector	1,800
Prather, Eddie M.	....do	1,600
Cranford, Wesley H.	Inspector's assistant	840
Wheeler, D. N.	Stock examiner	1,200
Kelting, Henry C.	Meat inspector	1,200
Flint, Edgar M.	Junior dairyman	1,440
Sell, Benjamin	Meat inspector	1,000
Steffen, Martin R.	Veterinary inspector	1,400
Zimmerman, John	Meat inspector	1,000
Smith, Walter E.	Inspector's assistant	840
McGill, James L.	Stock examiner	1,000
Saunders, William H.	....do	1,200
Earle, Alexander F.	Veterinary inspector	1,400
Huff, Joseph N.	....do	1,400
Newman, John B.	Collaborator	(1)
Schroeder, R. R.	Agent in scabies eradication	1,000
Dawson, Wilburn	Agent in tick eradication	840
Sweet, Harry D.	Agent in scabies eradication	720
Ballard, Henry A.	....do	720
Wilkes, Richard W. A.	....do	1,000
English, John H.	....do	720
Knox, Edward W.	....do	840
Herwick, Frank V.	Inspector's assistant	840
Doherty, Patrick H.	Meat inspector	1,000
Sims, Frank C.	Veterinary inspector	1,400
Thorpe, Ira	Inspector's assistant	840
Richards, Albert S.	Meat inspector	1,000
Moldenhauer, Charles F.	Inspector's assistant	840
Burke, James W.	Veterinary inspector	1,400
Bailey, Alfred L.	....do	1,600
Bankert, Andrew F.	Meat inspector	1,000
Neill, John	....do	1,000
Atwood, Elmer R.	Inspector's assistant	900
Faville, George C.	Veterinary inspector	1,800
Horan, Thomas L.	Meat inspector	1,200
Thompson, John D.	....do	1,200
White, Frederick W.	....do	1,000
Mather, Chalmer A.	Agent in scabies eradication	1,000
Gray, Daniel T.	Expert in animal husbandry	300
Moore, G. Emery	Agent in scabies eradication	720
Gilbert, Louis C.	....do	1,000
Trees, Oliver P.	Inspector's assistant	1,000
Paull, William L.	Meat inspector	1,200
Eagle, Richard F.	Veterinary inspector	2,000
Smith, Albert S.	Meat inspector	1,000
Piquette, George L.	Inspector's assistant	840
Smith, Fred B.	....do	840
Smith, Joseph W.	Meat inspector	1,000
Gibbs, W. H.	Inspector	1,800
Larsen, Peter G.	Inspector's assistant	840
Gibson, Fred W.	....do	840
Laird, Ernest E.	....do	900
Thompson, Leroy F.	Veterinary inspector	1,400
Jacobus, Fred H.	Meat inspector	1,000
Seybold, Charles M.	Inspector's assistant	900
Riley, William H.	....do	840
Sheehan, Thomas S.	....do	840
Smith, Robert E.	Meat inspector	1,320

LETTER FROM OFFICERS AND MEMBERS OF BRANCH NO. 14, OKLAHOMA CITY, OKLA., OF THE NATIONAL ASSOCIATION OF THE BUREAU OF ANIMAL INDUSTRY EMPLOYEES TO CONGRESSMAN CLAUDE WEAVER.

OKLAHOMA BRANCH, NATIONAL ASSOCIATION
BUREAU OF ANIMAL INDUSTRY EMPLOYEES,
Oklahoma, Okla., May 14, 1914.

Hon. CLAUDE WEAVER,
Congressman at Large from Oklahoma, Washington, D. C.

DEAR CONGRESSMAN: We wish to express our heartfelt thanks, both individually and collectively, for the able manner in which you presented our case before the Committee on Agriculture. It is indeed gratifying to us to know that we have in Congress such an able and fearless champion as you have shown yourself to be.

Your remarks show that you have given our cause careful and conscientious study, and that you have a broad and comprehensive view of the needs of the membership of our association. We feel that our cause is just, our needs imperative, and that a mere casual investigation will convince the most skeptical of the necessity of remedial action in our behalf.

We wish to thank you, sir, not alone in behalf of Oklahoma Branch, No. 14, but in behalf of our entire membership, scattered throughout this broad land of ours, and to assure you of our most grateful obligation and sincerest regards.

Sincerely, your friends,

M. H. Rhoades, president; J. C. Dixon, vice president; K. V. Gragg, secretary; H. H. Glenn, treasurer; F. E. Haworth; O. W. Berry; C. L. Farthing; R. W. Lewis; F. L. Pontious; Wm. N. Myers; W. H. Myers; J. C. Dixon; V. Osborne; Chas. Favors; W. Ritchey; O. H. Grayson; Arthur McConnell; A. O. Lundell; Milton M. Ramsey; Otto E. Jung; John Clufente; Henry Dumbauld; Chas. T. Luke; John G. Carlson; W. C. McClellard; J. W. Woodle; M. B. Thornton; Guy T. Cole; Ray F. Hamm; Al Ayers; A. N. Lee; O. A. Rathman; Wm. J. Haskins; B. J. Meyer; J. Hampton; A. G. Bibb; F. W. Brewer; Wm. E. Bailey; W. F. Dunawae; Harry D. Larzefere.

EXTENSION OF REMARKS
OF
HON. EMMETT WILSON,
OF FLORIDA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 19, 1914.

Mr. WILSON of Florida. Mr. Speaker, we have heard criticism from Republicans of the President and the Democratic administration for the last few weeks. I think the record of the administration and its accomplishments are a sufficient answer to its critics; but it may not be out of order for one who so thoroughly believes in the integrity of the President politically and every other way, as I do, and in the honesty of his advisers in the Cabinet, and generally in the integrity of all those gentlemen who are supporting him in Congress, to say something about the work of this administration.

I think that this has been a remarkable administration. The President has not used the "big stick"; he has not sought to drive Members of Congress, but he has earnestly told them what he thinks ought to be done, and his sincerity and singleness of purpose have so impressed gentlemen who desire to assist him that we have agreed with him and stood by him.

No man who has conscience and heart could have failed to recognize the greatness of Woodrow Wilson when he addressed the great throng of people upon the occasion of the ceremonies in honor of the boys who fell in Vera Cruz. Indeed, no man who knows Woodrow Wilson and has come in contact with him can fail to recognize his worth, his ability, and, above all, his great desire to do what the President of the United States should do on every occasion. This is apparent from the smallest thing to the greatest.

It is not necessary for me to pronounce any encomium upon the President. I desire rather to speak of the accomplishments of this administration. The Democratic Party in the fall of 1912 came into power by the overwhelming vote of the American people. The President has shown to his critics upon every side that he knows what the American people want. The fact that he insisted upon a special session of Congress to pass the Underwood tariff bill, the great promise of the Democratic Party, and in the same extra session insisted upon the fulfillment of other Democratic promises, was alone sufficient to show his honesty, his integrity, and, as the head of the Democratic Party, his desire to see that we keep the faith.

In that extra session I think that we can safely say that we did more in constructive legislation beneficial to the American people than has been done in a decade by the Republican Party. In that session we passed the Underwood tariff bill, which, notwithstanding the clamor of the Republicans, has benefited the American people and will become more beneficial.

In addition to the tariff bill the President, with a Democratic Congress behind him, insisted upon the passage of the Glass-Owen currency bill. We sat all summer in committee considering this measure, and a Democratic Congress put it through. When it gets into active operation it will immensely benefit the American people, and yet we hear our Republican friends say that we have done nothing, that the Democratic Party is not a party of construction, but of negation. This we did in the extra session. The President was not satisfied that we let these matters go over to the regular session beginning in December, 1913, but he insisted that we get busy. After having passed these two measures we have passed since the regular session convened the good-roads bill, introduced by the gentleman from Missouri, Mr. SHACKLEFORD. We also have under consideration a rural credits or farmers' credits bill. The committee may not be able for some time to report a bill to the House, but are engaged in its consideration. Personally I would like to see the matter disposed of at this session. It is the opinion of some gentlemen who are Members of the House and some gentlemen who have appeared before the committee who are not Members of the House, but who have knowledge of this matter, that we should give the new currency bill a trial in order to ascertain whether or not some of the proposed features of the farmers' credits bill may not be eliminated if the new currency bill meets the situation. This may or may not be good judgment. I am of the opinion that we should be careful to distinguish, if we propose to do anything at all, between the purely banking business and the idea of extending credit

to the agricultural interests. The relief which is sought is relief from the money lender who charges a high rate of interest.

We hope, in addition to what has been done in the passage of the tariff bill and the currency bill, to add this other bill. It will be done if the people permit a Democratic Congress to remain in power. It may not be done to-day, to-morrow, or the next day, but it will be done within the passing of a few months. If the American people will study the record made by the Democratic administration, they will find that we have been able to do things notwithstanding the criticism that we never proposed but rather deposed. It is to be hoped that the voters of the country will study this record of performance, and when they do they will come to the inevitable conclusion that we have done things since coming into power and that we should remain here until our program for the benefit of the American people is concluded, and then, even after that, we should remain to see that the people are properly cared for in the execution of the laws which we have passed.

Standard Oil—In Midcontinent Field.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 19, 1914.

Mr. MURRAY of Oklahoma. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of the effect of permitting the Standard Oil Co. and its allied and holding companies to control and dictate the price, irrespective of competition, of crude oil in the mid-continent field, especially in the State of Oklahoma.

We have just appropriated—and largely at the request of the President—$35,000,000 to build a railroad in Alaska, and there are more people in any one of the half dozen counties in Oklahoma containing one of these oil fields than there is in the whole Territory of Alaska. In fact, there are more Indians affected by the oppression of the Standard Oil Co. in Oklahoma than the entire population of the Territory of Alaska. Moreover, there is no danger of the matter becoming monopolized in Alaska, because of the Government ownership, but the people of Oklahoma are face to face with the proposition of selling their product, after they have undergone the "wildcat" hazard of discovering and producing it, to the Standard Oil Co. because that company controls the pipe lines and are seeking to do an oil-producing business, which of itself is fundamentally wrong. With $5,000,000 a pipe line can be built from the mid-continent field to the Gulf and thus relieve the condition existing, and that $5,000,000, or one-seventh the appropriation made for the Alaskan railroad, would save fifty times the amount of property and serve that number more of people than the railroad in Alaska can possibly serve in the next half century.

Why is it, Mr. Speaker, that it is so difficult to reach these conditions where the Standard Oil have a foothold? Is it not answered by the oft-repeated statement here in Washington that the "Standard Oil is the invisible government"? In the CONGRESSIONAL RECORD of April 14 will be found a letter from the Secretary of Agriculture answering a resolution of inquiry made by the Senate giving the startling statement that 600 persons are operating in or through the Department of Agriculture either wholly or partially paid by the Rockefeller Foundation. I have been aware of this fact for four or five years. In fact, all of the agricultural cooperative demonstration work in the South, including Oklahoma, has been partially paid through this foundation, and we in Oklahoma have had to meet the argument and assaults of this insidious propaganda of either the Rockefeller or Carnegie Foundation funds in an assault upon the State's management of its agricultural affairs and its continued assault upon our excellent president of the College of Agriculture and Mechanical Arts.

In that 14th of April copy of the CONGRESSIONAL RECORD will be further found the insidious method used to educate the future young men of the country by "roping in" and linking up with their plans and schemes the professors of economics in various universities throughout the country. What for? To control the influence emanating from such universities. I do not hesitate to say that such professor ought to be dismissed from the service not only of the United States but the service of any State, because it is but a species of bribery of the intellect and training of the future brains of the country toward the interests, economic and political, and governmental policies of the Carnegie and Standard Oil interests.

As to the conditions existing, and as to the argument for the necessity of governmental aid to enabel the individual citizen to cope with this gigantic trust in the midcontinent field, I desire to have printed in the RECORD a letter from the honorable M. L. Lockwood, former State senator from the State of Pennsylvania, and who for many years has been fighting the trusts of the country, and in whose integrity and ability to grasp such problems I have the utmost confidence. The following is Senator Lockwood's letter:

TULSA, OKLA., *May 12, 1914.*

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR MR. PRESIDENT: I feel called upon to make a plea for a Government owned and operated pipe line from the midcontinent oil field to the Gulf of Mexico to the trackless ocean, where commerce is free, where the ships of all nations are beckoning for the trade of the world.

I believe that it is recognized by all students of the problem that one of the first duties of a government is to provide highways over which or through which the products of its people can be transported to the markets in the most economical manner.

I believe that the Hon. Jeremiah S. Black, of Pennsylvania, one of the greatest jurists of any age, layed down the true doctrine, in 1878, before the railroad committee of the senate of the State of Pennsylvania, when he paced up and down the committee room, shaking his finger in the face of the Pennsylvania Railroad officials, and told them that because the Pennsylvania Railroad Co. had built the Pennsylvania Railroad, that did not signify that the Pennsylvania Railroad Co. owned that highway; that that highway was the people's highway just as much as though the people had built it by the direct agency of the State, and that it was the highest duty of the State to direct and manage that highway in the interest of the people of the State, and that when the Pennsylvania ceased to administer that property with an eye single to the advancement of the public good, then it would be the first duty of the State to take that highway away from the Pennsylvania Railroad Co., having a just regard for the rights of its shareholders, and administer that railway as a common highway, as a common carrier for the products and persons of the people without favoritism or discrimination. That to hold that that Pennsylvania Railroad Co. had a vested right to the perpetual ownership and control of that highway, with power to run it as they saw fit, was a dangerous doctrine; that the State might as well turn its people over to sack and pillage as to allow the Pennsylvania Railroad to continue the practice of discrimination in favor of this set of men and against that set of men; to continue the practice that built up the Standard Oil Co., upon the one hand, and the Carnegie Steel Co., upon the other, bankrupting and destroying every other set of men who attempted to build up a business in competition with them.

Now, there is no doubt as to what the duty of government is. It may build a highway by the direct agency of its own officers just as the Panama Canal is now being built, and just as his pipe line to the Gulf of Mexico is now proposed to be built, or it may confer upon corporations a part of its power and authorize them to build these highways for them. But, in any event, these highways must be the public highways of the people, and under no circumstances can the Government divest itself of the power of eminent domain, that power that takes private property or corporate property for the advancement of the common welfare, and there is no question, I take it, of what the duty of government is, as to providing highways for its people.

Prompted by this duty, our Government has created a magnificent system of railways and pipe lines by delegating a part of its power to railway and pipe-line corporations. This system has been fully worked out, and it has developed the fact that they who control and manage these highways can, and do, take from the producers and consumers all that the commodities which they transport will bear. They take nearly all the profits. It has developed the fact that this system of providing highways for the people enables those who control these highways to create and maintain monopoly, and this has been proven to be true.

For the control of the highways has enabled a few men to monopolize the rich deposits of anthracite coal in Pennsylvania.

The control of the highways is fast enabling a few men to monopolize the bituminous coal fields of America.

The control of the highways has enabled a few men to monopolize all of the rich iron-ore deposits of America.

The control of the highways has enabled a few men to monopolize the profits of the oil fields of America.

The control of the highways has enabled a few men to create a monopoly and rob the producers and consumers of our land.

By the power of monopoly they take so much of the wealth that the people create that there is a very scant amount left for the people who create it. They take so much that in a land so rich as this, so rich in soil, in iron, and coal and oil, so rich in copper and silver and gold, so rich in everything that administers to the wants of men—they take so much that a very large percentage of our people are now only one step removed from starvation. They take so much that want and the fear of want are driving men and women to crime and degradation. Is it any wonder, then, that the people have declared at the ballot box that monopoly is "intolerable and indefensible"?

The evils of corporate control of the highways are now especially emphasized in the State of Colorado. By the most unholy violation of the spirit of the land laws of the United States a few men have seized upon the coal deposits of the State of Colorado, and now Rockefeller and his associates refuse to arbitrate the difference they have with the American citizens who are working for them there and have brought in the Gatling guns of the State of Colorado to force these American citizens to submit to conditions that are destroying the manhood of the men and the womanhood of the women, having ejected them, men and women, from their homes—American citizens, mind you—in the name of the sacred right of property; and when these men have provided themselves with tents to protect their loved ones, their wives and their children, from the blasts of winter, in their mad zeal for dividends the Coal Trust of Colorado turn loose the Gatling guns of the State and mercilessly slaughter men, women, and children—American citizens, mind you. In the name of the sacred right of property this carnival of crime goes on. And why is all this? For coal that costs them 80

cents a ton to mine they force the people of Rocky Ford, only 85 miles away, to pay them $6.75 a ton for the coal they burn in their homes; and they force the dealers, under penalty of their displeasure and threats of being driven out of business if they shall cut prices from that fixed by the Colorado Coal Trust, who have seized upon the coal supply of the people.

I speak of this to show you that those who control the highways of the people can rob both the producers and consumers of the land and take the wealth that the people create to swell the criminally swollen fortunes of the few.

From every farmer, merchant, mechanic, and laborer who burns a ton of coal they take, over and above a fair competitive profit, more than 4 bushels of wheat or its equivalent upon every ton of coal burned by the people of Colorado and the surrounding States, and thus by the control of the highways of the people does monopoly gather the wealth produced by the masses, and are building up and creating a plutocracy of wealth in this land such as the world has never known.

If the land laws of the Nation had been complied with in taking up the coal land of Colorado in truth and in fact, instead of the campaign of perjury, conspiracy, and fraud by which the Coal Trust acquired the rich coal deposits, then there would have been at least 300 different men and companies operating and developing 300 separate and distinct coal mines. Then there would have been freedom. Three hundred sets of men and companies competing and bidding to secure the right kind of men to work and develop their different mines and 300 sets of men and companies competing to find a market for the output of their mines—that would have been a condition that would develop the genius of men; that would have guaranteed fair service to the consumers of coal, and that would have guaranteed to every miner a reward for his ability, application, and capacity. It would have given every miner a chance to find the man or the company for whom he best liked to work—that would have been freedom. But the Coal Trust: Work under our terms and conditions or starve. Eighty cents a ton for coal to the American miner and $0.75 a ton for coal to the American consumer only 85 miles away. Such comes to the public, both producers and consumers, under the domination and control of monopoly. Domination of monopoly is despotism—dire, dark despotism.

The evils of the control of the people's highways by corporations has become so apparent to every thinking man and woman that when Guggenheim and his associates asked the Government for a charter to build a railway from the coast into the coal fields of Alaska public sentiment condemned it and Congress refused to grant a charter, realizing that those who control the highways could make all other men their slaves, recognizing that he who controlled the highways could take all the wealth that other men create, could take all except a poor, miserable living from those who labor to create this wealth.

Congress and all thinking men recognized that the Government might as well make Guggenheim and his associates an absolute present of the mineral resources of Alaska as to allow them to control the highways over which these mineral resources must reach the markets, and so, in the interest of justice to men and in the interest of those fundamental principles of equal rights for all, the Government determined to build this railroad itself and give every man an equal chance in the contest for bread and the acquisition of the resources of the land, and what will be the result? Hundreds of different mines will be opened by hundreds of different men, all competing for men to work their mines, and all these different mine owners competing with each other to supply the public with coal and a fair competitive field will be reestablished and monopoly will disappear, and there will never again be such a deplorable condition as now appears in the monopoly-cursed State of Colorado.

And now we come to the oil situation. Do you know that none of these great pipe lines in the midcontinent oil fields will run a barrel of oil for any American citizen until they have first forced him to sign a contract in the shape of a division order, in which they force him to declare that the moment his oil goes into their pipe lines that it is their oil; that he has no control over it whatever? He can not go to the independent refineries in this vicinity, who are willing to pay 5, 10, or 15 cents a barrel more for it than the pipe lines will pay him, and sell it to them and order the pipe lines to deliver it to these independent refineries. He can not do that. He has no oil. He has already been forced to declare that his oil belongs to the pipe lines that run it. All he can do is to go to the pipe lines and take the price that they—the pipe lines—see proper to fix and pay him, and I am satisfied that these prices are fixed by a conspiracy between three trunk pipe lines to tidewater. Is not that a condition that is intolerable and indefensible? Yet all this magnificent body of American citizens, who have had the courage and energy and enterprise to develop the midcontinent oil fields of the Nation, have been forced, by the power of monopoly, to sign such contracts as this.

There is no essential difference between the duties and responsibilities of the railroads and pipe lines as common carriers for the people. What would the American people think if the railroads would issue a rule that they would transport no more of the products of the farm, the factory, the shop, or the forge until the men owning these commodities come in and sign a contract that their property, the moment it was delivered to the railroad companies, should become the property of the railroad companies, and that the railroad companies could fix a price that they would pay the people for this property? What kind of a commotion would that create among the farmers and manufacturers of the land? Take the price which the railroad officials in their avarice and greed see proper to fix for them, and the price would be cut down and down until the fear of stopping the supply would prompt them to raise the price a little to encourage new production. But it would be the selfish interest of the men who control the railroad that would control and fix the price all the time. The raising of the price would be prompted by a selfish purpose. The fear of killing the goose that was laying the golden egg would be the impulse that would control them, and that purpose would be a selfish purpose, just as it is now the selfish interest of the men who control the pipe-line companies that fixes the price of oil all the time. But if you do not sign the contract you can not ship any goods. If you do not sign the contract you can not ship any oil. That is the position that the mid-continent oil producers are placed in, and it is a burning shame to the Republic. It is a disgrace to our civilization and a humiliation to the manhood of our men; a despotism, and in this land, too, whose government is based upon the doctrine of the equal rights of man. Is it not time that something should be done?

And, further, with all the power of transportation behind them, these pipe-line corporations, these State-created giants with ten thousand times the power and capital of an ordinary American citizen, these corporations with unending life, State-made creatures that never die, who by the power of transportation and monopoly are enabled to take from the people twice as much for this oil as the producers get. If they are allowed to go in, through their subsidiary companies, and absorb the oil-producing fields of America—if this is allowed to go on, they are just as sure to monopolize the oil-producing fields of the mid-continent, just as sure to do it as that the power of transportation enabled a few men to monopolize the anthracite coal fields of Pennsylvania and levy tribute of more than a hundred million dollars annually on the consumers of anthracite coal in America over and above a fair competitive price. As Rogers said, "A monopoly is worth all it costs, in dollars and cents, to us." When a monopoly is established they can take so much from the people in monopolistic profit that the cost of creating monopoly is comparatively small, indeed

If, by the control of the highways, a few men are allowed to monopolize all these rich resources of the Nation, what kind of a show will our children have in the combat of life? They will have already been condemned to servitude and degradation.

These pipe-line corporations must not be allowed to become the beneficial owners, through their subsidiary companies, of the oil-producing fields of America. Such a course will not advance the public welfare, and the public welfare is the supreme law. You can not breed the right kind of men in the shadow of monopoly. You can not breed the right kind of men where the resources and opportunities are monopolized by the few.

Let the young men of the land have an opportunity to compete with each other in a fair competitive field, in the development of these God-given riches, for if the profits from these rich deposits of oil are taken by monopoly away from the men who produce this wealth to swell the swollen fortunes of the few, none of this wealth can be used to build up homes and independent proprietorship for the men who produce it; and when these deposits are finally exhausted, the people will be worse off than at the beginning. Their lives will have been spent in a vain struggle, in which they were condemned to failure from the start, and they will be poor indeed. Nearly all of the profits are taken away from the communities in which this wealth is created to increase the power and despotism of those who continually defy and circumvent the laws of the land.

These criminally swollen fortunes, wrung from the people by the power of monopoly, are no strength, but a weakness, to the State. Give the young men an even chance. Do not ask them to go out and compete, in the production of oil, with these pipe lines, these giant corporations, with all their special privileges. Under such conditions the young men are condemned to failure before they start. To-day the young and rising generation are facing a situation where the fields of opportunity are being closed to them. Divorce these pipe-line companies from the producing end of the oil business. Confine them to their legitimate duties as common carriers of oil for the people.

Now, how are you going to do this; how are you going to force these pipe lines to do their duty as common carriers of oil? A year or two ago the Government brought suit against the Prairie Oil & Gas Co. to force them to do their duty to the people as common carriers of oil. I am almost 70 years old, and I will be dead and in my grave before that suit will be finished. I do not forget the 18 long, weary years of legal quibbles in the Producers and Refiners' case for penalties against the railroad for discrimination. All this time the citizens of the Republic are being robbed by monopoly. And when these suits are finally finished and the courts have finally ruled, as we know they will have to rule, in favor of the contention of the people, the able and resourceful lawyers of monopoly will fix a new set of reasons why their clients should not be bound by it, and it will take another 10 years to settle that point in the courts; and so, as Rogers said, "We will manage to keep just one lap ahead of the law," and all this time the American people are being robbed by monopoly. The only way to do it is to cut the Gordian knot right here. Build this proposed Government pipe line to the Gulf of Mexico, and again I say to the trackless ocean, where commerce is free and where the ships of every land beckon for the trade of the world. Think of it! At the expense of less than one-half of what a modern dreadnaught would cost this people can be set free. You can, if you will, deliver the producers and consumers of oil from the curse of monopoly. The American people need protection from the encroachment of monopoly more than they do from any foreign foe. With a great horde of lobbyists, dignified by the name of attorneys, they are undermining the integrity of our public life, and they are justifying themselves by the declaration that a monopoly is worth to them all it costs.

At so small a cost, why should you be afraid? Compared with the magnificent work that our Government has done at Panama, the building of this pipe line is but a drop in the bucket. At a fair charge for transportation the Government pipe line will pay for itself in less than 10 years, and the Government will have the use of it for fuel oil for the Navy besides.

What would be thought of a nation and an administration that would spend nearly $400,000,000 of the people's money to create a world's highway at Panama, a highway for the benefit of the world's commerce, and then refuse to spend $6,000,000 to create a highway for oil—a pipe line—to save its own citizens, producers and consumers of oil, from being robbed by monopoly on every barrel of oil they produce and upon every gallon of oil they burn in their lamps? If this situation is allowed to go on, is it any wonder that the wealth of the Nation is being concentrated in the hands of the few—the rock upon which all the nations of the past have been wrecked?

You do not have to take any risk in the producing of the oil. The independent producers of the midcontinent field, who are now producing at least 140,000 barrels of oil a day, will be too glad to sell you all the oil you want for the Navy at the market price at the wells, and you transport it yourselves, and as soon as the Government opens this highway for oil to tidewater, with a fair charge for transportation, the independent refineries of the world will take all the oil you can possibly put through a 10-inch line over and above what you will need for the United States Navy.

Every department of this enterprise can be put upon a paying basis. The proposed refinery near the coast can take out of this oil gasoline, lubricating oils, and greases which will be worth more money to the Government than the entire cost of the crude oil. That will give them their fuel oil for the Navy free of cost. A fair storage charge on the commercial oil that goes through the Government lines will pay for the necessary storage tanks at the coast in less than five years.

The reserve oil-fuel supply for the Navy, in my opinion, should be stored at a point where it can be delivered at any place on the Atlantic or Gulf coast where it may be needed. That point is the midcontinent oil field. Under the war power of the Government, in times of war, any of the pipe lines from this field, reaching as they do Chicago, Buffalo, New York, Philadelphia, Baltimore, and Baton Rouge, can be

seized by the Government to deliver oil at any of these points as needed by the United States Navy. Besides, the reserve fuel supply stored here will be safe away from invading armies and hostile navies. It may be well to have a skimming plant located here, so that in times of war this oil can be put in proper shape for the Navy's use before it is sent through the lines to places where it is needed.

Now is the time for the Government to act. The pipe-line companies here have declared that they are able to handle only 75 per cent of the oil now being produced, and they have declared also that the increased production of the Cushing field alone will reach 150,000 barrels per day. The pipe lines, which are the only buyers, have within the last 20 days put the price of oil down from $1.05 per barrel to 80 cents per barrel, and the cutting of prices has just begun. These conspirators who are robbing the producers and consumers of oil never stop until they have cut to the very bone. Why should not the Government get in here and take advantage of the situation and accumulate some of this cheap oil for the Navy's use? There are men here in the West who will contract to complete 50,000-barrel tanks for the Government within 30 days. There is plenty of pipe held here by the supply companies so that the Government can complete a system of gathering lines while the first 50,000-barrel tanks are going up. It will only take a little human energy to begin taking in this cheap oil for the Government, reserve oil fuel supply from the wells inside of 30 days. All the Government has got to do is to call in the iron-tank builders and the pipe-line builders of the Nation, and they will complete the iron tanks and pipe lines as fast as is needed. There are tank builders enough to complete one, two, three, or more 50,000-barrel tanks every day, and there are plenty of pipe-line men to build a pipe line as fast as is needed. Give them the pipe and they will complete a line reaching every known oil field in Oklahoma in less than 90 days. Why should you hesitate? Why not move and get your reserve fuel supply for the Navy now while it is cheap, and while the corporation-controlled pipe line can only take 75 per cent of the present oil production, and while it is held by many that the Cushing oil field alone is now threatening to increase its daily production up to 200,000 barrels of oil per day? All of these tanks that would be built, and all of these pipe lines that would be made, would be needed in the future to hold and maintain the reserve fuel supply for the Nation. The Government can always get their oil direct from the wells from the independent oil producers at the market price. Why should not the Government take advantage of the present situation while there is a flood of oil, and when the present pipe lines are only able to handle 75 per cent of what production we now have, and when the prospect is that the Cushing oil field alone will increase the present production from 150,000 to 200,000 barrels per day? This additional production will be crowding on the market. Now is the time to begin, if you want to accumulate a cheap fuel supply for the Navy, and at the same time stop this oppression of the American people. The tanks will be necessary when the Government pipe line is completed to the Gulf of Mexico to hold the reserve fuel supply for the Navy's use.

The pipe-line business is a legitimate business, and the refinery to prepare the gasolines, lubricating oils, and greases and fuel oil is a safe and legitimate undertaking. No graft or corruption can go on in piping and refining oil without being detected and the parties punished, but for the Government to go into the speculative and uncertain business of producing oil would open a field for graft and corruption that, in my opinion, would discredit the whole enterprise. No one knows the value of prospective oil lands. No one knows whether they are worth $5 or $500,000. It is only a matter of judgment, and if the producing department should get into the hands of corrupt and dishonest men, they could swindle the Government right and left without any chance to detect or punish them.

When the Government pipe line has been established, an open competitive market for oil has been created. Every day the price of oil will be known of all men. There will be no opportunity for graft any more than there is in the Government Post Office.

Now, I want to see this Government pipe line built. It is the only way that the grip of monopoly in oil can be broken. In 1873 I helped to make the first fight against the monopoly in oil, the fight against the South Improvement Co., and it has been one continual combat against the encroachments of monopoly ever since. I helped to pay for the drafting of the Reagan bill, the interstate-commerce law, and spent eight long, weary years agitating and helping to create public sentiment for the enactment of that law. It provided a penalty of fine and imprisonment for a violation of its provisions. And yet in 1899 Chairman Knapp, of the Interstate Commerce Commission, testifying before the industrial commission, swore that in spite of the penalty of the interstate-commerce law that railway discriminations were universal.

These great criminals stand upon the highways of commerce and defy the law, yet none of them have been sent to the penitentiary for their crimes.

The Government carried on a suit for many years to dissolve the Standard Oil Co., and they won their suit; but they fixed up a settlement of dissolution with the Attorney General that was approved by the courts that made the Standard Trust stock go up by leaps and bounds. It is all managed from 26 Broadway now, just as it was before, and their monopoly is stronger to-day than it ever was before.

I want to say to you that just as long as these combinations control the highways through which oil must find the market that they will maintain their monopoly. If this Government pipe line is built, that ends monopoly in oil at once. It attacks the enemy in the vital points.

When the Government pipe line is in operation buyers of oil for independent refineries will be here from every clime. They will know that the Government will not sell out or go into a conspiracy to bankrupt and destroy them, and they will have confidence to go forward and build up and expand. They will know that they can put the oil that they buy at the wells on board ships at a fair transportation charge and monopoly will wither away.

Now, for God's sake and for the sake of those that are to come after us, let the Government build this pipe line. It will cost less money than monopoly takes from the people in monopolistic profits every 60 days. The people of the United States are the Government, and why should this administration let them be robbed? I have faith in this administration. A new god has come to reign over Israel. A god that worships men and not money. And this pipe line will be built, and this people will be set free from the curse of monopoly in oil.

But the emissaries of special privilege say that the Government can not manage this transportation business; that there will be too much graft. Why, Mr. President, there has been more graft in the management of the people's highways by the Frisco and the Hartford & New Haven corporations alone in the last five years than has occurred in the Post Office Department of the United States since the beginning of the Government, and all this talk that the Government can not get honest and upright men to handle this transportation business is all nonsense and the worst kind of poppy-cock. Let this Government pipe line be built. It is the entering wedge that will dethrone monopoly and reestablish the equal rights of the people.

My dear Mr. President, I am sending a copy of this appeal to the members of your Cabinet and different members of the Oklahoma delegation in Congress, and I am also handing a copy of the same to Mr. William Striker, proprietor of the Tulsa Democrat.

With an expression of my high regard, I remain,

Most truly, yours,

M. L. LOCKWOOD,
National President of the American Antitrust League.

Decentralization of Money Control.

EXTENSION OF REMARKS
OF
HON. OTIS T. WINGO,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, May 16, 1914.

Mr. WINGO. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an editorial that recently appeared in the News, published at Lynchburg, Va.

The editorial is as follows:

DECENTRALIZATION OF MONEY CONTROL.

"Understand," said John Skelton Williams in the course of an address before the North Carolina Bankers' Association Wednesday night, "understand it is not assumed or promised that the new currency law will perform the functions of divine Providence, shower blessings on everybody, or establish universal prosperity; nor will it bolster up or save banks improvidently, recklessly, or corruptly managed. It is intended to enable banks honestly and sagaciously conducted to enjoy the legitimate results of their own integrity and sagacity. It is hoped and believed that this law will prevent the alternating money gluts and money famines daily reported in the newspapers, by providing supplies of money to flow automatically, responsive to need." Further in this connection Mr. Williams said that "the new currency measure is Democratic essentially. It looks to decentralization of direct financial control, to financial local self-government, so far as is consistent with stability and the general safety; to a currency which will be worth its face value everywhere, which will be based on the actual values it purports to represent, as well as the faith and credit of the General Government, and which yet will be elastic, expanding to meet needs where and when they develop, receding when not needed; a system fitted to meet any emergency moving smoothly and noiselessly for the ordinary uses of business in tranquil times. We do not propose to use violence to force disintegration and decentralization, to do anything with a jolt and a jerk. It is understood clearly that to rush headlong and at full speed over an evil or an obstacle may cause derailment or jarring, uncomfortable and bad for passengers."

In thus so succinctly and candidly epitomizing the objects of the administration currency law, Mr. Williams also suggests banking and currency vices which have made a comprehensive reform policy altogether necessary. And in this relation, among other things, he referred to the evils incident to the control of the country's money, which by virtue of Republican policies had passed largely under the dominating influence of a few men identified with the banking interests of New York. Mr. Williams was especially happy, lucid, and eloquent when portraying this condition, although impressive and forceful. No one can gainsay the truth of the statement or belittle the gravity of its significance as thus voiced by Mr. Williams: "When a dozen men own among themselves $1,600,000,000, and through a system of interlocking directorates control as much more, directing an amount equal to the total currency supply for 100,000,000 people, we should realize that such power is a peril, not only to our commerce and to the people at large but to the Government itself."

It is fairly well known who be these money lords of America. Their names and the estimated totals of their gigantic fortunes have been frequently published. And because of their power to control the New York money market and the power of New York as the great money center of the country, a condition of national subjection to the sway of these men and the power of this city, have conditions developed which vitally affect and frequently endanger the prosperity of the people of the entire country. In reminding of these things John Skelton Williams points out that New York has become "the walled city from

which the barons have levied tribute in a territory and population vaster than any lord or king of the Middle Ages dreamed of, yet sometimes using methods as ruthless and savage as those of the fiercest of the robber nobles. No sudden swoop by a feudal magnate on his peaceful neighbors was a more cruel or shameless plundering expedition than some of the transactions which have been brought to light by which the shareholders of railways and other great enterprises, established to build up the country and promote the public interests, were despoiled. The purpose should be to change the relation of New York to the country generally from an attitude of dominating ownership to friendly partnership. Big as New York is, it is not big enough to direct the destinies of this continent."

Aye, of a verity. Nor should 12 American men ever be rich enough, or if rich enough, ever mighty enough to sit in financial dominion over the millions of American citizens. But however obvious this truth, the ringing words in which John Skelton Williams expressed it will set a-snarling all the predatory interests of Wall Street. This goes without the saying. The sound of fury or derision will come soon enough from various champions and organs of special privilege. But Williams nevertheless said that which will impress honest business, however big it be or however little, that in the mind and heart of the administration are courageously pulsing the square-deal impulse and the square-deal purpose; that from the citizenship of America is about to be lifted the yoke of bondage to New York money kings which has already too long served to menace and at times oppress and destroy legitimate business aspirations, initiative, and effort.

Survivors of Indian Wars Should be More Liberally Pensioned.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. KNOWLAND,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 8, 1914.

On the bill (H. R. 15280) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1915, and for other purposes.

Mr. J. R. KNOWLAND. Mr. Speaker, I take advantage of this opportunity, during the consideration of the pension appropriation bill, to direct attention to the fact that no action has as yet been taken during this session of Congress on the various bills which have been introduced extending the provisions of the act passed February 19, 1913, "An act to increase the pensions of surviving soldiers of Indian wars in certain cases." I have a bill pending, H. R. 14785, and there are several others before the Committee on Pensions.

On December 18, 1911, I introduced the following bill:

A bill granting increase of pensions to survivors of the Indian wars under the acts of July 27, 1892, and June 27, 1902.

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to increase the pension of every survivor who is now on the roll, or may hereafter be placed on the roll, under the acts of July 27, 1892, and June 27, 1902, to $24 per month from the date of filing application for same.

At that time Indian war veterans were receiving but $8 per month, while their widows were drawing $12 per month. Several other bills were introduced granting an increase. A bill was finally reported from the committee increasing the rate to $12 per month. On the floor of the House this was raised to $30. The bill then went to the Senate, and was reported with an amendment cutting the amount to $12. In conference $20 was finally agreed upon, and the existing act now provides as follows:

That from and after the passage of this act the rate of pension to surviving soldiers of the various Indian wars who are now on the pension roll, or who may hereafter be placed thereon, under the acts of July 27, 1892, June 27, 1902, and May 30, 1908, shall be $20 per month.

The following is the bill which I introduced on March 18, 1914, and which is now pending before the Committee on Pensions, to extend the provisions of the amended act of 1913 to veterans of other Indian wars, who are certainly deserving of recognition:

A bill (H. R. 14785) pensioning the survivors of certain Indian wars from the year 1865 to January, 1891, inclusive, and for other purposes.

Be it enacted, etc., That the provisions, limitations, and benefits of an act entitled "An act granting pensions to survivors of the Indian wars of 1832 to 1842, inclusive, known as the Black Hawk War, Creek War, Cherokee disturbances, and the Seminole War," approved July 27, 1892, be, and the same are hereby, extended from the date of the passage of this act to the surviving officers and enlisted men, including marines, militia, and volunteers of the military and naval services of the United States, who served for 90 days with their regiments during the campaigns in southern Oregon and Idaho and northern parts of California and Nevada from 1865 to 1868, inclusive; the campaigns against the Cheyennes, Arapahoes, Kiowas, and Comanches in Kansas, Colorado, and Indian Territory from 1867 to 1869, inclusive; the Modoc War of 1872 and 1873; the campaign against the Apaches of Arizona in 1873; the campaigns against the Kiowas, Comanches, and Cheyennes in Kansas, Colorado, Texas, Indian Territory, and New Mexico in 1874 and 1875; the campaigns in North Dakota and Montana against the Northern Cheyennes and Sioux from 1873 to 1877; the Bannock War of 1878; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Ute Indians in Colorado and Utah from September, 1879, to November, 1880, inclusive; the campaign against the Apache Indians in Arizona in 1885 and 1886; and the campaign against the Sioux Indians in South Dakota from November, 1890, to January, 1891, inclusive; and also to include the surviving widows of said officers and enlisted men: *Provided*, That such widows have not remarried: *Provided further*, That where there is no record of enlistment or muster into the service of the United States in any of the wars mentioned in this act the record of pay by the United States shall be accepted as full and satisfactory proof of such enlistment and service: *And provided further*, That all contracts heretofore made between the beneficiaries under this act and pension attorneys and claim agents are hereby declared null and void.

SEC. 2. That the period of service performed by beneficiaries under this act shall be determined by reports from the records of the War Department, where there is such a record, and by the reports from the records of the Treasury Department showing payment by the United States where there is no record of regular enlistment or muster into the United States military or naval service.

In consulting with different members of the Committee on Pensions, particularly the chairman, the gentleman from Colorado [Mr. KEATING], I understand that there is liklihood of a bill being reported at an early date embodying provisions contained in the numerous bills. While I believe that the bill I introduced more fully meets the views of the Indian war veterans, nevertheless I will be glad to see any other satisfactory measure reported out. The service they performed was particularly difficult and hazardous, and the hardships which they endured are indescribable. Surely this great Government can afford to be generous to these men, who were forced to do the hardest kind of fighting. These Indian fighters did much toward opening up the great West, and for this important service certainly deserve recognition.

In the rush of other matters let us not delay until it is too late. These veterans are old and greatly in need of assistance. Now is the time to show our appreciation. In the leave given me to extend I shall print a few communications which I have received concerning these bills, and also a letter from the commander in chief of the Spanish War Veterans in relation to the bill pensioning the widows and orphans of veterans of the Spanish-American War.

The letters referred to follow:

THE REASON WHY.

1. The soldiers who served on the frontiers against hostile Indians, from after the close of the Civil War until 1891, performed services equal to those of the veterans of the Revolution and the Civil War.

2. The fact that the Government has been tardy in recognizing and taking care of the veterans of our Indian wars is no reason why it should continue to do so.

3. Every Member of Congress, especially those from west of the Mississippi, should feel it his duty to provide for these veterans, who braved the dangers and hardships incidental to Indian warfare.

4. These survivors of the Indian wars, who for small remuneration underwent many hardships, who blazed the way for the settlement of our frontier countries, and who protected the immigrant and settler, have deserved well from the Government that they upheld and served so faithfully and should be recognized on the same basis as the veterans of the Civil War.

5. It is a well-known and indisputable fact that Indian wars had a horror of their own; the soldier who served in them faced and braved conditions unknown to survivors of our other wars.

6. Most of the survivors of these Indian wars are now old men, the privations endured by them during their years of service having undermined and shattered their health, rendering them unfit for hard labor in the sunset of their lives, and every United States Senator and Member of Congress should use his influence to have Mr. TAYLOR'S bill, H. R. 1672, passed, so that these brave ex-soldiers will not become objects of public charity.

7. It is erroneous to suppose that there will be numerous applications for relief under this act, as years of research has brought to light that there are four or five thousand of these veterans who can become beneficiaries after the bill becomes a law.

8. The veterans of these Indian wars are, as a rule, poor men, who have not the means to uphold expensive lobbyists in their behalf; they rely implicitly in the justness of their request, as set forth in Mr. TAYLOR'S bill, and on the well-known fairness in such matters of the honorable gentlemen who represent them in the Halls of Congress, and look to them that belated justice be done the survivors of our Indian wars.

Col. S. L. MEDDAUGH, *of Elmira, N. Y.*
C. R. HAUSER, *of Denver, Colo.*

BITS OF FORGOTTEN HISTORY.

In writing of what our soldiers did on the frontier in Indian campaigns I hardly know where and how to begin. Probably the best commencement will be to quote from that distinguished soldier, Lieut. Gen. Phil Sheridan, who said in his annual report for 1877:

"During the last two years the ratio of loss of officers and men in proportion to the number engaged in this division in the Indian wars has been equal to or greater than the ratio of loss on either side in the present Russ-Turkish campaign or in the late Civil War in this country. I take pleasure in saying that both officers and men throughout the division have shown thorough and commendable devotion to duty and deserve the approbation of their country."

During these two years that Gen. Sheridan speaks of—years of "profound peace," as our Thanksgiving proclamations put it—while part of

the Army was engaged in quelling one of the most widespread series of railroad strikes this country had ever seen, another portion was looking after the disturbances incident to the Hayes-Tilden election, and also while there was Indian fighting by the troops under Gens. Pope, Ord, and Kautz, the number of soldiers killed in the departments commanded by Gens. Terry, Crook, and Howard was greater than the number killed in the Philippines from May 1, 1898, to September 30, 1899, and nearly twice the number of soldiers, sailors, and marines, Regulars and Volunteers, killed in Cuba and Porto Rico and adjacent waters during the same period. Few people realize this astounding fact.

In 1871, when your comrade, Fred C. Meyer, joined his regiment (the Seventh Infantry) he had to march, after leaving the railroad, over 500 miles before he reached his post. For two years he was (belonging to a mountain detachment) engaged in breaking up the whisky trade with Indians in that great stretch of country from Sun and Missouri Rivers north to the boundary line. This detachment would usually start out for a month, come back and refit for a couple of weeks, and then out again, scouting in every direction and without any reference to the weather; and the weather of Montana ranged all the way from 110° in the summer to 40° and 50° below in the winter; all this scouting was in a country destitute of inhabitants, save Indians and renegade half-breeds and white men.

In one particular Scout Meyer had his extremities badly frozen and his ears were a "sight." We had rescued Col. McLeod, the commander of the Northwestern Police, from death on the prairie; from our camp it was 60 miles to the nearest house. Col. McLeod's animals were all played out, and Meyer needed the services of a physician, so I sent him on horseback to guide the way and break the road (there being about a foot of snow covered with a hard crust); as Meyer had a fresh horse, he led the way for them for every foot of that 60 miles, stayed at the agency one night, and then had 40 miles to go before he could reach a physician. Fortunately, no serious damage occurred; later Col. McLeod told me that without this help they could not have made the trip.

On another occasion there in Montana about 60 men of my regiment were returning from an expedition where they had been destroying a whisky-selling village; they were struck by a blizzard, the severity of which will be recognized by many of you old soldiers when I tell you that between 1 o'clock and 4 o'clock the thermometer fell from 35° above to 40° below zero in three hours, and this particular detachment suffered a loss of 23 amputations from that one storm.

On one occasion a detachment of recruits were marching across country over an unknown road when we were struck by one of those blizzards, and the only way we could guide ourselves was with a compass, and it was necessary to follow up the rear of the column with a black-snake whip to keep the men from lying down and going to sleep, and when we went into camp that night our only means of making a cup of coffee was by using rose bushes and the furniture that I was moving for an officer.

In the Yellowstone expedition of 1876, Gen. Gibbon's command, to which I belonged, left Fort Shaw March 17, 1876, at noon, with the thermometer 20° below zero. That night and the succeeding night it fell to 40° below, and while on the Rosebud in August, the thermometer registered 111° in the shade; in other words, we experienced a variation of 151° with no change of outer clothing. In warm weather we went in our shirt sleeves, in cold weather we put on our overcoats, and before the campaign was over you could tell the flour we used by reading the brand on the sacks used for reseating our trousers, and I have seen a general officer wash his underclothing in the Yellowstone and sit on the bank wrapped in "meditation" while his underclothing was drying.

One whole week on the Tongue and Powder River our clothing was never dry, and those that know what a night in Montana is know how men must have suffered, being only supplied with one blanket at that time—owing to lack of transportation—and with our wet clothing.

We were absent until October 2, and for five months of this time we never saw a house or building of any kind, and during this period we had no fresh meat, except a few buffalo and deer, and very few vegetables, and marched 1,700 miles.

I do not want you to think that we were alone in Montana at this time. There were others. Gen. Crook took the field from Fort Fetterman with 1,000 men, Gibbon had 400 from Fort Shaw and Fort Ellis, while Terry, with the Seventh Cavalry and part of the Sixth Infantry (about 1,000), from Fort Abraham Lincoln, N. Dak.

To appreciate the magnitude of our undertaking the country included between these four points and the British line is 200,000 square miles, greater than the combined area of New England, New York, New Jersey, Pennsylvania, Delaware, and Maryland, with absolutely no settlement, no roads, and no trace of civilization.

I have no question in my own mind but what a larger percentage of this command became permanently disabled by rheumatism and kindred complaints than for any campaign of equal length during the Civil War.

The very next year six companies of our regiment marched 220 miles in 14 days, crossing the Rocky Mountains twice during that time, attacked the Indian village, killed and mortally wounded 25 per cent more Indians than we had men in the fight, and lost a larger percentage of killed and wounded than did the Light Brigade at Balaklava, and Gen. Gibbon did not blunder. We had no surgeon along, and for three days our wounded had no surgical attention only such as their comrades could give them.

I have always felt that your services on the frontier were never recognized at their true worth by our people, but your officers knew and appreciated your trying and heroic services. There were two or three reasons for this; one was that most of you were Regulars, in which no particular locality has any great pride; and, secondly, there were so few of you, with no political influence; and, thirdly, the people in the States never recognized what you did and accomplished. They had no idea of the sufferings, the endurance, and the fighting that was performed by the little band of Regulars from the British line to the Mexican border.

I have not attempted to give any real, connected history, only to recount a few facts concerning matters that came under my personal observation, giving an idea of what the Regular soldiers did and suffered; but if at any time I can be of assistance to the Order of the United States Indian Warriors, I shall be very glad to aid them.

C. A. WOODRUFF.

ALAMEDA, CAL., *February 23, 1914.*

Hon. JOSEPH R. KNOWLAND,
Washington, D. C.

DEAR SIR: Yours of the 21st instant is at hand, and, as you suggested, have added an amendment which will, I think, cover my case. I think that every soldier who served the Government on its frontiers from 1832 to 1890 should be entitled to a pension. There are only a few of them left, and those deserving of a pension can not get one, as the pension laws now in vogue were made for Volunteers of the Rebellion and Spanish-American Wars, and it is almost an utter impossibility for a Regular to get a pension.

Our Regular soldiers serving on the frontiers (majority of those) have suffered great hardships, far greater than those of the Spanish-American War, which history will show. I should feel very sorry if the pension law were such that I could receive a pension and one who served with me, but discharged at a different time, could get none. However, I will state that I think that you are a looking out for the interest of the old soldiers, and know that you will continually use your great influence and position to advance our interests.

Thanking you kindly for past favors, I remain,

Very respectfully,

DE WITT W. TOLL,
Late Sergeant, Seventh United States Cavalry.

VALLEJO, CAL., *April 15, 1914.*

Congressman KNOWLAND, *of California.*

MY DEAR SIR: As a resident of California for over 20 years and an old Indian fighter, I beg you to use all your efforts to help to pass the bill now before the House to give us old Indian fighters equal rights with the veterans of the Spanish-American War to Government positions, and grant us the small pension we are asking for.

I am sure that you and any student of the different Indian campaigns realize that we have endured at least as much hardship as the Spanish War veterans, and it was through us soldiers that the miner, rancher, and settler were enabled to develop the great West, and I believe that our claim is just and right.

Trusting that you give this your kind consideration, and influence others to do so, I am,

Truly, yours,

F. W. KLOPPER,
203 Capital Street.

UNITED SPANISH WAR VETERANS,
SOUTHERN BUILDING,
Washington, D. C., April 1, 1914.

Hon. JOSEPH R. KNOWLAND,
House of Representatives, Washington, D. C.

MY DEAR SIR: On behalf of the United Spanish War Veterans, I desire to thank you for the very earnest and able support which you gave to the widows and orphans' pension bill, H. R. 13044.

Very sincerely,

JOHN LEWIS SMITH,
Commander in Chief.

"My Mother—A Prayer."

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HUMPHREY,
OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 16, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I insert an article from the Seattle Post-Intelligencer entitled "My Mother—A Prayer." The article is by Tom Dillon, one of the most talented and popular writers on the Pacific coast. It is a beautiful tribute, that will find a fervent response in the heart of every real man, and it is well worthy a place in the RECORD.

The article referred to follows:

MY MOTHER—A PRAYER.
[By Tom Dillon.]

For the body you gave me, the bone and the sinew, the heart and the brain that are yours, my mother, I thank you. I thank you for the light in my eyes, the blood in my veins, for my speech, for my life, for my being. All that I am is from you who bore me.

For all the love that you gave me, unmeasured from the beginning, my mother, I thank you. I thank you for the hand that led me, the voice that directed me, the breast that nestled me, the arm that shielded me, the lap that rested me. All that I am is by you, who nursed me.

For your smile in the morning and your kiss at night, my mother, I thank you. I thank you for the tears you shed over me, the songs that you sung to me, the prayers you said for me, for your vigils and ministerings. All that I am is by you, who reared me.

For the faith you had in me, the hope you had for me, for your trust and your pride, my mother, I thank you. I thank you for your praise and your chiding, for the justice you bred into me and the honor you made mine. All that I am you taught me.

For the sore travail that I caused you, for the visions and despairs, my mother, forgive me. Forgive me the peril I brought you to, the sobs and the moans I wrung from you, and for the strength I took from you, mother, forgive me.

For the fears I gave you, for the alarms and the dreads, my mother, forgive me. Forgive me the joys I deprived you, the

toils I made for you, for the hours, the days, and the years I claimed from you, mother, forgive me.

For the times that I hurt you, the times I had no smile for you, the caresses I did not give you, my mother, forgive me. Forgive me for my angers and revolts, for my deceits and evasions, for all the pangs and sorrows I brought to you, mother, forgive me.

For your lessons I did not learn, for your wishes I did not heed, for the counsels I did not obey, my mother, forgive me. Forgive me my pride in my youth and my glory in my strength that forgot the holiness of your years and the veneration of your weakness, for my neglect, for my selfishness, for all the great debts of your love that I have not paid, mother, sweet mother, forgive me.

And may the peace and the joy that passeth all understanding be yours, my mother, forever and ever. Amen.

Interstate Trade Commission.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. CALDER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 22, 1914,

On the bill (H. R. 15613) to create an interstate trade commission, to define its powers and duties, and for other purposes.

Mr. CALDER. Mr. Speaker, taking advantage of the rule permitting extension of remarks on this bill I am pleased to print in the RECORD the following letter addressed to me by the secretary of the New York Board of Trade and Transportation and the resolutions adopted by that great business organization expressing their views on this measure:

NEW YORK BOARD OF TRADE AND TRANSPORTATION,
203 Broadway, New York, May 1, 1914.

Hon. WILLIAM M. CALDER,
House of Representatives, Washington, D. C.

DEAR MR. CALDER: Some time ago you asked me to have the Covington bill carefully examined, and to report to you the conclusions about it. The bill was reported upon by our executive committee on April 8, and I send some copies of their report herewith.

Yours, very truly,

FRANK S. GARDNER,
Secretary.

THE REDRAFTED BILL TO CREATE AN INTERSTATE TRADE COMMISSION.

[The Covington bill (H. R. 16513).]

The bill reflects a sentiment long popular among certain classes of agitators—an unreasoning sentiment of hostility to corporations. In the minds of such agitators the opposition to corporations is simply the expression of hostility to all forms of property and to all who possess property, and all who possess property are deemed guilty of having robbed those who have none.

It will be most unfortunate and to be regretted if the Congress shall by any legislation in the remotest degree give adherence to this sentiment.

The report printed on the following pages was unanimously adopted by the New York Board of Trade and Transportation, April 8, 1914.

We are impressed with the belief that the business interests in the various sections of the United States will not differ greatly regarding business principles, or upon the policies which should control Congress in legislating on business questions.

The antitrust agitation arises from the practices of a few great aggregations with which the merchants of New York have no more sympathy than the merchants of other sections. In order to reach a few big concerns all of the business of the country is to be put into strait-jackets.

The fact that such legislation as the so-called Five Brothers has been under consideration has caused business to halt, has brought the country to the verge of disaster, and has done and is doing untold harm. We regret the necessity of expressing such views, but we regard the situation with apprehension.

NEW YORK BOARD OF TRADE AND TRANSPORTATION.

THE REDRAFTED BILL TO CREATE AN INTERSTATE TRADE COMMISSION.

The Covington bill, H. R. 15613, was introduced in the House of Representatives on March 14 and referred to the Committee on Interstate and Foreign Commerce. That committee immediately ordered it to be reported favorably. It has been called to our attention as the bill which is understood to have the approval of the President. The bill has been reported without any hearing whatever to ascertain what, if any, objections may be made to its enactment.

It is entitled "A bill to create an interstate trade commission, to define its powers and duties, and for other purposes." It creates a commission to be composed of three commissioners appointed by the President," by and with the advice and consent of the Senate," and not more than two of the commissioners shall be of the same political party. No commissioner shall engage in any other business, vocation, or employment, and each shall receive a salary of $10,000 a year. All the duties of the Bureau of Corporations and of the Commissioner of Corporations shall be vested in the commission. The Bureau of Corporations and office of Commissioner of Corporations are abolished. The commission is to be free from the direction or control of the Secretary of Commerce. All the information obtained by the commission in the exercise of the powers previously exercised by the Bureau of Corporations and the Commissioner of Corporations may be made public in the discretion of the commission. Heretofore such publicity was given in the discretion of the President.

A "corporation" under the proposed law is defined to mean "a body incorporated under law, and also joint-stock associations and all other associations having shares of capital or capital stock or organized to carry on business with a view to profit." Another section excepts from the provision of this law "corporations subject to the acts to regulate commerce," i. e., the interstate-commerce act and amendments thereof, including railroads, express companies, telegraph and telephone companies, and such water transportation lines as are operated in connection with railroads. Businesses conducted by firms not incorporated, although engaged in interstate commerce, are not subject to the provisions of the act.

All corporations engaged in "such commerce as Congress has the power to regulate under the Constitution," i. e., interstate commerce, shall be subject to the act. Every such corporation "shall furnish to the commission annually such information, statements, and records of its organization, bondholders and stockholders, and financial condition, and such information, statements, and records of its relation to other corporations and its business and practices while engaged in commerce as the commission shall require," and "the commission may prescribe as near as may be a uniform system of annual reports." "The commission may also require such special reports as it may deem advisable," all of which "reports shall contain all the required information and statistics," "and they shall be made out under oath or otherwise in the discretion of the commission. Default in filing such reports subjects the corporation to a penalty of $100 per day for each and every day while in default.

"The commission may from time to time make rules and regulations and classifications of corporations for the purpose of carrying out the provisions of this act." What kind of "classifications" this means will doubtless be construed by the commission and finally by the United States Supreme Court.

"The commission may from time to time employ such special attorneys and experts as it may find necessary for the conduct of its work or for proper representation of the public interest in investigations made by it."

The commission in this case is presumed to determine what "the public interest" is in the private affairs of an ordinary business corporation which is rendering no public service of any kind, which is operating under no franchise, which enjoys no privilege whatever conferred by the Government. The commission, after "the public interest" has been determined in each case, will then determine what constitutes "proper representation" thereof.

The act does not declare that there is a "public interest" in every corporation which engages in interstate commerce, but confers the power of subjecting every corporation to an inquisition to ascertain what public interest exists. It assumes, however, that every corporation is invested with the element of a "public interest," and the "public interest" in this case means some form of wrongdoing which affects the public welfare, and the assumption is that every corporation engaged in interstate commerce is guilty of wrongdoing until it proves itself innocent. To prove freedom from guilt it must submit to the inquisition.

The act is apparently intended to disguise that glaring hostility to every form of corporate organization which was so conspicuous in every feature of the tentative bill. But there is little, if any, real difference in their purposes or in what would result. "The voice is Jacob's voice, but the hands are the hands of Esau."

The act is intended to permit discrimination between corporations. Any corporation having itself a capital of not less than $5,000,000 or owning, operating, controlling, or organized in conjunction with others having together $5,000,000 is subject to the act. A corporation having less than $5,000,000 capital will not come under the act unless it "belongs to a class of corporations which the commission may designate." The act does not indicate what the characteristics of a corporation shall be or what its acts shall be in order to bring it under the designation of the commission. This power to designate what corporations shall suffer the inquisition is left wholly to the commission. Neither the President nor any member of the Committee on Interstate and Foreign Commerce which reported this bill, nor all of their powers combined, could predict what corporations the bill would affect. They doubtless have a very definite idea of their own about it, but the act is as blank and impenetrable in this respect as a stone wall. This would be construed by the commission and the "class" would be designated by it, and the United States Supreme Court would finally clarify and contract the area of debatable ground, and probably at the same time declare whether or not this provision constitutes an unconstitutional delegation of the legislative function.

If the act is intended to carry out the fair pledges of the President to remove from the minds of business men the doubts which now cloud them and to make clear the way of business, it utterly fails, and leaves all in the dark what corporations will be affected until the commission has designated them, which is the very first question that every business man and the country will want answered.

There is no warrant for such legislation, pervaded as it is with mystery and doubt, fixing nothing definitely and making nothing clear except an obtrusive hostility to corporate forms of business organization, and the penalties which are to be imposed upon corporations which fail to conform to the mandates, rules, regulations, and classifications of three appointed officials.

The bill reflects a sentiment long popular among certain classes of agitators—an unreasoning sentiment of hostility to corporations. In the minds of such agitators the opposition to corporations is simply the expression of hostility to all forms of property and to all who possess property, and all who possess property are deemed guilty of having robbed those who have none.

It will be most unfortunate and to be regretted if the Congress shall by any legislation in the remotest degree give adherence to this sentiment.

Why this law or any law should be directed against only such business between the States as is carried on by corporations is not clear except upon the theory of hostility to corporations. It is not clear why a firm which carries on its business in the same way that a corporation does should be free from guilt under the law and the corporation punished.

The business corporation in many instances, perhaps in most instances, consists mainly of owners who separately have small capital not great enough to carry on even a small business and who have not the training and experience to warrant a venture in business themselves; many employed in subordinate spheres in other businesses; many whose savings of long years of labor are thus invested; many whose sole resources of a few hundred or a few thousand dollars are thus invested.

The individuals composing all such business corporations are on the average persons of small possessions as compared with individuals

composing firms, and against the latter there is no outcry, and there should be none unless guilty of wrongdoing, and likewise there should be no persecution of corporations simply because they are for convenience conducting business under a corporate form of organization.

Such legislation as proposed in this bill can never have the consent or approval of the sound and substantial business interests of the country nor of any considerable portion of the people. The spirit which pervades it and which gives it shape is the spirit of unrest—an abnormal condition of the public mind which periodically finds expression, leads some astray, and takes on various forms of attack upon the welfare of society. Fortunately, thus far in the history of our country the economic miasms, though sometimes dangerously pervasive, have each and all been dissipated after the people have had due time for full consideration.

We therefore renew our recommendations made to this board and approved by it on March 11 last—that if the President and Congress shall have due regard to the welfare of the country no such legislation will be enacted at this session or based upon the hasty consideration and very imperfect evidence thus far had, and we further earnestly recommend that when the bills have been redrafted they be printed in sufficient number to permit the business interests of the country to procure copies and to study them in their new form and that hearings on them be given at the principal cities of the country before the next session of Congress and that other action be deferred until the next session.

Respectfully submitted.

THE EXECUTIVE COMMITTEE,
EDWARD F. COLE, *Chairman.*

NEW YORK BOARD OF TRADE AND TRANSPORTATION,
New York, April 8, 1914.

Mexican Situation.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1914.

Mr. BAILEY. Mr. Speaker, I hold no brief for Gen. Villa. I am not here to defend his methods. I am no apologist for the atrocities he is alleged to have committed. He may be as guilty, as red-handed, as merciless, as ferocious, and as diabolical as the gentleman from Wyoming [Mr. MONDELL] insists that he is. Let us grant that he is the monster he is said to be; that he is as ruthless and as bloodthirsty, as savage and as pitiless as the Hearst propagandists have made him out. Does he stand alone in this? Has he been more cruel and more pitiless than the great American general in the Philippines who issued the order to "kill all over 10"?

Or, for that matter, can we be quite sure that our own immediate record in Mexico shines with mercy and gentleness and forbearance in comparison with that of Villa and his "bandit" followers? In a recent issue of the Citizen, published at Winsted, Conn., I find a letter from Sergt. John F. Ryan, marine detachment, U. S. S. *Vermont*. In it Sergt. Ryan gives a faint hint of what has been going on down at Vera Cruz since the American occupation.

Some bluejackets just had a scrap about a half hour ago—

Writes Sergt. Ryan—

and killed six more Mexicans. All of the murders—

Note the word—

that are being committed on Mexicans are being done by the bluejackets and not the marines. So, if you read about them in the paper, do not think that I am implicated in any of them, as we only shoot the Mexicans who try to kill us.

This hardly calls for comment. But it is something to the credit of Sergt. Ryan that he feels ashamed of some of the work that has been done down there, and that he is anxious to have those who know him understand that he has had no part in the "murders."

In its edition of May 8 the Chicago Tribune prints a letter from William A. Loehrl, first-class gunner aboard the battleship *Utah*. Gunner Loehrl describes the battle of Vera Cruz, and in the course of his narrative he says:

We more than got peppered by the Mexicans. All those beasts are good for is pot shooting. By pot shooting is meant climbing up high buildings and then firing down on us out of windows. We no sooner had our battalion together than we started in. It did not take long, when—bang—down goes one of our fellows with a bullet clear through his head. Death was instantaneous. That worked us fellows up to a savage mood. Kill? Right and left. We put the field guns in the middle of the streets and let fly. We had mercy on nobody, which was proper. Nobody showed a bit of cowardice. Murder and plunder was all we wanted, and we more than gave it to them. For every 1 of our fellows killed we shot down like dogs about 10 Mexicans. It was rather hard for me to kill at the start, but when the fellow next to me was shot through the chest I became as savage as the rest. The fellow that was shot next to me let out a piercing cry and died in about 30 seconds. * * * Firing ceased at about 10.15 p. m. Tuesday. We had about 150 prisoners, of which we court-martialed about 80 and shot them the same night. That's biz. Show no mercy is our policy now. We took the prisoners and made them dig trenches for us around the entire city. Made them clear the streets of the dead and pull around our 3-inchers, etc. But we never torture them. We kill them just as fast as they show themselves, but never torture them. They would torture us if they were given the chance. We have plenty of grub, as we get a fresh supply from the ship every day. You have no idea how fast we kill them off. Perhaps you would like to know what we do with the dead ones. We take a horse and wagon and fill the wagon with bodies and drive to the outskirts of the city. There we go to an oil tank, sprinkle crude oil on them, and put a match to the pile. Up goes the whole works. What the flames do not consume the buzzards do.

All this merely goes to show that war is hell; that it makes monsters of men who otherwise may be gentle and kind and tender of heart; and it should tend to moderate the transports of indignation which the acts of a Villa or a Carranza excite in some of our friends on the other side of this Chamber. And it is well to remember that Villa is not the first leader of a revolution, not the first captain of a popular army, to be denounced as a bandit. George Washington was so denominated by King George and by his Tory sympathizers in the revolting Colonies. Like opprobrium was heaped on Grant by those who openly or secretly sympathized with disunion. But Villa executed prisoners taken in battle, so the press dispatches say. Perhaps he has done so. If so, he was but following the example set by our own Army of conquest in the Philippines. Few of the little brown men wounded in battle or captured by the invading host lived to tell the tale. And the water cure was a popular torment administered to the natives in the name of benevolent assimilation.

Yes; war is hell. It too often embrutes those who engage in it, and it turns even the noncombatant into a savage lusting for the blood of the enemy. Doubtless Villa is all that he is represented as being. But let us remember as we go along that there is a very practical side to the banditry with which he stands charged. He is indeed confiscating the great landed estates as his victorious rebel forces fight their way toward the capital city. But he is not appropriating the land to himself. He is not confiscating it even to the revolution. He is turning it over in 60-acre farms to the disinherited citizens of Mexico and leaving behind him as he marches hundreds hitherto hopeless to whom the door of hope has been opened.

At bottom the revolution in Mexico is a peasant uprising—an agrarian attempt to overthrow an order established in rapine, corruption, and tyranny. The constitutionalists have a program big with economic and social possibilities, a program which contemplates the restoration of the soil of Mexico to the millions who inhabit it; and we may understand the Hearst hysteria when we learn that some of his vast holdings have been taken over and brought under the beneficent provisions of the Mexican constitution for the benefit of disinherited Mexicans. The Hearst ox has been deeply gored.

That President Wilson realizes just how grievously that particular ox has been gored is pretty clearly to be inferred from the interview with him recently reported by Samuel G. Blythe in the Saturday Evening Post. Referring to the clamorings in certain quarters—on the other side of this Chamber among others—for the restoration of "order" in Mexico, the President is quoted as saying:

My ideal is an orderly and righteous government in Mexico, but my passion is for the submerged 85 per cent of the people of that Republic who are now struggling toward liberty.

Mr. Blythe quotes him further:

I challenge you—

He said—

to cite me an instance in all the history of the world where liberty was handed down from above. Liberty is always attained by the forces working below, underneath, by the great movement of the people. That, leavened by the sense of wrong and oppression and injustice, by the ferment of human rights to be attained, brings freedom.

Is there anyone on this floor who dares challenge President Wilson at this point? Or is there anyone here who dares challenge him in what follows, likewise reported by Mr. Blythe:

It is a curious thing that every demand for the establishment of order in Mexico takes into consideration not order for the benefit of the people of Mexico, the great mass of the population, but order for the benefit of the old-time régime, for the aristocrats, for the vested interests, for the men who are responsible for this very condition of disorder. No one asks for order because order will help the masses of the people to get a portion of their rights and their land; but all demand it so that the great owners of property, the overlords, the hidalgos, the men who have exploited that rich country for their own selfish purposes, shall be able to continue their process undisturbed by the protests of the people from whom their wealth and power have been obtained.

The dangers that beset the Republic are held to be the individual and corporate troubles of these men, not the aggregated injustices that have been heaped on this vastly greater section of the population that is now struggling to recover by force what has always been theirs by right.

They want order—the old order, but I say to you that the old order is dead. It is my part, as I see it, to aid in composing these differences so far as I may be able, that the new order, which will have its foundation on human liberty and human rights, shall prevail.

Mr. Speaker, I beg to voice the fervent hope that what the President is striving for may be attained—the establishment of a new order founded on human liberty and human rights. And in voicing this hope here before the American Congress I feel that I am likewise voicing the fervent hope of the people of this great Republic. I can not believe that they want for Mexico an order founded on tyranny and injustice, on murder and usurpation, on aristocracy backed by force, on privilege sustained by the strong arm. But, with the great peacemaker at the other end of the avenue, I believe they desire for Mexico an order established on a foundation of human liberty and human rights.

Antitrust Legislation.

EXTENSION OF REMARKS
OF
HON. J B. THOMPSON,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 26, 1914.

On the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. THOMPSON of Oklahoma. Mr. Speaker, I regret to find myself in disagreement with the Judiciary Committee that reported this bill and with the President and Secretary Bryan if they are reported correctly in yesterday evening's Times of this city. The Times article reads:

President Wilson will not compromise further with organized labor. Definitely and without hesitation he accepted, this morning, the gauge of battle. To a subcommittee of the House Judiciary Committee which called at the White House this morning to lay before him a tentative compromise amendment to the antitrust bill requiring exemption for organized labor from the operation of the proposed law, the President declared he would accept no compromise. The fight is now on in earnest. The labor representatives claim sufficient votes in the House to force the adoption of the changes in the legislation which they demand. Apparently the President is determined to let the antitrust program fail, if need be, rather than yield an inch further to the demands of labor. Charges of bad faith are flying back and forth. Monday night, in an effort to effect a compromise, the House leaders tentatively agreed to add to section 7 the following language:

"And no such organization nor association nor member thereof shall be regarded as an illegal combination in restraint of trade under the Sherman Act."

This amendment was submitted to the President this morning by the subcommittee, Congressmen WEBB, CARLIN, and FLOYD. The President was found to be adamant. On their way from the White House the members of the subcommittee learned that Secretary of State Bryan had joined the President.

Mr. Speaker, I am in favor of amending section 7 of this bill so that its provisions will not apply to the operation of farmer, labor, fraternal, consumers, or horticultural organizations, orders, or associations. This is all the farming and laboring people ask for. We said in the Baltimore platform:

The expanding organization of industry makes it essential that there shall be no abridgment of the right of the wage earners and producers to organize for the protection of wages and the improvement of labor conditions, to the end that such labor organizations and their members should not be regarded as illegal combinations in restraint of trade.

Let us sacredly live up to that platform declaration. These organizations are wholly unlike corporations, associations, or combinations of individuals organized for the purpose of trade and commerce, and which by agreement and combinations can monopolize a product and raise the price to suit their own fancy, or by underselling drive a competitor out of business, leaving the people at their avaricious mercy.

These farming, laboring, fraternal, consumers, and horticultural organizations are not instituted for profit. They have no capital stock. They are organized for mutual help, and it would be a monstrous proposition to subject their members to criminal prosecution for doing a thing which they ought to be encouraged to do, namely, to better their condition and the condition of their families.

I can not and will not support a bill which does not in the plainest language exempt these organizations from the penalties of the antitrust act. I can not and will not vote for a provision that will subject our workingmen to prosecution if they organize to secure a better wage for their labor. I can not and will not vote for a provision that will subject our farmers to prosecution if they organize and agree to hold the product of their toil for better prices or if they agree not to plant as large an acreage of wheat, corn, or cotton as they formerly planted.

I shall vote for the amendment proposed by President Gompers, of the American Federation of Labor, which in plain language exempts these organizations from the provisions of this act. This is not class legislation. It is but putting into the statute the divine right which now belongs to all free men. There is a vast difference between these organizations, instituted without capital and not for the purpose of making a profit, but simply to better their condition, and a corporation or combination of persons organized to speculate on the products of labor and the products of the farm.

I desire in this connection to quote a letter which I received some time ago from Mr. E. R. Bennett, a horticulturist of my State, which so clearly sets forth the reasonableness and justness of this exemption that I think little, if anything, could be added to what he says. The letter is as follows:

OKLAHOMA CITY, OKLA., *March 2, 1914.*

Hon. J. B. THOMPSON, *Washington, D. C.*

DEAR SIR: I beg leave to call your attention to a matter that is of more than passing importance to the agricultural interests of Oklahoma.

During the past year the writer has spent considerable time investigating the watermelon industry in Oklahoma. We find that the growers in this State have an opportunity to make a great industry in growing watermelons for the northern markets. Two years ago there were sent to northern markets something like 1,600 cars. The larger part of these watermelons were sold at a loss. As a result during the season of 1912 the production was only about 600 acres, which were sold at a fair profit. In studying the conditions we find that so far as climate, price of land, labor, etc., are concerned that the farmers of our State have the advantage over most other districts in this industry. The difficulty in making a stable industry of melon growing has been that the growers do not know how to market their products. In 1912 we found that from three cities on the Rock Island 102 cars of melons were sent into Kansas City in five days. This amount alone was sufficient to glut the market to such an extent that the melons did not bring the price of the freight. This condition prevailed in all of the large markets of the north. At the same time practically all of the small towns in Kansas, Nebraska, Iowa, Minnesota, Dakota, and Colorado were without watermelons. In other words, under the present system of distribution of melons all go to the big towns and leave the small towns to be supplied through the markets of the large places. If this distribution problem can be properly worked out, we believe the growers of Oklahoma could as readily produce and distribute 5,000 cars as they can now distribute 1,000. The trouble has been lack of cooperation, with the consequent uncertainty in market conditions all along the line.

The bill which is now before Congress, known as the antitrust bill, is undoubtedly meant to benefit the general public. We believe, however, that if this bill is passed it will work a serious injustice to our growers in that it will prevent them from cooperating in handling their produce, which necessarily has to be shipped out of the State.

At present the average price received for melons by the grower is not to exceed 5 cents per melon. These same melons cost the consumer all the way from 30 cents to 75 cents apiece. The object of the melon growers in trying to organize is not to restrict marketing or production, but to distribute the production in such a way as to cut out this excessive intermediate cost between the producer and the consumer. We have at present an organization under way by which the growers of the different parts of Oklahoma may cooperate in selling through one agency. If the antitrust bill before Congress now becomes a law this organization would be unlawful.

We earnestly solicit your consideration of this matter, as we believe that it is of vital importance to our growers so far as this industry is concerned.

Yours, very respectfully, E. R. BENNETT.

The Hobson Resolution Providing for National Prohibition.

EXTENSION OF REMARKS
OF
HON. J. B. THOMPSON,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, May 23, 1914.

Mr. THOMPSON of Oklahoma. Mr. Speaker, I have been asked by some of the friends of prohibition in Oklahoma if petitions addressed to Congress at this time would assist in the passage of joint resolution No. 168, commonly known as the "Hobson" resolution, providing for nation-wide prohibition. I have answered that the day for petitions to Congress in favor of this resolution has passed; that petitions addressed to Congress are always referred, without reading, to the committee having in charge the bill, and that inasmuch as this resolution has already been reported to Congress by the committee, the best way to assist in its passage is by writing to individual Members of Congress with whom the petitioner might have a personal acquaintance.

Mr. Speaker, my position on the prohibition question is known to all Oklahomans. I did not wait when the issue was brought before the voters of Oklahoma in 1907 to ascertain what would be the popular side of the question. At that time I was chairman of the Democratic State central committee and was in charge of the campaign for the adoption of the constitution and the election of the Democratic State ticket. Rev. E. C. Dinwiddie, now chairman of the National Anti-Saloon League, with headquarters in this city, was at that time chairman of the

Anti-Saloon League of Oklahoma, with headquarters at Oklahoma City. I labored with him then and gave him all the assistance I possibly could for State-wide prohibition. When the question was again submitted to the people of Oklahoma on the initiative bill providing for municipal local option, I was one of the speakers who campaigned against the bill. In the Legislature of Oklahoma during my term as State senator I introduced the prohibition bill advocated by the Anti-Saloon League in the 1911 session and fought it through the legislature to a successful passage. I also introduced and secured the passage through the Senate of an act prohibiting bucket-shop and race-track gambling. While a member of the State Senate of Oklahoma I supported and voted in favor of every law that would suppress crime of every character and would elevate the moral standard of our citizenship. I have always been for city-wide, precinct-wide, county-wide, State-wide, Nation-wide, and world-wide prohibition. Whisky never did anything for any man. It never made prosperous any community, county, State, or nation. On the contrary, it has left in its wake countless widows and orphans; it has wrecked the prospects of some of the world's greatest intellects, laid its withering hand on society, leaving broken hearts, smokeless chimneys, and pauperized families in its path; it has been a mightier Sampson of destruction than fire or sword or storm, than pestilence or plague.

Mr. Speaker, since I came here I have loyally cooperated with and supported every measure proposed by its enemies and intended for its destruction. I introduced in Congress at this session a bill prohibiting the sale of liquor within 400 feet of street-car crossings where transfers are given in the District of Columbia. I did this at the request of the national attorney for the Anti-Saloon League. It is a good bill, and I believe every fair man, no matter what his views on the liquor question may be, will concede that it ought to pass and that the lives of women and children who are compelled to make transfers at street-car crossings are not jeopardized by reckless and drunken men. After the bill was introduced it was suggested to me by the friends of prohibition that inasmuch as the new excise law which they had succeeded in passing after a long and bitter struggle, and which will reduce the number of saloons in the District from about 500 to less than 200, does not take effect until next November, they thought it wise that this bill be not pressed until that act had taken effect. These people who are earnestly seeking to rid the country of the whisky evil and who have devoted their lives to a practical study as to how this can best be done are entitled to lead in this fight, and I accepted their suggestion.

When the Democratic caucus met on the 12th of this month I spoke to Capt. HOBSON, who introduced this resolution, with reference to calling it up and making it a part of the program for this session of Congress. He suggested that the friends of the resolution thought it might not be an opportune time to present the matter, and I am willing to follow them.

Mr. Speaker, I have never failed to take a stand and express my views on every public question as it arose. I have not waited to ascertain what might be popular and then come out on the side of popularity. I fought for prohibition when there was a saloon on nearly every street corner in my State and when the outcome of the fight was trembling in the balance. I did this when many who are now so loud and vociferous were as dumb as an oyster, and you could not extract from them an opinion on the subject with a log chain and a yoke of oxen. The work which I have done for the prohibition cause has not been confined to high-sounding phrases and rounded periods—it is reflected in the statutes of Oklahoma.

Farm Credits.

EXTENSION OF REMARKS
OF
HON. J. B. THOMPSON,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, May 22, 1914.

Mr. THOMPSON of Oklahoma. Mr. Speaker, there is no subject on which this Congress can legislate at this session that is of so much importance as establishing a system of farm credits which will furnish cheap money to the farming and laboring classes of our people. I began a filibuster in this House a few days ago to force the consideration of such a bill at this session, and not next year or at some time in the future. I ceased that filibuster when I was assured that the bill would be considered if reported by the Committee on Banking and Currency. I have just read in the Houston Post, published at Houston, Tex., an article on this question by the Post staff correspondent, Mr. W. S. Gard. Mr. Gard, in reporting this matter to his paper, said:

> While it is not probable that the Banking and Currency Committee will agree upon a rural-credits bill that can be taken up this summer, there is a possibility that in the event of a prolonged wrangle over the trust measures something may yet be done in this direction.

I hope this forecast is inaccurate. I trust there will be no filibuster by the committee which will prevent a Democratic Congress from redeeming a Democratic pledge made in the Baltimore platform. Mr. Speaker, there is widespread interest throughout this country in this subject. Be not deceived, for the people are closely following our actions. Since the newspapers carried the news of my fight a week ago for the consideration of this bill, I have received letters from all parts of this country urging action at this session. From Maine to California, from the Canadian border to the Rio Grande, the people all over this country are praying that we do not forget them in this crisis. I will insert one of these letters, which is a fair sample of what the people are thinking. When they ask for bread let us not give them a stone:

GREAT FALLS, MONT., *May 15, 1914.*

HON. J. B. THOMPSON,
House of Representatives, Washington, D. C.

DEAR SIR: Press dispatches this morning disclose that you are making an effort to have the rural-credits bill considered at this session. You are certainly on the right trail, and I hope you will follow it to the summit. There are more people interested generally in this legislation than any enacted or proposed in the present session. The tariff, currency, canal tolls, and other enactments, while needed and appreciated, are nothing more than aids and regulations of trade and commerce, and do not reach down to the producer. Times have changed and are continually changing, and these changing conditions must be met.

We complain about the high cost of living, but lose sight of the means and cost of production. The producer must have cheap and ready means to start the plow. This means more things to eat and wear and less fluctuation in prices and less cost to the consumer in the things needed to sustain life. Besides, it will mean more hands at work on the farm, the stores, banks, and the other commercial pursuits. I need not dwell on this, for I feel sure that you have the subject well in hand.

I believe Mr. UNDERWOOD means well, and it may be that he has good and sufficient reasons for postponement of this law, but you may rest assured that the farmers and producers and workers of all classes, East, West, North, and South, are very much interested, and the Democratic leaders will do well to heed their wants and render aid in an effective and prompt manner.

A bank-controlled system of rural credits is not desired.

The fast-growing revolution in the manner of trade and production demands immediate attention. The workers must be kept in the field with a prospect of a reasonable reward for their labor.

I thank you very kindly for the stand you have taken.

Respectfully, yours,

RICHARD BENNETT.

Prosperity to the State of Oklahoma Under Democratic Rule.

EXTENSION OF REMARKS
OF
HON. J. B. THOMPSON,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, May 20, 1914.

Mr. THOMPSON of Oklahoma. Mr. Speaker, I desire to call the attention of the House to an article which appeared in the St. Louis Republic of the 19th of this month to show the prosperity which has come to the great State of Oklahoma under Democratic rule. Prospects were never so good for an abundant crop as now. All lines of business and all classes of industry are going forward as never before in the history of our State. When we have solved the trust problems, established a system of rural credits that will afford the farming and laboring classes cheap money, and passed and carried into effect the other beneficient reforms we pledged the people in the Baltimore platform the people of the whole country will feel grateful to a Democratic administration.

I commend this article to our Republican friends, who from day to day continue to rise on this floor and predict hard times and paint pictures of idle factories, empty smokestacks, men out of employment, and a thousand other ills which their desire to receive the commendation of the American people causes them to see in their imagination. In order to convince the country that these awful forebodings which they spread from day to day on the pages of the CONGRESSIONAL RECORD were coming true another "Coxey's army" was organized to march on the Capital. This much-advertised and heralded "army"

arrived in Washington yesterday evening, and I am glad to inform our Republican friends that this "army" consisted of Coxey and a band of seven people—all working for pay.

In view of the prosperity which was driven from the borders of our country by 16 years of Republican rule, and which is now returning, I beg of my Republican friends to cease their talk about men out of employment and come over and join us in passing laws that will strike down monopoly, give trade and commerce a fair deal, without special privilege, unlock the shackles now binding the hands of our farmers and laborers, and make this country what it was intended by the fathers—a place where every man is equal and where no man has a special privilege.

TWENTY THOUSAND HARVESTERS ASKED BY OKLAHOMA—WHEAT GROWERS FACE HEAVY LOSS UNLESS THEY CAN GET MEN TO GARNER CROPS—HIGH WAGES ARE PROMISED—FRISCO AGRICULTURAL DIRECTORS AIDING FARMERS IN GETTING REQUIRED LABORERS.

Twenty thousand men are needed to harvest the enormous wheat crop of Oklahoma, according to Frank Anderson, director of development of the Frisco Railroad, who has charge of the agricultural interests of that system. The wheat crop in Oklahoma this year is about twice as great as normal, he said, and the farmers are afraid of losing heavily unless they get enough harvest hands.

The extreme dry season last year left many Oklahoma farmers without feed to carry their stock through the winter. So they sowed wheat for winter pasturage. Many of them did not expect to allow the wheat to stand for grain, but the prospects were so good in the spring that they changed their minds.

The wheat acreage for the State this year is 2,465,000 acres, says the Department of Agriculture, which estimates the yield will be 35,500,000 bushels. The acreage is 30 per cent greater than last year, but the crop will be more than double last year's because of the increased yield an acre.

FIRST BIG CROP IN THREE YEARS.

This is the first good crop of wheat Oklahoma has had in three years, according to Anderson, and it promises to be the largest and best in the history of the State. The condition is perfect, the wheat being free from bugs and rust. Continued rains are the only dangers the growers have to face now.

The 20,000 men will be needed by June 1 and will be paid good wages, according to Anderson, probably more than last year.

The Frisco Railroad has been busy all winter building cars and preparing to transport the big crop. About 35,000 cars will be distributed along the system in Oklahoma before June 1, so that the wheat can be taken to the market at once.

Men who go to Oklahoma can find employment in Kansas as soon as the Oklahoma crop has been harvested. From Kansas they can go north into the Dakotas and Minnesota to harvest the northern crop.

CALL SENT OUT FOR LABORERS.

Anderson has received letters from newspaper men and members of commercial clubs of Oklahoma begging him to aid them in getting the men needed to save the crop. He devoted yesterday to telegraphing to various points in Oklahoma to learn how many men will be needed in each locality. He also was in communication with the State labor commissioner.

E. K. Gaylord, business manager of the Daily Oklahoman, Oklahoma City, called on Anderson to learn what assistance the railroad could give his State in solving the labor problem. Among the editors who have written to Anderson for assistance are Frank A. Salter, of the Carmen Headlight, and J. M. Pate, of the Hobart Republican. The newspapers are acting as free employment agencies to relieve the emergency.

Pate says the Oklahomans will have to have more thrashing machines, because they have never had enough to handle the normal crops.

Life-Saving Service and Revenue-Cutter Service.

EXTENSION OF REMARKS
OF
HON. WILLIAM C. ADAMSON,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 21, 1914.

Mr. ADAMSON. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD, I include the following:

IN THE GENERAL ASSEMBLY OF THE STATE OF RHODE ISLAND.

Joint resolution favoring bill (S. 2337, Sixty-third Congress, second session) to create the coast guard by combining therein the existing Life-Saving Service and Revenue-Cutter Service.

Whereas the maintenance of the highest standard of efficiency in the saving of life and property from shipwreck is of great importance to the commercial and shipping interests of the State of Rhode Island; and

Whereas the United States Senate has passed and there is now pending in the House of Representatives a bill (S. 2337) to create the coast guard by combining therein the existing Life-Saving Service and Revenue-Cutter Service, which will assure greater efficiency by bringing together for more concerted effort in the saving of life and property from shipwreck two important branches of the Government service charged with that duty, one operating from the shore and the other on the seas and the Great Lakes; and

Whereas the existing provisions of law for retirement, longevity pay, and allowances for the officers and men of the Revenue-Cutter Service are by the bill referred to justly extended to the superintendents, keepers, and surfmen in the Life-Saving Service: Therefore be it

Resolved by the General Assembly of the State of Rhode Island, That the Representatives of the State of Rhode Island in the Congress of the United States be, and hereby are, earnestly requested to give their ardent support to bill S. 2337, and to use their efforts to secure its early passage by the House of Representatives of the United States; and be it further

Resolved, That a copy of these resolutions be sent to each Representative in Congress from the State of Rhode Island and to the chairman of the Committee on Interstate and Foreign Commerce of the House of Representatives, and to the general superintendent United States Life-Saving Service.

STATE OF RHODE ISLAND,
OFFICE OF THE SECRETARY OF STATE,
Providence, May 18, 1914.

I hereby certify the foregoing to be a true copy of the original resolution approved by his excellency the governor on the 6th day of May, A. D. 1914.

In testimony whereof I have hereunto set my hand and affixed the seal of the State aforesaid the date first above written.

[SEAL.] J. FRED PARKER,
Secretary of State.

Necessity for Antitrust Legislation Illustrated by Colorado Coal War.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 28, 1914,

On the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. BRYAN. Mr. Speaker, this House is now considering the trust problem, and I have the privilege of extending my remarks in the RECORD on that subject. I shall insert a record of the incidents which occurred, and, it might be said, are still occurring in the State of Colorado. Some of the Members may censure me for consuming so much space in the RECORD with this story, but the facts I am thus placing in permanent record have not been handled by the press of the country. The people are in ignorance as to these awful details. No speech any Member of this House could make will approach the force of the arguments here presented for the necessity of relief against the rule of brutal big business in this country.

Judge Ben Lindsey is to be thanked for coming across the continent to make known these facts to the people. I am incorporating as a part of this record the proceedings of the meeting held here in Washington, the Capital City, which was addressed by Judge Lindsey and others. Let no Member complain about the space occupied by this awful recital till he knows of the details recorded.

The meeting referred to was largely attended and was held under the auspices of the Washington Woman Suffrage Council, at the National Rifles Armory, 918 G Street NW., Washington, D. C., Thursday evening, May 21, 1914, at 8.15 o'clock. The following proceedings were had:

Mrs. GLENNA SMITH TINNIN: Friends, your presence here this evening is an indication of your interest not only in the speakers but in the matter that they are to talk to you about. You are to hear tonight not a report that is being vitiated by rumors or by unauthorized public statements, but a story from the lips of those who know it, and who know it, we may assume, only too well. Just three days ago the Washington Woman Suffrage Council learned that Judge Lindsey and a committee of Colorado women had started from Denver to Washington for the purpose of laying directly before the President the facts of the Colorado strike situation. This organization foresaw at once the possible privilege of this meeting, not only for its own members but for the interested people in Washington, and the privilege of gaining thereby direct information on a situation that is of vital significance not only to the people of Colorado but to the people of the whole country. [Applause.] The Washington Woman Suffrage Council has as one of its direct purposes the providing of a forum, an open forum, admitting free speech on all subjects of industrial or human interest. I am sorry that those terms are not as synonymous as they were meant to be. [Applause.] But in this forum subjects of vital importance to any community or group of people may find expression by those who, through close association or through experience, are best qualified to speak on the cause of the conditions that they represent. It is such a meeting that we are holding this evening. For certain mysterious reasons the published accounts of the Colorado strike war have been meager and rare. Many of those who do not read rightly or do not read closely have not even realized that there has been and is still being waged in the Colorado mine district one of the most desperate industrial struggles in our history; and those who have read have been shocked into unbelief by the stories of battle and carnage and bloodshed—the Denver papers have said arson and murder. And it is not surprising that these reports should be discredited by all those who have any faith whatever in the civilization of these people; and so we have not known what to believe and what not to believe. Tonight we shall know better, and it is in the interest of a just judgment, in the interest of enlightenment upon a critical present-day struggle, which must have its effect on the industrial history of our country, that this meeting has been called, and that these speakers have responded, regardless of the cost it may be to their personal feelings, responded to the call to talk to you. I gladly turn this meeting over wholly into the hands of Judge Lindsey, and I now have the honor to introduce to you—and I am sure you have all met him before—Judge Ben B. Lindsey, of Denver, Colo. [Applause.]

SPEECH BY JUDGE BEN B. LINDSEY.

Madam Chairman, ladies, and gentlemen, I am sure it is a great privilege to have the opportunity to preside at a meeting like this, and I think we need offer no apologies that this meeting is held in the great Capital City of our beloved and common country, as other meetings have been held in my own capital city of my own State for the same purpose. As has been well suggested, the difficulty we face in Colorado is not local; just as is the story of one city the story of all cities in this country where privilege is to be had and people are to be exploited under certain conditions that exist in this country, so the story of one State where certain industrial conditions exist is the story of every State where similar conditions exist. [Applause.] And the difficulty we face in Colorado is, therefore, not a local difficulty, but a national difficulty, and we have the right as citizens gathered together in any State, and above all in the Capital City of this Nation, to discuss the troubles that have recently embroiled our own people. I am reminded, as I have read the papers in the last few weeks and months, of the philosophy of a small boy with whom I dealt once. I had taken this boy out of jail—that was in the old days when children were put in jail. He had been missing from home a month and he had told the police a number of stories, and the stories were so varied and different that, to ascertain the truth, I finally asked the little boy to go with me to make good the statement he had finally made that he had been living in a piano box for a month. I found the box back of an old ramshackle barn, and while I stood talking to this boy I heard the gang around the corner, out of my vision but within my hearing, and above the hum of voices I heard a boy say, "He gets full once a week." Another boy said, "No, he gets full once a month"; and I was anxious to know who was getting full, for we had upon one occasion some boys from that neighborhood that were drunk. That didn't happen often. I turned to my little friend, and I said, "Harry, I did you a favor; I got you out of jail, and now I want you to do me a favor; I want you to mix with the gang and find out who is getting full." I had forgotten for the moment the law of the gang which forbids tattling or snitching, as they used to call it, and, as he said, "I am to be loyal to the gang and loyal to the judge," he started out upon the mission upon which I had directed him. He came back and said, "Judge, it is the moon that those kids are talking about; the moon gets full once a week. The skinny kid said the moon gets full once a week, and another guy said it gets full once a month"; and he said, "I tell you, Judge, you just can't believe all you hear nohow." And so I find, in reading the reports and accounts of the conditions in southern Colorado that the cause of recent happenings has naturally brought them to the attention of the whole civilized world—as they ought to be—and one of the difficulties we face in these great industrial struggles is to get the facts. You meet people lined up on both sides, where prejudice is more or less rampant and men seem to be unable to reason calmly together. I learned in my own experience that the greatest factor in reforms are facts, but the greatest difficulty in reforms is to get the facts to the people, untainted, if you please. [Applause.]

Now, some of you may wonder why I am interested in this industrial struggle and may I say just a word about that before I introduce the speakers, who have a story to tell that ought to ring around this country; and if it does, and if this country is what we know it to be, this country is going to respond with a demand for justice, for which some people in Colorado are rightly calling loudly, at least up to this point, without receiving any. I have learned in that 15 years' experience in dealing with the welfare of the children of this Nation that there is no child problem that isn't a parent problem and there is no parent problem that isn't at bottom, more or less, a social, industrial, and economic problem. [Applause.] For example, before the State board of charity and correction, that met in Denver last December, or the State conference I should say, I was presented with a report by the secretary of that board that only one newspaper in the town would print. It was a copy of the record of the coal-mine inspector's office, showing that within a period of about four years, in practically two counties in the State, where coal mines exist, nearly 700 little children had been orphaned, made fatherless, or made dependents, because of explosions in those mines, two-third of which, according to Government reports, might have been avoided had the ordinary safety appliances and precautions been used that are used and have been used in other sections of the country, where such accidents, as a rule, are one to three and a half in that section. And how is a man on the bench going to stop the increase of orphan children, according to his courts, unless he can stop the lawlessness in mines taking away the parents of those children? [Applause.] There are 150,000 fathers, it is estimated by some, dying of occupational diseases every year, and 150,000 mothers being forced into the double burden of home maker and bread winner, because of certain conditions, with the result that over 100,000 children are hurled up into our courts every year in this country. Do you think we are going to stop this condition by sitting behind the table and looking across into the faces of tear-stained children? We are not going to do it. It is the thing for the doctor to do, when a patient is brought to the hospital with typhoid to go behind that hospital and find the cause of typhoid. [Applause.] And that is what some of us have dared to do in Colorado. We haven't stopped at the bench, we have gone beyond that bench, as the doctor would go beyond that hospital to protect the health and happiness of all the people. And yet some of the so-called interests in Colorado have come out boldly and said that we ought to be driven from the State. I am only driven from the State long enough to come down East once in a while and tell the people what is going on out there. We are not fighting alone for 100,000 children coming to the courts; we are fighting for millions of children that will come to court every year unless conditions that make for this effect are changed. And I haven't any apology to make for being here at this time, for I can do more good in two weeks away from Denver for a cause like this than I could do in 10 years in any juvenile court, and I want to say that when we are away there is a very good judge that carries on the work, so we are doing the thing from our court from both ends against the middle, if you please, and we are going to stop this thing, and the more they kick about it the more satisfied we are that we are really doing something for the children of this country.

I spent my vacation last summer, in July and August, most of it, up in the coal mines of Pennsylvania, and in the town of Shenandoah, where one-third of the population is said to be children, and when I discovered that fact I said Shenandoah is the greatest town in the United States, but I talked to a little boy there and he dragged me off down to the jail and showed me a dirty, insanitary place, into which the boys had been thrown, as he had, for the awful crime of picking up coal on the railroad track; and I found that little boy didn't have any father, and that his father was blown up in the mine, and that he went to jail for picking up the coal that came out of that mine. My friends, there are many things to show that there is something radically wrong in the laws of property in this country. [Applause.] That seems to be above the law of humanity. I have been in these mines, and I think I may be pardoned if I say I have learned to love these people, because they are very human; they are not the kind of animals you'd think they were, when you hear how they were shot down like dogs in our State, by men who look upon them as wild animals, and now, my friends, I was sitting once in the home of one of these miners, and he looked out upon the hill from which the coal came, and here was a little garden and his little home, and here he lived and slaved, toiled for 20 years, and he said to me, "When I came here there wasn't a hole in that hill; but my son was killed in the coal mine in that hill and I was maimed in that hill to bring forth the coal that was there and wealth to the men in New York, who own that mine and never saw it and never put it there. "No," he says, "God Almighty put it there for all His children," if you please. [Applause.] "But now they want to reduce the pay that we receive for jeopardizing our lives in the work that has taken from my family the son of my heart 10 cents a ton, and they tell us if we complain to get out, that they will bring somebody in from southern Europe to take our place." It is all very well to provide this sort of liberty for the American workingman. But, said this man, "What am I going to do with my home, all the accumulations of these 20 years? Sacrifice it all and get out, because I have nothing to say under your laws of property, as to what should be done with this work that God Almighty put into these hills for you and me and all of His children. Is it fair? Is it right?" I say it isn't. And when we consider to-day that the first, great, chief cause and difficulty between capital and labor is the lack of the personal relation that brings about consideration of man for man. Such exists in every State where these conditions exist, so that the men who own these mines live thousands of miles away, and the relation is absolutely impersonal, and because of the laws of property they present those who own any property a combination against the men who have to produce the work, and while that condition exists there are men in this country who say that so long as the personal relation between employer and employee is abolished, then it must follow that the only full, absolute protection is to get together in a labor union to protect themselves. [Applause.] And no man that is honest with himself, who has any conception of the present condition of property laws, who ever thinks, can deny that proposition at least as a method of protecting man against man—greed, if you please, against greed—under present conditions. And now, my friends, that struggle is bringing about strife and difficulty in nearly every State in this Union where such wealth has been put by God Almighty, who gave us these wonderful resources, and that is chiefly the cause of the difficulties we are facing.

Now, we have had that struggle in Colorado, and out of that struggle have come some terrible outrages—some sad and pathetic events that are to be regretted. These things are not approved by the people of our State. We have a law-abiding people in Colorado, as a whole. We have a liberty-loving people there. We have a people in Colorado who want to see justice established in the State, and where there is justice there won't be much need to worry about law and order, because justice means that. But, my friends, because of the laws of property those who have worked from the other end to maintain the rights of humanity have had to work under trying difficulties, and the peculiar thing to me is that they have been as patient as they have been. Violence produces violence. In a factory in Shenandoah they had a testing machine, and in that machine they had a steel bar that would require a pressure of 500,000 pounds, and we sat in that office, and you could hear a pin drop, and the man turned to me and said, "You don't see it." There was no explosion of dynamite, but the violence was there, which wrenched that steel bar apart. That is the kind of violence, under the laws of property, that is crushing down the laboring man of this country. But under the eternal law it is in some sections met with violence. It is to be regretted, though. But it is a little loud, and people understand it better. But, my friends, if we can usher in the reign of justice and drive out the reign of privilege we may get rid of the force and violence, but until we do we must try to get along. But I am sorry to say that in our beloved State, that I love as I love my soul, a life, with the lives of others, has been threatened because we have been devoted to that State, and in that devotion, devoted to all the States under the flag of this Union that we love; but, my friends, we have had violence there not because of our people, but because of the condition our people have had to face. And recently one of these violent outbreaks occurred in this present struggle between the mine operators, consisting of three great coal companies, the chief stockholder in which is Mr. Rockefeller, and the union men on the other side. It isn't the Western Federation of Miners, but it is the same organization that was formerly headed by John Mitchell and now by John T. White—the United Mine Workers of America—who are trying to unionize the men as far as they can by legitimate means, and we have here to-night some of the wives of the miners, some of the women, if you please, who were in what is called the "Ludlow massacre." This inhuman massacre happened on the 20th of April. It grew out of conflicts between what was called the militia, an undisciplined lot of men—in one company of 170 there were 126 men who were employees of the mine owners. There were a great many thugs who had no respect for men, women, and children. As to whether or not that statement is true you can judge after hearing the statements of those who have been there and those who have the sworn statements here, notwithstanding what you have heard and seen in the papers. And Mrs. Jolly, whom I shall have the honor and pleasure to introduce to you, is going to be the first to speak. And remember, these good women are merely ordinary wives of mining men, human, good people, who haven't a great amount of this world's goods, neither are they as low down in the social scale as some people might think they were.

Mrs. Jolly, and quite worthily, has well become known as the heroine of Ludlow, a good woman, who armed herself with the badge of the Red Cross upon her bosom and upon her arm, and went forth to succor women and children and to help to avoid the horrors of the massacre; and then we shall hear Mrs. Thomas, a lady who comes from Wales, who is a friend of Lloyd George, the great champion of human liberty in Wales, who has visited with Lloyd George and broken bread with him in the home of members of her family. That is the type of women, miners' wives, that are here to speak with you to-night. She will be followed by Mrs. Lee Champion, and she is a champion, indeed, the wife of a recently appointed district judge in Colorado, and chairman of the woman's relief committee. Then I shall have the privilege of introducing to you Representative McDONALD, of Michigan, and Representative BRIAN, of Washington, and now I have the honor and take pleasure in introducing to you Mrs. Jolly, of Ludlow, Colo., the Red Cross nurse.

Mrs. JOLLY. Ladies and gentlemen, I am a citizen of Colorado, born and raised in Colorado, practically in the southern coal fields, and I will try to tell you, as near as I can, the story of our terrible massacre in Ludlow. April 19 in Ludlow was Sunday. We had a baseball game there. During this baseball game the militia attended, which they had done before, but never with rifles. They attended with rifles and they had these rifles drawn on the game as though they intended to shoot the players. They were standing in so close around first base that it was impossible for a man to get there. One of our players asked them if they would please get out of the diamond. They would not move. Another man told them if they wanted to watch the ball game to put their guns at their side. They refused. One of the ladies in the crowd made the remark that if a bunch of ladies would start toward them with beebee guns they would run. At this they turned to her and said, "That's all right, girlie. Have your big Sunday to-day, but to-morrow we will have the ropes," and the man in the lead said, "It will only take me and my four men to clean out the whole bunch of you," which he and his four men, with help, did the following day. They had tried to start trouble before, but failed. On Sunday night they rode through the camp, and we thought that they were planning on blowing up the camp, but nothing happened. On the following morning they sent to my tent for Louis Takus, who was one of our leaders. When he went out a few of us ladies followed him. There were four militiamen—the same four who had been to the baseball game. They handed him a piece of paper with a name on it of some man who was not in the tent colony, and told Louis he wanted to take this man out. Mr. Takus asked them if they had a warrant or if they had been sent by the civil authority. They said, "No." They said they had been sent by the military authority, and he told them he understood the military authority was out of commission, but he would like to see the man who had given him orders for this man. The last remark that was made was that they would be back again. When they left the ground Mr. Takus went to the telephone and asked Maj. Hemlock to talk to him. He told him he would meet him halfway between the military post and the colony. Mr. Takus went halfway, but he did not meet him there, and he came back to the tent colony. When he came back he telephoned again. Maj. Hemlock told him to go to the depot, which he did. Following that, he probably had been there 10 or 15 minutes when he started coming toward our camp on the dead run, waving a white handkerchief. They fired two bullets and continued firing at him until he hit our tent colony.

When they started firing at the tent colony, our men decided that if they would take their rifles and leave that they would cease firing on the tent colony and that would protect the women and children, and they left. What women and children that could get out did, but women that were expecting to become mothers and women who could not possibly get out remained in places which we had which we called dug-outs or pits. They were dug there just immediately after we went to Ludlow. There had been two previous battles in Ludlow. At the time of the first battle it was not possible for the women and children to get out, and they dug these pits. After the first battle they were left there, in order that they would be a protection. And the military authority now claim that they were dug two days before the massacre. But they were not. What women and children could go into these pits got in, but they didn't cease to fire on the tents. They fought the women and children in the Ludlow tent colony. They started firing on us between 9 and 10 on Monday morning. They fired on us until I suppose—I don't think they ever ceased firing for about a week, but kept it up continually, and at 3 o'clock they set two machine guns right on the tent colony and started to riddling the tents. Between 5 and 6 o'clock the tents were set afire. During this day in the Ludlow tent colony, after they had fired on us so much, they decided that if I would dress in white and put a red-cross emblem on that they would quit shooting. I did that, but when I went out to the front they took the red cross for targets. I turned around and went back. Shots were flying all around me, and a bullet hit the heel of my shoe and shot it off. I thought at first my foot had been shot off, but I didn't have time to stop and see whether it was or not; I had to keep on the run. We then decided—this Louis Takus and I—that we would go from tent to tent and make the women and children in these tents as comfortable as they could be. We went about dodging bullets all day. At one time I went to my tent. It was one of the tents right in the front. And we found two of our leaders laying in back of the office tent trying to send a message. They asked me if I would stay there long enough to make some sandwiches. I went into the tent and I left my door open. Standing just opposite the door I had a large dresser, with a large mirror. I think they could see my reflection in this mirror as they opened fire on my tent. They riddled the dresser. I didn't stay very long, because I dropped on the floor. They shot on the tent for half an hour, and I guess they came to the conclusion that anything in there was dead. I finished making the sandwiches and went around the corner to give them to the men, and they started shooting at me again, and one of the men said, "For God's sake, girl, stay away from here. You are a hoodoo." At another time that day there was a wounded man in a tent, and I tried to go and get some dressing to use. The first time I made the effort I couldn't get there at all. They shot at me so strong I had to get back. So we then decided that if Louis would go on ahead of me and open the tent door, then I could get in. But he didn't succeed. He started out ahead of me and I lost him. And he went around one tent and I was following, and he turned around and said to me, "Drop and drop quick." He was behind a coal pile that wasn't big enough for one person to get behind. I dropped there with him, behind that coal pile. They shot at us a bit and then they quit, but they had just quit long enough to set the machine gun on us. It got so hot for three men that were following that they thought they would try and get behind the coal pile we were behind. And they also came and got behind the coal pile where we were, and that was five behind this little coal pile. However, they kept the machine gun on us, but didn't hit us, although the shots were hitting within a foot or so around us.

In the meantime, while they had us behind this coal pile, one of the children had the top of his head blown off in the tent and his brains were scattered over the other children with him. His father came out to tell us about it, and they turned the machine gun on him to chase him back home, and that is how we got away. This boy that was killed was Frank Snyder, a boy 12 years old. They had been in the cave all day. Mrs. Snyder has seven children, and he was the eldest; and at about 4 or 5 o'clock they got hungry, and, as they weren't shooting on the camp, they decided that they could go into the tent and get something to eat. She said they had been in the tent about three minutes. The little boy was sitting in her bedroom and he was sitting in a rocking-chair. He had just made an effort to caress his sister when the top of his head was blown off and his brains were scattered over his sisters. His mother had to keep them there until 12 that night. She couldn't even stop to see if the boy was dead. She had to get the other children out of the way; and at about 5 or 6 o'clock that night, when a fire broke out, we were trying to get the women and children together as nice as we could. We were going around from tent to tent, and from the light of the fire they could see us, and they would shoot at us, but they couldn't hit us. We got most of the women and children out, but we had got the report that day that one of Mrs. Petrucci's—she lost three of her children—one of her children had been shot. Louis Takus couldn't understand how she could get out with these three children, and one being dead. He said that if I would leave a band there of 50—he decided that if I would lead them out of there he would go back to Mrs. Petrucci and get her and her children. That was between 8 and 9 that night. He started back to the cave to get them, but when he started back they captured him and murdered him. But they didn't try to save these women and children, and I knew that they couldn't have murdered him quick enough for him not to have told her. They first hit him over the head—I didn't see him after they captured him—with a gun. They broke the butt of a gun over his head, and it fractured his skull. The man that broke his gun made the remark that he had spoiled a new gun. When he had fallen they shot him four times in the back, but he was shot after he was dead. They had also turned him over and stepped in his face. The print of the shoe or the boot is very plain to be seen on his chin. His nose was broken and his cheek bone was broken. We have a picture of it, if any of you would like to see it. They didn't go to this cave, but this woman and her children happened to be in another cave, where there were 11 children and 2 women taken out dead on the following Wednesday. On this Monday we went to Frank Bayes's ranch, about 1 mile below. They didn't fire on us, because they were too busy looting and stealing, but at 5 o'clock Tuesday morning there was an automobile came with two doctors in it, who came there to care for an injured man.

When this automobile came I suppose they thought it was some of the men—they immediately opened fire on the farmhouse. We couldn't in no way get to the cellar only through a side window. They kept us in the cave Tuesday all day; that is, most of the day. At this farmhouse we had a telephone. We couldn't find out anything about what was going on, only that they were trying to kill all of us; so we decided that we would eavesdrop on the telephone—not a very nice thing to do, but at the time of war anything is all right. We took down the receiver and listened. At one time there was one of the ladies in the Hasting Canyon speaking to the superintendent. She says: "Well, what do you think of yesterday's work? That was fine, wasn't it? They killed that old Jim Fowler and Louis, the Greek. Wasn't that fine? They burned down the Ludlow tents and we won't be bothered anymore, and we know of 28 of the dirty brutes that were roasted alive in the tent colony." But we never got any 28 back. They have evidently got rid of them some other way. We took down the receiver again in a few minutes and there were some men talking. "Well, we have all the important ones we want to get now except John Lawson and the two Winber boys, and we know where they are." But they didn't get them. We moved them. We didn't have anything to eat in this farmhouse. Everything was gone. This Frank Bayes decided that if he would take the Continental Oil Tank out that they wouldn't fire on us. So he went to a place by the name of Augusta to get us something to eat. When he went out they didn't fire. When he started back he got about a quarter of a mile from his home when they opened fire. The shots hit all around, but didn't hit him; but they did hit one of the mules. But he got into the house. That made them that much more furious. They simply started to shooting that place up right. Most of the shots were hitting in the chicken yard and back of us, but we thought they were going to hit us every minute, and Mrs. Bayes didn't know what to do. Finally she decided she would call on the men for protection. She called up the sheriff at Trinidad. He said he didn't have nothing to do with those men, but to call up a captain of the militia. She called up one of the captains of the militia. She asked him if he wouldn't try to protect the women and children. He told her that it was not his men, it was the strikers. But she told him that she knew better; that they were in uniform. He told her, then, that he would see what he could do; but the best advice he could give would be not to move, because anything that was seen moving would be shot at. So we decided that as soon as it was dark we would get out. That night when it got dusk we got out. After we left the farmhouse they had went there. They took everything that they could carry away with them. They took boxes of corn starch and scattered it all over everything. "This is what you get for harboring strikers. Cut it out or we will call again." This little note was left there, signed by the Baldwin-Phelps Detective Agency and the national guard. That night we went about 5 or 8 miles below there. We had two or three sick people in our party. We decided that we would take them the next day to a hospital. We went to a hospital in Trinidad. I found out that the bodies hadn't been rescued yet. They wouldn't even let the dead wagon in. So we got permission from Denver, from Gov. Ammons to go. He said that if we went out with the red-cross emblem on we could get into the camp. We made up a party of two automobiles. We went there and they let us go into the camp, but we were under guard, and there were only certain places we were allowed to get. All of the bodies were in this one cave. We found 11 children and 2 women. One of the women in this cave was in labor at the time she died. Her baby was born two days later in the undertaking department dead. While we were doing it they would sneer at us. I never in my life heard so much slander. They said everything they could think of to us. They tried in every way to get us to say something to them.

When we were taking these bodies out they would come to us, and they would shoot a dog or a chicken. Sometimes I think they were shooting at nothing, just to frighten us, but by that time we weren't a bit afraid of them. Finally we got the bodies all out, and started back. They held us up at the depot and searched our automobiles, but they were just simply trying to cause trouble. They held us up there for a good while, and then told us that they would not take any chances on any red cross or white flag, and gave us to understand that everything that came through there was to be shot at, until the Federals came in the field. I think I have told you now most of the facts of things that happened, but there are lots and lots I couldn't possibly tell you, and it is not possible to make it clear. We couldn't in any way tell you how terrible that was in Ludlow, but Mrs. Thomas, now, I believe, will relate a few of her experiences there in Ludlow. [Applause.]

Mrs. THOMAS. First of all, ladies and gentlemen, I would like to tell you that it is only 10 months since I came from Wales, and I have never seen anything like I have seen in Colorado before. I was raised in one small town, which was a very, very small place, but now a very, very large town. Everyone knew me in this town, and I was very much respected there. I got married there eight years ago, and I had 200 wedding presents given to me. One hundred and fifty-six of

these I brought to Colorado with me and $1,500, and which to-day I haven't got a thing to show but clothes which have been donated to me. I had a silver tea service given me by a society to which I belonged, and several other things which I could not mention here. These presents I had; I took great pride in them, and I thought it was a great honor for anyone to look at those, leave alone have them stolen or burned. I had been there two months when they came out on a strike. When I came to this country first, my husband went to a mining camp to work. When we were going up some one asked him where he came from, and he said he came from Wales. They asked him did he belong to a union. He said, "Oh, yes," and he took great pride in drawing out his union card. "For God's sake, hide it or else you go down sooner than you came up," the fellow said. So he had to put that back. I found conditions there intolerable. They were terrible. I had to live in a pigsty, as we call them in Wales. They were worse than that. I found the conditions so different there to the mines in which my husband had worked in Wales. He had only worked in union mines before, so we decided that we would not stay there very long. It was just like this: When we see our husbands go out through the door in the morning, every miner's wife goes to the door and thinks it is the last she is going to see of her husband, and if we hear of anyone hurt, everyone thinks it is their own, and to think that our men have to work under conditions like that. If the boss told a man, "You go there to work," and if that man knew the top would come down on him, he would get fired if he refused. He should not have a say in anything. And another thing they would do: One man maybe would say, "I will have $80 next pay day." If he had sixty he would have to be satisfied, and if he complained about it he would be fired. They say it was short weight, but no miner ever had a checkweighman of their own, so they could cheat them just as they had a mind to. [Applause.] Well, after I had been there for two months, we came out on strike. I was right with them, because I have been taught ever since I was a very little girl what unionism meant. [Applause.] When I came over to this country I didn't come a pauper. I sold the business I had, which was doing fine, and I brought $1,500 over here, and I had everything comfortable. Now, I haven't got a thing. That is what Colorado has done for me. My husband was born in America, and we thought we would like to come back to the place to see it once more.

Judge LINDSEY. Colorado hasn't done that—you mean Mr. Rockefeller.

Mrs. THOMAS. Well, he owns Colorado? [Applause.]

Judge LINDSEY. I promise not to interrupt any more.

Mrs. THOMAS. Well, when we did come out on strike there were gunmen placed on each side of the camp where we came from, just a few yards from one another, pointing guns at anybody, if they just looked like a union man. That is the first time in my life I ever saw a gun. I have seen so many now that not one would scare me. And we were driven down this canyon just like dogs. They knew that there was not enough chance there, but that was not the United Mine Workers' fault. They had ordered 300 tents two weeks before this strike came on, and the C. F. & I. Railway pretended that they couldn't find them, and they were only to come from Denver to Ludlow. And that is what they did, just to keep us out in the rain and snow for a whole week. There were as many as 30 under 1 tent, and all our furniture, bedding, and everything else left out in the weather. Well, we determined—they were against us so much—we determined to stick together more than ever. [Applause.] And when the gunmen came—they were there ready for us; they had 300 of these gunmen there. Well, the operators wanted us to fight with these gunmen, so that they would be able to have the militia in there, so that they could put the expense on the State. We could see these things. We were not as crazy as they thought we were. We had meetings to this effect: That if we were to fight with these gunmen, that they would have the militia out, and that they would be able to carry on a strike. And when these gunmen came down to shoot into the women and children and our men couldn't stand it any longer, they had to take to their guns. And the militia came in, and we were determined to treat them as society should be treated. We went to meet them. We invited them to our dances. We danced with them. We invited them to our homes. We gave them suppers. But in a very short time the operators saw that that didn't pay them. They wanted to cut off the friendship that existed between us. They took these militiamen to take up these strike breakers in daytime, so that we would be able to see it. They knew it would make us mad, and it did. When they came to our dances we refused to dance with them. One of their officers asked me, "How is it you don't dance with us?" I said, "Because you can't be on two sides; if you are going to take these strike breakers up there, we would much prefer you to respect us and keep away"; and he said, "We will not be down again." And that is just what he wanted, and from that on the militia started against us and did everything that was mean. They were continually wanting to search the tents. They would fix their machine guns right around the colony and place soldiers with fixed bayonets ready to shoot the men. We were pushed about like dogs. Women that were pregnant were knocked around just as if they were beasts, and they continually came there to search, and they would take everything they wanted. They would look into little drawers that were just that size for guns. We asked them would they please divide up if they found any money. They kept all the money they found, and several things they stole. And one time their captain searched them because the complaint was made that they had stolen things, and they found things on them. I guess I have to tell you about my being in jail.

I was going to Trinidad the day we were protesting against Mother Jones, and I wanted to go down so bad that I was hurrying to catch the train. But they made me lose the train. I determined to go anyhow, because I had other important business to attend to there. An automobile was passing down at 2.15. There was the driver and two passengers in it, so I asked them if they would give me a ride to Trinidad, and they said yes. I got in. Immediately I got in they started asking me questions about Ludlow. "Isn't it too bad about these poor miners there just listening to a few agitators?" one of them turned to me and asked. I said, "You needn't feel sorry. They are just doing fine." So he said, "But there are lots of people going to work, isn't there?" and I said "No." He said, "Why, there were 20 of them that went this morning," and I said, "There is only 4 gone altogether." So he saw he couldn't get out of me what he wanted and he didn't take any more notice of me and I didn't take any more notice of him. I didn't care, as long as I got to Trinidad. When we reached Trinidad I noticed he looked sort of funny. We stopped opposite the Colonial Hotel. He rushed out right away. And so I got out and I looked down the street and the parade was over and everybody was coming back. I was going up to the house of a friend to wash my face, and while I was looking about I walked to the house. I got there in about 10 minutes. I went up four of the steps, when one of the militiamen pushed me to the floor and the lady friend said "What are you doing?" He said, "Walk on." I said, "I don't have to." And he said, "Your business is to walk on." And he knocked me down three times, just as if he was piking Jack Johnson. So finally one other fellow—there were two 6-footers—some one jumped up and he said, "Arrest that woman." And they took me right up at the post office, with about 50 militiamen standing around me, and they kept me there for about 10 minutes, when Gen. Chase came along and one of them said, "This is Mrs. Thomas, from Ludlow." "Oh," he said, "that is her. Well, you keep her until I give you further orders," and they kept me on that road with 50 militiamen for two hours—they kept 50 watching me for two hours. Well, then they marched me up, in front of this 50, to jail, and when I went there they took my size, my weight, the color of my eyes and color of my complexion, when I was born, and things of that sort, and he couldn't decide what color hair I had. He said, "What color you call that?" I said, "Pale blue." [Applause and laughter.] And then he put me into the cell, and the cell, it was beastly. There were two other women that were arrested, but that night they let them out. So I thought it was going to be my turn next, but it didn't come my turn. I had my hat on, so that if it came my turn I would be ready to go. I got into the dirty bed that was there, and the rats, they were around there something terrible. That place had been condemned years ago, but they kept me there, and I told them that I wanted to bring my children, and I dropped a note out through the bars, so somebody would find it, and somebody did, and sent it to my husband, and I told him they were going to send the militiamen for my children, and I would not trust my children in the hands of any dirty militiamen, as I found them. [Applause.] And I told my husband that he wasn't to give these children out of his hands until they came right into mine, and he was not supposed to see me. So he came down to the jail and he said that he wanted to take the children up. They told him "She is a military prisoner." And my husband said, "These children are not going out of my hands until they are in hers." So, finally, when my husband was going out he said "I guess I'd better let you go."

When he brought them up to the door the jailer said, with his arms folded, "Mrs. Thomas, I shall have to listen to what you and your husband say." I said, "All right, listen." But we spoke Welch, and he couldn't understand it. So he got so mad, and he left me talk about three to five minutes, but I could tell him a lot in that time. And then when my children came down they got so depressed with that place. One of them asked, "Mamma, why do those bars be on the window?" And they put their little hats and coats on and tried to drag my hand, and asked me to come out; and when he would bring food he would throw it right to the floor, as if I was a dog, and he would click that door. Every time the key clicked it would go through my heart. I had never heard them before until I had to go through with it myself. I sent a letter to Gen. Chase, and I asked him what charge did he have against me, and what did he have me in there for. That if he would give me a trial I could prove I hadn't done anything, and he never answered my letter. He kept me in there for 11 days, until he felt like letting me out, and without any trial at all, and I don't know yet what I have been in for. Then they got so mean with our men by now, that every man that would dare go outside the boundary of that tent colony would come back with black eyes. There isn't a man in our tent colony they haven't beaten up like that. But you don't hear about it. Now you hear, after we have had to make such a sacrifice. These people were dear to us. We were brothers and sisters. We clung together just like the ivy. And referring to the battle which Mrs. Jolly has explained to you, I just want to tell you that a few days before this battle they pulled down the American flag and fixed up a red flag there instead of it. So that showed they wanted a fight, and the morning that this fight started no one had any idea of a fight. Everybody was in bed. Do you think that they would have stayed in bed until the first shot were fired? We would have saved our most precious things. I ran to a well with 70 people when the fighting started. I was afraid the staging would break. The well was 150 feet deep. But I put about 50 people in there and went with the other 20 up into a stable. The shots were firing through all day, and I was going out to the parties to see how things were going on. There were about 50 of these men there, and they knew very well that women and children were there, and only 4 of these Greeks kept them at bay, and I filled their rifles for them and don't care who knows it. [Applause.] We hadn't even had breakfast that morning. We weren't even dressed. Our children didn't have shoes and stockings on their feet. We were there until 7 o'clock that night, when there was a freight came along, and somebody suggested that would be the only means of escape.

The freight train was coming up this way [indicating] and the militia was over there [indicating], shooting this way [indicating], so I was about 15 yards away from this well, so I said I would go to this well and tell these people to get out. They were down so deep that they could not hear the freight train coming. They said not to go, but I decided I would go, and I went; and when I went to this well these people were so excited that they could hardly get up, but they got up and I was the last woman to leave that well, and one Greek helped me with one of my little girls and I took the other one. And when this man that was driving this freight train through got opposite the well one of these militiamen went up and said, "If you don't move out, and damn quick, we will shoot you, too," and he had to move out; and when he did move out they could see me, when I was standing up, and they were shooting at me and they shot a piece of my hair off, but I am not dead yet. [Applause.] And when I was running to this arroyo I fell over a man that was shot. I fell over this dead man. And they told me that when he died "Union forever!" was on his lips. I had fallen over this man's body as I was going to the arroyo, and they were firing, too, as I was running up this arroyo, and there were pregnant women with us and seven other children, and the most pitiful sight you ever saw, and these women were lying on the side of the arroyo fainting. I tried to throw some water at her, and I took her running as fast as we could to the first ranch, and we reached this first ranch, which was about 2 miles. If we could have crossed right across, it would only have been a mile. We could see this tent colony ablaze, and we knew we had not a place to lay our heads. We were just like Jesus Christ was born into the world. When we reached this ranch we could see these soldiers—I won't call them soldiers—I could see these men on horseback as if they were coming in that direction. Fighting the women and children; that is what they were fighting. They didn't want to fight men; they were too cowardly to fight men. [Applause.] And I could see them heading for this ranch, so there was a man there with a big wagon, so we had the oldest women and children put in this wagon and we walked behind it and we walked for another 8 miles—from 15 after 7 until 12.30 in the dark, and you couldn't see your hand before you, and the little children were so afraid they wouldn't make a sound, and the women held their hands over the babies so they would not make any noise, so they wouldn't know where we were and could

follow us. And one man had to get out of bed with pleurisy that morning. We were leading the road. We had lamps, but we daren't light them, and we had to travel in the dark, and we got 4 miles farther than we ought to, owing to no light. When we reached the second ranch we put the children in bed—15 in one bed—and we lie down on the floor ourselves, and was very glad to have that place that night. We got up that morning and heard that our men on the hills didn't have any water. We took a bucket up to these hills, which was another 5 miles, that morning, and when we were reaching these hills the shooting was terrible. When we got to the foot some men were coming down, and said, "For God's sake, go back. You needn't take that now; they have a barrel of water." And we left the buckets there at the foot of the hills so they could get it if they wanted it. And that night we went to Trinidad. We had to go on a road that had never been used before, and had to take 5 miles more just because we had to go on a road so that we wouldn't be caught. We found the people there very, very kind, and we thank everybody for what they have done for us; but even more so than charity we want justice. [Applause.] I will read to you what one of our men has written. John D. Rockefeller, when testifying before the congressional committee investigating the matter, when asked if he approved of the use of machine guns and paid gunmen, replied, "My conscience acquits me."

She then read a poem by a miner on the subject.

REMARKS BY MRS. LEE CHAMPION.

Mrs. LEE CHAMPION. It will be very tame to hear me speak after listening to these "ignorant foreigners." However, I want to tell you that what they have just told you is absolutely true. And the reason I know is because I went down there and made an investigation. In the first place, I was chairman of the Ladies' Relief Association, of Denver, to relieve the sufferings of the women and children, and I was sent down there to investigate their conditions and report back to them. I first went to Trinidad, then to Ludlow. I went in company with Miss Alma Lakaday and Miss Evangeline Hart, of the Peace Society. We went out and presented our credentials to Maj. Hemlock, then returned to Trinidad and began to gather evidence. In a couple of days the other ladies returned to Denver, and I went on with my investigation. There are some points they didn't touch upon, and that is the destruction of private property which did not belong to the miners. There were homes belonging to different parties which these soldiers—I ought to apologize for saying that—entered and ruined completely. There were two stores which they entered, and they demolished everything they didn't carry away. They scattered flour and meal over everything—demolished everything in that place. They entered a bakery and demolished everything in that. They entered a mother's store and demolished everything in that. They entered private residences and carried away jewelry, hand-painted china, carried away trunks, carried away everything that was worth carrying away. Now, this I know and can prove, and I am prepared to do so, and if anyone denies this you ask them to show me their proof that it is not true. I went down to the grounds of the Ludlow tent colony. I never saw anything that spoke so much for itself as this ruin. I have some of the pictures here, and I wish I had enough so that you could all see it. If you would go there to-day and you could look at it, the thing speaks for itself. The colony was laid out in rather regular rows, with streets or alleys, and I think they were numbered. My first observation when I got there was a chicken house right up close to the tent, which was not burned; that is, the parts which were made of wood were not burned. At that time the mine owners held that the miners had burned themselves out. They had done it, and they contended that the tents were not set afire. Now, I have affidavits to show that they were set afire. All of the affidavits which I collected on my trip of investigation I have given into Judge Lindsey's hands, believing that a lawyer can do better justice than I can. I observed these pits. This particular pit, in which these women and children were found, was the safest pit in the whole place, and it was just a little larger than is given in the coroner's report. I know that because some one went out and measured it. There were many grave rumors in regard to what became of some of the people, who have not all been accounted for. That is one of the particular reasons I had been sent from Denver. After the others left for Denver I went out, and with the aid of men, picks, and shovels we tried to find something else. I knew we wouldn't find anything, but we wanted to satisfy the public. There were something over 20 who were still missing.

While I was there in Trinidad word came that it was reported that a certain well ought to be investigated, and as I had originally got permission to do this work from Holbrook, they thought I ought to ask permission of Maj. Lockett to go out again. The coroner, the district attorney, this gentleman, and myself visited Col. Lockett and he requested us not to do this at this time. It was during the disarmament proceedings and they didn't want any agitation, and promised later to let us go, but the general opinion—I will not make any statement not covered by an affidavit without telling you so (this isn't covered by an affidavit)—but the general opinion of most people is that if there were any dead not otherwise accounted for that they were burnt in the coke ovens. It is true they have not yet been accounted for. There was one pitiful thing in connection with this, and that was the cries of a child away in the mountains. Supposing that door was where the high elevation of ground on which these guns were placed. That corner over the place at the steel bridge. This side of the room as the Colorado & Southern Railroad tracks. Beyond that a switch, on which there was a long string of steel cars, from which the men shot into the tent colony. It has been the custom of the men, in order to protect these women when there was any trouble imminent, to leave the tents and go for the Black Hills, away off to the left. When the gongs were sounded the men immediately made for the left, so that if the militiamen were going to fight them they would fight them off to the Black Hills and would let the tent colony alone. The pump house was all back. Behind the pump house was Mr. Lowe's residence, and near that this deep well. It was something awful. It had a stairway leading down to one landing. Then another stairway. It led down one side, then a semicircular landing. The stairways led from that side down, and so on, with this deep well right in the center. Why those children weren't all drowned I don't know. They were there all day. We have the testimony of a Mrs. Dear. They claimed at first that the strikers started it. I got my affidavits, before any of the militia had testified, that they had tried to start this fight with the strikers. All of my affidavits so far state they tried to start trouble at this ball game on Sunday. Since that time a lieutenant and some others at this military court—kangaroo court—that they held testified that they had attempted to, but had not succeeded in doing so. Mrs. Dear testified that she got up about 9 o'clock and was washing her hair, when her husband told her to come quick. She said she saw them throwing up breastworks and planting their guns. She then ran to her neighbors and told them that there was liable to be trouble. She observed nothing that would cause this except that some boys were playing ball. I have in my possession the affidavit of one of the boys who was playing ball. He was totally unconscious of any trouble at all. A couple of horsemen came down the hill to the right and came past her door meeting these other horsemen. When they met they returned from the direction of the steel bridge. As they went by her home one of them yelled, "Good-bye, we are off," and everybody took to the cellar. We had a public meeting in Denver and one lady, a coal man's wife, said, "Mrs. Champion, isn't it true that none of those children were shot?" I said, "One boy was shot." She said, "That was all?" I said, "Yes; but which would you prefer, to have your children shot to death or smothered or burned to death? Does it matter?" There is some mystery around this. The whole truth of this has not come out, but there are those who have told me that they were afraid to tell the truth. It isn't only a matter of losing your job; you are much more likely to lose your life. That is the absolute truth. In time, you will get this all, I am very sure; but there is some mystery about one thing—these children.

This mother, Mrs. Petrucci, had three children suffocated while she was unconscious in this hole. The next morning she became conscious, but she lost consciousness and never saw them again. I have talked to her about this since, and afterwards secured the affidavits of the other parties, several of whom were Mexicans, and I had to have the services of an interpreter. The interpreter said the thing that puzzles the women is that where they had left their children that were not burned. They were suffocated. There are many and grave rumors about what happened to them. But to put more enlightenment on the situation, I want to tell you that that day some time a saloon was demolished and $1,200 worth of beer and whisky disappeared. I don't know whether it was demolished or not, but I doubt it. I fully believe that those men were drunk when they did this, because no human being can go over that ground and imagine a man in his senses doing what they did. Behind one of the stores, lying there to-day, is a little pig that was taken out and its two forefeet cut off. Some of the clothes of some of the ladies were taken and destroyed, and the nasty, corrupting things that were done would put any man to shame. None of these places of business were miners' property at all. To me it looked like a villainous, drunken orgy. I have given all my testimony over to Judge Lindsey, and I want to give it over to all who want it. The press of Colorado say, "Oh, don't ruin Colorado." They are ruining Colorado themselves. I want to tell you that the financial bodies of Colorado have smothered and smothered these things until the whole State is besmerched right now. [Applause.] And in my report which some certain individuals—you may guess whom—tried to prevent me from publishing I asked them for once to let in the light of day and to make a social bonfire and burn up the political rubbish, and then they could resent people pointing the finger of scorn at Colorado. They deserve all they get for permitting it all this time. When this thing happened I couldn't sleep at night. I can't explain it to you. It was an awful thing to think of. The horror of it got on my nerves so that I could not sleep. I wish I could picture it to you just as bad as it was. I said, when I went off that day and before I went down, that every citizen of Colorado who sits still in the face of such a thing is participating in those atrocities. [Applause.] And I offered my help, and I paid my own expenses down there, and I am going to pay them clear through, just for principle's sake. [Applause.] And just one thing more. You will hear something better in a moment. You have no idea of the tensity of feeling in Trinidad. Now, don't think I am lying about this. I was walking along with a lady, and she said there are 1,000 union-line women in this town who, if they impose upon women and children any further, will fight; and she meant it. [Applause.] She also said, pointing to a printing press, "The Free Press." She said that place has kept, until the Federals came here, a force in their back room to keep the militia or gunmen from blowing up their press. I doubted that. I had no idea how it was. I walked straight over to this printing office and I said, "Is this true?" They said, "Yes; we kept 15 men in that back office, and across the street is a building in the second story of which we have kept an armed force of men to prevent them from blowing up the Free Press." Why? Because it never gave a wrong statement during the time I was there. The worst feature of the whole thing is the Baldwin-Phelps Detective Agency. It is one of the obnoxious features of the strike. There is an army of them there at Trinidad. To my mind those coal companies are criminal organizations or they would not need them. [Applause.] When I got home I was very tired. I had been unable to sleep, and I thought I wouldn't let anybody know I had arrived home. It was just a little bit until there was a detective in my home. He said, "I am president of the Cigar Makers' Union; my name is Robert Johnson," and he says, "Now, you are an intelligent woman, and it is too bad you have to pay your way down there yourself. Won't you let us pay your way?" What he wanted to know was, "How much will it take to make you keep your mouth shut?" [Applause.] I could talk a long time, but this is enough. They have told their story, and every particle of it is true. It is almost unbelievable, but it is true. [Applause.]

FURTHER STATEMENT BY MRS. THOMAS.

Mrs. THOMAS. There is one thing I forgot to tell you. It is the insults we have had to take in Ludlow from these gunmen. There was no law to protect us. We had no place to take our cases to. I know, for one night, when two militiamen came down drunk, and there was a woman there, they told her to drink some whisky, and she wouldn't, and they were going to arrest her and take her to jail because she wouldn't, and she called me and she said that they were going to arrest her. I said, "You will not take that woman out to-night or you will take me, too. If you want that woman come down in the morning." And it was 12 o'clock, but they never came. But the insults we had! We will never do it again. We would rather be shot. Although we are ignorant foreigners, we would rather die than take what we have taken. Our honor is more to us. And they say all kind of things about Louis the Greek. That was the most intelligent man I ever met. He was the hero of Ludlow, a man who knew the Bible—not like John D. Rockefeller. It always reminds me of a society lady that came from London one time down to Wales, and when she was there she thought she would like to see the miners. She went near the mine to watch them come home, and when she saw them she said, "Well, but aren't they like men." So the same thing applies here. [Applause.]

Judge LINDSEY. I hope the audience will have a little patience. We have a few short speeches from some very important gentlemen. You are to hear from Representative MACDONALD, of Michigan, who can tell you and will tell you a most interesting story. You are going to hear from Representative BRYAN, of the State of Washington, who has a little constructive program he will perhaps refer to, and Congressman EVANS, who has been on the investigating committee in Colorado. These

speeches will be brief. We will now have an announcement by Miss Winslow.

Miss WINSLOW. I have an announcement to make. I want to say that your part of the meeting is now to take place, because the ushers are starting to take up a collection, which we hope to defray the expenses of the meeting with. The Washington Woman Suffrage Council is very energetic, but poor. We will arrange all the meetings we possibly can for you, but we shall have to ask for a contribution from you to pay for them.

Mrs. TINNIS. The request that this announcement be made has been sent to the platform: There will be a conference on behalf of the unemployed at 811 E Street NW. on Friday (to-morrow) evening and on Saturday, May 23, from 10 to 12 noon, and Saturday evening. All are invited. Signed, D. F. Wheeler, P. H. Turner, and James E. Hall, committee.

CONGRESSMAN MACDONALD, OF MICHIGAN, INTRODUCED.

Judge LINDSEY. Ladies and gentlemen, I am sure you will not be seriously disturbed by the collectors, but, in order not to lose any time, I now have the pleasure and privilege of introducing Representative MACDONALD, of Michigan.

Representative MACDONALD. Mr. Chairman, ladies, and gentlemen, with all due respect to our friend Judge Lindsey, I have been very much impressed in watching the effect of these wonderful stories upon you and noticing your demonstrations by the fact, and I doubt whether there is a "judicial temperament" in this audience. [Applause.] The things that you have heard related to-night have occurred in Colorado—Colorado, in the United States of America, not Russia. And the things that have happened in my home in the copper miners' strike in Michigan are exactly the same kind of things. [Applause.] These occurrences that have happened in the last few months can be easily explained away by any number of great constitutional lawyers that we have in this country to-day. [Applause.] They can show you that our people that have been killed by these gunmen imported from the East into our States according to the strict letter of the Constitution [applause] and say "What are you going to do about it?" The story, as Judge Lindsey so well said, repeats itself over and over again. A few months ago these horrors were happening at my home in the copper strike in Michigan. The men were imported from New York—hired gunmen—and were turned loose upon our people. They in some cases wantonly murdered them. Since that time some of the gunmen have been brought to trial and have been convicted. The judge in sentencing four of them to the penitentiary said that this was a case of unmitigated guilt. At the time, before we had accomplished this, before we could get these men brought to trial, for three months after they had committed this wanton murder upon our people, they were still in charge of the administration of the law in our community. You heard of the awful horror of Christmas eve at Calumet, in which 73 people were crushed. Sixty-two little children killed. Their lives crushed out. All these things happened and it is gone by. The strikers have been beaten. They have gone back to work—as many of them as can get work—and the same old conditions will go on, the same old injustices will work over and over until it breaks out again. The same thing will happen in regard to Colorado. The forces of society that make these things possible will go on just the same, apparently. You are interested to-night and you are enraged, but in a few short months it will be forgotten. The powers of society that prey upon our people will go on preying, and what are you going to do about it?

SOME ONE IN AUDIENCE. Take over the mines. [Applause.]

Representative MACDONALD. How are you going to take over the mines?

SOME ONE IN AUDIENCE. By confiscation.

Representative MACDONALD. Now, just listen a moment. We have not only some 15,000 employees in the mines in our community, my own community, but we have a great many other people—professional people, business people, just as you are. I have talked to many audiences in my home, just like this audience. You will be surprised, no doubt, to learn that when the time came—the crucial time came when our miners were struggling in the last extremity, when they were absolutely astounded and dazed at the brutality, the atrocities inflicted upon them by these hired gunmen and the local officers and the powers—you will be surprised, no doubt, to learn that the large part of the respectable element of the community sided with the mine owners. They held meetings in their churches urging incendiary action. Incendiary speeches were made, urging action against whom? Against the striking miners and against those whom they called the agitators. All the influences of society there—the churches and everything else—were used by these forces against these men who were struggling for justice. Now, those people are not any different than you are, except that they are there, and when these forces are applied they respond. How can these conditions be remedied? It means determined, systematic work and a determined, systematic program—political program. In every one of these cases, I say, these powers that prey are the wealthy, these malefactors of great wealth—and I dare say that most of you can not deny this if you are honest; down in your heart you can not look upon a man who is worth twenty millions as absolutely lacking in respectability. And the time will never come when we are going to redeem ourselves in this country until we get rid of that slavish adoration of the material things of life [applause], until we get to the point where we really mean what we say—that a crook is a crook no matter whether he is a millionaire or a pauper. [Applause.] You know perfectly well, and I know, too, the difference between murdering one of these multimillionaire mine owners and murdering one of the miners. Which would shock you the most?

A SMALL PORTION OF THE AUDIENCE. The miner.

Representative MACDONALD. No; it wouldn't. Here is another thing. Not one of these social cataclysms occurs in this country, not one but what at the critical time the officers—the public officers that you elect—are found on the side of the powerful.

SOME ONE IN AUDIENCE. But we don't elect them.

Representative MCDONALD. But you do

SOME ONE IN AUDIENCE. We don't in the District of Columbia.

Representative MCDONALD. Most of the residents of the District of Columbia don't vote here; they gone home to vote. But in all such cases that it is the problem that we must meet. It must be met politically. I don't mean partisan politics. It is a political problem. It can be met by putting men into office who will serve the people who put them there. We had our experience in Michigan. The copper miners' strike was not 48 hours old before every single national guardsman of the State of Michigan was either there or on the road—some 2,600 of them—and when they were there they were placed at the disposition, of course, of the mine owners. We had a governor of the State of Michigan, a man who has been going up and down the State for 30 years preaching about the rights of the people, and he said and he continued to say that if outsiders would mind their own business—meaning the Federal Government, Congress, and the President, and the Department of Labor—that they would settle the fight themselves in Michigan. And when a resolution providing for a congressional inquiry was introduced into Congress he immediately sent a telegram calling the Member who introduced that resolution a traitor and a liar.

SOME ONE IN AUDIENCE. Did it go through?

Representative MCDONALD. Yes; it went through, and the committee investigated and we are waiting for the report. Now, I only expected to talk a moment or two, but I do, friends, want you to carry something away from this meeting. Don't just merely leave a wonderful impression upon your sympathy, but take it with you that you owe a duty, every one of you, to do something in this situation. You can help make public opinion. Make up your mind that as far as your influence goes that you will exert it. [Applause.]

CONGRESSMAN BRYAN, OF WASHINGTON, INTRODUCED.

Judge LINDSEY. Ladies and gentlemen, I have the honor to now introduce to you a man who has some constructive ideas of this difficult situation, who has endeared himself very much to the people of our State, Representative BRYAN, of Washington.

Representative BRYAN. Mr. Chairman, ladies, and gentlemen, I have got the biggest job of my life to do right now. In 10 minutes I have got to tell you what to do, how to do it, and how to take care of Mr. Rockefeller, and how to take care of the mining situation out in Colorado. We have had a good deal of talk about our duty. We must consider our duty. But the eloquence of Webster, the moral conscience of Wilberforce will not do by itself. We have got to have common horse sense in this particular situation. The reason why all of this trouble is prevailing out there is because an absent landlord owns vast areas of land, and by the power of money he says who shall come and whither they shall go and what they shall do. He has that power by virtue of that title. He must be divested of that title. [Applause.] That ownership must be taken away from him. It has been said here to-night that the coal was put there by God Almighty for the people of this country. It is true. No man has a right to gather unto himself the resources of this country in such superabundance that he can compel the whole mass of people, a large number of people, to come to him for that necessity of life. [Applause.] John D. Rockefeller has no more right to the coal mines of Colorado than he has to the moon. In pursuance of those ideas I have introduced a bill in Congress, and I would like to see that bill enacted into law. It provides that under the conditions out there the President of the United States is ordered to take possession of these mines with his Army; with the soldiers he is to take possession of them and operate them, and he is to put the men to work, and he is to see that the present conditions are improved; and while he is operating them the Attorney General is to begin condemnation proceedings and take away from John D. Rockefeller these coal mines; and having taken them away, the flag is not to be hauled down. Uncle Sam is to continue in ownership and is to continue to operate these mines. Why should they not be operated for the people by the people? Why should they not be maintained, not to make a few men rich and give to them an entirely disproportionate amount of money; instead of that, why should they not be operated for the people who have to be warmed by that coal? They ought to own the mines; and if that plan is followed, if that course is pursued, we will be able to operate the mines under decent conditions, decent labor conditions, and under conditions that permit the people to have peace; permit the people to have ball games, if they want to; permit the people to go to church and worship God; permit the children to live under decent conditions. Colorado—the name is disgraced. That will be wiped out and Colorado will be pure, because the mines will be operated not for profit nor for a miserable desire of a few; for the sake of greed, to mass up their wealth, but for all the people. We had, only a few years ago, an awful fight in Pennsylvania, and then there was a man in the White House [applause] that when he said something, when he showed his teeth and talked about calling out the troops, they did not fool with him. Not a bit. [Applause.] Do not stop me by applauding; let me make my speech. We have a President whom I love, whom the majority of the American people love. More people love Woodrow Wilson than anyone could believe. He has more unanimous support of the people at this moment than any man you could possibly think of. But, according to my opinion, President Wilson, whom I respect, and I would not say anything against him, but I believe he is on trial right now. I believe that there are a large number of people that believe he does not possess the necessary nerve, the necessary backbone, to handle such a situation; and if he does not show it in this instance, he is just as sure to lose the confidence of the American people as he has the confidence of the American people now.

When the anthracite coal strike was on, that great strike in Pennsylvania, Theodore Roosevelt sent word to the Army officers, and he arranged with the governor of Pennsylvania that the governor was to call for the troops if they wouldn't arbitrate, and he had all the arrangements made to take over that mine, and he has given to us the very details that he had planned to use to acquire and operate those mines in the name of the United States Government, and those mine operators knew that Theodore Roosevelt would do exactly that very thing. It is true that Theodore Roosevelt didn't plan to keep them in the Government ownership and continue to operate them, as I suggest, but the time has come to go him just one better, and I believe that there is the only way we can do the things that we have to in Colorado. We have had all these property laws passed. We have men going up and down talking about the duty to the State. But we have got to be practical. We have got to take these utilities, the great franchise-bearing utilities away from private parties. We have got to break the power of the great railroads of the country who have monopolized transportation. We want to take away from private interests the railroads of this land and the fuel that we use and need. And if we do that, if we have a program, then Congress can act, then Congress and the legislatures can act. We can tell them how to act. We don't have any trouble in the Post Office system. Everything goes along nicely. And so we can handle these big problems in this country, and I hope that every influence will be brought to bear that can be brought to bear to develop a sentiment for the passage of a bill that means the taking by due process of law of the coal mines away from Rockefeller and placing the title in the United States Government, where it ought to be. [Applause.]

Judge LINDSEY. Mr. Judson King has a resolution he would like to read to you, providing for Government operation of the Colorado mines and providing fair wages to workers and fair prices to consumers, which embodies the fundamental solution of the Colorado situation, and to be passed by those present. [The resolution in question was read. It indorsed and recommended immediate passage of the bill for the Government to condemn and operate the mines.] You have heard the motion offered by Mr. Judson King?

Congressman KINDEL. I amend it by saying all the mines.

Congressman BRYAN. We don't want any such an amendment or any such a suggestion. The gentleman knows that there is no plan on to take in all the mines. Take in gold mines and silver mines and amend the bill, amend the proposition so it is worthless. We have one thing to do, Congressman KINDEL, and we don't want any suggestions about any other mines.

Congressman KINDEL. I don't believe that there is a man in this house that has stood by the masses as against the classes for the last 25 or 30 years as I have done.

Judge LINDSEY. The Chairman can vouch for that.

Congressman KINDEL. I believe it is the prerogative of American citizens to tell the truth and to know the truth, and to have the courage to tell it. I want to see if there is anybody here that can dispute this fact that we have succeeded in Colorado to get the initiative, referendum, and recall, and Judge Lindsey and myself have done great work in that line to accomplish it.

Judge LINDSEY. I can vouch for that.

Congressman KINDEL. I want to say, further, that the mine owners have done all the things that have been asked of them six months prior to the strike.

Congressman BRYAN. It isn't so.

Congressman KINDEL. I want to say that if this is not true that they have sent this telegram out, I want to be the first to help to throw stones. I am on record as having been opposed to John D. Rockefeller long before you folks ever heard of him.

Judge LINDSEY. All in favor of the resolution of Mr. King signify it by saying "aye."

(The resolution was unanimously adopted.)

CONGRESSMAN EVANS, OF MONTANA, INTRODUCED.

Judge LINDSEY. You will now hear from Congressman EVANS, who was on the congressional committee. After that, I am going to tell you about our visit to the President of the United States.

Congressman EVANS. Mr. Chairman, ladies, and gentlemen, the promptitude with which you passed a vote on a resolution concernig something about which you know nothing prompts the suggestion that perhaps we, as a people, get just as good government as we are entitled to. [Applause.] Under our form of government we always get just as good government as we are entitled to. If we do not like it, we have the power to change it. If we continue in one old rut and it is bad, we have nobody to blame but ourselves. Let us be sane upon this and all other questions. I, too, believe in taking some things from some people, but I am going to take them, so far as I am concerned, according to the laws of the land. That is what we have laws for; and when you take them otherwise you have anarchy, such as you have in Colorado to-day. For several weeks I stayed in Colorado, assisting in taking 7,000 pages of testimony. It was there that I met Mrs. Thomas, who for 11 days laid in jail without cause, without reason. It was not done according to law. [Some one asked, "Why?"] Why wasn't it done according to law? Because—I will tell you why. You people ask; I may offend these good people here—because the State of Colorado lacks more in moral sentiment than any community I ever saw. I told them so. The people of the country wouldn't publish the news there. They wouldn't publish the testimony that was given.

SOME ONE IN AUDIENCE. Why wouldn't they publish it?

Judge LINDSEY. Please don't interrupt the speaker.

Congressman EVANS. And that is the only way you will ever win a fight, by being orderly and being sane and going at the matter with deliberation. I think outside of these few people here that I know intimately more about the Colorado situation than any of my audience. I went out there, prompted by a resolution of Congress, as a Member of Congress. We went into it as deeply as we could, and I found the most deplorable condition out there. I am going to tell you of some of the conditions we found. And I want to tell you, to begin with, that, in my judgment, all the blame is not on one side. That is natural. That is human.

When I lived as a boy out in the western country, as a young fellow, I was a dispatch carrier in an Indian war—and the war they have had in Colorado is an Indian war. It was an eye for an eye, a tooth for a tooth, and a scalp for a scalp, and its doesn't make any difference whose scalp, so long as he is of the opposing side. A mine guard killed a striker and a striker killed a mine guard. It is a disgrace to civilization that they imported these gunmen from West Virginia, and they carried the same machine guns that had been used in West Virginia. There was one place where the law was weak—that they shouldn't import guns for the purpose of shooting down the inhabitants of their State. You will never have peace in Colorado until you have industrial justice. It will never come from precipitous action upon the part of this audience or any other audience. I want to be reasonable about this business. I am a law and order fellow myself. I tried to get the militia to put me in jail in Colorado, because I thought I could break the strike if I did. I have heard that the militia was hitting people over the head and putting people in jail, and I thought I would ascertain for myself. I dropped in at 8 o'clock and went on the street corner. Trinidad is a town of about 15,000, well lighted; and I saw a man—a cavalryman—standing on the corner talking with some other men. I went up and joined in the conversation and asked this soldier several questions, what his hours were, etc. He answered them all very civilly. In the course of two or three minutes I finished my conversation. Up rode three petty officers. They were militiamen—cavalrymen. The man in charge whispered something to the other two and then turned to me and said, "What is your name?" I said, "I don't know that that is any of your business." He asked me then, "What are you doing here?" I said, "I don't know that that is any of your business." He said, "You get off that street corner." I said, "You get plumb to —— down the street." And I tried to get him to hit me. They knew the committee was coming to town that night, and he wouldn't do it. He rode off down to headquarters and came back in a few minutes and said, "I am sorry, Mr. Congressman, I insulted you. I owe you an apology." There are some good men in that militia out there, but there are a lot of plug-uglies, gunmen, and thugs imported from New Mexico and Texas and West Virginia as ever cut a throat or scuttled a ship. There isn't any question about it. The testimony reveals the fact that in one bunch of men that were enlisted in the State Militia of Colorado one bunch of 18 men were in the employ of one of the mining companies, drawing $100 a month; and they continued in the employ of the mining company, drawing $100 a month. They drew also $30 from the State of Colorado, which is a disgrace to the condition of our civilization out there. Perhaps Colorado was not to blame for that. I will tell you the cause of the trouble out there—the reason those men struck. The conditions under which they lived were absolutely intolerable, as these witnesses have told you. All the mining in Colorado is done in canyons. Coal is found cropping out on either side of a narrow gulch and they develop it, and they build a town for the purpose of mining it. They incorporate this town after they have built quite a town. Then they apply to a board of county commissioners to abandon the public road that runs up this canyon and goes down on the other side. They abandon that public road and they make it a private road, and they put a guard across this road at the line of the company's property, and every living soul who goes into that incorporated town or goes out must get a pass. Think of a Congressman having to get a pass to go into an incorporated town in the great State of Colorado.

VOICES IN AUDIENCE. Law and order! Law and order!

Congressman EVANS. Is there anybody—will anybody here stand up and tell me that he doesn't believe in law and order?

SOME ONE IN AUDIENCE. Not if that is law and order you are telling about, I don't.

Congressman EVANS. I didn't say that was law and order.

SAME PERSON. Let me say something further. I don't believe in the law and order that our courts usually deal out to us.

Congressman EVANS. That, in turn, is the trouble of the citizenship of any country. Because we control our courts. We elect our courts, and when we can not elect honest men, then we must admit ourselves incapable of republican government. Let us not forget that we are Americans, worshiping under the flag of the Stars and Stripes, telling all the world that we are self-governing. Let the good people of the District of Columbia not forget that. Out in my State I have a vote, and I worship the right of that vote, and I am going to give it to the good women of my State in the hopes for better government. The chairman has cautioned me that I must stop.

Judge LINDSEY. Glad to have the Congressman go on.

Congressman EVANS. The conditions in Colorado are absolutely intolerable. And in one of these incorporated towns, for instance, we had a man on the witness stand. He told us he was mayor. We were criticizing the conditions there, and I criticize them now very frankly; but I am not willing to criticize so frankly that these people for a moment believe that I believe in anarchy. This is the kind of law and order they have there now. That is the reason I asked Mr. Wilson to send the troops there when the matter got beyond the control of the civil authorities. We said to this mayor, "Have you ever ordered anybody out of town?" He said, "I ordered one man out." "What was his name?" He said, "Ben Tolman." "What did you say to him?" He replied, "He had been talking union too much." "He had been talking union too much?" "Yes." "He had his house there?" "Yes." "He abandoned everything?" "Yes." That is one of the conditions under which the people live. I took the coroner's reports of the county district. I found that there were 232 violent deaths in that county—187 were accidents in mines. I found that, so far as the record was concerned, and the law provided they should hold inquests, that they held 30 inquests out of the 232, and I found that the foreman, one man, an officer of one of the leading political parties there, was foreman of the jury 24 out of 30, which was out of the 232. And I found this sort of a record of one man killed: "John Smith, age, etc. Killed in mine by fall of rock. Injured in spinal region. No funds, no relations, and damn few friends." And that was the record. I asked Mr. Rockefeller on the stand about it. He thought it was a term of endearment that was used.

There are things I would like to tell you about Colorado, but my sympathy is with the people that are working out there; and if we are going to take the mines of Colorado, let us take them by law. I asked Mr. Rockefeller what he thought about it, but he dodged the question. I don't blame him for dodging. I haven't time to discuss that with you. I am grateful that Judge Lindsey came here to enlighten these people. For six or seven weeks I tried to get some publicity on the conditions. There wasn't a paper in Denver that would dare publish it. I said to them if the press of the State of Colorado had given to them the testimony that we developed in the statehouse we would have settled the strike before we left. The press of all States has been subservient. Since then they have come to their senses, and are to-day giving to the public the conditions that exist in Colorado.

Mrs. CHAMPION. I wish to inform the gentleman that one of the papers had a suit brought against it for $600,000 for publishing the truth. Just an instance of a new system of blackmailing.

Judge LINDSEY. As soon as the papers begin to publish the facts Mr. Rockefeller proceeded to sue them for $600,000 for telling the truth.

SOME ONE IN AUDIENCE. I rise to ask a question for information. I am a curious sort of a chap, and I want to ask the distinguished gentleman from Washington about how long he thinks it will take to get his program through the American Congress.

Congressman BRYAN. The gentleman himself calls the rolls every day; he ought to know. Turn out the Democrats and put in the Progressives, and we will do it right away.

Judge LINDSEY. I would also like to ask how he expects to get it past the Supreme Court and the Constitution.

Congressman BRYAN. We are building the Alaska Railroad. We have that all fixed there. The Supreme Court has had its ear to the ground.

Congressman EVANS. The power of eminent domain has been suggested, and I quite agree that there is some way to get justice, notwithstanding the Supreme Court.

SOME ONE IN AUDIENCE. I would like to ask if there is anything about divesting those mine owners of those mines? If not, in what political platform is there something about it? [Applause.]

Judge LINDSEY. Mr. BRYAN, you have been asked a question.

Congressman BRYAN. I really didn't hear the question.

(Same person repeated the question.)

Congressman BRYAN. Well, only indirectly. It is not directly stated, out the Progressive platform says something that bears directly on it. You read the Progressive platform, and you will find it there.

Judge LINDSEY. We promised to close this meeting at 11 o'clock, and the ladies have requested that they be kept not later than that.

SOME ONE IN AUDIENCE. That provision is in the Socialist's platform. [Applause.]

Judge LINDSEY. If Mr. Rockefeller knew how many Socialists he is making in this country, he would tumble over himself to have this question arbitrated.

SOME ONE IN AUDIENCE. I want to ask you a question. I want to ask you, don't every intelligent man, as a matter of fact, know that it is utterly impossible to get Mr. BRYAN'S resolution or bill through this session unless the President of the United States does as the one preceding the last did in the case of Panama? He took the Constitution from the shelf, got Panama, and put it back again.

Judge LINDSEY. That is substantially what we have asked President Wilson to-day with reference to the situation in Colorado. Whether he will do it or not is a matter of speculation.

SOME ONE IN AUDIENCE. Why don't you ask William Jennings Bryan?

Judge LINDSEY. I am sure that I voice the sentiment of this meeting in expressing its gratitude and thanks to the women who have made this meeting possible, who you will observe are not antisuffragists, and,

secondly, I would now crave your indulgence for a few moments. The hour of 11 has arrived, but in deference to some of the gentlemen's questions I will have to ask for about five minutes or thereabouts to do two things. I want to read a resolution that was passed at a meeting at the State capitol in Denver, on the 15th of May, that involves in part the proposition proposed to the President to-day by myself and some others, who have been asked to come here and intercede with the President to step in the breach and help to save us, and, in a measure, save this whole country from the possible difficulty that we may meet unless he is willing to take the action that has been requested. I will read this resolution, and I will ask your kind patience while I go through it. It is very short; and then I will spend a very few minutes of your time in closing the meeting by telling you about the very interesting meeting that we had to-day between the President of the United States and the good women of the State, in which meeting I had the honor to be a participant. The resolution was unanimously passed at one of the most enthusiastic and one of the largest meetings of men and women that ever crowded in the State capitol at Denver. The resolution is as follows:

RESOLUTION ADOPTED AT A GREAT MASS MEETING OF THE CITIZENS OF DENVER AT THE STATE CAPITOL MAY 25, 1914, AND REAFFIRMED AT MASS MEETING IN WASHINGTON, MAY 21, 1914.

We, men and women of Denver, assembled in mass meeting, are dealing with a crisis caused by the entire collapse of our State government in a desperate emergency. Our legislature has proven itself impotent or corrupt, and our executive has publicly admitted his helplessness. We know that with the dangers threatening the country outside it is impossible that Federal troops should remain indefinitely upon police duty in Colorado; we know, on the other hand, that their withdrawal means the outbreak of civil war upon a scale even more terrible than during recent weeks. We therefore declare it our conviction that there exists a condition of military necessity such as to justify the President of the United States in using his authority to force an immediate settlement of the dispute upon a just basis to be determined by a Federal commission of conciliation. Inasmuch as it is well known that the miners are willing to submit their cause to such a tribunal, and that the only obstacle to such a settlement is the attitude of the coal operators, we declare it our conviction that the President should use his military authority to close down the mines until the operators decide to yield to public sentiment and the claims of justice and humanity; and that furthermore the President should make clear that, unless such concession is quickly made, he will take possession of the mines and operate them in the interests of the consuming public.

We are convinced that this course of action offers the only hope of an honorable settlement of a dispute which has shamed our State before the world. In order that the facts and arguments which have led us to this conclusion may be properly presented to the President, we are resolved to appoint a committee of representative citizens of this State to proceed to Washington and request an audience. And we furthermore invite the representatives of the miners to appoint a committee of women who have personal knowledge of the horrors of the recent civil war to accompany our committee and interview the President, in order that he may be informed at first hand what are the conditions against which this meeting protests.

We believe that in the above resolution we are embodying the opinion of all citizens of this State who are humane and enlightened, and we call upon the public sentiment of the country to manifest its sympathy with us. Raising our hands in this meeting we declare our solemn resolve that there shall be no more bloodshed in this State, and that the coal strike shall be settled, not according to the arbitrary will of either of the contending parties, but upon a basis of justice and humanity to be determined by disinterested authority. We believe that such an authority is found in President Wilson. We have confidence in him; we know that the miners have confidence in him; and we declare our belief that if the coal operators have not confidence in him it is because they know that their course can not be defended before the bar of public opinion.

And I want to say to you, if I may again interpolate here, that I have talked to the miners, and on every hand I hear nothing but the kindest consideration and remarks concerning the President of the United States. They feel that the President of the United States has been as friendly to them as he could be, and that he has tried as far as it is in his power to do justice in this case. [Continued reading.] And I would like to ask here if some one will make a motion that in so far that these resolutions are general and not local, if we may not ask this mass meeting to adopt these sentiments as expressed. Moved and seconded that the sentiments be adopted. Those in favor of it say "aye." [Unanimously adopted.] And now, my friends, in pursuance of this resolution, we may finally come to the conclusion of our meeting, and I will now relate a matter I know you are all waiting to hear. I had the honor to be importuned by a great many of our great people to see the President. The widow of our own Robert W. Steel, who rendered the dissenting opinion in the Moyer case, Mrs. Steel, was one of the good women who saw us off at the train. They asked us to come here to Washington with the women from Ludlow and Mrs. Champion, and present this matter to the President as best we could, and to propose one or two or three plans of settlement. I want to say to you that the President has shown us every possible courtesy and consideration—all that we could ask. He made an appointment with us yesterday, but because of the sickness of one of the ladies of our party we missed our train. And Miss Jane Addams, of Hull House, entertained us, presided at a meeting at Hull House, and expressed her warmest sympathy with the purpose of this committee coming here to Washington. We had another meeting before the School of Civics (etc.), presided over by Mr. Taylor, and the newspapers gave a great deal of publicity to the story told by the women who have come all the way to Washington to tell you their simple, yet terrible, story. The President had great consideration for us. He made way for us, and at 12.15 we appeared at the Executive Offices, in accordance with the engagement, and for about 30 minutes, which I think, under the circumstances, was about all the time we could ask or expect, he listened to the stories of these good women. He asked questions, and he permitted me to state, of course briefly but I think sufficiently, what many of us in Colorado believe is the best way out of the difficulty, and, my friends, it is this: There are several plans that we had to propose. First, let me preface this briefly by saying that the testimony which I have in my hands, but which at other meetings I shall refer to, shows beyond a question of doubt that the governor of the State and the legislature have absolutely failed in their duty toward our people in preserving the sovereignty of our State under these conditions.

SOME ONE IN AUDIENCE. What political party does the governor belong to?

Judge LINDSEY. Democratic. I will have to ask you not to interrupt me. We are all tired and our ladies are not very well, and my wife is quite ill; and we come under great stress of difficulties, and my voice isn't as strong as I would like to have it. Under other circumstances I would be glad to answer questions and to have more of these splendid meetings. Our plan is briefly this: That because of the conditions and the fact that the governor has confessed his inability to control this situation when he asked the President of the United States to send the Federal troops into Colorado, under the Constitution as it is construed and generally understood, the President of the United States has a right, when the legislature makes the request, to send the Federal troops to a State to restore order. If the legislature is not in session, then the governor may make that request. The legislature had met, but they made no request to the President to keep the Federal troops there. We understand the governor wants it, but, whether that is true or not, the people are practically agreed that if the President withdraws the troops from Colorado because of these brutalities and cruelties comparable to nothing, the militia will not have the respect that it must have if it is going to preserve peace, for these miners are men who have red blood in their veins, and after the indignities heaped upon their women and children it would be hardly possible to expect them to show that kind of obedience we would like for them to show. But however that may be, it is not for me to discuss, further than to say we are agreed that if the President withdraws those troops, which means a repetition of the horrible happenings of the Ludlow massacre—and the President of the United States can not afford to subject those people to that possibility—then the President of the United States, in the face of that admitted fact, must put human rights above property rights, even though they are the property rights. [Applause.] I happen to know, and I think I am violating no confidence in stating, that since last November President Wilson has done everything that he could do to bring about a settlement of this difficulty, until it has reached this phase now where he must find some other power in order to bring about a settlement; that he shall keep those Federal troops there and prevent the importation of strike breakers and permit a fair controversy between these controlling forces and the mine workers. I believe the result would be to eventually bring about a settlement. That was the first. The second was this: That he further use, under the circumstances of military necessity, the police powers and other powers that we believe the President may find in the Constitution; that he close down those mines, take possession of those mines in the name of the Government and in the name of peace and law and order as the only way that it can be obtained, appoint a law and order commission, and hale Mr. Rockefeller into the high court of public opinion and compel him and those with him to consent to an arbitration of these difficulties in the interests of peace and humanity and human life in the State of Colorado.

We believe that the President would be justified to take even as extreme a course as that. Extraordinary conditions demand extraordinary remedies. But without a line in the Constitution or the law the President and Congress can turn loose the dogs of war and plunge this country into a war in order to maintain a doctrine that never was in the Constitution. Mr. Lincoln did not wait for the Constitution to be amended to free the black slaves, and when we face these great crises in our Nation's affairs, not only concerning Colorado, but it also may spread to other States and involve possibly this whole Nation at a time when we are facing a foreign foe, we believe that the situation is so extraordinary that the President would be justified in doing what we to-day have asked him to do, if it is necessary to be done in order to prevent a repetition of the horrors in our State. These people, if you please, are citizens of our State, and they are entitled to as much protection as we would be if we lived in foreign countries, and some of the consuls have appealed to the President already, who asserted that because of these conditions that have been described here to-night the State of Colorado can no longer guarantee them protection. In a word, the republican government has broken down in Colorado, and under the Constitution that the General Government may be called upon by the people of a State to preserve a republican form of government of that State, and we believe that President Wilson is amply equipped with power, with public sentiment ready to stand back of him, to do the things we have asked him to do, any one of which we believe will bring an end to this war in our beloved but suffering State. He has it under consideration. He is going to do what he can do with the light that he has to-day, I think, and we are going to wait patiently and abide by the decision as law-abiding citizens. I wish to thank you for your kindness and consideration.

Mr. Speaker, there are many who will not believe the stories told by the speakers at this Washington meeting can possibly be true, and I deem it necessary to add affidavits and sworn testimony that will be convincing to all who read.

STATEMENT OF REV. RANDOLPH COOK.

GENERAL CONDITIONS.

Approximately one-eighteenth of the population of Colorado live in Las Animas and Huerfano Counties, but one-third of all the illiteracy of the State is found in these two counties, or six times our proportionate share. This is due to the large per cent of foreigners in our population. It is in this mass of illiteracy that, first, the agitator gets in his best (?) work, for, owing to the illiteracy and prejudice of the people, they are easily led.

No. 2. Hence there is congenial soil in which to sow the seed of discontent.

No. 3. Here amidst these conditions the corrupt politician gets in his work.

SPECIFIC CAUSES OF THE STRIKE.

First. Fundamentally the corporations are to blame for the strike. (a) They are to blame by reason of the fact that they have brought to this community large numbers of foreign-born peoples, who, while they are not fools, are ignorant of our language, customs, and laws; thus they have distinctly lowered our social, moral, and economic standards. (b) As soon as these foreigners became sufficiently acquainted with our customs, laws, and language to resent oppression the companies turned on them, called on the militia to help them out, and the taxpayers paid the bills. (c) Now, these companies (Colorado Fuel & Iron, Victor American, and Rocky Mountain) have sought to dominate our politics by electing, as per common report, the judge, sheriff, coroner, and assessor. It is common report that a man need not stick his head up for office who is not favorable to the companies. (d) At a time of dissatisfaction these companies secured large numbers of armed guards, whose very presence was an intimidation to the workmen and a menace to the peace of the community. (e) The operators made a mistake in not conferring with the miners' representatives when invited to do so September 17, 1913.

SECOND GENERAL HEAD NO. 2, AS TO THE CAUSE OF THE STRIKE.

The governor is responsible for this strike, who, by reason of his failure to enforce the laws on mines and miners which he swore to uphold and defend, can not escape the responsibility.

No. 3. The negligence of the so-called "good people," who to the extent of their influence have sat idly by and allowed this boil or cancer to develop on our social body, which sooner or later must burst. Even the churches themselves can not evade responsibility for this condition.

No. 4. The cause of this strike is the miners themselves, who through their leaders may not have exercised that caution in words and acts properly due under a strained condition or realized the rights of others to work if they choose.

MORAL EFFECTS OF THE STRIKE.

First. The moral effects of the strike are to be seen in the number of lives lost, estimated to be between 150 and 200.

Second. In the enforced idleness of the men, which is deteriorating in itself, resulting in the loss of millions of dollars to the community.

Third. Until recently this enforced idleness greatly accentuated the saloon business and that of the "red-light" district.

Fourth. Certain general disregard for all law.

Fifth. It is believed that the presence of the militia has distinctly lowered the moral tone of this community, as evidenced by the number of girls in the juvenile court and a large number of others who married under 16 years of age.

Sixth. It is a matter of common report that spotters visited the churches and took note of any remark that the minister might make in his public sermon or prayer that might be used favorably to one side or the other, and one minister states that he was explicitly warned in advance that spotters would be present at a certain funeral service.

THE WOMEN'S PARADE, JANUARY 22, AT THE HOUR OF 2 P. M.

The parade consisted of about 300 women, approximately 50 children, some of them infants in their mothers' arms, followed by several hundred men, mostly miners, and many local citizens as onlookers. As they reached the place on East Main Street, where Gen. Chase was stationed, mounted on a horse, he with five of his subordinate officers ordered the paraders to turn back. The order was disregarded and many persons ran about and between their horses, and proceeded on about 125 feet eastward on Main Street, where they were stopped by a number of cavalrymen, turned back, and in much confusion returned to the main part of the city. I watched the pursuit of the parade one block; I saw one gun and many sabers drawn by the cavalrymen. I noticed one militiaman on foot use his bayonet to prod a woman; one cavalryman dismounted from his horse, took deliberate aim with his fist, and struck a woman on the left breast. I saw Gen. Chase kick one young woman with his foot; one cavalryman dropped his saber. The women threw missiles, such as ice, sticks, and small stones at the militia as they were being rode upon and bumped by the horses' hoofs. Six men were arrested at this particular place, and I noticed that one was bleeding from a wound just back of the right ear, and the blood ran down his neck. I noticed one woman who had been cut on the ear. Bayonets were used to prod the people, sabers were flourished, and one cavalryman drew his revolver and struck at the people. Horses were ridden so close as to bump and jostle the people with their knees as the horses stepped.

A BOY'S BRAINS SHOT OUT BY ROCKEFELLER AGENTS.

Affidavit of William Snyder.

STATE OF COLORADO, *Las Animas County, ss:*

William Snyder, of lawful age, being first sworn, on oath deposes and says that his name is William Snyder; on Monday morning, April 20, at 8 o'clock in the morning or about, after the gunmen had lined on the Colorado & Southeastern tracks, they sent a detail of four to the Ludlow tent colony, presumably to arrest one man without a warrant; we refused to give up the man without the due warrant of law; that the said detail said that they would get their man if they had to search the camp; that we were to produce that man by afternoon or they would search; they went over to old Company K camp and reported, and from there they fired three signal shots, dynamite, I guess they were using; and all guards began to pull out of the cannons—that comprises the two cannons—and also between 20 and 30 cavalry on horses left Company K camp and crossed the Colorado & Southern track, main line, by the depot, and took position south of the Colorado & Southeastern tracks; our men, realizing that trouble was in the air, in order to avoid a massacre and the shooting of women and children, went to the Colorado & Southeastern tracks on the north and took up a position against them to keep them away from the women and children; that the gunmen, to start trouble, undoubtedly, fired the first shot, and from that time on the battle raged, they using their machine gun, three machine guns being in action; that at about 4.30 our men, running out of ammunition, had to retreat, and from that on the Baldwin-Feltz took our position and the colony, and they shot up the colony with the machine gun and rifles and started to burning the tents, not stopping to look if there were any women, children, or anybody else around. Owing to us turning our arms in to the militia, they several times took advantage of our unarmed situation and tried to carry out the threats that they had made that they would clean Ludlow out, and did. I myself, not being armed, stayed on the tent-colony grounds to protect my family to the best of my ability; and that about 4.30 p. m. when the thugs or militia had right flanked our colony and shot through my tent and killed our boy, showing clearly that they did not stop to see whether there were any women or children on the colony ground or not; just previous to the time the boy was shot he got out of the hole or cave where my children were to get his sister a drink of water, and as the firing had slackened the children had left the hole, being out of the hole from five to eight minutes, and stepped into the bedroom of my tent; the boy, Frank, was sitting in the chair with his sister on the floor between his knees, and he was in the act of stooping to kiss or caress his sister, when the bullet struck him above the temple on the right side and blew his brains out. I was standing near the front door of my tent, and I heard the impact of the bullet striking the boy's head and the crack of the bullet as it exploded inside of his head.

The boy was killed by an explosive bullet. I went to the boy to render what assistance I could, and while falling I caught him in my arms, and in the act of letting him down to the floor two more bullets passed over me in the tent; then I went to the hole where my family and children were, and seeing the boy in his death struggle, went to him again; was in the act of washing his face when another bullet went over me. The firing became so heavy that I went to my family and stayed in the cave with them until they burned the tents. They fired this tent of mine by standing by the southeast corner with a piece of paper on fire in their hands, and as the tent was blazing they came in the tent. This I observed by looking out of the hole where we were located. As the tent was in flames they opened the door and came in, and then my wife pleaded to save her children, telling them they had already killed one, and, for God's sake, to save the others. Whereupon this officer assisted Mrs. Snyder from the hole, and the other children. By this time there was five or six of the militia or thugs in the tent, and wanted to kill me. And I asked them to let me get my dead boy to the depot, and to which this officer consented, after cursing me, putting a gun to my head, and threatened to kill me; and on leaving the tent with the corpse I laid him down outside of the door to put on my coat, and I requested of some one to help me carry this boy to the depot. I was told that I was big enough to carry him myself, which I did, over my shoulder, and my 3½-year-old daughter in my arms, when George Titsworth, sr., who, to the best of my knowledge, set fire to the tent, throwed a gun on me and said, "You God damn dirty son of a bitch, I ought to kill you right here; you have fired as many shots as anybody," and he touched my head, or nearly so, with his revolver, and said, "I will kill you." My wife pleaded in behalf of her dead boy, to let us get him to Trinidad; and this officer escorted us to the depot, but on passing Snodgrass store at Ludlow Linderfelt throwed his flashlight in my face, and wanted to know what "God damned, red-neck S. B." they had here, when Mrs. Snyder says to Linderfelt, "Please don't shoot him; they have killed one of my children already," when Linderfelt says, "It's a damned pity that all of you damned red-necked bitches were not killed." But we kept on till we got to the depot, and there the floors were covered with the thugs and provisions that had been robbed from Snodgrass store, and they were joshing and making remarks over their day's work. While laying there listening to these remarks I heard one in particular say that he knew he killed one at the bridge, and would have to go down at daylight and try and get another one. I heard several say they had killed one, two, or three, and they thought that they had a pretty fair day's work, but also thought themselves that the Regulars would be in the next night. I was called into the baggage room to be consulted by some officer in regards to the leaders, and Louis Tikas in particular. They asked the question if Louis Tikas was not the cause of the troubles and a leaders of the Greeks, and I answered "No," he was the interpreter. They asked me if I saw a gun on Tikas, and I told them "no." They said, "Well, we killed him to-day and found a gun on him." Then they asked where the gunmen got their arms and ammunition. I said, "I do not know." I did not have any myself. So I was then asked what I was coming to Trinidad for. I told them as I had no place else to go at present I had to go to Trinidad to get relief and a place for the family to stay, and to bury my boy. I was then advised I had better get out of this country altogether.

At the time the machine guns were turned on the tent colony the strikers were taking to the hills, on account of their ammunition being used up.

Before the signals were fired, Louie, having been notified that the south of the Colorado & Southeastern tracks were swarmed with the militia with machine guns in position, pointing toward the colony, he went personally himself to see, and while coming back to notify the colony of the conditions the men had found out for themselves and started back to direct the fire away from the women and babes. All my earthly effects and cash were destroyed.

Further affiant saith not.

WM. SNYDER.

Subscribed and sworn to before me this 1st day of May, A. D. 1914. My commission expires September 10, 1917.

THREE CHILDREN SUFFOCATED TO HELP ROCKEFELLER MAKE MONEY.

Affidavit of Mary Petrucci.

STATE OF COLORADO, *Las Animas County, ss:*

Mary Petrucci, of lawful age, being first duly sworn, on oath testified as follows:

That her name is Mary Petrucci; that affiant had started to wash and a little later heard two bombs go off, and noticed the soldiers running toward the steel bridge, and they started to shoot down at the colony; affiant states that it was about 9 o'clock; and then affiant went into her cellar hole; that when affiant went into her cellar hole she took her three children, ages 4 years, 2½ years, and 6 months, respectively; that affiant remained in the cellar until 6 o'clock in the evening, when her tent was set on fire; affiant states that her tent was the first one fired, as her tent was No. 1; affiant states that her tent (No. 1) was the tent nearest the railroad track; affiant states that when the shooting commenced with the machine guns the bullets were so thick in the tent that she shut her cellar door; that about 6 o'clock in the evening affiant saw some fire on her cellar door, and on looking out saw that her tent was on fire, whereupon she took her three children and went to the cellar hole occupied by Mrs. Costa and other women and children to affiant unknown; that shortly after affiant reached the above last-mentioned cellar hole the tent took fire and the women and children commenced to cough, and they were all choked with the smoke; affiant further states that she lost consciousness until the next morning, when she touched and called to her three children, and they were all dead; affiant states that she went to the Ludlow station and came to Trinidad; affiant states that she does not remember anything of the trip from Ludlow to Trinidad; that affiant was taken sick with pneumonia, caused by exposure and grief; affiant states that on account of being ill she never saw her three children after leaving them in the cellar hole; affiant states that when she came out of her cellar hole the guards were shooting after her, and she started to the cellar where Mrs. Costa was, because it was dug in under like a mine, and affiant thought it would be safer, and the guards yelled, "Get away from there"; affiant states that she had the three children and she had nowhere else to go, so I went in there.

Further affiant sayeth not.

MARY PETRUCCI.

Subscribed and sworn to before me this 11th day of May, 1914.

[SEAL.] LEON V. GRISWOLD, *Notary Public.*

My commission expires September 10, 1917.

PORTIONS OF THE LUDLOW TENT COLONY INQUEST.

Burney B. Sipe, being first duly sworn, on oath testified as follows. Witness examined by District Attorney J. J. Hendrick:

Q. Your name is Burney B. Sipe?—A. Yes, sir.

Q. You are the coroner of Las Animas County, Colo., are you not?—A. Yes, sir.

Q. You were such coroner on April 20, 1914?—A. Yes, sir.

Q. You made an investigation into the death of Louis Tikas et al.?—A. Yes, sir.

Q. I will state at this time that the reason for putting you on the stand at this time is to give us the names of the parties who lost their lives at Ludlow on the 20th day of April, 1914. I am not familiar with the names, and I don't believe the jury are. You investigated that matter, did you not?—A. Yes, sir.

Q. What dead bodies did you know of that were found at Ludlow as a result of a battle and fire that occurred on the 20th day of April, 1914?—A. Alfred Martin, 30 years old; Premo Larese, 18 years of age; Louis Tikas, 35; Frank W. Snyder, 12; Frank Rubino, 23; James Fyler, 43; John Bartoloti, 45; Rogerolo Pedrigone, 6 years old; Celorine Pedrigone; Charles Costi, 31; Cedelmo Costi, 27 years old; Lucy Costi, 4 years old; Onafiremo Costi, 6 years old; Pedro Valdez, 37 years old; Elvira Valdez, 3 months old; Mary Valdez, 7 years old; Eulolo Valdez, 8 years old; Rudolpha Valdez, 9 years old; Frank Petrucci, 6 months old; Lucy Petrucci, 3 years old; Joe Petrucci, 4 years old. That concludes the list of names which I have of the deaths at Ludlow on the 20th day of April.

Q. From your investigation, Mr. Coroner, of the disaster at Ludlow, can you state to the jury how those persons came to their death; take Louis Tikas?—A. He came to his death by gunshot wound.

Q. Did you examine his body?—A. Yes, sir.

Q. How many wounds did you find?—A. Three, I think; I am not sure, but I have my physician here who can tell you about that.

Q. Did you examine him with reference to any other wounds?—A. Abrasions about the head.

Q. Who else was shot or killed at that place, Mr. Sipe?—A. Alfred Martin was shot, Premo Larese was shot, Louis Tikas was shot, Frank W. Snyder was shot, Frank Rubino was shot, James Filer was shot, and John Bartoloto was shot. The other names which I have read of persons dead lost their lives by fire.

Q. Didn't you fail to state one man, Mr. Sipe?—A. Charles Costi.

Q. Wasn't there another Costi that was shot there?—A. No, sir; that was all that was shot.

Q. Did you bring those bodies in yourself, Mr. Sipe?—A. No, sir.

Q. Do you know who did?—A. Yes, sir.

Q. Who was it?—A. I had them brought in by Mr. George, or rather William Code.

Q. They were not brought direct to your undertaking establishment then?—A. No, sir; they were not.

Q. Those bodies have all been buried, as far as you know?—A. Yes, sir.

TESTIMONY OF DR. PERRY JAFFA.

Perry Jaffa, being first duly sworn, on oath testified as follows (witness examined by District Attorney J. J. Hendricks):

Q. Dr. Jaffa, you are the county physician of Las Animas County?—A. Yes, sir.

Q. Now, then, with reference to the end of the men, women, and children at Ludlow, you made an examination, did you?—A. Yes, sir.

Q. Did you post the bodies?—A. No, sir; I only made an examination of the bodies.

Q. Did you examine the body of Louis Tikas?—A. Yes, sir.

Q. State to the jury the cause of his death, and the condition of the injuries on his body.—A. I will have to use my notes.

Q. Go ahead and use your notes.—A. He had a scalp wound on the right side of the head about 1½ inches long, done with some blunt object. Five bullet wounds—three entrance wounds and two exit. One entered about the left dorsal region under the scapula, passing the left lung and the base of the heart, taking a downward course in the right lung, and lodged near the median line over the seventh rib, under the skin; that bullet was removed. Another, the entrance, it entered in the lumbar region of the right side; exit in the same side. Wound in the second costal cartilage of the right buttock; the exit in the same side. That isn't exact, but about that.

Q. Did these bullets enter from the rear or from the front?—A. From the back.

Q. Did you examine the skull?—A. No, sir.

Q. Do you know if it was fractured?—A. No, sir; it was not fractured.

Q. What was the condition of his face?—A. It was scratched, and a few contusions about the face.

Q. Dr. Jaffa, in your opinion, what was the direct cause of Mr. Tikas's death?—A. It was due to gunshot wounds.

Q. Have you the bullet with you that was removed from his body?—A. No, sir; Dr. Scannel made the autopsy.

Q. Who else did you examine, Doctor?—A. I examined the other bodies.

Q. What was the cause of the death of the people?—A. I have it down William Snyder. Which is it?

Q. Change your record to Frank Snyder. Now, then, you are going to testify to the wounds found upon the body of Frank Snyder?—A. Yes, sir.

Q. Just go ahead and tell what they were.—A. There was one bullet wound; it entered on the farther end of the cerebrum, about 1½ inches on the right side; the exit was on the opposite side of the skull. That bullet went straight through.

Q. What was the condition of the skull?—A. Well, the entrance wound was small, but the exit wound was a large hole, about 1½ inches in diameter. Now, then, William Wyler; there was a bullet that entered on the right side of the nose, and the exit was at the back end. There was also a bullet wound through the right wrist.

Q. Then there was two shots that penetrated William Fyler?—A. Yes, sir; two. John Bartoloto had two wounds, one right over the heart, and the other one was a little bit to the right of that; both entrance wounds; there was no exit to either one. He was also shot through the right arm and through the right leg.

Q. That made four shots on him?—A. Yes, sir.

Q. Did you get any of the bullets, Doctor?—A. No, sir.

Q. But the ones near the heart were sufficient to cause death?—A. Yes, sir.

Q. Who next?—A. Frank Rubino; I think he had two wounds; both wounds were so close together right over the right eyebrow we were a little bit doubtful as to whether it was two wounds or two bullets or whether the bullet had divided.

Q. It caused his death?—A. Yes, sir.

Q. Who next?—A. Premo Larese; we could not tell where the bullet entered or the exit; the entire top of the head had been blown off. There seemed to be a mark like a bullet wound, but we could not tell whether it was the entrance or the exit wound. That mark was on his forehead.

Q. Was there any powder burns on that body?—A. No, sir. Charles Costi; the bullet entered over the right temple, and that concludes the people killed by gunshot wounds.

Q. Now, calling your attention, Dr. Jaffa, to the testimony of Mr. Sipe, you heard that statement, did you not? He gave the names of the people that were found dead out there.—A. Yes, sir.

Q. Did you make an examination of the bodies of those women and children?—A. Yes, sir.

Q. What was the cause of their deaths?—A. They were caused by asphyxiation.

Q. Smothered?—A. Yes, sir.

Q. Describe the condition of the bodies that were burned.—A. Those that were burned were slight; some very, some pretty badly burned.

Q. Were they burned so badly that their legs came off?—A. Well, Mrs. Costi's arm was burned off, but there were no legs burned off.

Q. Was there a leg of one of the children that was burned off?—A. No, sir; it had been injured in some way, and in trying to get out of there he dislocated it, or it was due to some one falling on it; they were all jammed in so small a place; but I think in trying to get him out that it was dislocated.

Q. Dr. Jaffa, did you assist in taking out any of those bodies from that cave?—A. I did not.

Q. (Juror Casimiro Cruz.) Did you notice if any of the women or the children had been shot?—A. No, sir. I believe that Frank Snyder was the only child that was shot.

Q. Doctor, did you visit the Ludlow tent colony for the purpose of seeing where these people were found dead?—A. I did.

Q. What kind of a place did you find there? Just describe it to the jury.—A. It was a hole in the ground, I would say about 6 feet in diameter; the entrance to it was such that you had to almost crawl into it in order to get in at all; it was very small, probably 2 feet wide and 3 feet high. When any amount of people would get in there you could not get any air, and asphyxiation would be in a very short time.

Q. What was over the hole, if anything?—A. It seemed to me that there were railroad ties over the top of it, and filled over with dirt.

Q. Was that inside of a tent?—A. There wasn't any tent there at that time.

Q. Well, had the tent burned down at that time?—A. Yes, sir; there were some marks there, and I supposed that a tent had stood there at one time.

Q. Was there any burnt lumber around there?—A. Yes, sir; from the indications there those people all crowded in there, and couldn't get out on account of the cave being so small, and they afterwards died.

TESTIMONY OF DR. ACA HARVEY.

Dr. Harvey, being first duly sworn on oath, testified as follows (witness examined by District Attorney J. J. Hendrick):

Q. Your name is Dr. Harvey?—A. Yes, sir.

Q. What is your full name?—A. Aca Harvey; Aca Harvey.

Q. You reside where?—A. At Aguilar.

Q. Were you in the vicinity of Ludlow on the 20th of this month?—A. Yes, sir.

Q. What time did you go there?—A. About 1.30 in the afternoon.

Q. Now, go ahead and tell the jury what you saw and did there. Give us what experience you had, if any.—A. Well, I didn't go at once to the tent colony, because there was firing over there, shooting, shooting at everyone that passed by the road.

Q. Who did?—A. I couldn't say.

Q. Where were the shots coming from?—A. From every direction, coming our way; some were shooting from a string of cars that was on the C. & S. E. bridge and from a house and corral on the hillside.

Q. Could you see any of the bullets strike the road?—A. Yes, sir.

Q. Do you know if the mine guards were stationed at either of those places you just spoke of?—A. I believe so.

Q. What were you riding in, if anything?—A. In a buggy.

Q. Who was with you?—A. Dr. Davis. We were stopped in front of Mr. Bayes's house, and that is about three-quarters of a mile away from the tent colony. They told us we wouldn't go any farther, that it would not be safe.

Q. Who stopped you?—A. Several people. There was some men in Bayes's yard; there was some children and women there, also.

Q. How far away from this corral and house you testified to?—A. I judge it was three-quarters of a mile from that corral and cement house.

Q. The tent colony was between that corral and Bayes's?—A. Yes, sir; in the middle.

Q. Who did those people seem to be shooting at?—A. At anyone that came in sight.

Q. Could they have been shooting at the tent colony over there?—A. They were shooting probably 100 feet above the tent colony. We were on kind of a ridge over there. Mr. Bayes's house is higher than the tent colony.

Q. Higher than the tent colony?—A. Yes, sir.

Q. Tell what next happened.—A. Do you want me to tell what I done there?

Q. Tell what you did there and what you saw there.—A. Well, we met some parties from the colony that had made their get-away who advised that just one of us go over to the colony, and so I voluntarily said I would go; and then they advised Dr. Davis to return to Aguilar. So I and Mr. Bayes—he helped me carry my surgical instruments, cases; he said they were too heavy for one man to carry; so we started over to the camp. These people we were talking to said that there was some wounded man up near the C. & S. bridge and up by the pump house, just to the west of the tents. Before starting out I got a white flag and we started over there. We went straight east and turned and got in an arroyo and followed the arroyo up to within 100 yards of the railroad bridge; then whoever it might have been in that cement house, about 300 yards away, started to shoot at us.

Q. Who was it doing that shooting?—A. I supposed it was the militia and guards up there. One of those bullets just about struck Mr. Bayes on the head; some whistled by me. In order to get to the bridge I had to pass by an open space. I hugged up as close to the arroyo as I possibly could. I made a run and got by the open space, and I jumped into the bank, or a little cave in the bank—cave out. I had my medicine antiseptic solution with me, and unfurled my flag and started to wave that, but every time I stuck it out it would be shot at.

Q. Any bullet holes in that flag?—A. Yes, sir; five or six holes in it.

Q. Have you got that flag with you?—A. No, sir; it is down at Dr. Beshoar's office. I waited there about three-quarters of an hour. There was a couple of the union men come there and got into a little pit dug in the side of the hill, and they started to shooting back at whoever was doing the shooting; and when those men seen the people that were doing the shooting they turned their attention to them. Then I jumped out of the cave I was in and made a run to the bridge. I

found a man there who was shot through the head. He was not dead, but he was dying. I suppose there was about a dozen or 15 men there. They told me that there was another wounded man in a cellar, up by the pump house, 100 yards away. The railroad bridge would protect me, so I crawled away and got within 50 or 60 feet of the cellar at the pump house. I filled my pockets with dressings, and all the time I was crawling to the pump house the bullets were falling thick and fast around me. About the time I got in there the machine gun turned loose, and they kept that up for some two or three hours.

Q. Which direction were the bullets coming when the machine gun was turned loose?—A. All about; I could hear the bullets dropping all over. There was a constant spatter of bullets.

Q. Was any of the bullets that were used explosive bullets?—A. I believe so from the noise they made.

Q. Where were the militia and guards stationed, if you know?—A. Some were up by the steel cars and entrenched behind the banks.

Q. Where was the machine gun located? Was the machine gun on water tank in operation?—A. That is south of the depot. I don't know, sir.

Q. You spoke of some man dying down there by the bridge. Do you know who that was?—A. I don't know his name. He was shot in the left side of the head.

Q. He died, did he?—A. Yes, sir.

Q. Was that Charles Costi?—A. No; he was found farther up, south and east.

Q. Go ahead and tell what else you did.—A. When I got to the place those men called a cellar I found, in place of a cellar, a well. It was about 80 feet deep.

Q. Was there any strikers down there?—A. I think there was four ladies and children at that time. When we would go down 10 feet or so there was a platform, and then down from there was another platform, a stairway down from the first platform, and so on until you get to the landing. There was quite a number of women and children in there, and the wounded man was on the first landing. There had been two men shot there. One of the men what was shot crawled away. He was not so disabled that he could not get away.

Q. The man in the cellar, that was wounded, who was he?—A. I don't know. I believe he was a Greek; I took him for a Greek anyway. Well, they kept that firing up with the machine gun over that cellar or well until it was almost dark, when a freight train came from the north. There was a long string of them, so the people that were in there made their getaway while those cars were going by. Those cars came between us and the parties doing the firing.

Q. What time of day was that?—A. It was getting dark.

Q. What time? Do you know, Doctor?—A. No; I don't know.

Q. What did you do next, Doctor?—A. Well, we went down to that bridge and got the wounded man, and we removed him over to Mr. Bayes's house and dressed the wounds over there. There was some 25 or 30 women there when I got back to Bayes's.

Q. What next?—A. Well, I stayed all night at Bayes's ranch. There was a few men, strikers, came there, and they were told to go away and not stay there. We thought that if the militia seen any men there that they would fire at the house, so we told all the men that stopped there to go on. They kept the women and children there, and cooked and fed them all right.

Q. Where were you when the shooting first started, Doctor?—A. I got over there about 1.30 to Bayes's ranch.

Q. What were the indications around there?—A. I did not look around much.

Q. What was the condition of the tents with reference to being shot up, as to whether or not it was full of bullet holes.—A. No; I don't know.

Q. Did you see the firing that night?—A. Yes, sir.

Q. What time did the first fire begin?—A. About 7.30.

Q. Did it start from the southwest corner of the tent colony?—A. Yes, sir. It seemed to me that the big tent, the large tent that was used for their meetings and dances, etc., was set on fire. Well the fire started in a little storehouse in the southwest corner, next to the railroad, about the third or fourth tent from the big tent. The fire started in the storehouse and spread to the big tent. The fire stopped for about an hour or two and then it started again. We supposed they would all be burned up the next morning. When Mr. Bayes and I got up the next morning there was several tents standing.

Q. What became of them?—A. It looked as though they were pouring coal oil on them. Mr. Bayes got up on his water tower—his windmill there—he got up there and had a pair of field glasses.

Q. What did he say he saw?—A. He said he saw the uniformed men throwing coal oil on the tents while another would apply the matches.

Q. You didn't see any of this firing of the tents yourself; it was just Mr. Bayes?—A. I could just simply see the blaze when it would flash up from the tents.

Q. Could you say it was the troops that were doing it?—A. No, sir; I am not positive whether it was the troops or not. Mr. Bayes said it was men in uniform; he had the field glasses; I wasn't up on the tower myself.

Q. Doctor, do you know whether or not Monday was a windy evening?—A. I don't think so. I was busy dressing wounded men, and when I came out of the house the firing had started again.

* * * * * * *

R. J. M'DONALD.

R. J. McDonald, being first duly sworn on oath, testified as follows (witness was examined by District Attorney J. J. Hendrick):

Q. What is your name?—A. R. J. McDonald.

Q. Where do you reside?—A. At Trinidad, Colo.

Q. What have you been doing, Mr. McDonald, in the last three or four or five months?—A. Since the 25th day of December I have been military stenographer for the military commission.

Q. Were you taking notes in investigations and extending testimony?—A. Yes, sir.

Q. Were you out at Ludlow on the 20th of this month?—A. I believe it was, if the 20th was last Monday.

Q. The day of the fight?—A. Yes, sir.

Q. With whom did you go?—A. With the train that was called the reinforcement train.

Q. For what purpose did you go out there?—A. Merely curiosity as far as I was concerned, Mr. Hendrick.

Q. What time did you get out there?—A. Shortly after 4 o'clock; I don't know the exact moment.

Q. Who was in charge of the train?—A. When we left Trinidad it was in charge of Lieut. Conner, and after we got there Capt. Carson with a few men up on the C. & S. joined us and we detrained.

Q. How many men were on that train?—A. Eighteen or twenty from Trinidad and some came down from Segundo.

Q. Who were they?—A. Part were mine guards and part were militiamen.

Q. For what purpose were they going out there?—A. About 10 o'clock in the morning I was down in the armory getting ready to go to work, and the telephone rang and Capt. Foreman's assistant couldn't understand what was said, so when it rang again I answered the phone, and it was Mrs. Linderfelt calling. She said the troops at Cedar Hill were being killed, and that they wanted to have help.

Q. You went out there?—A. Yes, sir; I did.

Q. Where did the train stop at, Mr. McDonald?—A. This side of Rameyville; that camp back of Cedar Hill is what I was told. Well, the men detrained there; the machine gun was taken off there. About the time the machine gun was being taken off I noticed an automobile there, a brown automobile, with quite a few people in it; there was a young girl there about 19 or 20 years old; I didn't pay much attention; I heard some one say here is an automobile, so just put the machine gun in it and the driver will take it to the top of the hill; and then it will be just a short distance to carry it. I remember this young lady getting out of the machine. Then two men on horseback came down from the top of the hill and gave some orders.

Q. You remember what those orders were?—A. The orders were that the soldiers should detrain and go up to the hill. The automobile took the machine gun up to the top of the hill and it was afterwards packed over.

Q. The driver of that automobile was the gentleman that just testified, Mr. Hall?—A. I don't know.

Q. What was done with the machine gun after it was taken to the top of the hill? A. It was planted, if that is the proper term.

Q. Was it put into operation?—A. Shortly afterwards I heard its fire.

Q. In what direction were they shooting?—A. Probably a mile or a mile and a half to the hills in the direction of the Black Hills. The reason I apprehend that it was about that far is because some of the men were using 30-30's, and they were told to "cut it out using the popguns," because they couldn't reach that far.

Q. Do you know if they were shooting at the tents then?—A. Not at that time that I know of, but they did later on. It was probably 6 o'clock, because some one gave an order and I heard it; some one said, "There is 50 minutes yet before dark and we have to take and burn the tent colony."

Q. Do you remember who gave that order?—A. I think it was Maj. Hamrock or Capt. Carson; it was either one of the two, but I heard the order.

Q. Where did you go from there?—A. I left there; somebody said we will leave five men with the machine gun, so we went from the top of the hill over to the steel bridge, and from there over to the railroad cut, just north of the Ludlow tent colony.

Q. What occurred there?—A. Mr. Welsh was with me; he followed in the back, and got in the Ludlow depot; about that time the firing was pretty heavy.

Q. You went to the Ludlow depot?—A. Yes, sir. Probably after an hour's shooting we left the Ludlow depot and went up toward the tent colony; we followed out on the track from the box cars that were standing there, and Linderfelt ordered the men on the steel bridge to cease firing and advance slowly toward the tent colony. He turned around to me and said, "You aren't doing anything else, and you are a fairly intelligent man; you run up to the bridge and give that order," so I ran up to the steel bridge and told the men there that they were to cease firing and advance slowly toward the tent colony. One of the men there said, "Who gave you that order?" He said, "I don't know you, and I won't obey it." Probably two minutes elapsed, and Maj. Hamrock came down and he gave the order for them to cease firing and advance slowly to the tents.

Q. Did you see Louis Tikas there that day?—A. I never seen him that day.

Q. Did you hear anyone discuss him that day?—A. After we come down from the steel bridge by the railroad cut down there the tent colony was on fire. We heard quite a bit of commotion down there by the water tank, and somebody came in and said that Louie the Greek had been captured and that they wanted to hang him. I said "They don't need to hang him; why don't they just take him prisoner." Mr. Welsh said, "That's none of our business," or something like that. Well, when we started for the depot I wanted to go to the depot and stay there; I had seen enough and I didn't want to see any more. We met Maj. Hamrock and Linderfelt. Mr. Welsh said something to them about Louie the Greek, and Linderfelt said he wouldn't let them kill him or hang him, but I broke or spoiled an awful good rifle; he was carrying it by the barrel over his shoulder.

Q. Do you know if he struck Louis Tikas over the head with that?—A. Nothing more than the talk I have heard; but I supposed so; we were about 20 or 30 feet from them when a fusillade of bullets were fired, and we went over the embankment, and then started to walk up the track to the depot, when some one came in and said that Louie had been shot. He said he knew it was Louie because he had a pair of red leggings on and a pair of field glasses.

Q. What time was that?—A. About 7.30.

Q. How soon after that did the tents begin to burn?—A. Before I went down; the tent nearest the railroad track was on fire when I first looked.

Q. How did that catch on fire?—A. I don't know.

Q. Did you see any men around them at that time?—A. There was a commotion over by the arroyo north of the Ludlow tent colony. Some one run out and said, "My God, God, dynamite," and it went up. Some of the soldiers were in the back of the railroad crossing at that time.

Q. Isn't it a fact that there was a railroad train came along?—A. There was two freight trains, about 10 minutes apart, before the passenger train. It was late that evening.

Q. Do you know if the railroad men had a conversation with any of the soldiers with reference to the fire?—A. I couldn't say; they pulled right through the depot without stopping.

Q. Do you know, Mr. Riley, who was on the railroad train that day—that train that evening?—A. I don't know.

Q. Do you know if he talked to the soldiers?—A. No; I don't, Mr. Hendrick. After I got down on the railroad cut those two freight trains passed me. I don't know if they stopped any place or not.

A. At the time you saw the tents burning you were about a half a mile away, were you not?—A. Yes, sir; 600 yards away.

Q. What time did you leave the Ludlow depot that night?—A. At 11.20 I went to Pueblo and Denver.

Q. Were the tents still burning then?—A. Yes, sir. Tuesday night the tents were still burning when I went through—or, rather, the wood was burning—the frames.

Q. The canvas part was not burning?—A. No, sir; just the frames.

Q. To what extent, when you left that night, had the tent colony been burned up?—A. Possibly 14 or 15 tents in smoke at that time.

Q. At the time the tents were burning did you see anybody in and around them?—A. Well, when I was in the depot one man came and said that there was three pups—dogs—tied there, and that he cut them loose; and another one came with an American flag, and some one asked him where he got it, and he said out of the tent colony; that he could not see it burn up. Pretty soon another man came in with a revolver; probably it was a .32—something like that. Then another man carried in a double-faced looking-glass.

Q. Mr. McDonald, you went out there in the interest of a spectator?—A. I went for this reason, Mr. Hendrick: There had been several reports; first they were going and then they weren't going. I didn't have anything to do that day, so I thought I would go out and look over the grounds, never expecting anything like that to happen.

Q. Do you know who operated the machine gun?—A. I don't know his name; he was a militiaman.

Q. Do you know what that gun belonged to?—A. I don't know whether it was gotten from here or whether it belonged to the State militia; I am not positive.

Q. You don't know, Mr. McDonald, whether it belonged to the State militia or to the coal operators?—A. I could not state.

Q. These men that were armed and went out on that train with you, did they have Springfield rifles or Savage?—A. Some were the Springfield rifles and some Savages and some were the Regular Army guns. They put their uniforms on down at the armory, and some just had the Savage 3/30.

Q. Mr. McDonald, what per cent of those men were mine guards?—A. I couldn't hardly state. I think three or four were actually in service here. Whether the others belonged to the State militia and were subject to call or not, I couldn't state.

Q. Did E. J. Foreman command that squad, Capt. Foreman?—A. He was ordered to don his uniform, and he said he was going up the street, and the next I seen of him was at Denver at the depot Wednesday morning.

Q. So he was not out there?—A. No, sir; he wasn't there.

Q. The guards made up this party that went out that day, they came down from Segundo?—A. I think 20 came down.

Q. Do you know if they brought that machine gun down with them?—A. I don't know. There was three day coaches and a passenger car went out, and in front was a steel car, the most of them men, etc.

WILLIAM SNYDER.

William Snyder, being first duly sworn on oath, testified as follows. Witness was examined by District Attorney J. J. Hendrick:

Q. What is your name?—A. William Snyder.

Q. Where do you live, Mr. Snyder?—A. Now?

Q. Right now.—A. At 310 Elm, Trinidad.

Q. Did you live at Ludlow on the 20th of this month?—A. Yes, sir.

Q. How long had you lived there?—A. Since the 26th day of September, or about that date.

Q. Of last year?—A. 1913.

Q. You went there immediately after the strike was called?—A. Yes, sir.

Q. What did your family consist of on the 20th day of this month?—A. Five boys, one girl, my wife and myself.

Q. Were you and your family in the tent colony on the 20th of this month?—A. Yes, sir.

Q. How were you living there?—A. In a tent.

Q. What kind of a tent? How large?—A. It was 16 by 24.

Q. One room or more?—A. I had it partitioned off, about the center of it was partitioned, I had the lumber in it about 5 feet and then the drop curtains.

Q. How old are your children?—A. How old, from 3½ to 11 years and 11 months.

Q. Now, then, calling your attention to the early part of the morning, state what, if anything, unusual happened on the morning of the 20th of this month.—A. Well, the first thing that I noticed in the morning was four militiamen coming to the colony, as I understood it afterwards, to arrest a man without a warrant, as I understand it, and that Mr. Tikas told them they could take anyone out of the colony if they had a warrant, but without a warrant they could take no one, as I understood it afterwards. This detail of four, as I understand, they were to get that man by noon or that they would search the colony. At that time the militia were lined up on the Colorado & Southeastern tracks. So I went in the store and said to my partner, "It looks to me like there is something in the wind."

Q. Who is your partner?—A. Bill Barden.

Q. Where is he?—A. In Trinidad.

Q. What else?—A. So Mr. Tikas, as I heard later, heard rumors that the men were lining up on the other side of the track, that the militia and guards were lining up down there, and so he went down to verify that statement—he was a man that did not believe everything that was told to him—and on his way back three shots were fired. I think they were signal shots of some kind; I think it was meant to bring the rest of the militia out of the different canyons.

Q. What did it sound like?—A. Dynamite, it must have been.

Q. That is what it was.—A. In about two or three minutes—I couldn't say exactly—there was another bomb fired off, and a third one.

Q. Did they come from the militia camps?—A. Yes, sir; from the grounds that are occupied with the soldiers, where the old K Company used to be. Just when these bombs were fired I looked up the track and I seen men on horseback; I supposed it was the cavalry. I could see those men hurry around that C. & S. track there by the C. & S. E. bridge. So the men in the colony left the tents, so that if they started anything that the firing would be directed away from the women and children of the tent colony, as I looked at it. The militiamen were going in a southeasterly direction.

Q. Were the inhabitants of the tent colony leaving the tents?—A. Yes, sir.

Q. Where were you during this time?—A. I was right there on the grounds; I was locking the store to start for home to protect my wife and children.

Q. What time were those bombs set off?—A. Somewhere between—well, I couldn't say exactly.

Q. Well, approximately.—A. About 9 o'clock or a little after.

Q. How soon after the bombs were fired was it before the firing began?—A. I couldn't say.

Q. Tell the jury where the shooting came from mostly, which direction.—A. From the Colorado & Southern tracks.

Q. How long was the fire kept up toward the tent colony?—A. Well, the firing ceased about 12 o'clock at night; I don't know if they kept it up continuously at the tents or not.

Q. Were any of the tents struck by bullets?—A. Yes, sir.

Q. To what extent?—A. I could not say.

Q. Did you see the tents catch on fire?—A. They were on fire before I got to look at them.

Q. I will ask this question: Do you know whether or not there were any shots fired from the tent colony occupants toward the soldiers?—A. No, sir; not that I know of.

Q. Did you fire any?—A. No, sir.

Q. When did you get out of the colony?—A. As I judge, it was between 12 and 1, or 1.30, anyhow.

Q. Was your tent struck by any bullets?—A. Yes, sir.

Q. How often.—A. It was struck four times that I know of of my own personal knowledge.

Q. State whether or not any of your family were killed?—A. Yes, sir.

Q. Who?—A. Frank; he was 11 years and 11 months old.

Q. Where was he at?—A. He was sitting in a rocking chair when he was struck.

Q. Where was he struck?—A. By the temple, and tore out the brains.

Q. Did it affect the remains' brains?—A. Yes, sir; tore them out.

Q. Broke his skull?—A. Yes, sir; we have not been able to find the pieces of the skull.

Q. Tell what happened from the time that he was killed until you got out of there.—A. He was killed, I should judge, about 5 o'clock in the afternoon of the 20th of April. I had been outside, and I heard the bullet pass by me. I had just stepped out, and I heard it strike something. I heard two distinct hits of that bullet. My next boy to Frank, George, said, "Frank is shot." I said, "Where?" and I jumped in the other room and caught the boy before he fell out of the chair. Just then a bullet went over my head, and so I had to let the boy down on the floor on the wounded side, and I layed down beside him. My wife was in the cave, and I said to her, "Frank is dead." He was still in convulsions. I picked the boy up and put him between the beds. My wife had started to come out of the cellar, and she fell in a faint, so I grabbed her. Then I went and got some water that my wife had been preparing to wash the dishes in and tried to wash the blood off of Frank's face, but the firing come so heavy that I had to stop. Finally I went over to Tollers's tent, and from what I have heard since I must have come back in that heavy machine firing. I got back home, and I got down on the floor and took both of Frank's hands—he was just drawing up—and laid them across his chest, and then went into the hole with my wife and the other children.

Q. When did you get out of there?—A. Somewhere around 12.30 or 1 o'clock.

Q. Did anybody come to your tent while you were there?—A. Yes, sir; the militia come there.

Q. Who were they?—A. I don't know them.

Q. What did they say to you?—A. They set fire to the tent and opened it and come in.

Q. They set fire to your tent?—A. Yes, sir. My wife then said, "For God sake, save my children." I didn't want them to know I was there, but just about that time sister said something to me.

Q. What did they say to you?—A. They said, "What in hell are you doing in there?" I told them I was trying to save my wife and children, and they said, "You ——— get out of there, and get out ——— quick at that." My wife was out by that time. I believe one of the officers helped her out. I told them to hold on, I had a boy killed in there, and they told me to get him out ——— quick. I picked the boy up and laid him down outside so I could get a better hold on him. I asked some of those fellows to help me carry him to the depot, and he said "——— you, ain't you big enough?" I said, "I can do it." I took him on my shoulder and sister by the other arm, and just then some one of the militiamen stopped me and said, "———, ———, I have a notion to kill you right now." He said, "You red-neck ———, I have a notion to kill you right now."

Q. Do you know who he was?—A. I think I do; he is a guard in uniform.

Q. What is his name?—A. I would rather not tell it unless I just have to.

Q. Will you tell it to me in private?—A. Yes, sir. My wife kept on pleading, he said you have done as much shooting as anyone else around here, and I just kept on going until I got to the depot.

Q. Did your wife go with you?—A. Yes, sir.

Q. Were the tents burning at that time?—A. Yes, sir; while I was passing Snodgrass's store this man—that officer, Mr. Linderfelt—flashed a light and said, "What God damn red neck have we got now?"

Q. Which one said that?—A. The one we call Jesus Christ.

Q. Do you mean E. K. or K. E. Linderfelt, the man with the bull face?—A. That is right; he is bull faced.

Q. He is a captain?—A. We used to call him lieutenant, but I think he is up in ranks now.

Q. Why did you call him Jesus Christ?—A. He told Mrs. Lowe that he was Jesus Christ, and that the other fellows were his Jesuses, and so we always called him Jesus.

Q. Where did you stay the balance of the night?—A. At the Ludlow depot.

Q. Who was in there?—A. Some gunmen and militiamen.

Q. What were they doing?—A. Some laying on the floor sleeping, some joking and passing different remarks, joshing; one of them said I got one red neck son of a bitch, and at daylight I will go up and get another one.

Q. Did you stay in the depot all night?—A. Yes, sir; we had to, and about 5 o'clock they let me go over to Frabur's house, just before that No. 7 train was due.

Q. Did you know Louis Tikas during his lifetime?—A. Yes, sir.

Q. He is dead now?—A. Yes, sir.

Q. Did you know Mr. Fyler?—A. Yes, sir.

Q. Do you know how many women and children perished in that hole?—A. I heard that 11 children and 2 women and 1 man.

Q. That is right, according to the coroner's testimony.

Q. Mr. Snyder, you have lived in the tent colony practically ever since it started?—A. Yes, sir; that is the only home I ever had and the only one I ever knew of.

Q. Do you know of any reason why those militiamen and guards should have burned that tent colony?—A. Just to get rid of us.

Q. Do you know whether or not the militia or mine guards or anybody else ever threatened to burn the tent colony, or have you ever read it in any of the Trinidad papers?—A. I didn't have to read the papers. I am not positive, but I believe I have read it in the papers that they would clean out Ludlow. I was told to get out of the county by one of the militiamen, and for me to stay out.

Q. You were told to leave the county?—A. Yes, sir.

Q. (Juror.) Were you ever at the ball game on Sunday?—A. No, sir.

PORTION OF THE TESTIMONY OF A. J. RILEY.

Q. What is your name?—A. A. J. Riley.

Q. What is your business?—A. Freight brakeman on the Colorado & Southern.

Q. Between Trinidad and Pueblo?—A. Yes, sir.
Q. Were you a member of that train crew on last Monday night, the 20th of last month, coming from Pueblo to Trinidad?—A. Yes, sir.
Q. You came through the town of Ludlow?—A. Yes, sir.
Q. As you approached the town of Ludlow on the north, what did you see?—A. My attention was attracted to the fire, the blaze of the tents.
Q. What part were you on?—A. On the engine.
Q. Your train stopped there?—A. Yes, sir.
Q. For what occasion?—A. We had to let the passenger train pass us there. I saw the tents blazing—two of them. Then I see a man in a militia uniform touch a blaze to the third tent.
Q. Repeat that. I didn't hear you.—A. I saw a man in a uniform touch a blaze to the third tent; this was at 7.05 p. m.
Q. How many armed men did you see around there?—A. I would judge there was about 100 strung along there from the arroyo and the pump house up to about No. 2 switch in the yards.
Q. That is almost to the depot?—A. Yes, sir.
Q. What, if anything, was said by any of the armed men there?—A. Yes, sir.
Q. What was said?—A. Ten or fifteen stuck their guns up to our face and told us to move on, and to be damn quick about it, or they would shoot us.
Q. Did you say anything to those men?—A. No, sir; not a word.
Q. Who were those men that stuck their guns up in your faces?—A. Uniform men.
Q. Did you see anyone that did not have a uniform on?—A. No, sir; I did not notice in particular.
Q. Did you see any women and children there?—A. Yes, sir.
Q. Where were they going?—A. Along by the right-of-way fence, screaming and crying.

TESTIMONY OF WILLIAM HALL AT LUDLOW INQUEST.

William Hall, being first duly sworn, on oath testified as follows (witness was examined by District Attorney J. J. Hendricks):

Q. State your name.—A. W. J. Hall.
Q. What is your business?—A. Automobile driver.
Q. For whom?—A. For myself.
Q. Did you have your automobile out near Ludlow on the 20th day of this month?—A. Yes, sir.
Q. What was the occasion of your being out there?—A. I was out at Tobasco, Mr. Hendrick.
Q. Did you go through Ludlow?—A. No, sir.
Q. Do you know anything about what happened out there that day?—A. Nothing, except I was there when the special train went out with the militiamen, and so forth.
Q. What, if any, experience did you have?—A. Well, I came out from under that cement bridge that the train passes over—about half way from Rameyville—and I was stopped.
Q. Who stopped you?—A. I presume he was a militiaman. I then recognized Capt. Carson. He was telling me to stop. He waved for me to stop, rather. There were others there that I did not recognize.
Q. What time of day was that?—A. Shortly after 4 o'clock.
Q. Who was with Capt. Carson, if anyone?—A. There was from 50 to 100 men there with him that I did not recognize.
Q. That train was going north—to Ludlow?—A. Yes, sir; but everybody got off there by Rameyville.
Q. Did you have any conversation with any of those men at to what they were going to do?—A. No, sir.
Q. Did they say anything to you or not?—A. One of those men asked me to drive the machine up the hill for them. He told me he wanted to put the machine gun in my machine and asked me to drive the car back for him.
Q. Did he say anything to you about what was going on at Ludlow?—A. Not to me.
Q. Did you hear him say anything to anyone else?—A. Things were said at random to everyone, but not to me.
Q. What did you hear said there?—A. I heard some one ask where the militia and guards were located and where the strikers were at.
Q. Those men were on the train you say? Where did they get off at?—A. At Rameyville. Jack Cold loaded the machine gun in my machine. Jack took care of the machine part of it and another fellow held the tripod and I took it up the hill for them.
Q. Where was the machine gun unloaded at?—A. Right at the crest of the hill by the Colorado & Southeastern tracks, Mr. Hendrick.
Q. Was that near the big steel bridge?—A. There is a general large hill near the steel bridge; that is where the machine gun was unloaded at.
Q. What were they going to do with the machine gun?—A. They did not say anything to me.
Q. What did they take it out to Ludlow for?—A. I don't know; I presume to shoot.
Q. Mr. Hall, did you hear any order given there that day?—A. Yes, sir.
Q. What were those orders?—A. The orders were for those men to go in and clean out that colony, for them to drive everyone out and then to burn the colony.
Q. You heard those orders, did you?—A. Yes, sir.
Q. Did they put any ammunition in your machine?—A. Yes, sir; they put some boxes in there; I suppose that it was ammunition.
Q. What kind of boxes did they put in your machine, if any?—A. Big, long boxes; the dimensions were probably about 6 inches high and 12 by 18.
Q. Were they machine-gun shells, or what was in those boxes?—A. I don't know; some were machine cartridges, I suppose, and some of the boxes had been opened, and all the men were loading up with ammunition.
Q. Those orders were to go out and destroy that colony and to burn the tents?—A. Yes, sir.
Q. Who gave those orders?—A. I don't know; some man in uniform.
Q. Some man with shoulder straps on?—A. I couldn't say.
Q. Had you ever seen him before?—A. I couldn't say.
Q. Have you seen that man since?—A. No, sir.
Q. Now, then, Mr. Hall, after they loaded that gun in your auto you took it up so far for them, and then they carried it the rest of the way, did they not?—A. Yes, sir; I took it to the top of the hill.
Q. How long after that was it before you heard any shooting?—A. I don't know.
Q. Did you hear the machine gun in operation?—A. I heard something that I thought was the machine gun.
Q. Describe what kind of a noise it was making. Was it a rapid noise?—A. It was very rapid, Mr. Hendrick.
Q. Did you leave there and come back to Trinidad?—A. No, sir; I stopped at Rameyville.
Q. What did you stop at Rameyville for?—A. We were not in a position where there was any firing; we were on the hill.
Q. Did you hear any of the shooting where you were at?—A. Yes, sir; we could see the dust raise.
Q. How long did you remain there, Mr. Hall?—A. In the neighborhood of an hour and a half. It was 6 o'clock when we left Rameyville for Trinidad. I stopped on the hill, and if the firing had come my way all I would have to do would be to drive down the hill and be out of range of the bullets.
Q. Who was with you, Mr. Hall, if anyone?—A. Mr. Ryan and his daughter and another fellow; I think his name is Laird; he is a friend of Mr. Ryan's.
Q. Did you see the tents burning?—A. No, sir.
Q. Mr. Hall, do you think you could recognize the parties that gave orders to clean out the tent colony? Would you recognize the man that put the machine gun in your machine?—A. I could recognize several of the parties—the one with the machine; but I don't believe I know who gave those orders, Mr. Hendrick.
Q. Did you carry that machine and ammunition in your automobile voluntarily, or not, Mr. Hall?—A. No, sir; I did not do it voluntarily, Mr. Hendrick. Those men seemed to have full authority over the car; and from the way I have seen them act around Trinidad here I thought it would be best not to refuse to carry that stuff for them. I was under the impression that it was of no use to try to resist letting them have the car.
Q. Do you know if there were two machine guns from Trinidad?—A. I do not. However, if there was two machine guns from Trinidad, I didn't see it; but I don't think that there was but one—unless there was a possibility of two being clamped together, and I don't believe there was.
Q. That is all.

CORONER'S JURY.

John F. Harriman, being first duly sworn, on oath testified as follows. Witness was examined by District Attorney J. J. Hendrick.
Q. State your name, please.—A. John F. Harriman.
Q. What is your business?—A. Railroad conductor.
Q. Of what road?—A. Of the Colorado & Southern; freight conductor.
Q. Between what points on this division do you run?—A. Pueblo to Trinidad.
Q. When making your trips, do you pass Ludlow?—A. Yes, sir.
Q. State to the jury if you passed Ludlow on the 20th of this month.—A. Yes, sir.
Q. What direction were you going on that evening or day?—A. Coming south.
Q. Did you pass the Ludlow tent colony, or what used to be the Ludlow tent colony?—A. Yes, sir.
Q. At what time of day?—A. About 7.05 p. m.
Q. Who composed your train crew?—A. Engineer Bashford, Fireman Mack Alexander, Head Brakeman A. J. Riley, Rear Brakeman J. H. Gordon; we also had passenger on, Mr. Lowery, the Denver & Rio Grande coal inspector.
Q. What is his first name?—A. I don't know.
Q. When you reached Ludlow that evening, what, if anything, attracted your attention at or near the tent colony?—A. When rounding a curve, perhaps a mile and a half north of Ludlow, just on top of a hill, I noticed a fire; I was in the cupola in the caboose; I first took it to be the depot, but I couldn't tell until we got closer what it was.
Q. What did you discover it to be?—A. The tent colony. The strikers' tent colony.
Q. Which tent was burning?—A. The first tent, the first three tents on the southwest corner were burning.
Q. Did you stop your train?—A. We stopped; yes, sir.
Q. State what occurred.—A. We come in there about 7.05 p. m. We were to take the sidetrack and let No. 2 pass; we were to take the sidetrack; the switch is nearly opposite the colony, only a little bit south of the opposite side; when we stopped to take the sidetrack, when the gunmen and the militia under the tank, about 15, stuck their guns in the engineer's face and told him to get out, and to be God damn quick about it; we made no effort to go to the sidetrack then.
Q. What did you do?—A. We pulled out of there right away, we stopped there not to exceed a minute or two minutes, and we pulled through the switch and didn't stop any more.
Q. Did you have any conversation, or did Mr. Bashford have any conversation with what you termed as gunmen, with reference to the burning of the tents?—A. I believe they told me they were shooting up the colony.
Q. Is the engineer here?—A. No; he went out on the 1.30 train to-day.
Q. Was he subpœnaed, Mr. Coroner?—A. He was; but we could not find him.
Q. How long did your train remain at Ludlow, Mr. Harriman?—A. Not to exceed two minutes; we got away just as quickly as we could, the firing was so hot.
Q. Did you or any of your crew make any effort to extinguish the fire?—A. No, sir.
Q. How many men did you see there with guns?—A. I had about 36 cars on the train, and that put me back quite a distance, about four times twelve or thirteen hundred feet back of where the engine was, when I seen the tents were afire. I jumped down from the cupola and went to the back door of the caboose and stepped out; the bullets weren't in my range; but just as I started to get back in a bullet sung by me through the air, so I went back in the car and went to my desk and blew out the light and hung my lantern up, and when we started to pull up I looked out the right-hand side of the door, on the right side of the tracks, and I could see the guns flash toward the colony from the point on the steel bridge which crosses the arroyo and passed the tank; when we got to the tank I seen several flashes.
Q. Do you know how many were there?—A. No, I don't. Under the tank I would judge about 15. They laid along all the way to the pump house, to the tank, this side of the tank, clear up to No. 2 switch, and that would be about 1,000 feet.
Q Did you notice any soldiers come in the depot?—A. We didn't stop there; we kept on going. I looked out on the left side when passing the depot and I didn't see anybody.
Q. Do you know how long those tents had been burning?—A. I should judge but a few minutes.
Q. How far were these men from the tents?—A. Well along the track under the tank just outside of the right of way, and they were on the other side of the right-of-way fence, about 1,000 feet from the right-of-way fence to the first tent, or maybe 150 feet.
Q. Did you notice any persons at or near where the tents were burning?—A. No, sir; nothing but women and children crawling out of the right-of-way fence. They seemed to be, as I concluded, taking the advantage of the train while we were between them and the soldiers, and they were crying. I seen as many as 15 or more women and children getting out of there while we stopped there.

Q. Which direction were they shooting then?—A. Toward the colony; that is, according to the flash of the guns.

Q. Anything further you know, Mr. Harriman?—A. I don't believe there is anything else I could say.

Q. (Juror). Was there any shooting from Water Tank Hill?—A. That is near the Colorado & Southeastern bridge near Ludlow. I didn't see anybody there; it was dark.

Q. (Juror). Did you hear the machine gun there?—A. The train was making considerable noise, and if there had been any shooting to any great extent I might have heard it, but I couldn't say. That is all.

A. J. Riley, being first duly sworn on oath, testified as follows. Witness was examined by District Attorney J. J. Hendrick:

Q. What is your name?—A. A. J. Riley.

Q. What is your business?—A. Freight brakeman on the Colorado & Southern.

Q. Between Trinidad and Pueblo?—A. Yes, sir.

Q. Were you a member of that train crew on last Monday night, the 20th of the last month, coming from Pueblo to Trinidad?—A. Yes, sir.

Q. You came through the town of Ludlow?—A. Yes, sir.

Q. As you approached the town of Ludlow on the north, what did you see?—A. My attention was attracted to the fire—the blaze of the tents.

Q. What part were you on?—A. On the engine.

Q. Your train stopped there?—A. Yes, sir.

Q. For what occasion?—A. We had to let the passenger train pass us there. I saw the tents blazing—two of them. Then I seen a man in a military uniform touch a blaze to the third tent.

Q. Repeat that; I didn't hear you.—A. I saw a man in uniform touch a blaze to the third tent. This was at 7.05 p. m.

Q. How many armed men did you see around there?—A. I judge there was about 100 strung along there from the arroyo and the pump house up to about No. 2 switch, in the yards.

Q. That is almost to the depot?—A. Yes, sir.

Q. Who was on the engine beside you?—A. The engineer, Bashford, and Fireman Alexander.

Q. What, if anything, was said by any of the armed men there?—A. Yes, sir.

Q. What was said?—A. Ten or fifteen stuck their guns up to our faces and told us to move on, and to be damn quick about it or they would shoot us.

Q. Did you say anything to those men?—A. No, sir; not a word.

Q. Who were those men that stuck their guns up in your faces?—A. Uniform men.

Q. Did you see anyone that didn't have a uniform on?—A. No, sir; I didn't notice in particular.

Q. Did you see any women and children there?—A. Yes, sir.

Q. Where were they going?—A. Along by the right of way fence, screaming and crying.

Q. Where is Mr. Alexander?—A. He is on the engine to-day.

Q. He and Bashford both?—A. Yes, sir.

Q. Is there anything further you can state?—A. Nothing but there was considerable shooting from the right side of the track from the guards.

Q. Was there any machine guns in operation that night?—A. The train was making considerable racket, so I couldn't of heard; but I did hear rifle shots.

Q. The machine was south of the depot, by that steel bridge, on what is called Water Tank Hill. Have you seen that?—A. No, sir.

Q. You don't know if it was being operated?—A No, sir.

Q. (By juror.) Did you hear any shots fired from the colony?—A. No, sir.

Q. That's all, Mr. Riley.

A GRUESOME WARNING.

Affidavit of Mrs. Ed Tonner.

STATE OF COLORADO, *Las Animas County, ss:*

Mrs. Ed Tonner, who is about to become a mother, of lawful age, being first sworn, upon oath deposes and says: That her name is Mrs. Ed Tonner. At about 10 in the morning I was in my front room tent sweeping, and I heard the two bombs fired, and I started grabbing for my five children, and to throw them into a cave right under my front tent, and I stayed there until about 8 o'clock at night; all this time, from 10 in the morning until 8 o'clock at night, the machine guns were going. Mr. Snyder came along, and he said, "My oldest son, Frank, has half of his head blowed off," and he said "if your children won't lay down, slap them and make them lay down, rather than have them killed," he said; and he held out his two arms, like that [indicating], and they were full of blood; and it seemed that after he left his tent, that the machine guns turned loose all the more. My tent was so full of holes that it was like lace, pretty near. It could have been about 4 when little Frank got his head hurt, and a little while after this they tried to set the tents on fire. I kept bobbing my head up and down, and Mr. Fyler said, "For God's sake keep your head down, or you will get it blown off." About 6 o'clock they turned around and tore the tent between the two tents, and they set the broom on fire with coal oil, and they set the tent on fire, with me right underneath, with my five little children; then Gusta Retlich she helped me out with the children—grabbed them up—and then we run to a Mexican lady's tent farther down; and then Louis the Greek helped me; he helped me down into a hole, and threw water in my face, as I was fainting, with all the children, and then Louis the Greek heard some Mexican baby cry, and he said, "I must go and see what I can do for it," and then after that he says, "You people had better hit it for that ranch over the Bayes," and we stayed there until the next night. They were shooting at the ranch house, although we had a white flag out, but they shot just the same. Mr. Bayes then took us to another ranch called Powell's ranch. They let Mr. Bayes through all right and back all right, but when he got back to his ranch they fired on him, and hit one of his mules in the thick part of the leg; and the next morning we went from Powell's ranch to Aguilar. I was not expecting anything like that, and I had very little clothes on. A thin skirt and a Mother Hubbard apron and my oldest shoes. Everything that I had in this world was lost. I lost $35 watch; $8 chain of my own; gold watch of my husband's, worth about $25; and then I had a hair chain of my own hair, worth $5; watch charm of my children's hair, worth $5; $16 pair of glasses; bracelets of my little girls, worth $5; opal ring, $7; $10 in money. Not a thing left in the world.

Further affiant saith not.

Mrs. ED TONNER.

Subscribed and sworn to before me this 30th day of April, A. D. 1914.
My commission expires September 10, 1917.

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Maria Chaves, being first duly sworn, on oath deposes and states that her name is Maria Chaves. Early in the morning I seen a woman going to the soldiers' camp, and I think she was a traitor; and as soon as this woman got to the camp the guards came out; and as soon as they reached the camp they started to fire at the camp. When they started to fire at the camp they kept on firing all day; and when they started to fire at the camp we all went into the cellar, about 9 o'clock in the morning; and we stayed in the cellar all day until the soldiers took us out, about 3 or 4 o'clock in the p. m. They would come inside of the tents and take the best things and then set fire to the tents. I don't know how they set the fire, but I know that they set the tents on fire. I lost all my personal effects in this fire. I had $250 in the sewing machine that my husband's people had sent, and I lost all of that.

MARIA CHAVES.

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Mrs. Alcarita Pedregon, being first duly sworn, on oath deposes and says that her name is Mrs. Alcarita Pedregon. I got up late in the morning and I seen the guards and militia on horseback, and they got off the horses and fell down on the ground to get away from the fire, and then I went into the hole with the children. There were 11 children and 4 women in the hole, and we stayed in that cellar from 9 in the morning until 6 the next morning. I seen a militiaman come over there and look inside the tent and strike a match and set fire to the tent. I stayed in the tent until it was all burned up. There were 11 children and 2 women suffocated with the smoke where I was. I lost two children in this cave when the tent burned. I don't know where my husband was at this time. I looked up out of the hole and saw the soldier set fire to the tent with a match. I lost everything I had in this fire.

Mrs. ALCARITA (her x mark) PEDREGON.

(Mr. Filer, agent for C. & S. at Ludlow, can give wonderful story of militiamen who took possession of the C. & S. station.)

I HAD SIX CHILDREN TO CARE FOR; MY HUSBAND WAS SHOT IN THE BACK.

Affidavit of Virginia Bertoloti.

STATE OF COLORADO, *Las Animas County, ss:*

Virginia Bertoloti, of lawful age, being first duly sworn, testified as follows:

That her name is Virginia Bertoloti; my husband told me that there was shooting going on, and they were shooting the machine gun, and I said, "I don't believe it," and he said yes; he said get the beds and the children in the hole, and I took one bed in the hole, and then I heard the bomb go off, and I saw Mrs. Fyler crying, and she said there is going to be a big fight, and I said you come over to my place, and I went in the hole with the children, and I wanted my husband to come down, and he said you go with the children, and I said I will go with the children as I am afraid, and I stayed in the hole for a few minutes, and then we went to the pump house and went into the well, and I stayed in the well all day until about 7 o'clock, when a freight train went along, and then I got out and went to the Bayes ranch and stayed there about an hour, and from there we went to another ranch. Mr. Bayes said you had better get out of here as they will be firing at the ranch. Just as we left the well the tents were on fire. I had six children in the hole with me, and in the well all day. My husband was killed there; he was coming to see me and take care of me and the children, and he was shot in the back. He was crying all day for me and the children. I lost everything I had in the world in this fire.

VIRGINIA BERTOLOTI.

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Juanita Hernandez, being first duly sworn, on oath doth depose and say:

That her name is Mrs. Juanita Hernandez; the first thing I saw was the camp all around with the guards, and I just had time to get into the cellar with Clorinda Padilla; we was all day in that cellar with all the children, and I stayed there until the soldiers came and took me out. The tents were on fire when they took me out, but not my tent. The soldiers took us all to the depot. She see the soldiers go and get a lot of quilts and stuff, then they went back and got some clothes and an accordion and played on it before us. The soldiers stole all the things and kept them. I lost everything that I had. All I had left was the few clothes I had on my person.

THE LITTLE BOY RAISED UP HIS HANDS AND SAID, "DON'T SHOOT, FOR MY MOTHER'S SAKE."

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Ometomica Covadle being of lawful age, being first duly sworn, on oath deposes and says:

That her name is Ometomica Covadle; I was going up to the store, in the daytime, and the guards were all around the tents, and they start to shoot at the tents, and I only had time to get hold of my baby son about 10 years old and get into the pump, and the soldiers came up and tried to shoot inside where we were, and they came out of the pump when they tried to shoot with the machine guns and went into the arroya. There were two dead men and they jumped right top of them. Couple of soldiers came out of the arroya and was going to kill both of us, and the little boy raised up his hands and said "Don't shoot, for my mother's sake." I had a machine and the soldiers took it out, and a lot of other stuff and took it to the depot and kept it. They stole a trunk

full of my clothes. I saw them take it with my own eyes. I had $5 in money that was stolen. They told me that I should be happy that you all were not killed.

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Mrs. James Fyler, of lawful age, being first duly sworn, on oath deposes and says:

That her name is Mrs. James Fyler; the first we know of three soldiers came down and demanded of Louis Tikas that he give them a man that they wanted in the tent colony; that they wanted him, and he asked them who gave them authority to come there, and they said that they came under the military laws, and he told them that the military laws were out, and that they could not have anyone in the tent colony, so then they went away, and Louie told them to send Maj. Hamrock down and he would talk with him, and they did not send him and Louie went to the depot to meet Maj. Hamrock, and they had quite a conversation up there, and the first we saw of Louie he was coming down waving his handkerchief for the crowd to go back. As soon as he got in sight of the tent colony, and when he got to the tent colony, Mrs. Dominsky and I were standing there; we were the only two that were out right in the crowd, and I walked over to my husband; he was looking for a pair of field glasses, and I asked if he had saw my boy, and he told me "no" he had not, so just then they shot off one of the bombs and one of the machine guns on the Denver & Rio Grande tracks. Those were the first shots that were fired, and Louie waved his handkerchief at us, and said, "Good-bye, I will never see you any more"; so then we made our escape to the pump station. That was about 2 o'clock when the shooting started, and we stayed there all day, then, without even any water, food, or anything; then about 4.30, I would judge, they turned the machine guns on the tent colony with full force, and I should judge about 6 o'clock the tent colony started to burn, and about 7 o'clock a freight train came in from Aguilar, and we made our escape to the arroya, and then we made our escape to Mr. Frank Bayes ranch, and from there he hitched up his team and took us to Wineberg's ranch, and we landed there about 2 o'clock in the morning; and about 12 o'clock the next day we came to Trinidad. We got to Trinidad about 5 o'clock in the evening, and there I learned of my husband's death. I did not know he was killed until that time. The Sunday before, at 10 o'clock, we had a ball game, and we played the men, and we got through about 1 o'clock; then we all went to the Greeks for our dinner; and then after that Louie took our pictures five different ways with our bloomers on; then we went back and played another game of ball in the afternoon, about 2 o'clock, and during our ball game there were four of the militia came down, and each one carried a gun—a rifle—in their hands, and we remarked about it on account of it being the first time they had ever carried guns at the ball game. Affiant further states that from the time the shooting started in the morning there were only four men there on the grounds, the others having fled to the hills.

Further affiant saith not.

Affidavit.

STATE OF COLORADO, *Las Animas County:*

Edith Fyler, 12 years old, being first duly sworn on oath, deposes and says:

About 9.30 I went to the door of the tent and I saw two Greeks running down toward the arroyo, and then I shut the door and run to mamma, at Mrs. Jolly's, and then we all came home and went to the door, and Mrs. Bartlow came past and said to mamma to bring us all up there and put us into the cave; after little while mamma went up there, did not go into the cave right, but stood there, and then mamma went to the officer, where papa was, and mamma was talking to him and the first thing we knew there was a big bomb went off, and mamma grabbed my little brother and came running into the tent, where we were, and the next thing mother closed the door and my big sister commenced fainting, and Mr. Bartlow—had seven children—one of the men who got killed, run and got her some wine and sugar; they brought her to, and mamma said, "This is no place for us," so we went to the pump station, and we tried to get into the pump well, but it was full of people and we could not get in; then we went to a little barn and laid down on the floor as close as we could, and next we heard a rap at the door, and it was my brother James, and he came in for shelter, and there was a lot of men in back of the barn, where we were, began shooting, and they quit for a little while, and my sister began crying for a drink, so it was safe, and mamma went and got it, then she went back and a bullet came through and pretty near hit her and Mr. Barton. There was a little window in the barn, and I saw that they were shooting pretty bad, and they quit for a few minutes, mamma went to look out, that was when they first discovered the tents were on fire. There was a freight train came along and Mr. Barton said that it would be a good chance to escape there, as the train had steel coke cars, and they were between us and the Gatling gun, they must have spied us between the cars, for they kept bullets whizzing over our heads. We made our escape to the arroyo. We followed from the arroyo to a ranch, where the people's names were Bayes. We stayed there and got a lunch, and then we got a spring wagon and took us to the Winberg boys' ranch. We got in there some time along midnight, and stayed there the rest of the night till about 12 o'clock the next day, and a man came with one of these big wagons—I don't know what they call them—and took us for Trinidad. We got to Union Hall, and awful quick they wanted mamma to eat supper, and a little newsboy came along and asked her if she wanted to see the names of the ones who were dead, so my sister must of overheard something, and asked mamma for the paper; just then Mrs. Bartlow came and told mamma the news of papa's death.

Further affiant saith not.

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Q. What is your name?—A. Leyor Fyler.
Q. How old are you?—A. Ten years old.
Q. Did you go to school?—A. No school at Ludlow to go to.
Q. Where do you live?—A. Ludlow, tent colony.
Q. Go ahead and tell your story.—A. At first I was out playing ball; and after the mine guards they came down to the tents, and they wanted one certain man there, and there was no man there by that name; and then after they says give half an hour to get the man, Louis the Greek, the camp boss, he told them that there was no man there by that name; and they says, "If you don't get that man there in half hour, will come and search. Louis the Greek says that they could not search, and they walked back to the tents; and a half hour after they come to the Denver & Rio Grande track and had the machine gun planted; and after the guards had their machine guns planted some of the Greek fellows went around to the left, and they, the mine guards, give one signal, one shot. We run back to one certain woman's dugout; and then, after we got in the hole, my big sister fainted, and mother told her to get out of there and they would go to the pump house. There was not room in the well for us to go there, and the boy there told us to go in the barn; and we went to the barn and laid on our bellies; and after they started to shoot bombs, then some Greek fellows come from the Denver & Rio Grande tracks down by the barn to protect us people; and after they came down through there they shot one shot from the depot and went right through the barn—pretty near hit one man's hat and just shaved my mother's head; and then a freight train came in, with steel coke cars; and then Mr. Barton told us "This is our time to get out"; and we ran to the arroya. Bullets were whizzing all around our heads; and then we went to Frank Bayes's house, and we went down there and got something to eat there. Then Mr. Bayes he hooked up the team and went to Gus Winberg's ranch, and we stayed there until the afternoon. In the afternoon we started for Trinidad.

Q. How did your father come to get killed?—A. Mr. James Fyler and Mr. William Snyder and Mr. Joe Dominisky was the only men on the ground there, and after papa went away from there, went up by the little red store, he went up there, and Mr. Dominisky told him not to go up there. As soon as he got up there a shot came between him and Mr. Dominisky and shot right through there [indicating between the eyes]. Then Mr. Dominisky run.

Further affiant saith not.

Affidavit.

STATE OF COLORADO, *Las Animas County, ss:*

Mrs. Clorinda Padilla: About 9 o'clock I heard two signal shots fired, and about five minutes after they started to firing with the machine guns, shooting to the tent colony at Ludlow, and then I put my four children in the hole we had made under the tent, and we stayed there in the hole without food and water until about 11 o'clock at night. They were shooting all day long; never stopped a minute. During the day I heard Mr. Snyder say that his boy had been killed. The tents were full of holes, like lace. I came out of the tent for a minute to get something for the children to eat, and while I was out there they began shooting again, and a bullet came close to me, and then I went back into the hole. At some time late in the afternoon they started to burn the tents. When the tents were first fired they did not burn my tent; later in the evening the soldiers came back to fire the rest of the tents, and they heard my children crying, and they said, "There is a family in there," and they helped me out and took me and the children to the depot. While at the depot three Mexican guards got mad at the women and said that they ought to be burned in the tents.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. FRANKLIN BROCKSON,
OF DELAWARE,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, April 30, 1914,

On the bill (H. R. 14385) to amend section 5 of an act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone, approved August 24, 1912.

Mr. BROCKSON. Mr. Speaker, the people of America and other countries for more than a century have desired an isthmian ship canal to connect the waters of the Atlantic and the Pacific Oceans. This great project has engaged the attention and thought of many statesmen and has been much considered by different Governments.

The United States and Great Britain, by the Clayton-Bulwer treaty, concluded April 19, 1850, agreed to promote and facili-

tate the construction of such a canal, and agreed to protect the canal and guarantee its neutrality after it had been constructed. They also agreed by that treaty that neither one of them should "ever obtain or maintain for itself any exclusive control over the said ship canal."

This treaty continued in force for fifty-one years. During that time all efforts to promote the construction of the Isthmian Canal failed.

The construction of such a canal was too great a project for a private company or a small government.

Many people of the United States objected to the alliance of our Government with Great Britain, as provided for in the Clayton-Bulwer treaty, and desired that the canal should be constructed, owned, and controlled by the United States.

In 1898, during the Spanish War, the long and perilous trip of the *Oregon* around Cape Horn impressed upon the people of this country the great need for an Isthmian Canal, under the control of our Government, for the use of our war vessels in time of war.

After that incident and our acquirement of islands in the Pacific Ocean a strong public opinion quickly developed in this country in favor of the abrogation of the Clayton-Bulwer treaty and the construction of the Isthmian Canal by the United States.

The Clayton-Bulwer treaty was superseded by the Hay-Pauncefote treaty, which was concluded November 18, 1901.

By the Hay-Bunau-Varilla treaty, concluded November 18, 1903, the Republic of Panama granted to the United States "in perpetuity the use, occupation, and control of a zone of land" 10 miles wide, extending across the Isthmus of Panama, "for the construction, maintenance, operation, sanitation, and protection" of an isthmian ship canal.

On that zone of land the Panama Canal has been constructed by the United States. It will be completed and opened to the use of the public in 1915. When completed the canal will have cost the people of the United States about $400,000,000.

The law approved August 24, 1912, providing for the tolls to be charged for the use of the Panama Canal, exempts from the payment of tolls vessels engaged in the coastwise trade of the United States.

The pending bill, H. R. 14385, provides for the repeal of that exemption. The provision of the law proposed to be repealed by this bill is as follows:

No tolls shall be levied upon vessels engaged in the coastwise trade of the United States.

The two principal reasons given in favor of the repeal of this law are, first, the exemption is a violation of the Hay-Pauncefote treaty, and second, the exemption is a mistaken economic policy.

I agree that the law making the exemption should be repealed if that exemption is a violation of the Hay-Pauncefote treaty.

Does this law violate the treaty?

When the Hay-Pauncefote treaty was concluded, it was evidently the desire and the intention of the people of this country that our Government should have the right to construct, own, and control the Isthmian Canal. Such a policy had been advocated by statesmen for many years.

In his annual message to Congress, in 1868, President Johnson said:

Negotiations are pending with a view to the survey and construction of a ship canal across the Isthmus of Darien under the auspices of the United States.

In a message to the Senate, March 8, 1880, President Hayes said:

The policy of this country is a canal under American control. The United States can not consent to the surrender of this control to any European power or to any combination of European powers.

An interoceanic canal across the American Isthmus will essentially change the geographical relations between the Atlantic and Pacific coasts of the United States and between the United States and the rest of the world. It would be the great ocean thoroughfare between our Atlantic and our Pacific shores, and virtually a part of the coast line of the United States. Our merely commercial interest in it is greater than that of all other countries, while its relations to our power and prosperity as a Nation, to our means of defense, our unity, peace, and safety are matters of paramount concern to the people of the United States. No other great power would under similar circumstances fail to assert a rightful control over a work so closely and vitally affecting its interest and welfare.

In his annual message to Congress, in 1882, President Arthur said:

The claim of this Nation in regard to the supervision and control of any interoceanic canal across the American Isthmus has continued to be the subject of conference.

The Democratic platform of 1892 contained the following plank:

For purposes of national defense and the promotion of commerce between the States, we recognize the early construction of the Nicaragua canal and its protection against foreign control as of great importance to the United States.

The Republican platform of 1892 contained the following plank:

The construction of the Nicaragua canal is of the highest importance to the American people, both as a measure of defense and to build up and maintain American commerce, and it should be controlled by the United States Government.

In his annual message to Congress, in 1898, President McKinley said:

That the construction of such a maritime highway is now more than ever indispensable to that intimate and ready intercommunication between our eastern and western seaboards demanded by the annexation of the Hawaiian Islands and the prospective expansion of our influence and commerce in the Pacific, and that our national policy now more imperatively than ever calls for its control by this Government, are propositions which I doubt not the Congress will duly appreciate and wisely act upon.

The Democratic platform of 1900 contained the following plank:

We favor the immediate construction, ownership, and control of the Nicaraguan Canal by the United States.

The Republican platform of 1900 contained the following plank:

We favor the construction, ownership, control, and protection of an Isthmian Canal by the Government of the United States.

In his annual message to Congress, in 1900, President McKinley then said:

I commend to the early attention of the Senate the convention with Great Britain to facilitate the construction of such a canal, and to remove any objection which might arise out of the convention commonly called the Clayton-Bulwer treaty.

These statements and declarations, although referring to different routes, show the fixed intention and desire of the American people to have an Isthmian Canal owned and controlled by the United States.

Has the Hay-Pauncefote treaty carried out this intention and desire by providing for such a canal, or have the American people been disappointed by this treaty?

The Hay-Pauncefote treaty is as follows:

The United States of America and His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans, by whatever route may be considered expedient, and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the "general principle" of neutralization established in article 8 of that convention, have for that purpose appointed as their plenipotentiaries—

The President of the United States, John Hay, Secretary of State of the United States of America;

And His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B. G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States;

Who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

"ARTICLE 1.

"The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

"ARTICLE 2.

"It is agreed that the canal may be constructed under the auspices of the Government of the United States either directly at its own cost, or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"ARTICLE 3.

"The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal, that is to say:

"1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

"2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

"Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

"4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

"5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart

within 24 hours from the departure of a vessel of war of the other belligerent.

"6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

"ARTICLE 4.

"It is agreed that no change of territorial sovereignty or of international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

"ARTICLE 5.

"The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty, and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

"In faith whereof the respective plenipotentiaries have signed this treaty and hereunto affixed their seals.

"Done in duplicate at Washington, the 18th day of November, in the year of our Lord one thousand nine hundred and one.

"JOHN HAY. [SEAL.]
"PAUNCEFOTE. [SEAL.]"

I have quoted this treaty in full so that we may consider all its provisions together.

Much misunderstanding as to our rights under this treaty has been caused by the fact that rule 1 of article 3 has been so frequently quoted alone.

Article 2 states:

It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost, or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

By this article it was agreed that the Government of the United States might construct the canal at its own cost, and that, subject to the provisions of this treaty, our Government should "have and enjoy all the rights incident to such construction."

What are the "rights incident to such construction"?

The Government of the United States has constructed the Panama Canal on land acquired from Panama for that purpose, and has paid the entire cost of its construction. By "such construction" the Government of the United States is the owner of the canal. Hence the "rights incident to such construction" are the rights of the owner of the canal.

The owner of property "has the right to enjoy and do with it as he pleases, even to spoil or destroy it, as far as the law permits, unless he be prevented by some agreement or covenant which restrains his right."

The Government of the United States, being the owner of the canal, has the right to use it or permit it to be used in every lawful way without charging for its use, unless restrained by agreement.

It is contended that rule 1 of article 3 restrains and precludes our Government from exempting any vessels of commerce from payment of tolls, whether such vessels be engaged in the coastwise trade of the United States or engaged in foreign commerce.

In considering this rule we should keep in mind that article 2, in addition to the rights which I have mentioned, also gives our Government "the exclusive right of providing for the regulation and management of the canal."

Pursuant to this authority given in article 2, "the United States adopts" the "rules."

Rule 1 of article 3 is as follows:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

Do the words "all nations" used in this rule include the United States?

The owner of the canal, the United States, adopted this rule, and the other rules, to be observed by other nations, because no other nations will have the right to use the canal unless such other nations observe these rules. The United States has not agreed that the canal shall be open to the vessels of "all nations," but has only agreed that the canal shall be open to the vessels of "all nations observing these rules." The United States has also agreed that such nations shall be permitted to use the canal on terms of "entire equality," under "conditions and charges" that "shall be just and equitable." By this rule the United States has simply agreed not to discriminate against any nation that uses the canal, and agreed that the "conditions and charges" for the use of the canal "shall be just and equitable."

If the United States are included in the words "all nations," then both the vessels of commerce and the vessels of war of the United States are governed by these rules, because "vessels of commerce and of war" are joined together by the language of rule 1, and the words "vessels of commerce and of war" are modified together by the words "of all nations."

There is nothing in the treaty to warrant the exclusion of the "vessels of war" of the United States from the provision of this rule and the inclusion of "vessels of commerce" of the United States.

If the words "all nations" include the United States, what would be the position of our Government should the United States fail to "observe these rules"? Would the canal be forfeited, or would the United States still be required to maintain and operate the canal for the sole use of the other nations that observe the rules?

With the vessels of war of the United States governed by these rules, our Government would be required to go through the absurd performance of having one officer of our Government to collect money from another officer of our Government as tolls for our vessels of war that pass through the canal.

The United States would not be permitted to exercise any right of war in the canal. We would have no right to embark or disembark troops or munitions of war in the canal. Our vessels of war would not be permitted to remain in the canal longer than 24 hours.

Under such conditions the canal, instead of being a means of defense to this country, would be a heavy burden.

However, I will not follow this untenable proposition further, because the gentlemen who favor the passage of the pending repeal bill admit that the words "vessels of commerce and war" used in this rule under consideration do not include "vessels of war" of the United States, and that "vessels of war" of the United States will not be required to pay tolls. These gentlemen also admit that the other rules in article 3 do not restrict the rights of the United States.

Great Britain admits that our Government has the right "to exercise belligerent rights" to protect the canal.

Sir Edward Grey, in his note of November 14, 1912, to Ambassador Bryce, said:

Now that the United States has become the practical sovereign of the canal, His Majesty's Government do not question its title to exercise belligerent rights for its protection.

From the reasons and admissions given, it clearly appears that the words "vessels of commerce and of war," used in rule 1, do not include "vessels of war of the United States." Hence these words "vessels of commerce and war" do not include vessels of commerce of the United States, because we can not include "vessels of commerce" of the United States and exclude "vessels of war" of the United States in fixing the meaning of the words "vessels of commerce and of war of all nations" used in this rule.

It plainly follows that the words "all nations" do not include the United States, but include "all nations" other than the United States, the maker of the rules and owner of the canal.

Neither rule 1 nor any other provision of the Hay-Pauncefote treaty restrains or precludes our Government from exempting vessels of the United States fom payment of tolls for passing through the Panama Canal whether such vessels be engaged in the coastwise trade of the United States or engaged in foreign commerce.

For these reasons I am fully satisfied that the law which exempts vessels engaged in the coastwise trade of the United States from the payment of tolls at the Panama Canal does not violate the Hay-Pauncefote treaty.

It is contended by some that the words "without impairing the general principle of neutralization in article 8 of that convention," used in the preamble of the Hay-Pauncefote treaty, establishes a "general principle of neutrality" that limits the right of the United States in its control of the Panama Canal.

Article 8 of the Clayton-Bulwer treaty is as follows:

The Governments of the United States and Great Britain having not only desired, in entering into this convention, to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America, and especially to the interoceanic communications, should the same prove to be practicable, whether by canal or railway, which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other state which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

A careful examination of this article shows that no general principle of neutralization that would apply to the Panama Canal was so established.

This article established the "general principle" that the nations who should jointly protect the canal should have equal rights to the use of the canal. No nations join in the protection of the Panama Canal. The whole burden of protecting this canal rests upon the United States.

The rights of a Government can not be conveyed away by terms that are doubtful.

Former Secretary of State Olney said:

The principle is well settled that a State conveys away its rights of sovereignty or property only by terms which are clear and express and are not susceptible of any other reasonable construction. If the terms are vague and of doubtful import, the presumption is against the State's intention to part with or abridge its jurisdictional or property rights.

By exempting vessels engaged in the coastwise trade of the United States from payment of tolls at the Panama Canal, our Government discriminates against no nation when the tolls charged other nations are just and equitable and each nation is charged the same, because the coastwise trade of the United States is wholly reserved to the vessels of the United States. The law governing this trade is as follows:

That no merchandise shall be transported by water, under penalty of forfeiture thereof, from one port of the United States to another port of the United States, either directly or via a foreign port, or for any part of the voyage, in any other vessel than a vessel of the United States.

No foreign vessel shall transport passengers between ports or places in the United States, either directly or by way of a foreign port, under a penalty of $200 for each passenger so transported and landed."

In fixing the rate to be charged for tolls our Government took into consideration the estimated amount of coastwise trade and made due allowance for same. The tolls for the Panama Canal have been fixed at $1.20 per net ton. At the Suez Canal the tolls are $1.30 per ton. The construction of the Suez Canal cost only about $127,000,000. The Panama Canal cost more than three times as much as did the Suez Canal, yet we charge 10 cents less per ton for tolls.

Hon. A. Mitchell Innes, chargé d'affaires of Great Britain, in his note of July 8, 1912, to the Secretary of State, practically admitted the right of the United States to exempt vessels engaged in the coastwise trade of the United States from the payment of tolls. In the conclusion of that note he said:

As to the proposal that exemption shall be given to vessels engaged in the coastwise trade, a more difficult question arises. If the trade should be so regulated as to make it certain that only bona fide coastwise traffic which is reserved for United States vessels would be benefited by this exemption, it may be that no objection could be taken.

In the case of Olsen against Smith, decided in 1904, and reported in one hundred and ninety-fifth United States, 332, the Supreme Court of the United States has sustained a State law that exempted coastwise vessels from payment of pilotage.

The syllabus of that case is as follows:

A State pilotage law subjecting all vessels, domestic and foreign, engaged in foreign trade to pilotage regulation, but which exempts, pursuant to law, coastwise steam vessels of the United States, is not in conflict with provisions in the treaty between the United States and Great Britain to the effect that British vessels shall not be subject to any higher or other charges than vessels of the United States.

Mr. Justice White, delivering the opinion of the court, said:

Nor is there merit in the contention that, as the vessel in question was a British vessel coming from a foreign port, the State laws concerning pilotage are in conflict with a treaty between Great Britain and the United States, providing that "no higher or other duties or charges shall be imposed in any ports of the United States on British vessels than those payable in the same ports by vessels of the United States." Neither the exemption of coastwise steam vessels from pilotage, resulting from the law of the United States, nor any lawful exemption of coastwise vessels created by the State law, concerns vessels in the foreign trade, and, therefore, any such exemptions do not operate to produce a discrimination against British vessels engaged in foreign trade and in favor of vessels of the United States in such trade.

Until recently it was generally believed, in this country, that we had the right to exempt vessels of commerce engaged in the coastwise trade of the United States from payment of tolls. But few statesmen thought otherwise.

In 1912 both the Democratic Party and the Progressive Party, in their platforms, declared in favor of the tolls exemption.

Less than two years ago both Houses of Congress and the President believed we had that right when the tolls-exemption law was enacted.

President Taft then said:

After full examination of the Hay-Pauncefote treaty and of the treaty which preceded it I feel confident that the exemption of the coastwise vessels of the United States from tolls and the imposition of tolls on vessels of all nations engaged in the foreign trade is not a violation of the Hay-Pauncefote treaty.

Tolls exemption has been the policy of our Government for many years.

The law establishing tolls exemption by our Government was enacted in 1884, and is as follows:

That no tolls or operating charges whatsoever shall be levied or collected upon any vessel or vessels, dredges, or other passing water craft through any canal or other work for the improvement of navigation belonging to the United States.

The contention that the tolls exemption is a mistaken economic policy is based upon two grounds: First, the tolls exemption would benefit a shipping monopoly instead of benefiting the people, and, second, the tolls exemption is a subsidy.

I can not agree that the tolls exemption is a mistaken economic policy. Neither do I admit that the tolls exemption would benefit a shipping monopoly instead of benefiting the people.

If you admit this proposition to be true, you admit that our Democratic administration is incompetent to suppress monopolies. I will make no such an admission. I believe this administration can and will suppress and destroy monopolies.

The law already prohibits the use of the canal to vessels violating the antitrust laws and vessels owned by competing railroad companies. This law is as follows:

From and after the 1st day of July, 1914, it shall be unlawful for any railroad company or other common carrier subject to the act to regulate commerce to own, lease, operate, control, or have any interest whatsoever (by stock ownership or otherwise, either directly, indirectly, through any holding company, or by stockholders or directors in common, or in any other manner) in any common carrier by water operated through the Panama Canal or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic or any vessel carrying freight or passengers upon said water route or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic; and in case of the violation of this provision each day in which such violation continues shall be deemed a separate offense.

No vessel permitted to engage in the coastwise or foreign trade of the United States shall be permitted to enter or pass through said canal if such ship is owned, chartered, operated, or controlled by any person or company which is doing business in violation of the provisions of the act of Congress approved July 2, 1890, entitled "An act to protect trade and commerce against unlawful restraints and monopolies," or the provisions of sections 73 to 77, both inclusive, of an act approved August 27, 1894, entitled "An act to reduce taxation, to provide revenue for the Government, and for other purposes," or the provisions of any other act of Congress amending or supplementing the said act of July 2, 1890, commonly known as the Sherman Antitrust Act, and amendments thereto, or said sections of the act of August 27, 1894. The question of fact may be determined by the judgment of any court of the United States of competent jurisdiction in any cause pending before it to which the owners or operators of such ship are parties. Suit may be brought by any shipper or by the Attorney General of the United States.

By the enforcement of these and other laws I believe these shipping monopolies can be checked and competition restored in the coastwise trade.

If competition and reasonable freight rates can not be obtained by other means, we can open our coastwise trade to the vessels of the world.

I do not agree that the tolls exemption is a subsidy.

Subsidy, as defined by Webster's New International Dictionary, is:

A grant of funds or property from a government, as of the State or a municipal corporation, to a private person or company to assist in the establishment or support of an enterprise deemed advantageous to the public.

The New Standard Dictionary defines it as follows:

Pecuniary aid directly granted by government to an individual or commercial enterprise deemed productive of public benefit.

A subsidy as generally understood is money paid from "the Public Treasury." No money whatever is paid from the Public Treasury to the transportation companies by the exemption of vessels from payment of tolls. By the exemption from payment of tolls the expenses of the transportation companies are reduced, and the companies are thereby enabled to charge a lower freight and passenger rate.

If tolls are charged upon our coastwise trade, the amount of the tolls will be added to the freight charges and ultimately collected from the consumer.

It has been fully demonstrated that water competition is the most effective means of keeping down freight rates.

Our Government has expended over $700,000,000 for the improvement and maintenance of the waterways of this country. Over $15,000,000 have been appropriated for the improvement and maintenance of the Delaware River. During the last 20 years about $1,000,000 have been expended by the Government for the improvement and maintenance of the harbor at Wilmington, Del.

The improvement of this harbor has greatly promoted the growth and development of the great manufacturing and commercial city of Wilmington.

Since 1881 our Government has expended over $2,000,000 for the operation and care of the St. Marys Falls Canal. The expenditures for that canal last year were $151,748.43. The expenditures for operating and care of Lock and Dam No. 37 in the Ohio River for last year were $31,372.86.

No tolls are charged for the use of these canals or for the use of any other canals owned by the United States.

Will anyone contend that the money expended for the improvement, maintenance, and operation of these waterways is a subsidy? If so, what companies or persons receive the subsidy?

It is apparent that the tolls exemption to coastwise vessels passing through the Panama Canal will be no more a subsidy than is the tolls exemption to vessels passing through the St. Marys Falls Canal, the locks and dams along the Ohio River, or "free tolls" to the vessels using the Wilmington Harbor. Whether the money is expended for building walls along the side of a stream or building movable walls across a canal, in the form of locks or gates, or dredging rocks or mud from the bottom of a harbor, the expenditure of the Government indirectly benefits the public, and in none of these cases is the expenditure a subsidy. In such cases, no money is paid from the Public Treasury to the transportation companies.

The improvement and maintenance of waterways, including the ownership and operation of canals without charging tolls, has been a fixed policy of our Government for many years.

The Democratic Party for 30 years or more has fully approved and indorsed the policy of the improvement of our waterways.

In 1884 the Democratic platform contained the following declaration:

> The Federal Government should care for and improve the Mississippi River and other great waterways of the Republic, so as to secure for the interior States easy and cheap transportation to tidewater.

Similar declarations are in the Democratic platforms of 1892 and 1896. In 1904 the Democratic platform contained the following plank:

> We favor liberal appropriation for the care and improvement of the waterways of the country.

In 1908 the Democratic platform contained this declaration:

> Water furnishes the cheaper means of transportation, and the National Government, having the control of navigable waters, should improve them to their fullest capacity. We earnestly favor the immediate adoption of a liberal and comprehensive plan for improving every watercourse in the Union which is justified by the needs of commerce; and to secure that end we favor, when practicable, the connection of the Great Lakes with the navigable rivers and with the Gulf through the Mississippi River, and the navigable rivers with each other by artificial canals, with a view of perfecting a system of inland waterways to be navigated by vessels of standard draft.

In 1912 the Democratic platform contained the following declaration:

> We renew the declaration in our last platform relating to the conservation of our natural resources and the development of our waterways.

Tolls exemption at the Panama Canal for vessels engaged in our coastwise trade is also a Democratic policy.

The Democratic platform of 1912 contains the following declarations:

> We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal.
>
> * * * * * * *
>
> Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign, and we invite the cooperation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country.

I approve both of these declarations, and consider myself committed by them to the American people in favor of the Panama tolls exemption.

We are now asked to repeal this exemption law by the pending bill. I believe the determination of the question as to our violating our treaty obligation should decide whether or not the tolls-exemption law should be repealed now.

As I have stated, I am satisfied the tolls-exemption law does not violate the Hay-Pauncefote treaty. Therefore, I am opposed to the passage of the pending repeal bill.

The repeal of this tolls-exemption law now would be an admission by our Government that we do not have the right to control the Panama Canal. What other demands would be made upon the United States concerning the management and control of this canal no person can say. Great Britain has already given notice of a protest against the law which prohibits vessels controlled by trusts from using the canal. In his note, from which I have quoted, Sir Edward Grey says:

> There are other provisions of the Panama Canal act to which the attention of His Majesty's Government has been directed. These are contained in section 2, part of which enacts that a railway company subject to the interstate commerce act of 1887 is prohibited from having any interest in vessels operated through the canal with which such railways may compete, and another part provide that a vessel permitted to engage in the coastwise or foreign trade of the United States is not allowed to use the canal if its owner is guilty of violating the Sherman Antitrust Act.
>
> His Majesty's Government do not read this section of the act as applying to or affecting British ships, and they therefore do not feel justified in making any observations upon it. They assume that it applies only to vessels flying the flag of the United States, and that it is aimed at practices which concern only the internal trade of the United States. If this view is mistaken and the provisions are intended to apply under any circumstances to British ships, they must reserve their right to examine the matter further and to raise such contentions as may seem justified.

Other protests and demands will follow if we now surrender our right to control the canal.

Is it possible that we have spent $400,000,000 of the people's money in the construction of a canal over which our Government will have no greater control and will receive no greater benefits than will foreign nations?

We are told that the canal will be a great "international waterway," to be operated "with equal treatment to the people and subjects of all nations," and that we should be liberal in controlling it. We should be liberal with the canal; but we should be sure we are just to the American people before we are generous to foreign nations. I can not acquiesce in the surrender of a vital right which I am fully satisfied belongs to our Government.

However, President Wilson and many other of our able statesmen now believe our Government has no right to grant the tolls exemption to the coastwise trade. Since the question as to our rights in the canal has been raised, our rights should be determined as soon as possible.

The Supreme Court of the United States has jurisdiction to determine our rights under treaties. Let the tolls-exemption law continue in force until our Supreme Court has finally decided the question as to our right to grant the tolls exemption. We will then have the question judicially determined in a way that will not only be satisfactory to the American people but satisfactory also to foreign nations.

Exemption of Farmers and Like Organizations From the Antitrust Laws.

REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1914.

Mr. MURRAY of Oklahoma. Mr. Speaker, right here again is where some Oklahoma politicians and office seekers, particularly if they are against me or want my job, will again proceed to "condemn" me, and will doubtless charge that MURRAY again has got off of the "Bryan band wagon" and quit the "Tumulty train" to the "President's patronage pantry," if what appears in yesterday's Washington Times be correct as to his position on section 7 of this, the Clayton antitrust bill, which so materially affects directly farmers, laborers, and other organizations which have no capital stock. Nevertheless, I shall give my views of this bill even at the risk of such a charge. I avail myself of the privilege of extending in the RECORD the statement as to the President's position:

> President Wilson will not compromise further with organized labor.
>
> Definitely and without hesitation he accepted this morning the gage of battle. To a subcommittee of the House Judiciary Committee, which called at the White House this morning to lay before him a tentative compromise amendment to the Clayton bill regarding exemption for organized labor from the operation of the proposed law, the President declared that he would accept no compromise.
>
> The fight is now on in earnest.
>
> The labor Representatives claim sufficient votes in the House to force an adoption of the changes in the legislation which they demand. Apparently the President is determined to let the antitrust program fail, if need be, rather than yield an inch further to the demands of labor.
>
> Charges of bad faith are flying back and forth.
>
> * * * * * * *
>
> Monday night, in an effort to effect a compromise, the House leaders tentatively agreed to add to section 7 the following language:
>
> "And no such organization, nor association, nor members thereof shall be regarded as an illegal combination in restraint of trade under the Sherman Act."
>
> This amendment was submitted to the President this morning by the subcommittee consisting of Congressmen WEBB, CARLIN, and FLOYD. The President was found to be adamant.
>
> On their way out of the White House the members of the subcommittee learned that Secretary of State Bryan had joined the President.

Of these three bills, known as the antitrust bills, the first, creating an "interstate trade commission," has a good purpose, but without authority to accomplish its good intentions. The one known as the Rayburn or "bond-and-stock" bill, I regard as wise and complete and without necessity of amendment. It is but a redraft of one of the celebrated reform bills enacted in Texas by noble old Jim Hogg. Of the present proposed act, styled the "Clayton bill," my opinion is that it contains several

vicious provisions requiring careful consideration and amendments. Not alone is section 7 wrong.

Let us analyze a portion of it, beginning with section 15, as follows:

No temporary restraining order shall be granted without notice to the opposite party, unless it shall clearly appear from affidavit or by the verified bill that immediate or irreparable injury, loss, or damage will result to property or a property right of the applicant.

This is but a repetition of the most fundamental textbook procedure in equity. The sections and paragraphs following that one adds some procedure a bit more specific, until section 18 is reached, which, in part, is as follows:

That no restraining order or injunction shall be granted by any court of the United States, or a judge or the judges thereof, in any case between an employer and employees, or between persons employed and persons seeking employment, involving or growing out of a dispute concerning terms or conditions of employment, unless necessary to prevent irreparable injury to property or to a property right of the party, if there is no adequate remedy at law.

Another clear recitation of the most elementary procedure in equity. I am astonished that gentlemen on this committee should imagine that this House is not aware of these facts. It is true the man unacquainted with law would not understand this.

The ordinary farmer and laborer could easily be deceived and made to believe they are getting something good; and but for subsequent sections I would consider this but a harmless, redundant reenactment of the elementary textbook principles governing proceedings in equity. But when we read a little further we observe, in the second paragraph of section 20, a procedure for trial of contempt reciting for the most part the present law, but there is not a proposed enactment in all these sections, from section 15 to 21, but what would be the procedure in any court where the judge is both competent and honest; but its purpose is found in section 21, wherein, in part, it reads:

Any judgment of conviction may be reviewed upon writ of error in all respects as now provided by law in criminal cases. * * * Upon the granting of such writ of error, execution of judgment shall be stayed, and the accused * * * shall be admitted to bail. * * *

What is the purpose of this section? Lawyers who are acquainted with the construction placed upon statutes, drilled in court procedure, would understand the effect and the purpose of reciting this procedure to be to substitute for the writ of habeas corpus a proceeding on appeal by writ of error, creating delay. I say this because the United States has never adopted the common law of England. It prevails only as it prevails by adoption in the several States, the Federal judges enforcing the common-law principle in those States where it exists and enforcing the civil law of France, or the Code Napoleon, in Louisiana. I ask this committee, Do you imagine you will deceive us, even if you can deceive the laboring man, and hide your purpose to supersede by another procedure the writ of habeas corpus, the highest writ of liberty known to the common law?

But there are other evils in section 22 as it may affect contempt proceedings. It says:

That nothing herein contained shall be construed to relate to contempts committed in the presence of the court, or so near thereto as to obstruct the administration of justice, nor to contempts committed in disobedience to any lawful writ, process, order, rule, decree, or command entered in any suit or action brought or prosecuted in the name of, or on behalf of, the United States, but the same, and all other cases of contempt not specifically embraced within section 19 of this act, may be punished in conformity to the usages at law and in equity now prevailing.

Note the last lines of that paragraph and look at its effect, and that is to repeal or modify statutes passed in recent years by Congress providing for a hearing and a trial by jury in contempt cases. In this paragraph those cases of contempt not enumerated in section 19, as—

in the presence of the court or in disobedience to any lawful writ, process, order, rule, or decree, where the United States happens to be a party—

may be punished in conformity—

to the usages in law and in equity as now prevailing.

Not in accordance with the statute, but with the processes in the lower Federal courts as pursued by the hooks and crooks on the bench of the superior Federal courts. Did you intend to modify and contravene the law governing contempt trials? Whether you intended it or not, you have done so. In the causes enumerated in that section 22 there is even no provision that a trial shall be given the accused in such contempt cases.

It is not a pleasing thing to me to differ with the President and his coadjutors. I have said I would follow his advice in all things where he knew better than I; but with my 15 years' experience at the bar, brought in daily contact with judicial decisions and constructions of law and statutes; add to that my experience in the making of two State constitutions, coupled with the vitalization of one by legislative enactments, my experience in these lines has been greater than his. In addition, my 12 years' recent experience as a proprietary farmer, living and associating daily with the tenant farmer, sharing with him his hardships and financial difficulties by aiding and lending him my credit and security to obtain money with which to make his crop, feeling and breathing his hardships and poverty when his crop failed or proved to be insufficient to pay off his note and mortgage, followed by a foreclosure of all he had, and my being obliged to come to his rescue to the tune of several hundred dollars to pay the balance of the note at exorbitant rates of interest—from all these experiences I know that my knowledge of legislation in the interest of the farmer surpasses that of the President or any other man who only knows the farmer by what he read of him out of a book, and I am unwilling to be a party to the reenactment of a bill causing a repetition of what occurred for the five first years after the enactment years ago of the Sherman antitrust law, for during that period it was used exclusively to prosecute the grange organizations throughout the country.

Suppose President Barrett, of the National Farmers' Union, were to send an order down the line of that organization calling on the farmers to withhold the sale of their cotton or their grain from the market so as to hold up the price, that order would be in violation of this statute and would subject him to prosecution and the jurisdiction of the inferior Federal courts of the country.

I doubt whether there be another Member of this House who knows the farmer by personal association with him as I know his and as I know his difficulties.

My experience as a farmer has convinced me that he must organize for just such purpose; that he must some times reduce the acreage of his crop and at all times limit the amount that goes upon the market, otherwise he would never receive a fair price. The market would be destroyed, and his crop, however large, would bring him no net returns. Therefore I am unwilling that the farmer or his leader as president of his organization should suffer or even be subject to the order of any court in the land, when he is doing no more than exercising the law of self-defense, which is but a natural first law and which supreme courts have rightly held to be above all law and constitutions.

I have never claimed either here or in any other legislative body to be the special representative of the laboring man, and I grant you they ofttimes make demands which they ought not to make—demands that would injure them—made in their desperation to secure their rights, but I have always stood for justice for them. I have never pretended to be the special champion of the farmer, although I will admit that my heart throbs beat more nearly in unison with his than with any other class. I have always believed that as a legislator I should know no interest but the public interest. Nor does the cry that by eliminating the farmers' and laborers' organizations from the application of this law to be "class legislation" deter me in the least. I go you one better; I believe in class legislation whenever it can be enacted to benefit one class without injury to any other class. Measured by this standard I ask what injury can be done to any other class by reciting that this act does not apply to these particular organizations without capital stock, organized purely for self-defense. Cry, if you may, "class legislation," and then think just a bit. We have not passed a bill in this Congress that did not violate the same principle. It was "class legislation" when we put raw wool on the free list and gave to the manufacturers 35 per cent; when we put cattle on the free list and then placed a duty for protection to packery products; when we provided in the banking act that the banker could secure currency based upon the notes taken from the farmer, this too was "class legislation," but you did not object; and now is the time when like class legislation should be enacted in the interest of the other two classes. The farmer now claims his share; nothing more. Nor do you stop here. Government aid of a rural credit system, although given to the banks, is denounced as "paternal and class legislation." The farmers did not object then, and they only ask now for equal privileges and for just and like consideration. Do not imagine that you have deceived then or that you can deceive them. They know the distinction between a demagogue and the offer of a real remedy. They can understand an analysis of all such legislation.

You expressly provide in section 8 of this bill that nothing therein shall prevent a corporation "engaged in commerce" from the formation of subsidiary corporations * * * or the natural or legitimate branches or extensions thereof, or from ownership and holding all or a part of the stock of such subsidiary corporations.

But in this provision you qualify such as those "engaged in commerce" and thereby exclude fraternal, labor, consumers, agricultural or horticultural organizations, or orders or associa-

tions instituted for the purpose of mutual help and not having a capital stock or conducted for profit (more "class law" for corporations "engaged in commerce"), as defined in section 7, and which you seek to be made amenable to this law, its criminal penalties, and the orders of Federal judges. Your cry of "paternal" and "class legislation" is nonsense. I say, with due respect to all gentlemen of this House, that no Member, whether he reside in the South or West, North or East, should vote for this bill without an amendment stating in specific terms that it shall not apply to such organizations. The man who can not draw a distinction between these organizations for mutual self-help, organized for personal self-defense to encourage and promote the American family and home, and the corporations and trusts of the country, solely organized for aggressive aggrandizement, has his mind, soul, and sinew so interwoven with corporation cobwebs beyond my power ever to have imagined, and the vote upon that amendment will determine whether there be those in this House that fail to note the distinction, a distinction between the natural man, with soul, heart, and sinew and an artificial person, called in law a corporation.

Antitrust Legislation.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, May 29, 1914,

On the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. BAILEY. Mr. Speaker, in the general debate on this bill the brilliant, the versatile, and the eloquent gentleman from Pennsylvania [Mr. GRAHAM], my distinguished colleague, alluded with pained surprise to my story of the Colby mine in Michigan, a story which he questioned, doubting whether it had any foundation in fact.

The gentleman reminds me of the countryman who visited the circus for the first time and there came face to face with an animal which for length of neck surpassed anything he had ever seen, even in fevered dreams.

"What is that?" he demanded of the keeper, after a long survey of what to him was a new specimen.

"That? Why, that's a giraffe."

"I don't believe it," said the countryman. "There ain't no sich animal."

The gentleman from Pennsylvania [Mr. GRAHAM] is equally skeptical regarding the Colby mine. He goes to the length of questioning my veracity with respect to it. Yet the Colby mine is no invention; it is no figment of the imagination; it is a very solid reality, which has been dealt with at length in the public records of the great State of Michigan in the annual report of the commissioner of labor for the year 1892. The facts regarding that mine, as I related them here on this floor last Saturday, have never been challenged to my knowledge. Yet they were widely discussed at the time of their publication by Commissioner Robinson, a man of high character, who lifted the bureau of which he was the head to a new high level among those of its kind in the United States.

The gentleman from Pennsylvania says the "Colby mine incident stands out in sharp contrast with the truth," and he cites figures relating to royalties in West Virginia, showing thereby that he entirely missed the point illustrated in the Colby incident. No one will for a moment pretend that soft coal has been brought under monopolistic control to the extent that iron ore has been or that hard coal has been. The distribution of soft coal is very wide. It is found in probably more than half the States of the Union. It varies as widely in quality and accessibility as in distribution. And the royalty of 10, 15, to 25 cents a ton, which is common, tells as great a story in its way as is told in the history of the Colby mine, where royalties aggregated about 95 per cent of the gross value of the output.

But there are things not dreamed of in the philosophy of the gentleman from Pennsylvania. Were he to look closer home, say at the enormous increase of land values in Philadelphia—at the story of the Girard estate, for a specific example—would he not discover a romance of unearned wealth quite as startling as that which shocked him in the revelations of the Colby mine? What is the extent of the taxing power which that estate possesses and has so long exercised on the labor and industry of the gentleman's home city? Do not the figures of the Colby mine pale into utter insignificance by comparison with those making up the record of the Girard estate? But if the gentleman should shrink from looking at things at so short a range, might he not turn his eyes without discomfort or embarrassment in the direction of Manhattan Island, where land values have risen from $11,755,402 in 1813 to $3,127,852,473 in 1913? Has the gentleman from Pennsylvania, or have other gentlemen here, read the Arabian Nights tale of land values in Manhattan? No eastern romance ever equaled it in its golden splendor. It is a tale of enormous significance. It tells of flaunting silks and glittering jewels on one page and of hunger and rags on the other. It tells of labor and enterprise and thrift in one chapter and of opulent idleness and gilded vice in another. It tells of millions who pay tribute for the privilege of toiling on the island and of a favored few who riot in luxury without thought for the morrow. Yet the gentleman from Pennsylvania has apparently never read this romance; he has never heard this tale; he has, at least, never gathered its significance.

Mr. Chairman, the Colby mine, as I said the other day, is a type. It may stand for a thousand other cases where monopolistic control gives over to individuals a private taxing power which is employed in collecting unrequited wealth. There is not a city, not a town or village, not a community of any kind in this broad land, where instances of a similar character can not be found. In my own city of Johnstown I have seen land values double, if not quadruple, within the last 20 years. And if this means anything it means that within 20 years the land user has been compelled to pay a heavier and a still heavier tribute to the landowner for the bare privilege of working and producing. Can any gentleman—can even the gentleman from Pennsylvania—miss the significance of this?

Migratory Bird Law.

EXTENSION OF REMARKS
OF
HON. CHARLES L. BARTLETT,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 1, 1914.

Mr. BARTLETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a decision of Judge Trieber, of the United States District Court for the Eastern District of Arkansas, rendered on Saturday, upon the constitutionality of the migratory bird law.

It is as follows:

MIGRATORY BIRD LAW—DECLARED UNCONSTITUTIONAL BY JUDGE TRIEBER, OF UNITED STATES DISTRICT COURT—MANY OPINIONS CITED—COURT UNABLE TO FIND ANY PROVISION OF CONSTITUTION, EXPRESS OR IMPLIED, TO SUSTAIN LAW—SPORTSMEN INTERESTED.

Judge Jacob Trieber, in the United States district court for the Jonesboro division of the eastern district of Arkansas, Saturday rendered an opinion in the Federal migratory bird law case, declaring the law unconstitutional. The opinion, which is of much interest to sportsmen everywhere, is as follows:

"United States *v.* Harvey H. Shauver. W. H. Martin, Esq., United States district attorney, and J. H. Acklen, of Nashville, Tenn., for the United States; E. L. Westbrook, of Jonesboro, Ark., for the defendant. Trieber, D. J.

"The defendant demurs to the indictment in this cause, which charges him with a violation of that part of the appropriation act for the Department of Agriculture, approved March 4, 1913 (37 Stat., 828, 847), known as the 'migratory birds' provision, and the regulations made by the Department of Agriculture in pursuance thereof and which have been approved by the President. That provision reads:

"All wild geese, wild swans, brant, wild ducks, snipe, plover, woodcock, rail, wild pigeons, and all other migratory game and insectivorous birds which in their northern and southern migrations pass through or do not remain permanently the entire year within the borders of any State or Territory, shall hereafter be deemed to be within the custody and protection of the Government of the United States, and shall not be destroyed or taken contrary to regulations hereinafter provided therefor.

"The Department of Agriculture is hereby authorized and directed to adopt suitable regulations to give effect to the previous paragraph by prescribing and fixing closed seasons, having due regard to the zones of temperature, breeding habits, and times and line of migratory flight, thereby enabling the department to select and designate suitable districts for different portions of the country, and it shall be unlawful to shoot or by any device kill or seize and capture migratory birds within the protection of this law during said closed seasons, and any person who shall violate any of the provisions or regulations of this law for the protection of migratory birds shall be guilty of a misdemeanor and shall be fined not more than $100 or imprisoned not more than 90 days, or both, in the discretion of the court.

"The Department of Agriculture, after the preparation of said regulations, shall cause the same to be made public and shall allow a period

of three months in which said regulations may be examined and considered before final adoption, permitting, when deemed proper, public hearings thereon, and after final adoption shall cause the same to be engrossed and submitted to the President of the United States for approval: *Provided, however,* That nothing herein contained shall be deemed to affect or interfere with the local laws of the States and Territories for the protection of nonmigratory game or other birds resident and breeding within their borders, nor to prevent the States and Territories from enacting laws and regulations to promote and render efficient the regulations of the Department of Agriculture provided under this statute.

"In pursuance of this authority, the Department of Agriculture has adopted suitable regulations which have been approved by the President.

"GROUND FOR DEMURRER.

"That the National Constitution is an enabling instrument, and therefore Congress possesses only such powers as are expressly or by necessary implication granted by that instrument, is not questioned. Unless, therefore, there is some provision in the National Constitution granting to Congress, either expressly or by necessary implication, the power to legislate on this subject, the act can not be sustained.

"The deference due from the judiciary to the other coordinate departments of the Government has made the courts, when the constitutionality of an act of the legislative department is attacked, to yield rather than encroach on the legislative domain. Only if the question is practically free from real doubt will the courts declare an act of the legislature unconstitutional. The fact that the statute goes to the verge of the constitutional power is not enough; it must appear clearly that it is beyond that power to justify a court to declare it void. These principles are so well settled by an unbroken line of decisions of all the American courts that it is unnecessary to cite authorities to sustain them.

"It is equally well settled that as to all internal affairs the States retained their police power, which they as sovereign nations possessed prior to the adoption of the national Constitution, and no such powers were granted to the Nation. (Cooley Const. Lim., 574; Patterson *v.* Kentucky, 97 U. S., 501–503; Covington, etc., Bridge Co. *v.* Kentucky, 154 U. S., 204, 310; United States *v.* Boyer (D. C.), 85 Fed., 425, 434.) But it is now equally well settled that the United States does possess what is analogous to the police power, which every sovereign nation possesses, as to its own property (Camfield *v.* United States, 167 U. S., 518, 525) and to carry into effect those powers which the Constitution has conferred upon it. (In re Debs, 158 U. S., 564, 581; Light *v.* United States, 220 U. S., 523, 536; Hoke *v.* United States, 227 U. S., 308, 323.)

"It is not claimed by counsel for the Government that the power to enact such legislation exists under the commerce clause of the Constitution, but it is claimed that subsection 2 of section 3, Article IV, of the Constitution, which is as follows, grants the necessary power:

"The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State.

"IMPLIED ATTRIBUTE.

"It is also claimed that it is one of those implied attributes of sovereignty in which the National Government has concurrent jurisdiction with the States; that it is a dormant right in the National Government, and where the State is clearly incompetent to save itself the National Government has the right to aid. To sustain the latter proposition stress is laid on the fact that it is impossible for any State to enact laws for the protection of migratory wild game, and only the National Government can do it with any fair degree of success; consequently the power must be national and vested in the Congress of the United States. A similar argument was presented to the court in Kansas *v.* Colorado (206 U. S., 46, 89), but held untenable. Mr. Justice Brewer, speaking for the court, disposed of it by saying:

"But the proposition that there are legislative powers affecting the Nation as a whole, which belong to although not expressed in the grant of powers, is in direct conflict with the doctrine that this is a Government of enumerated powers. That this is such a Government clearly appears from the Constitution, independently of the amendment, for otherwise there would be an instrument granting certain specified things made operative to grant other and distinct things. This natural construction of the original body of the Constitution, independently of the amendment, for otherwise there would be an instrument granting certain specified things made operative to grant other and distinct things. This natural construction of the original body of the Constitution is made absolutely certain by the tenth amendment. This amendment, which was seemingly adopted with prescience of just such a contention as the present, disclosed the widespread fear that the National Government might, under the pressure of a supposed general welfare, attempt to exercise powers which had not been granted. With equal determination the framers intended that no such assumption should ever find justification in the organic act, and that if in the future further powers seemed necessary they should be granted by the people in the manner they had provided for amending that act. Its principal purpose was not the distribution of power between the United States and the States, but a reservation to the people of all powers not granted.

"This disposes of that contention.

"Are migratory birds, when in a State on their usual migration, the property of the United States or of the States where they are found? If they are the property of the Nation, the States would have no power to regulate, control, or prohibit the hunting or killing of them. But the rule of law, which all the American courts have recognized, is that animals ferse naturae, denominated as game, are owned by the States, not as proprietors, but in their sovereign capacity as the representatives and for the benefit of all their people in concern. This principle has not only been maintained by all the highest courts of the States in which the question has arisen, but has had the approval of the Supreme Court of the United States in every case which has come before it. (Martin *v.* Waddell, 6 Pet., 367; McCready *v.* Virginia, 94 U. S., 391; Smith *v.* Maryland, 18 How., 71, 74; Manchester *v.* Massachusetts, 139 U. S., 240, 358; Lawton *v.* Steele, 152 U. S., 133; Geer *v.* Connecticut, 161 U. S., 519; The Abby Dodge, 223 U. S., 166.)

"DECISIONS CITED.

"In McCready *v.* Virginia it was said:

"In like manner the States own the tidewaters themselves and the fish in them, so far as they are capable of ownership while running. For this purpose the State represents its people, and the ownership is that of the people in their united sovereignty.

"It is true that this quotation was not absolutely necessary for the determination of the issues in that case, but the question of ownership of the fish in tidewater was indirectly involved, and the learned Chief Justice, who delivered the opinion of the court, evidently deemed it necessary to determine it.

"In Manchester *v.* Massachusetts a statute of Massachusetts regulating the fishing of menhaden in Buzzards Bay was involved, and it was there held:

"We think it must be regarded as established that, as between nations, the minimum limit of the territorial jurisdiction of a nation over tidewaters is a marine league from its coast; that bays wholly within its territory not exceeding 2 marine leagues in width at mouth are within this limit; and that included in this territorial jurisdiction is the right of control over fisheries, whether the fish be migratory, free-swimming fish or free-moving fish or fish attached to or embedded in the soil.

"In that case the court also quoted with approval from Dunham *v.* Lampshere (3 Gray, 268):

"That in the distribution of powers between the General and State Governments the right to the fisheries and the power to regulate the fisheries on the coast and in the tidewaters of the State were left, by the Constitution of the United States, with the States, subject only to such powers as Congress may justly exercise in the regulation of commerce, foreign and domestic.

"In Martin *v.* Waddell, after a careful review of the English authorities, it was expressly held that 'the public common of piscary belongs to the people in their united sovereignty, and the state holds it in trust for them.'

"Greer *v.* Connecticut may well be considered the leading case on this subject, as it reviews very learnedly all the law pertaining thereto. Mr. Justice White—now Mr. Chief Justice—reviewed not only the law as it existed under the common law but under the laws of Solon, the law as it is found in the Institute of Justinian, the Civil and Salic Law, and the Code of Napoleon, and sustained a statute of the State of Connecticut prohibiting the killing of certain game at any time when intended to be conveyed beyond the limits of the State. After reviewing all the authorities the learned justice summarized the law as follows:

"The foregoing analysis of the principles upon which alone rests the right of an individual to acquire a qualified ownership in game and the power of the State deducible therefrom to control such ownership for the common benefit, clearly demonstrates the validity of the statute of the State of Connecticut here in controversy. The sole consequence of the provision forbidding the transportation of game killed within the State beyond the State is to confine the use of such game to those who own it—the people of that State.

"AS TO CONSTITUTIONALITY.

"In Silz *v.* Hesterberg (211 U. S., 31) the constitutionality of the New York statute prohibiting the possession of game at certain times was attacked as volative of the National Constitution. That the State was the owner of all the game in the State, whether migratory or not, was not questioned by those attacking the statute, but it was claimed that the State had no power to prohibit the possession of game in the closed season when imported from a foreign country or another State where the killing is not prohibited. The statute was sustained as a proper exercise of the police power to protect the game in the interest of the food supply of the people of that State.

"In the Abby Dodge the principles laid down in the McCready case that 'each State owns the beds of all tidewaters within its jurisdiction, unless they have been granted away; also the tidewaters themselves, and the fishes in them, so far as they are capable of ownership while running' is reaffirmed.

"In Judson on Interstate Commerce, section 11, the author states the law to be:

"Thus the wild game within a State, at common law, belongs to the sovereign, and in this country to the people in their collective capacity, and the State therefore has a right to say that it shall not become the subject of commerce.

"Even after the game has been reduced to possession there is but a qualified ownership in it, subject to the control of the State. (Phelps *v.* Racey, 60 N. Y., 10; Commonwealth *v.* Savage, 155 Mass., 278; Organ *v.* State, 56 Ark., 270; State *v.* Geer, 69 Conn., 144, affirmed in 161 U. S., 519; State *v.* Northern Pacific Express Co., 58 Minn., 403; State *v.* Rodman, 58 Minn., 393; American Express Co. *v.* Peoples, 133 Ill., 649; Ex parte Mayer, 103 Cal., 476; People *v.* Collison, 85 Mich., 105; In re Deininger, 108 Fed. (C. C.), 623.)

"The act of Congress of May 25, 1900, chapter 553, 31 Stat., 188, known as 'the Lacey Act,' the constitutionality of which has been sustained, Rupart *v.* United States, 181 Fed., 104, C. C. A. 255, in effect legalizes the statutes of the States for the control of wild game within their borders, whether migratory or not. (People *v.* Hesterberg, 184 N. Y., 126.)

"The claim that the migratory birds are the property of the United States must therefore be held untenable.

"It is also argued that Congress has frequently exercised the power to regulate matters which could only have been done under the general police power, and the validity of these acts, when attacked, as beyond the power of Congress has been upheld. Counsel refers to the lottery acts, the antitrust acts, the national railway legislation, the safety-appliance act, the quarantine laws, the pure food and drugs act, the act regulating mailable articles, and other acts of similar nature; but every one of these acts was upheld under some provision of the Constitution, either that of the Post Office Department, the commerce clause, the taxing power, or some other grant. Whenever Congress or the head of a department went beyond that power, as by including intrastate carriage with interstate, the acts were declared unconstitutional. Trade-mark cases (100 U. S., 92); Illinois Central Railway Co. *v.* McKendree (203 U. S., 514); The Employees' Liability cases (207 U. S., 463).

"It may be, as contended on behalf of the Government, that only by national legislation can migratory wild game and fish be preserved to the people; but that is not a matter for the court. It is the people, who alone can amend the Constitution, to grant Congress the power to enact such legislation as they deem necessary. All the courts are authorized to do when the constitutionality of legislative acts is questioned is to determine whether Congress, under the Constitution as it is, possesses the power to enact the legislation in controversy; their power does not extend to the matter of expediency. If Congress has not the power, the duty of the court is to declare the act void. The court is unable to find any provision in the Constitution authorizing Congress, either expressly or by necessary implication, to protect or regulate the shooting of migratory wild game when in a State, and is therefore forced to the conclusion that the act is unconstitutional. The demurrer to the indictment will be sustained.

"TRIEBER, P. J."

Addresses Delivered at Arlington Cemetery on Decoration Day, May 30.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. COX,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 1, 1914.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include addresses by the honorable Speaker of this House, the President of the United States, and Senator SMOOT at Arlington Cemetery on Decoration Day, May 30.

The addresses are as follows:

Commander Gleeson, of the Department of the Potomac of the Grand Army of the Republic, introduced the President in the following words:

"I have the honor to present the President of the United States."

The President said:

"Ladies and gentlemen, I have not come here to-day with a prepared address. The committee in charge of the exercises of the day have graciously excused me on the grounds of public obligations from preparing such an address, but I will not deny myself the privilege of joining with you in an expression of gratitude and admiration for the men who perished for the sake of the Union. They do not need our praise. They do not need that our admiration should sustain them. There is no immortality that is safer than theirs. We come not for their sakes but for our own, in order that we may drink at the same springs of inspiration from which they themselves drank.

"A peculiar privilege came to the men who fought for the Union. There is no other civil war in history, ladies and gentlemen, the stings of which were removed before the men who did the fighting passed from the stage of life. So that we owe these men something more than a legal reestablishment of the Union. We owe them the spiritual reestablishment of the Union as well; for they not only reunited States, they reunited the spirits of men. That is their unique achievement, unexampled anywhere else in the annals of mankind, that the very men whom they overcame in battle join in praise and gratitude that the Union was saved. There is something peculiarly beautiful and peculiarly touching about that. Whenever a man who is still trying to devote himself to the service of the Nation comes into a presence like this, or into a place like this, his spirit must be peculiarly moved. A mandate is laid upon him which seems to speak from the very graves themselves. Those who serve this Nation, whether in peace or in war, should serve it without thought of themselves. I can never speak in praise of war, ladies and gentlemen; you would not desire me to do so. But there is this peculiar distinction belonging to the soldier, that he goes into an enterprise out of which he himself can not get anything at all. He is giving everything that he hath, even his life, in order that others may live, not in order that he himself may obtain gain and prosperity. And just so soon as the tasks of peace are performed in the same spirit of self-sacrifice and devotion, peace societies will not be necessary. The very organization and spirit of society will be a guaranty of peace.

"Therefore this peculiar thing comes about, that we can stand here and praise the memory of these soldiers in the interest of peace. They set us the example of self-sacrifice, which if followed in peace will make it unnecessary that men should follow war any more.

"We are reputed to be somewhat careless in our discrimination between words in the use of the English language, and yet it is interesting to note that there are some words about which we are very careful. We bestow the adjective 'great' somewhat indiscriminately. A man who has made conquest of his fellow men for his own gain may display such genius in war, such uncommon qualities of organization and leadership that we may call him 'great,' but there is a word which we reserve for men of another kind and about which we are very careful; that is the word 'noble.' We never call a man 'noble' who serves only himself; and if you will look about through all the nations of the world upon the statues that men have erected—upon the inscribed tablets where they have wished to keep alive the memory of the citizens whom they desire most to honor—you will find that almost without exception they have erected the statue to those who had a splendid surplus of energy and devotion to spend upon their fellow men. Nobility exists in America without patent. We have no House of Lords, but we have a house of fame to which we elevate those who are the noble men of our race, who, forgetful of themselves, study and serve the public interest, who have the courage to face any number and any kind of adversary, to speak what in their hearts they believe to be the truth.

"We admire physical courage, but we admire above all things else moral courage. I believe that soldiers will bear me out in saying that both come in time of battle. I take it that the moral courage comes in going in the battle, and the physical courage in staying in. There are battles which are just as hard to go into and just as hard to stay in as the battles of arms, and if the man will but stay and think never of himself there will come a time of grateful recollection when men will speak of him not only with admiration but with that which goes deeper, with affection and with reverence.

"So that this flag calls upon us daily for service, and the more quiet and self-denying the service the greater the glory of the flag. We are dedicated to freedom, and that freedom means the freedom of the human spirit. All free spirits ought to congregate on an occasion like this to do homage to the greatness of America as illustrated by the greatness of her sons.

"It has been a privilege, ladies and gentlemen, to come and say these simple words, which I am sure are merely putting your thought into language. I thank you for the opportunity to lay this little wreath of mine upon these consecrated graves."

Commander Gleeson introduced Speaker CLARK, of the House of Representatives, saying:

"The President has spoken of the noble men we have in this country, he said, not by patent of nobility, but by might of good

deeds. I believe the man who I am to introduce to you is such a man, one whose patriotism is as pure as crystal, a man who has the courage of his convictions at all times and on all occasions. From my observance of the man he is always to be found on the side of the right and truth. He is a man who fights in the open, a friend of the soldier, one who has shown that he is a man on whom we can count at all times, no matter what personal sacrifice it may involve to him. I believe you know who I mean without my mentioning his name—CHAMP CLARK, of Missouri, the great Speaker of the National House."

The Speaker said:

"Truly does Emerson say, 'We live in a new and exceptional age. America is another word for opportunity. Our entire history appears like a last effort of divine Providence in behalf of the human race.' Those words of the great Concord philosopher were fitly spoken and are like apples of gold in pictures of silver.

"I shall always consider it among the greatest blessings of my life that when I was a student at Kentucky University one of my teachers was Prof. Joseph Desha Pickett, a Virginia gentleman of the old school, who could have given pointers to Lord Chesterfield in politeness and made him turn green with envy. When a young man Prof. Pickett toured Europe. He was much in company with an English duchess. She was so charmed with his manners, wit, and learning that when they parted she said, 'Prof. Pickett, I have been surprised at your extreme grace and politeness, remembering that you come from a country where they have no queen.'

"The courtly Virginian, bowing almost to the ground, said, 'Your grace, I beg your pardon. You live in a country where you have one queen. I live in a country where every woman is a queen.' A finer mot was never uttered. The civilization of a country can be accurately measured by the estimation in which the women are held.

"Shortly after the close of the war between the States, Admiral Farragut made the circle of the globe in his flagship. In every civilized country he was received with the honors due a hero, which he was. While cruising in the Ægean Sea he sent word to the Sultan of Turkey that he desired to call on him to pay his respects. The Sultan replied that no foreign battleship was permitted to enter the Dardanelles unless commanded by a prince of the blood royal. That raised Farragut's Tennessee fighting blood to the boiling point, and he sent this message to the Sultan: 'I have on board my ship 700 American citizens, every one of whom is a prince of the blood royal in his own land. I am clearing my ship for action, and will call on you immediately in force.' Suffice it to say that he had no trouble anchoring in the Golden Horn.

"A few years ago a party of Americans were traveling in the Old World. They had with them a boy about 12 years old. In the catacombs of Egypt he was weary and fell asleep. A wag, thinking to have some fun with the lad, surrounded him with the grinning mummies of dead Egyptians and blew a horn in imitation of Gabriel's trumpet. The boy awoke and didn't know where he was. He rubbed his eyes, swung his cap over his head, and shouted, 'Hurrah! It's resurrection day, and an American is the first man up!'

"Prof. Pickett, Admiral Farragut, and that boy were genuine Americans, fit to be countrymen of George Washington, Thomas Jefferson, Alexander Hamilton, and old Ben Franklin.

"It is written 'Blessed are the peacemakers,' but after 19 centuries of Christian endeavor humanity is not sufficiently purged of the old Adam to obey the injunction contained in the Sermon on the Mount, which runs in this wise, 'Whosoever shall smite thee on the right cheek, turn to him the other also.' On the contrary, we are prone to smite the smiter.

"Despite the positive command of the Savior, few, even of the best of us, ever pray for our enemies. If we do, it is with an elastic mental reservation. The day has not yet arrived when swords are beaten into plowshares or spears into pruning hooks, and, judging from facts which can be neither blinked nor denied, that era of perfect peace is out of sight in the distant future.

"With every nation of Europe supporting armaments of immense proportions and straining every nerve to augment them it can not be truthfully said that the world has attained that status foretold in the gospel of the Prince of Peace. The clank of the sword is heard and the flash of the bayonet is seen in every quarter of the globe.

"That mythical and intangible thing called 'the balance of power in Europe' is in as precarious and dangerous condition as when Louis XIV and William of Orange contended for the mastery at Steinkirk, Namur, and Landen; as when Marlborough and bold Eugene conquered at Oudenarde; as when Peterborough scaled the walls of Barcelona. All Europe, from the Arctic Ocean to the Straits of Gibraltar, is a veritable powder magazine, which the pigmy prince of a petty State may explode at any moment by striking a single match. Martial fame is as strongly coveted to-day as when Absalom, of the beautiful hair, rode forth to battle, and when Richard, of the lion's heart, fought to wrest the tomb of the Redeemer from the hands of the Saracen unbelievers. If history is to be believed, war has been the most important occupation of man since Cain slew Abel and since Tubal Cain first worked in a blacksmith shop. The corporation of captains, from Nimrod to Gen. Wood, occupy more space in the annals of mankind than do all the statesmen, philosophers, poets, preachers, writers, and artisans that ever lived. All history is but one unending story of human butchery. All our boasted and multiplied arts of civilization are but preparations for the sacrifice of war—the festival of death.

"Last summer I had a striking illustration of the rapidity with which the veterans, both Union and Confederate, are vanishing from the scene. The House passed a resolution directing me as Speaker to appoint a committee of 21 to attend the fiftieth anniversary of the Battle of Gettysburg. Thinking that it would be in keeping with the eternal fitness of things I concluded to make up the entire committee of Union and Confederate soldiers, which I set about doing. To my utter amazement I discovered that in the entire membership of 435 there were only 9 soldiers of the Civil War—6 who fought under the Stars and Bars, 3 who fought under the Stars and Stripes. The trio of Union soldiers are Gen. Sherwood, of Ohio; Judge Goulden, of New York; and Mr. Kirkpatrick, of Iowa. The 6 Confederates then in the House were Stedman, of North Carolina; Taylor and Richardson, of Alabama; Talbott, of Maryland; Estopinal, of Louisiana; and Jones, of Virginia. Since then Judge Richardson has passed away, and his place has been taken by Judge Harris, another Confederate soldier.

"As the years steal into the centuries Decoration Day is gradually growing into Memorial Day—a great national holiday classing with Christmas and the Fourth of July. Most assuredly it is a beautiful, wholesome, and ennobling custom to decorate the graves of all American soldiers—both Union and Confederate soldiers—of all our wars, and to memorialize their valor, their sufferings, and their sacrifices.

"President McKinley did a wise, gracious, and patriotic thing when he suggested that the Federal Government should care for the graves of the Confederate dead at Arlington, and this suggestion came with double force because he himself was a Union soldier of approved capacity and high courage. If the spirits of the mighty dead take any interest in the affairs of this lower world, William McKinley's soul will be full of joy next week when there will be dedicated with fitting ceremonies a monument to the Confederate dead as an enduring testimonial of the perfect peace and abiding friendship now existing in all parts of our beloved country.

"I speak for the generation which was too young to participate in our great Civil War. I was only 11 years old when the first gun was fired at Charleston, and now my head is blossoming like the almond tree. I will tell you how I regard that awful struggle and how the generation to which I belong looks upon it—as a most heroic chapter in the annals of mankind.

"Cold must be the heart of that American who is not proud to claim as countrymen the flower of the Virginia youth, who charged up the slippery slopes of Gettysburg with gallant Pickett, or those unconquerable men in blue, who through two long and dreadful days rallied around heroic Thomas 'the Rock of Chickamauga.'

"It was not southern valor or northern valor; it was, thank God, American valor; that valor which caused our revolutionary fathers to throw their gage of battle into the face of the son of a hundred kings; that valor which animated Washington at Princeton, Brandywine, Monmouth, and Yorktown; that valor which upheld his famished men amid the unspeakable horrors of Valley Forge; that valor which sustained the soldiers who followed Arnold on that cruel winter's march through the woods of Canada and in the Christmas storming of Quebec, where Montgomery fell immortal; that valor which nerved Andrew Jackson and his raw militia on the ever glorious 8th of January, when they humbled to the very dust the towering pride of that mighty monarch upon whose dominions the sun never sets, and utterly routed the veterans of the peninsula who had snatched from Napoleon's brow the iron crown of Charlemagne; that valor which at Buena Vista, Cherubusco, and Chapultepec filled the world with it renown; that valor which wrote Davy Crockett's name above Leonidas and made the Alamo another shrine for freedom; that valor which begirts that land as with a wall of fire, forbidding the nations of the earth to touch the ark of American liberty lest they die. Callous, indeed, must be the man who can not find something to admire in the colossal character of Abraham Lincoln or in

the splendid career of Robert E. Lee, who deserves to rank with the Chevalier Bayard, Sir Philip Sidney, and King Arthur.

"The soldiers of the North and the soldiers of the South were American freemen all, fighting like heroes for what they considered right; as such I honor them and teach my children to cherish them. To both alike are applicable the words of Kentucky's soldier poet:

"On fame's eternal camping ground
Their silent tents are spread,
And glory guards with solemn round
The bivouac of the dead.

"When I look into the faces of my children my heart swells with ineffable pride to think that they are citizens of this mighty Republic, one and indivisible, not built for a day, but for all time, and destined under God to be the dominating influence in all the centuries yet to be.

"How sleep the brave, who sink to rest,
By all their country's wishes blest!
When spring, with dewy fingers cold,
Returns to deck their hallowed mold
She there shall dress a sweeter sod
Than fancy's feet have ever trod.
By fairy hands their knell is wrung,
By forms unseen their dirge is sung,
Their honor comes, a pilgrim gray,
To bless the turf that wraps their clay,
And freedom shall a while repair
To dwell, a weeping hermit, there."

Remarks by Dr. J. K. Gleeson, department commander, introducing Senator REED SMOOT, of Utah:

"I now have the honor of introducing to you as the orator of the day a man who is no stranger to you, a patriotic statesman, who by his acts and votes has proven that he is a true friend of the veterans and intends that they shall at all times be fairly treated, honored, and sustained by the Nation. I present the Hon. REED SMOOT, United States Senator from Utah."

Senator SMOOT said:

"Mr. President, Commander Gleeson, and ladies and gentlemen, there is no place more appropriate for Americans to gather on Memorial Day than Arlington, our national cemetery, where lovers of liberty are wont to turn their gaze or wend their way—Arlington, a sacred spot of ground, made so when dedicated to become the burial ground for thousands of our country's patriots. They who slumber here bore the cross of civilization to its loftiest height and there consecrated it with their untold and unknown suffering and in thousands of cases with their own lifeblood. My fellow countrymen, it is well that we assemble here. It is well that we recall the deeds of valor in the establishing and preservation of our Nation's life by the dead and the living. It is well for us to meet this day to pay a tribute of respect to the memories of our countrymen who laid down their lives for us.

"Some 46 years ago the Grand Army of the Republic, through its commander in chief, instituted the 30th day of May of each year as an appropriate time to drape with the Stars and Stripes and strew with beautiful and fragrant flowers the graves of their comrades who have passed into the great beyond. Thousands of illustrious names are included in the list of the dead. What a beautiful custom and what a joy it is to every true American on each Memorial Day to gather lovingly about the graves of his departed comrades and recite their deeds of valor in whispered reverence. Every general who led a victorious army is honored this day by us honoring the humblest soldier in the ranks who sacrificed his life to preserve our Government. Life sacrificed for one's country levels all rank, and to-day the dead drummer boy is as great a hero as the highest officer. We strew these humble graves with the fresh flowers of a growing year, because they are the prettiest symbols that dear mother nature affords and as a mark of loyalty and patriotism to the cause defended by the departed one. The tomb of the military leader and the monument that marks a spot commemorative of the massing of forces—we strew these not less nor yet more tenderly. Surrounded as we are with the graves of the known and unknown patriots, let us, out of full hearts, continue to sing our anthems to their undying praise:

"Go to their graves, O, Columbia fair—
Go to their graves and scatter there
Sweet flow'rets of a thousand hues—
Flow'rets that bloom in the matin dews;
Scatter them, scatter them deep—
Scatter them o'er where heroes sleep.

"Go to the hills where the laurel grows—
Where soft winds sigh, where the tempest blows.
Gather the choicest gifts of God
That spring from the rich and rugged sod;
Scatter them, scatter them deep—
Scatter them o'er where heroes sleep.

"Go to the tomb where the chieftain lies,
Where, carved in rock, of heroic days,
A story is told—of vict'ries won—
Honors achieved—of duties well done.
Then softly approach that spot pressed down,
Where the stone lies low—the name 'unknown'
'Unknown'—unknown in the sight of God?
He knoweth who sleeps beneath the sod.

"'Twas a mother's boy—a brave loving lad,
Who knew no glory save his nation's good;
Earth's bosom holds him in sacred embrace,
Nor time, nor storms shall his glory efface.
Entwine 'round the tomb and the lowly grave
Blossoms of beauty for the true and brave.
Scatter them—scatter them deep—
Scatter them o'er where heroes sleep.

"Sons and daughters of the veterans, Americans, lovers of liberty, never cease strewing their graves with forget-me-nots and roses and sweet violets, but far more important let us dedicate our lives to honoring, defending, and, if necessary, sacrificing our lives for the honor of our flag and country.

"The veterans of the Civil War left us a reunited country, united forever, I believe; they left us the priceless heritage of their patriotism and self-sacrifice, and by their actions during the war and following the war taught us lessons it would be well for us to apply in civil life. During the war they demonstrated a lofty idealism, and following the war sound practical sense, both of which are essential to a nation's success. Our veteran dead have all died in the same stern performance of a duty that right and liberty demanded of them. Men's patriotism, their very souls, were tried during the dark, heartrending, and bloody days of the sixties. It was your right to choose, and how proud we are of you that you chose the path of honor and all the hardships which fall to the lot of a soldier. Every one of you knew that your decision meant poor food, scant rations, the trench, the lone camp fire, and the storm of bullets from a fearless and worthy foe. The time had arrived in your minds when the American Union must be saved. This was done with a consciousness that liberty was not a mere name, and past history had taught the lesson that it often required the life blood of men to establish and maintain a free country. Officers of every rank, privates at every call, defended Columbia in her darkest hour of need. Fellow countrymen, they are our friends, and shall be so during this life and the life to come. I believe God held this land in the hollow of His hand, reserving it for centuries from discovery, until a dispensation arrived when liberty and freedom could be established. Without the assistance of an overruling Providence, the thirteen American colonies, struggling for independence, would have failed. Our revolution was the outery of a freedom-loving people against usurpation and tyranny. It has always appeared strange to me that in the past the greatest advances made in securing personal liberty for man have come through the destructive and inhuman channel of war. We have never had a war, nor will we ever have one, without examples of heroism and loyalty. Washington crossing the Delaware, cutting his way through floating ice, and surprising the Hessian hosts at their Christmas revel; Paul Revere's historical ride from Charlestown; and Ethan Allen, with his 80 backwoodsmen, swooping down upon a garrisoned fort and taking possession of the English Army 'in the name of the great Jehovah and the Continental Congress,' are but examples. A description of the revolutionary call to arms by George Bancroft, the historian, portrays in the following words the swiftness and patriotic impulse with which our fathers pledged their all to the cause of liberty:

"Darkness closed upon the country and upon the town, but it was no night for sleep. Heralds by swift relays transmitted the war message from hand to hand, till village repeated it to village; the sea to the backwoods; the plains to the highlands; and it was never suffered to droop till it had been borne north and south, and east and west, throughout the land. It spread over the bays that receive the Saco and the Penobscot and the St. Johns. Its loud reveille broke the rest of the trappers of New Hampshire, and, ringing like bugle notes from peak to peak, overleapt the Green Mountains, swept onward to Montreal, and descended the ocean river, till the responses were echoed from the cliffs of Quebec. The hills along the Hudson told one to another the tale. As the summons hurried to the south, it was one day at New York; in one more at Philadelphia; the next it lighted a watch fire at Baltimore; thence it waked an answer at Annapolis. Crossing the Potomac near Mount Vernon, it was sent forward without a halt to Williamsburg. It traversed the dismal swamp to Nansemond, along the route of the first emigrants to North Carolina. It moved onward and still onward through boundless forests of pines to Newbern and to Wilmington. 'For God's sake, forward it by night and by day,' wrote Cornelius Harnett, by the express which sped for Brunswick. Patriots of South Carolina caught up its tones at the border, and dispatched it to Charleston, and through moss-clad live oaks and palmettos still farther to the south, till it resounded among the New England settlements beyond the Savannah. The Blue Ridge took up the voice and made it heard from one end to the other of the Valley of Virginia. The Alleghenies opened their barriers, 'that the loud call' might pass through to the hardy riflemen on the Holston. Ever renewing its strength, powerful enough even to create a Commonwealth, it breathed its inspiring word to the first settlers of Kentucky, so that hunters who made their halt in the matchless valley of the Elkhorn commemorated the 19th of April by making their encampment Lexington. With one impulse, the Colonies sprang to arms; with one spirit,

they pledged themselves to each other 'to be ready for the extreme event.' With one heart, the continent cried: 'Liberty or death.'"

"The sorrows, suffering, death, and patriotism of our Revolutionary forefathers; the desolation and destruction that occurred during that justifiable war, are too well known by all for me to take the time to recite them to you. But from these sacrifices made by the soldiers of our country the American Union was born. Scarcely three-quarters of a century had passed following the birth of the Union before it became necessary for our Government to resort to war to save us that self-same Union. The same spirit of patriotism that was manifested in the War of the Revolution was shown in the Civil War, the most dreadful of all wars.

"Soldiers of the Civil War listen to the word picture of Col. Ingersoll in his 'Vision of War,' and see if it does not take you back 50 years or more and describe your experience at the first call and during the dark days of that mighty struggle:

"The past rises before me like a dream. Again we are in the great struggle for national life. We hear the sounds of preparation, the music of boisterous drums, the silver voices of heroic bugles. We see thousands of assemblages and hear the appeals of orators. We see the pale cheeks of women and the flushed faces of men; and in those assemblages we see all the dead whose dust we have covered with flowers. We lose sight of them no more. We are with them when they enlist in the great army of freedom. We see them part with those they love. Some are walking for the last time in quiet, woody places with the maidens they adore. We hear the whisperings and the sweet vows of eternal love as they lingeringly part forever. Others are bending over cradles, kissing babes that are asleep. Some are receiving the blessings of old men. Some are parting with mothers who hold them and press them to their hearts again and again and say nothing. Kisses and tears, tears and kisses, divine mingling of agony and joy. And some are talking with wives and endeavoring with brave words spoken in the old tones to drive from their hearts the awful fear. We see them part. We see the wife standing in the door with the babe in her arms—standing in the sunlight, sobbing. At the turn in the road a hand waves—she answers by holding high in her loving arms the child. He is gone, and forever.

"We see them all as they march proudly away under the flaunting flags, keeping time to the grand, wild music of war, marching down the streets of the great cities, through the towns, and across the prairies, down to the fields of glory, to do and to die for the eternal right.

"A vision of the future arises:

"I see our country filled with happy homes, with firesides of content, foremost of all the earth.

"I see a world where thrones have crumbled and kings are dust. The aristocracy of idleness has perished from the earth.

"I see a world without a slave. Man at last is free. Nature's forces have by science been enslaved. Lightning and light, wind and wave, frost and flame, and all the secret subtle powers of earth and air are the tireless toilers for the human race.

"I see a world at peace, adorned with every form of art, with music's myriad voices thrilled, while lips are rich with words of love and truth; a world in which no exile sighs, no prisoner mourns; a world on which the gibbet's shadow does not fall; a world where labor reaps it full reward, where work and truth go hand in hand, where the poor girl trying to win bread with the needle—the needle that has been called 'the asp for the breast of the poor'—is not driven to the desperate choice of crime or death, of suicide or shame.

"I see a world without the beggar's outstretched palm, the miser's heartless, stony stare, the piteous wail of want, the livid lips of lies, the cruel eyes of scorn.

"I see a race without disease of flesh or brain, shapely and fair; the married harmony of form and function, and, as I look, life lengthens, joy deepens, love canopies the earth; and over all in the great dome shines the eternal star of human hope.

"In all we say about the soldier, let us not forget the part taken and willingly assumed by the American women in time of war. What shall we say of the wives and the mothers who gave their husbands and their sons for their country? No woman who has not passed through this terrible ordeal can describe or measure the sacrifice our women made or the horrors and hardships and sorrows they endured. What say you of the loving sisters who gave their brothers, yes, and their lovers, too? Were not all these patriots? Yes; patient, waiting, sorrowful, suffering patriots without the stimulus of the excitement of war.

"It was decreed that secession was not to be. The South was a part of the Union which forms but one Nation, and to break up that Union was rebellion. The armies of Lincoln were compelled to forge new bonds, bearing them onward and onward, until at last they should reach around a solid union of States, binding all into one Nation, firm and indestructible forever. But oh, the cost! the cost! Only those who saw and suffered can ever know. You of the North and you of the South who heard the trumpet calls, who gathered around the watch fires, who suffered the tortures of imprisonment, who tramped and fought and bled, you were permitted to know. You can never forget the bloody battle fields of that war. You can never forget the victories and defeats; the hope and despair that came to our armies as the engagements progressed. Well has it been said: 'What anchors of hope' were pounded anew at Donelson! 'In what a forge and what a beat' was Shiloh. And what of Antietam? 'She stood trembling and dripping with a horror of blood.' And Fredericksburg! What message could she give? Her fire-swept fields, red with gore, were lost to fame. 'What anvils rang, what hammers beat' against the battlements at Vicksburg until victory came and the Mississippi flowed unvexed to the sea! And Gettysburg, great in her day of glory! Gettysburg—the high tribunal of the Civil War; God was there. 'He was sifting out the hearts of men before his judgment seat.' Oh, Gettysburg! Against thy brave heights rebellion surged and broke in bloody foam, sank back, and faded from liberty's soil forever. And then from the mountain tops of Lookout and Kenesaw there came a trumpet peal saying, 'Come, come'—we have unlocked the gateway; let us go onward, fighting onward in triumph to the end. The Wilderness and Cold Harbor! How soon will the world forget the holocausts of those fields? How the helpless were devoured amid the furies of the fiery storm. How liberty shrieked, spare us God of Mercy! Spare us! We need no more such costly teaching. But at last a power greater than man's power, stronger than bone and sinew and flesh and blood—a power mightier than vengeful hands struggling to tear freedom's flag in twain—such a power intervened. It was the power of Almighty God.

"The history of our country from the time the first gun was fired on Fort Sumter, in April, 1861, to the close of the war in 1865 unfolds one long story of sorrow, suffering, and death. But the very life of our Union was at stake and demanded suffering and death. Nothing less than the peril of our Union would have justified the slaughter and sacrifices. Many good men and good women surrounded with peace and plenty seldom stop and think at what terrible cost of precious life and property we now enjoy them.

"To-day America—North, South, East, and West—stands as a unit against foreign invasion, free from fear of internal disruption, secure in the inalienable right of life, liberty, and the pursuit of happiness. To-day every American honors and loves Old Glory. To-day the citizens of the South would respond as quickly to a call to defend the honor of our country as the citizens of the North. After the close of the war the sympathetic, humane, and pacific policy adopted by the Government toward our defeated brothers of the South did much to bury old issues and revive Revolutionary patriotism for our common country.

"Remember, my countrymen, great men are not the creators of great events; but great events develop great men. Had there been no Revolutionary War there would have been no immortal Washington, the father of our country. If there had been no Civil War, there would have been no Lincoln, the savior of our Union, nor would there have been a Lee, the pride and idol of the South. The Confederacy was richly endowed with patriots. Mistaken and disastrous as we believe the Confederate cause to have been, yet who can doubt the sincerity of soldiers who fought so valiantly as the southerners? Every Confederate soldier here to-day offered his life for a cause he deemed just and right, and to me you were patriots for that cause. You thought you were right. The boys in blue knew they were. Time has proven that division was not what God intended for these United States, and as I looked into the faces of the Confederate soldiers at Gettysburg, just 50 years after that bloody battle occurred, and as I look into your faces to-day, I do not believe if it were left to the soldiers of the South to-day they would have it other than it is. To-day the glorious emblem of liberty, the guarantor of personal freedom, the Stars and Stripes, floats over the graves of the forgiven patriots who wore the gray as well as those of the valiant soldiers who wore the blue.

"By the flow of the inland river,
Whence the fleets of iron have fled.
Where the blades of the grave grass quiver
Asleep in the ranks of the dead;
Under the sod and the dew,
Waiting the judgment day:
Under the one the blue,
Under the other the gray.

"No soldier who was big enough, unselfish enough, patriotic enough to offer his life for his country will be small enough not to forget and forgive. Soldiers of Lincoln, you were right in your loyalty to the Union. But none of you will deny that the soldiers of the Confederacy were as loyal to their cause as were you to yours, and they were brave and worthy foes. In saying this I do it with the avowed intention of complimenting the valor, heroism, and patriotism of the soldiers of both armies. Let us thank God this day for a reunited country. As an evidence of that unity I have but to call your attention and the attention of the world to the fact that five days from to-day will take place the unveiling of the Confederate Monument, erected in honor of the Confederate dead on the sacred soil of Arlington. The corner stone of this monument was laid by a Republican President of the United States. How fitting it is that the veterans of the North and the veterans of the South should participate in the exercises the same as they are doing on this our National Memorial Day.

"Not many days since there were brought home the bodies of our men at arms slain at the taking of Vera Cruz. The entire

Nation mourned the noble dead. To maintain the Nation's honor these men died, and to-day a million men, if necessary, are ready to finish the task which they began. These men gave their lives that brutal murders of American citizens and bloody anarchy should cease, and that our flag should be respected in the Republic to the south of us. We find the same spirit of patriotism, the same loyalty to country, at Vera Cruz to-day as has been manifested by the defenders of our flag in every call for national defense. We do honor to ourselves in honoring this day the men who died at Vera Cruz. The Vera Cruz 'invasion' has proven to the world, as did our War with Spain, that this country is the United States of America, filled with brave, generous, patriotic, and God-fearing citizens. If conditions develop in Mexico requiring our Army to enter the capital city of that unhappy and distracted Republic, if we should become involved in real war with all factions or any faction in Mexico, there will be no brothers arrayed against brothers, no Americans against Americans. It will be a united America seeking to enforce respect for the ordinary obligations of civilization. There will be but one sentiment in the hearts of all our people; there will be but one uniform and but one flag. Wrongs must be righted before our restraining hand can be withdrawn.

"War is a terrible thing, and should be shunned and avoided as far as possible. But when the Nation's honor is involved, when our liberty is threatened, when humanity demands it, war, in my opinion, is justifiable. The time will come when Christianity, civilization, and man's humanity to man will have advanced mankind to a point where war will be unnecessary. That day has not arrived as yet, but let us all hope and work for its early arrival.

"Mere praise of the Nation's heroes availeth nothing. The memory of their valor, their heroism, their sacrifices should lead us to noble thoughts and action, and the lessons taught in their death should never be forgotten. They are lessons of duty. No American is absolved from the duty of guarding our country's good name, of obeying her laws.

"There is no need of asking the members of the Grand Army of the Republic what our flag stands for, but to the younger generations and our newly adopted citizens it would be well to remind them on this national day that the 13 stripes and the 48 stars stand for more than the cities and villages of the Nation; more than a territory 2,700 miles wide and 1,600 miles long; not only 100,000,000 of free, happy, prosperous people; not merely the work of Washington, Hamilton, Jefferson, Lincoln, Webster, Grant, and Clay. All these we have when we gaze upon the Stars and Stripes. But we have more than these. When we look at our flag we feel its living presence in our very souls. We feel that it is a perfect representation of liberty, regenerated and protected by law, the symbol of the power and majesty of the mightiest nation on earth. The flag represents all that is best and wisest in human government. It represents many of the sublime teachings of the Savior; it represents religious liberty and freedom of speech. Not only does the flag represent all these, but every other true principle of representative government.

"It is our duty, individually and collectively, to educate each succeeding generation to the necessity of unbounded patriotism, in order that our country may continue to be free, that the Stars and Stripes shall continue to be the emblem of liberty, and our flag respected in every land and on every sea. Mr. Commander, I said our flag. In so saying I mean it in its broadest sense, as broad as the lines indicate in the following description by W. D. Nesbit:

"Your flag and our flag,
And how it floats to-day
O'er your land and my land,
And half the world away.

"Blood red and rose red,
Its stripes forever gleam;
Snow white and soul white,
The good forefather's dream.

"Sky blue and true blue,
With stars that beam aright;
A gloried guidon of the day,
A shelter through the night.

"Your flag and my flag—
Oh, how much it holds!
Your heart and my heart
Secure within its folds.

"Your heart and my heart
Beat quicker at the sight;
Sunkissed and wind tossed,
The red and blue and white.

"The one flag! The great flag!
The flag for me and you!
Glorified, all else beside,
The red and white and blue."

Why Congress Should Take the Profit Out of War and Preparation for War.

EXTENSION OF REMARKS
OF
HON. CLYDE H. TAVENNER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 12, 1914.

Mr. TAVENNER. Mr. Speaker, ere long Congress is going to take the profit out of war and preparation for war. When the people learn of the outrageous manner in which the powder, armor, and ammunition trusts have overcharged and cheated Uncle Sam they will insist that the Government manufacture its own munitions of war.

I have devoted the greater part of the last year investigating and studying this subject, and I desire to take the responsibility of placing in the RECORD some of the information and views I have gathered, to the end that the same may be preserved for the possible use of other Members when the matter again comes up for discussion and that my year's hard work in pursuing the subject will not have been wholly in vain.

During consideration of both the Army and Navy bills I did all within my power to have these measures provide for a policy of Government manufacture of all munitions of war. The manner in which the War Department has been overcharged for its munitions and the wisdom of complete Government manufacture of articles used by the Army was set out in great detail in my remarks, which will be found in the proceedings of the House of Representatives on February 27, 1914, when the Army bill was under consideration.

On April 18, when the naval bill was up, I introduced an amendment providing for an extension of the plant of the Bureau of Ordnance of the Navy Department, so that the Government might manufacture armor plate. In years preceding amendments had been offered to the naval bill providing for the construction of an armor plant, and they had been ruled out of order on the ground the amendments involved new legislation. My reason for providing in my amendment simply for the extension of a plant already in existence was the hope that a point of order would not lie against it, because of the fact the amendment did not provide for an entirely new thing but simply for the extension of a plant already in existence. A point of order was raised, however, and the amendment was stricken out.

On May 7, while the same bill was under consideration, I offered a second amendment, to be tacked on at the end of the following paragraph of the bill:

Increase of the Navy; armor and armament: Toward the armor and armament for vessels heretofore and herein authorized, to be available until expended, $14,877,500.

This second amendment read as follows:

Provided, That the Secretary of the Navy is hereby authorized to procure by contract armor of the best quality for any or all vessels heretofore or herein provided for, provided such contracts can be made at a price which, in his judgment, is reasonable and equitable; but in case he is unable to make contracts for armor under the above conditions, he is hereby authorized and directed to procure a site for and to erect thereon a factory for the manufacture of armor and gun forgings; and the sum of $4,000,000 is hereby appropriated toward the erection of said factory and the purchase of a site therefor.

This amendment is practically a duplicate of a provision contained in the naval appropriation bill of 1900; and the mere fact that that bill carried this provision resulted in the Government saving millions of dollars in the cost of armor plate. The Secretary of the Navy was able to say to the three firms having a monopoly of the manufacture of armor in this country that if they were not willing to sell armor to the Government at a fair and reasonable price he was authorized by law to go ahead and manufacture his own armor. Let us see whether the insertion of the amendment I have just offered proved of value in the naval bill of 1900.

Back in 1893 the Government was paying an average of $658 a ton for armor. Some time later Senator TILLMAN, of South Carolina, started in to fight the high price and to oppose the armor ring, and he forced the Armor Trust gradually to reduce its price until, in 1900, he got the price down to $413 a ton.

Then the naval appropriation bill of 1900 was amended to carry the provision I have just alluded to, which provided that if the Secretary of the Navy was unable to obtain a square deal from the Armor Trust, he was authorized and directed to build a Government armor plant.

What was the result? The three concerns manufacturing armor, rather than have Uncle Sam build a plant, gradually reduced their prices from $413 in 1900 to $345 in 1906, which

meant a saving of millions of dollars to the Government. Such was the result of the insertion in the naval bill of 1900 of the provision that I presented. Without spending a dollar for a plant or doing anything further than simply providing that the Secretary of the Navy was authorized to build a plant if he could not obtain fair treatment from the trust, the Government saved millions.

But when Congress failed to continue the provision in the naval bill it gradually lost its moral effect upon the armor ring, and the price of armor plate to the Government was steadily advanced from $345 a ton in 1906 to $454 a ton at the present time.

If this Congress will replace this amendment in the naval bill, I predict it will save every penny of $1,000,000 a year, even if the Government never further considers the advisability of a Government plant.

If the Government builds an armor plant and a padlock is placed on its doors as soon as it is completed, and it is never used, it will, in the opinion of Secretary of the Navy Josephus Daniels, pay for itself simply by enabling the Secretary to obtain a square deal from the armor manufacturers.

This bill carries an appropriation of $14,877,500 for armor and armament alone. If the Government had its own armor and gun-forging plant I believe I am well within the bounds of conservatism when I say that 30 per cent of this sum, or, in round numbers, $4,000,000, could be saved to the taxpayers. Is $4,000,000 a year on armor and armament alone worth the saving? I, for one, believe it is.

But my second amendment, like the first, went the way that all amendments go that threaten the profits of that gigantic trust which has a monopoly on preparation for war in this country, and which draws down annually a very large slice of the $250,000,000 appropriated each year for the maintenance of the Army and Navy in time of peace. It went out on a point of order.

AN OLD STORY.

For 18 years there has been on foot a movement for a Government armor plant. Time after time amendments have been offered to the naval appropriation bill providing for such a plant, and time after time points of order have been raised by gentlemen who do not desire the Government to manufacture armor, and the amendments have been stricken out. The result has been that year after year the armor ring has been permitted to go on drawing down the fat Government contracts which have rewarded them with millions and millions of dollars of extortionate profits.

My purpose in this effort to have the Government manufacture all its munitions of war, including battleships, is not merely to save to the Government the amount of these extortionate profits, but to take the profit out of war and preparation for war.

Those who advocate this policy are not so much concerned whether we build one battleship a year or two battleships a year, so long as the Government does the manufacturing, because then for every dollar Congress appropriates for battleships the Government will receive a dollar's worth of battleship; but now no one knows how much it receives for its dollar. Many gentlemen want a large number of battleships simply in order that private manufacturers may make huge profits in building them. When the Government manufactures all munitions of war we will be able to decide upon the number of battleships needed on the merits of that question. Then the amounts to be carried in the Army and Navy bills will not be dictated by the greed of the Armor, Powder, and Shipbuilding Trusts, but by the needs of the country from a strictly military viewpoint.

We do not know to a penny the extent to which the Government is being overcharged, but we do know that Mr. Carnegie, who was one of the first to go into the armor-plate business, boasts of having made millionaires out of 43 men, and he is now going through life giving his millions away, right and left, and death is going to overtake him with untold millions still on his hands. So there must be huge profits in the armor-plate business, and now that the Government has generously permitted a considerable colony of steel manufacturers to lay up sufficient millions to keep the wolf from their doors through the remainder of their days, as a reward for their thrift and genius and hard work, Congress should, instead of creating a fresh colony of steel magnates at the expense of the people, seriously begin to think of saving some of these millions to the taxpayers.

Complete Government manufacture of munitions of war will mean that the Government itself will save millions annually, because of its demonstrated ability to manufacture cheaper than outside manufacturers, and that the workmen who actually do the work will receive better wages for 8-hour workdays than the employes of the outside manufacturers receive for 9 and 10 and, in some instances, 12 hour workdays.

When all profit is taken out of war, but not until then, we may expect relief from the systematic agitation now being carried on by the Navy League and other friends of the armor ring, the ammunition ring, and the Shipbuilding Trust, for an ever and ever increased amount of armament, which agitation is especially systematic and pronounced about the time the Army and Navy bills are before Congress each year.

WHAT AND WHO THE ARMOR RING IS.

In using the term "armor ring" I do so advisedly. The expression is no mere figure of speech. The armor ring is not a part of invisible government, because we can definitely locate it and place our finger upon it. This ring has overcharged the Government, gouged the Government by selling it inferior products, and two of the three firms comprising the ring have practically admitted that they have conspired to prevent the Government from receiving the benefit of honest competitive bidding.

By the term "armor ring" is meant Bethlehem Steel Co., Carnegie Steel Co., and the Midvale Steel Co. Up to June 26, 1913, these three concerns had drawn down $77,103,483.55 worth of armor contracts alone, divided as follows: Bethlehem, $34,215,112.58; Carnegie, $30,844,153.56; Midvale, $12,044,217.41. Since these figures were compiled the ring has received additional contracts amounting to $8,089,764.45, making a total of $85,193,248. Nor is this all by any means. They have also drawn down millions and millions of dollars' worth of additional and equally fat contracts for guns, ammunitions, and so forth, from the Navy Department, and they have also done the great bulk of the contract work for the Army, receiving all the way from 20 to 60 per cent more than the same work could have been manufactured for in the Government arsenals.

It is still contended by some that these three concerns are intensely patriotic, and that rather than save millions of dollars annually to the people by manufacturing its own munitions of war the Government should continue to give this band of patriots contracts at excessive prices in time of peace in order that we may depend upon their patriotic cooperation in time of war. But when war with Spain was imminent these three concerns got together and issued an ultimatum to the Government that they would not manufacture a single piece of armor plate unless the Government would agree to pay them $100 a ton more than the price that had been determined upon by Congress after investigation as a fair price.

But the intense patriotism of the armor ring did not prevent it from selling armor to Russia in 1894 for $249 a ton, while it was charging the United States $616 a ton.

NO INTENTION TO QUESTION MOTIVES OF MEMBERS WHO DISAGREE.

I do not wish to be understood as desiring in the slightest degree to impugn the motives of any member of the Committee on Naval Affairs. If I or any other Member of the House should for one moment attempt to do so, such action would be so absurd it would make the speaker ridiculous. I have only the highest personal regard for the able chairman of the committee, who is fully as conscientious and patriotic as I or any other Member of the House, yet I can not agree with him in his policy of opposing Government manufacture of munitions of war. I am aware that the gentleman stated on one occasion that if he was satisfied the Government could save money by manufacturing its own armor plate he would be in favor of such an enterprise. But I submit that if he is not satisfied on this point after the abundance of testimony and information that has been collected by two investigating committees and two Secretaries of the Navy, which investigations have been going on for 20 years; and last, but not least, by the statement of the present Democratic Secretary of the Navy, as made in his last annual report, that—

> The Government can achieve a saving by the erection of a 10,000-ton-a-year plant of $1,061,360 per annum, after deducting 4 per cent as interest on the money used in erection and installation of plant and $3,048,462 a year on the basis of a Government plant capable of producing 20,000 tons a year—

if the gentleman is not satisfied after this array of uncontradictable findings by men who have made careful and accurate investigation of the subject, then I respectfully submit there is some excuse for the apprehension that he may never be satisfied as long as he remains chairman of the great Naval Affairs Committee.

ONLY THOSE WHO FAVOR THE PRIVATE MANUFACTURE OF WAR MUNITIONS ARE PATRIOTIC!

The chairman of the Naval Affairs Committee not only insists upon a big Navy but he insists that this big Navy be built by

private contractors. It is the latter part of his policy that I particularly disagree with.

The question has been raised as to the patriotism of those who insist upon the Government manufacture of all munitions of war, including battleships. I can not see how it can be contended that it is any more patriotic to advocate two battleships to be built by private contractors, with huge profits to the builders, than it is to advocate two battleships to be constructed by the Government, which policy means that for every dollar expended for battleships we will get a dollar's worth of battleship, and that the men who actually do the work of building the ships will receive higher wages and work under far better conditions than if the contracts are given to the Shipbuilding Trust.

The big Navy to be built by private contractors' policy will meet with the approval of the armor ring, the ammunition ring, and the Shipbuilding Trust. It will also be eminently satisfactory to the Navy League of the United States, which organization has from the first been an adjunct of the house of Morgan, and is constantly agitating a larger and larger Navy, but, mind you, not a larger Navy to be built at the lowest possible cost with a Government armor plant and in Government shipyards, but a larger Navy to be built by the armor ring, the ammunition ring, and the Shipbuilding Trust.

"BIG NAVY" AGITATION A BUSINESS PROPOSITION WITH THE NAVY LEAGUE.

Ever since I have been a Member of Congress I have been receiving literature from this "big navy" lobby, and finally I determined to call the attention of its officers to the fact that their pleas for a larger Navy are tainted, and will continue to be tainted until they advocate the Government manufacture of all munitions of war. On January 16 last I addressed a letter to Mr. A. H. Dadmun, the secretary of the league, in which, among other things, I said:

I beg to acknowledge receipt of your letter of the 13th instant, together with inclosures as to why a powerful Navy is needed.

Assuming that you are in good faith in this agitation and really desire the largest possible Navy for patriotic reasons, I am going to take the liberty of suggesting to you that if you will inaugurate a movement for the Government manufacture of all munitions of war, including all battleships, your campaign will strike a much more responsive chord with both Members of Congress and the people.

In other words, if the Government is to do all of the manufacturing of munitions of war, including battleships, the point can not then be successfully raised that the agitation is for the benefit of the armor ring, the ammunition ring, and the Shipbuilding Trust.

But if you do not advocate the Government manufacture of all munitions of war, including battleships, you can not successfully deny that you are carrying on a propaganda which means millions and millions of dollars of extortionate profits to the above-mentioned interests.

I hardly expect Members to fall out of their seats in amazement when I report that the Navy League has not accepted my suggestion. Should the Government adopt the policy of manufacturing all its munitions of war, I predict that the Navy League would not only lock the doors of its elegantly appointed suite in the National Capital, but that the same rich patriots who are now clamoring for a bigger and bigger Navy, in the certain knowledge that if their agitation is successful they will draw down contracts worth millions, will be the loudest in their protestations against an annual war expenditure of $250,000,000 in time of peace.

MANY PROMINENT PATRIOTS IDENTIFIED WITH THE NAVY LEAGUE.

I desire now to present some information as to who is behind the Navy League:

Mr. J. Pierpont Morgan was until his death one of the directors, and intensely interested in the league's work, to which he was a liberal contributor. Mr. Herbert L. Satterlee, general counsel for the league, is a son-in-law and heir of Mr. Morgan.

Gen. Horace Porter is president of the league. He was for many years an officer of the Pullman Co., which is a Morgan corporation.

Mr. Charles G. Glover is treasurer of the league. He is president of the Riggs National Bank, which is closer to Wall Street than any other bank in Washington.

Col. Robert L. Thompson is chairman of the executive committee of the league. He is an eminent financier of New York, whose great interests generally coincide with the colossal undertakings of the Morgan group. He is also the head—being chairman of the board—of the International Nickel Co., and holds the honorable post of president of the New York Metal Exchange.

Mr. J. Frederick Pams is director of the league. He is a New York society and yachting man, a friend of Mr. Morgan, and a member of Mr. Morgan's yacht club.

Mr. George von L. Meyer is a director of the league. Mr. Meyer was Secretary of the Navy in the Taft administration and on March 3 signed the remarkable contract for the *Pennsylvania's* armor that has been the subject for unpleasant comment in Congress and elsewhere. He is a considerable stockholder in the New Haven Railroad, which is a Morgan concern, and is also a director in the Amoskeag Manufacturing Co., at Manchester, N. H., and has on the board as his associates Mr. F. C. Dumine, who helped Mr. Morgan to incorporate the Boston Railroad Holding Co., by which the New Haven was enabled to hold the Boston & Maine in spite of certain provisions of the Massachusetts law. Mr. Dumine is also a director of the Fore River Shipbuilding Co., which is on friendly terms with the Morgan group and affiliated with United States Steel.

With a board of directors containing all of these wise and experienced men that are on terms of friendship with our greatest captains of industry our defenseless condition may be believed to be in safe hands and the activities of the Navy League to be unremitting.

ILLUSTRATIONS OF HOW GOVERNMENT IS OVERCHARGED.

The extent to which the armor, ammunition, and powder trusts have been overcharging the Government is almost unbelievable. There has seldom been honest competitive bidding between the manufacturers. Secretary of the Navy Daniels discovered this condition as soon as he entered office, and as a result of his activity in getting new independent bidders to enter the field he has saved the Government more than $2,000,000 and has been in office little more than a year.

Here are two sample illustrations out of a multitude which could be cited showing what happens under real competitive bidding.

Realizing the Government was being overcharged for turbine rotary drums the Secretary invited an English firm to submit a bid for the drums to be installed in the new battleship, No. 39, now building in the New York Navy Yard. The Midvale Steel Co. and the Bethlehem Steel Co., two of the three concerns composing the armor ring, bid $160,272 and $169,568, respectively, while the English firm, acting for the Cyclops Steel & Iron Works, of Sheffield, England, offered to furnish the drums for $57,436, a saving to the Government over the lowest bid of the armor ring of $102,836.

Then, recently the Secretary awarded a contract for building 100 torpedo flasks, including heads. There was competition; new contractors entered the field previously monopolized by the ring, and the Secretary of the Navy was able to purchase 100 flasks for $58,246, which under former conditions would have cost $115,075.

The bids of the Bethlehem Steel Co. and the Midvale Steel Co. under honest competitive bidding showed a reduction of 44 per cent as compared with bids for similar forgings submitted by these companies only four months previous.

RECOMMENDATION OF SECRETARY DANIELS IGNORED.

The chairman of the Naval Affairs Committee praises the present Secretary of the Navy, Josephus Daniels, as one of the greatest Secretaries of the Navy that we have ever had. This praise is justly merited, and therefore it is especially regrettable that the Naval Affairs Committee did not cooperate with and carry out the recommendations of the Secretary of the Navy, who asked for appropriations to make possible the Government manufacture of munitions of war, to the end that the Government might escape the necessity of paying excessive prices to the armor ring, the ammunition ring, and the powder and shipbuilding trusts. By not following out the recommendations of the Secretary of the Navy the committee left the Government at the mercy of these private manufacturers, just as it has been for a quarter of a century:

Here is the policy recommended by the Secretary of the Navy as contained in his annual report, which the committee ignored:

ARMOR, GUNS, AND POWDER SHOULD BE MADE BY THE DEPARTMENT.

The time has come when the department should be freed from excessive prices charged by private manufacturers of armor plate, guns and gun forgings, powder, torpedoes, and other supplies and munitions. Most of those necessaries for the Navy are made by a very few manufacturers, and the prices charged are so much too high that I earnestly recommend that appropriations be made for an armor-plate factory and an increase in the gun factory, the powder factory, and the torpedo works. The ability to make part of the powder used has effected some reduction, but the department is forced to buy too large a quantity from the Powder Trust at an exorbitant price. It has been demonstrated that the department can save money by making its powder, guns, and torpedoes. It is not open to doubt that it can save larger sums when it can make its own armor plate and gun forgings.

EVIDENCE THAT SECRETARY DANIELS IS NOT DOMINATED BY ARMOR RING.

I desire particularly to call attention to the strong arguments of Secretary of the Navy Daniels in support of his recommendation for a Government armor plant, as set forth in his annual report dated December 1, 1913:

IMPORTANCE OF ARMOR-PLATE FACTORY.

I desire to recommend the passage at the earliest moment of a sufficient appropriation to begin the construction of a Government armor plant to relieve a situation which, in my estimation, is intolerable and at total variance with the principle of economy in spending Government money. It is not my intention to enlarge here upon the economic reasons that prompt me to make this recommendation, as I have already gone into them at length in a letter to the Senate in response to a request for information. It is sufficient to mention here that only three firms in this country can manufacture armor plate, and that these firms have put in bids for armor plate seldom varying over a few dollars, and in many instances being identical to a cent. Asked for reasons as to the uniformity of these bids, two of the firms replied frankly that as the contract would be divided amongst them anyway, the only effect of competitive bids would be to reduce the profits made by all of the three firms.

The department has made every effort to secure real competition and reasonable prices, even to the extent of withholding awards until the necessity of building battleship *No. 39* made it imperative that action be taken. After long negotiations the best efforts of the department resulted in securing a saving of $111,875, by new "competitive"

bids, a purely nominal competition, inasmuch as the successful bidder proposes to divide up the work with his rivals. This saving, while well worth the time it took to secure it, is after all very small as compared with the total cost of the armor. Prices charged by these firms for armor have been investigated by Congress a number of times and by special boards of experts, and in every case the investigators have reported that the prices charged are greatly in excess of the cost of manufacture.

With the desire to be just, the Secretary offered to transmit to Congress any figures these companies cared to submit to show that their prices were reasonable, but they have refused to present the absolutely necessary data to the Secretary unless he would agree to accept it as confidential, which, of course, means that he would not allow Congress to analyze the figures. Confidential information about public expenditures was not desired and was not accepted. It is evident that without an armor plant of its own the Government in time of war or impending war would be entirely at the mercy of these three manufacturers and obliged to pay practically whatever price they asked. History does not warrant an assumption that the patriotism of these companies would prove superior to their desire for profits, inasmuch as during the time that the war with Spain was imminent these companies refused to accept the price fixed by Congress after investigation as a just rate, and declined to manufacture any armor until they got their own price of $100 a ton more than that which Congress had determined on. In this connection it is well to note that the love of country possessed by these companies did not prevent them from furnishing armor to Russia, as reported to Congress, in 1894 at $249 a ton, while they were charging the United States $616.14 a ton upon purchases under the contract of March, 1893; nor did it hinder them from furnishing armor to Italy in 1911 at $395.03 a ton, while they were charging their own Government $420 a ton, and that even at the present day, according to information that seems reliable, they are furnishing the armor for the *Haruna*, now being built by the Kawasaki Co. at Kobe for Japan, at $406.35 a ton as against the price, ranging from $504 to $440 a ton, which they are now charging us for the armor of battleship *No. 39*.

I am convinced from the reports made to me by experts who have gone carefully over the subject that we can make armor much cheaper than we now buy it, and that, from an economic point of view alone, the erection of a Government plant is amply justified. By manufacturing armor plate in its own plant the Government will be able to keep for its own use any improvements in the manufacture or composition of its armor that may be developed. The last word has not been said in armor, and past history shows that great improvements in the manufacture and design of armor plate have been made. The greater part of these improvements were suggested by actual experience gained by naval officers. Under our present system of obtaining our armor plate from private companies such improvements become the property of all the world and can be obtained by anybody who cares to buy them. Even now the improvements in armor and the designs worked out by the Navy have been embodied in the warship of another nation recently finished by the Bethlehem Steel Co. and put into commission. This is not an argument lightly to be disregarded in favor of a Government armor plant, nor has it been overlooked, for instance, by Japan, which has erected its own armor-making plant and surrounded it with such secrecy that none of the other nations are able to tell whether or not at this minute the Japanese armor may not be superior to any other in existence. In addition to Japan, the French Government, after experimenting with a factory capable of producing only the lighter weights of armor, is enlarging its Government plant so as to permit of the production of thick plates, and Russia has had its own armor-plate factory for some time. In England the extortions of what is described in the English papers as the "armor ring," for there is every reason to believe that the agreement to maintain high prices among manufacturers is international, has resulted in agitation for a Government plant for that country, which will probably be brought about in the next few years.

As mentioned in my letter to the Senate, taking the highest estimate which has been submitted to me by the experts of the Bureau of Ordnance as the probable total cost price of Government-made armor, the Government can achieve a saving by the erection of a 10,000-ton-a-year plan of $1,061,360 per annum after deducting 4 per cent as interest on the money used in erection and installation of plant, and $3,048,462 a year on the basis of a Government plant capable of producing 20,000 tons a year. If these figures are correct, as I believe them to be, and as Congress can easily ascertain for itself, I do not see how it is possible for Congress to justify to the people a refusal to erect a Government plant, nor how it can answer the charge that will invariably be brought up—that the same mysterious Providence which saved this profitable business to the steel companies three times in the past, even after money for a Government plant had actually been appropriated, is not still at work exercising its beneficent protection over these lusty specimens of infant industries, who are even now under Government investigation as violators of the antitrust law.

ARMOR RING REMAINS SNUGLY IN THE SADDLE.

Instead of providing for an appropriation for an armor plant, which would have rescued the taxpayers from the tender mercies of the armor ring, the committee brought in the following provision, which leaves the Government at the mercy of the ring and does not in any manner change the conditions now existing. This program will be eminently satisfactory to the armor ring:

The Secretary of the Navy is hereby authorized and directed to investigate and report at the next regular session of Congress upon the selection of a suitable site for the erection of an armor plant to enable the United States to manufacture its own armor plate and special-treatment steel capable of standing all ballistic and other necessary tests required for use in vessels of the Navy at the lowest possible cost to the Government, taking into consideration all of the elements necessary for the economical and successful operation of such a plant, such as the availability of labor, material, and fuel, and transportation facilities to and from said plant. Said report shall contain the cost of a site sufficient to accommodate a plant having an annual output capacity of 20,000 tons and a site for an output of 10,000 tons, and also an itemized statement of the cost of the necessary buildings, machinery, and accessories for each, and the annual cost and maintenance of each, and the estimated cost of the finished product.

The action of the committee in thus providing only for an investigation, of which there have been several in the past, instead of providing for an armor factory as recommended by the Secretary of the Navy, is worth from $3,000,000 to $5,000,000 a year to the armor ring.

VERY THOROUGH INVESTIGATION IN 1896–97.

I would favor enthusiastically the provision in the pending bill providing for an investigation of the cost of armor but for the fact that numerous investigations have been made in the past, and this provision for an unnecessary additional investigation impresses me as being merely a dodge to sidetrack an appropriation in this Congress for an armor plant, as recommended by the Secretary of the Navy.

The insertion of this provision instead of a paragraph carrying an appropriation for a plant means that the movement for an armor factory is set back to the point it reached 19 years ago.

On December 31, 1895, the Senate passed a resolution directing the Committee on Naval Affairs to "inquire whether the prices paid or agreed to be paid for armor for vessels of the Navy have been fair and reasonable," and "whether any legislation is necessary to further promote the manufacture and cheapen the price of armor." The committee also had before them the bill (S. 1700) to provide for the erection of an armor-plate factory in the city of Washington, D. C.

This committee, with the assistance and cooperation of the then Secretary of the Navy, H. A. Herbert, made a most thorough and scientific investigation of the whole subject.

The report and hearings of this investigation of the cost of armor makes a volume of 464 pages.

The conclusions of the committee, briefly, were as follows:

That a Government armor factory could be erected for the sum of $1,500,000, and that it is expedient to establish such a factory in case the armor manufacturers decline to accept such prices for armor as may be fixed by law.

The committee was of the opinion that a fair average price for armor was between $300 and $400.

The committee arrived at this conclusion as follows:

Cost of labor and material per ton	$168
Add for reforging	12
	180
Add for maintenance of plant	30
	210
Thirty-three and one-third per cent profit	70
	280
Add for nickel	20
Making the price for armor	300

The committee prepared this table after Secretary of the Navy Herbert had submitted one in which he had estimated that $400 was the outside price which the Government ought to pay for armor.

Secretary Herbert's estimate was as follows:

The Secretary takes as the cost of labor and material in double-forged, harveyized, nickel-steel armor the sum of	$196
He assumes that the plant costing $1,500,000 would need $150,000 per year for maintaining it, or $50 per ton upon 3,000 tons of armor, and adds to the price	50
Making	246
Or, in round numbers	250
He then adds for profit 50 per cent	125
Making	375
And then adds for nickel to be furnished hereafter by the contractors	20
Making	395
Or, in round numbers	400

In arriving at the figures used in the table both the committee and Secretary Herbert had accepted the figures submitted by the armor manufacturers themselves as to the cost of their plants, and so forth, although the armor concerns refused to permit the Government to have access to their books to substantiate their figures.

Read now, 18 years after the testimony was taken, the hearings contain some rich humor.

Practically, taking the manufacturers' own figures as to the cost per ton of manufacturing armor, the Secretary allowed 50 per cent and the committee 33 per cent as profit. Independent of the 50 per cent for profit, the Secretary allowed 10 per cent of the value of the plant for maintenance.

I estimated—

Said Secretary Herbert while testifying before the committee—

from information which I have obtained in Europe and elsewhere that either the Carnegie or Bethlehem plant could now be reproduced for about $1,500,000, but in order to be on the safe side I have allowed them maintenance upon $2,000,000 ($500,000 margin), and 10 per cent instead of 5 per cent. Then, allowing them maintenance at that rate, I have allowed them also a profit of 50 per cent, and for that sum it

does seem to me they ought to be able to manufacture the armor the Government needs.

In addition to all this, Charles M. Schwab, then general manager of the Carnegie Steel Co., appeared before the committee and demanded an additional 10 per cent, producing, when read to-day, some of the richest humor contained in the entire hearing.

He argued that in addition to the liberal allowance for maintenance, depreciation, interest on original investment, interest on working capital, and all conceivable as well as inconceivable overhead charges, his company should be allowed another 10 per cent for "loss by abandonment of plant when Navy shall have been completed." He argued that the Navy would probably be "completed" at the end of 10 years, and then the plant would be entirely valueless, ready to be consigned to the scrap heap. He thought the Government ought to be willing to pay for the plant, in addition to the profit on manufacture. The committee was at first inclined to think this logic was satisfactory.

But at this point Secretary Herbert recovered his equilibrium, according to the hearings, and blocked further gratuities to the Carnegie Co.

The Government has, according to my estimates—

Testified the Secretary—

paid for the plant, and they have the plant now, if these calculations are correct, and there is a large balance over.

Seventeen years have passed since the time it was anticipated that the Navy would be "completed" in ten years; and where we were using only 6,000 tons of armor a year then, we are using 16,000 tons now. Up to that time we had used a total of only 18,952 tons of armor, while up to the present day we have used a total of 85,193 tons. At the time of this investigation we had expended, in all, only $11,776,670 for armor, while up to the present time we have spent a total of $85,193,248; and the bill now under consideration carries an additional sum of $14,877,500 for armor and armament, and the Navy is not yet "completed."

The first thing the investigation developed was that various naval officers, both active and retired, were in the employ of the armor concerns. The most deeply involved of all was the then Chief of Ordnance of the Navy himself, Commander William M. Folger, who was shown to have been in the employment of several concerns doing business with the Government. This official finally resigned from the Navy to enter the employment of the Harvey Steel Co., receiving therefor salary at the rate of $5,000 per year and $20,000 worth of stock in the Harvey Steel Co., which arrangement was made before his resignation but, it was shown, not until after he had made bargains with the Harvey Co., as an official of the Government, worth large sums to the steel concern.

It developed at the hearings that whenever a naval officer found an opportunity to go into the employment of a private manufacturer it was the custom of the department to grant him a leave of absence for two or three years at what was known as "waiting orders pay," which amounted to $2,300 per annum, and which was two-thirds of full pay. While receiving $2,300 from the Government the officer would be receiving a considerably larger sum from private manufacturers having dealings with the Government. It developed that one officer who resigned from Government service and went into the employment of the Carnegie Steel Co.—Lieut. Stone—for a while had a desk in the office of the Bureau of Ordnance at the Navy Department, acting as the agent of the Carnegie Co. even after he had severed his official connection with the Government.

In its report the committee strongly condemned this sort of thing, and declared that another widespread evil just as bad was the custom of the department in permitting naval officers to become financially interested in patent processes used by the Government. In its report the committee said:

The committee had no hesitancy in reaching the conclusion that the above custom was a bad one and should be discontinued under all ordinary conditions; and especially that the employment of naval officers by contractors having large dealings with the Government should be peremptorily prohibited by law.

No man can well serve two masters, and if contractors having large dealings with a department of the Government can take into their employment, with no limit as to compensation, officials of that department, and through them learn the secrets and the purposes of the department, and, moreover, insidiously influence its action, great injury may result to the public service. The fundamental principle upon which all legitimate business is transacted—that each side shall be represented solely by persons wholly devoted to its own interests—is viciously violated by a custom which allows one side to take into its pecuniary employment a representative of the other side.

An effort was made in the debate to draw a distinction between officers on the active list and officers on the retired list. The committee deny that any well-founded distinction exists which ought to influence the decision of the question. Retired officers of the Navy remain officers to all intents and purposes, with an important exception. Section 1462 of the Revised Statutes provides that "no officer on the retired list of the Navy shall be employed on active duty except in time of war."

But notwithstanding this statute exempts retired officers from all obligation to render any service for the liberal retired pay which they receive for life, amounting usually to three-fourths of their active duty pay, yet they remain a part of the Navy of the United States, available in any emergency of war. They are entitled to wear their uniforms on public occasions and are allowed free access to every bureau of the Navy Department, on the theory that they are still ready to serve the interests of the Government by fidelity, sound advice, and an earnest spirit of devotion to public duty. It is quite enough to allow such officers to enter into ordinary private employment for compensation. To permit them to take sides against the Government and to enter into the employ of contractors having dealings with the Government reaching to millions of dollars will certainly, if the custom continues, become most pernicious and injurious to the public interests. Proclaim that such officers may be so employed by repealing the clause which has now become a law, and a bold and wealthy contractor, willing to spend enough money to take into his employ a sufficient number of naval officers on the active and retired list, would be able thoroughly to weaken the department in its dealings with such contractor and to put the Government at his mercy in making bargains, which would be substantially entered into with the representatives of one side alone conducting all the negotiations.

SECRETARY HERBERT'S REPORT JUSTIFIES APPROPRIATION FOR PLANT.

We now come to the report of Secretary of the Navy Herbert, made January 5, 1897, after many months of careful investigation, during which the Secretary personally visited several European countries. The Secretary also had the assistance of a board of naval officers. From his report the following is quoted:

The Secretary called together a board composed of Lieuts. Karl Rohver, Kossuth Niles, and A. A. Ackerman, two of whom had been inspectors of armor at the Bethlehem Co.'s Iron Works; the other, Lieut. Ackerman, had been connected with the manufacture and use of steel in its different forms for a number of years, during which time he had spent several months at both the Bethlehem and Carnegie works. These gentlemen made an exhaustive report upon the cost of labor and material entering into a ton of armor, showing in detail every little item, beginning with the cost of the several ingredients charged in the furnace for casting the ingot preparatory to the forging process and ending with the work on the finished plate. The result of their calculations was that the cost of the labor and material in a ton of single-forged harveyed nickel steel armor, the Government supplying the nickel (nickel at $20 per ton), was $167.30.

* * * * * * *

Lieut. Commander Rodgers, who had been an inspector at Bethlehem Iron Works, was called upon to make an estimate of the cost of manufacturing armor, and his report, based upon observation in the manufacture of armor, makes the cost of labor and material in a ton of single-forged harveyed nickel steel armor $178.50.

* * * * * * * *

The inspector of ordnance at the Carnegie Steel Co., Ensign C. B. McVay, was also called upon for an estimate, and his report, though made separately without consultation with the other officers, is that the labor and material in a ton of single-forged Harvey nickel steel armor is $161.54.

* * * * * * * *

Average for single forged of above estimate is $185.38, and $197.78 for reforged armor.

COMPETITION TO ARMOR RING FROWNED UPON BY NAVY DEPARTMENT.

On March 10, 1897, the Navy Department issued a circular calling for bids on 8,000 tons of armor, specifying that no bid in excess of $300 per ton, the limit fixed by Congress in the act of March, 1897, would be accepted. Although they had furnished armor to Russia in 1894 at $249 a ton, the Carnegie and Bethlehem companies refused to bid, because of the fixed limit of $300.

When read now as a chapter in the long history of the dealings between the Armor Trust and the Government, in every chapter of which the Government seems to have gotten the worst of it, this circular incident has all the earmarks of having been something in the nature of a joke.

The Carnegie and Bethlehem companies refused to bid, because they knew they would get the contracts at a higher price than $300 if they simply stood pat and refused to bid. The law was so worded as to assure them the business. The act provided that the armor must be of "domestic" manufacture, and as these two companies had a monopoly on domestic manufacture, and as they knew a new plant could not be put up within a year or two, and the Government must have the plate before that time, it was obvious that all they had to do to obtain their price was to refuse to bid, and wait for developments.

But this circular, harmlessly intended though it appears to have been, came within an ace of smashing the Armor Trust. The Illinois Steel Co. submitted a proposition to supply the 8,000 tons of armor at an average price of $300 per ton, conditioned upon Congress awarding the company a contract for furnishing the Government its armor for 20 years, at an average price of $240 per ton. The proposition was ignored. This is the narrowest escape the Armor Trust has ever had.

Since that time the Government has bought 161,803 tons of armor, paying on an average more than $400 per ton for it. Had the Government accepted the $240 per ton proposition of the Illinois Steel Co. in 1897 it would by this time have realized a saving of more than $25,000,000, and there is no reason to

believe the steel company would have gone into bankruptcy, either.

THE VARIOUS NAVAL BILLS AND THEIR REFERENCE TO ARMOR.

As a result of the revelations disclosed by the investigation of the Senate Naval Affairs Committee in 1896–97, which showed beyond successful contradiction that the armor manufacturers had been outrageously gouging Uncle Sam, the naval bill of 1897 provided that—

no contract for armor plate shall be made at an average rate to exceed $300 per ton of 2,240 pounds.

The naval bill of 1898 provided that—

no contract for armor plate shall be made at an average rate to exceed $400 per ton of 2,240 pounds.

The naval bill of 1899 provided that—

no contracts for the armor for any vessels authorized by this act shall be made at an average rate exceeding $300 per ton of 2,240 pounds, including royalties.

Then came the act of 1900 containing the provision authorizing the Secretary of the Navy to build an armor factory in the event he should be unable to obtain a reasonable bid from the armor companies. This provision is practically the same as the one I offered as an amendment to the pending bill, which has been ruled out on a point of order. I shall, however, to keep the record clear, quote the provision just as it was enacted into law in the naval bill of 1900:

Provided, That the Secretary of the Navy is hereby authorized to procure by contract armor of the best quality for any or all vessels above referred to, provided such contracts can be made at a price which in his judgment is reasonable and equitable; but in case he is unable to make contracts for armor under the above conditions, he is hereby authorized and directed to procure a site for and to erect thereon a factory for the manufacture of armor, and the sum of $4,000,000 is hereby appropriated toward the erection of said factory.

BUT THE ARMOR FACTORY HAS NEVER BEEN BUILT.

The armor factory was not built, and I can find no one now connected with the Government who is familiar with the reasons why it was not built.

The naval bills of 1901, 1902, 1903, and 1904 not only were silent on the subject of an armor plant, but in the acts of these years all limitation was removed from the price the Secretary might pay for armor. The acts were so worded as to throw everything to the Bethlehem, Carnegie, and Midvale Cos., because, although the Secretary was not limited as to the price he might pay, he was limited to "domestic" manufactured armor, and the three firms, comprising the armor ring, enjoyed a complete monopoly of the manufacture of armor in this country. Each year, following the investigation, the paragraph carrying the appropriation for armor contained fewer words, but each succeeding year it carried more millions for armor, and was worded as the "ring" would have preferred to have it written, had its interests been consulted in the matter. For instance, the paragraph relating to armor in the naval bill of 1904 was very brief, as follows:

Armor and armament: Toward the armament and armor of domestic manufacture for the vessels authorized, $12,000,000.

It was brief, but it did the business for the ring. "Domestic" manufacture, no armor plant, no limitations as to price, smooth sailing.

But by 1905 the demand for an armor plant to rescue the Government from the tender mercies of the Armor Trust again became hot. Some kind of action seemed necessary, so the committee increased the appropriation for armor by $6,000,000, and declared for another investigation, as follows:

Armor and armament: Toward the armament and armor of domestic manufacture for vessels authorized, $18,000,000; *And provided further*, That the Secretary of the Navy shall cause a thorough inquiry to be made as to the cost of armor plate and of armor plant, the report of which shall be made to Congress.

ATTEMPT IS MADE TO SIDETRACK THIS INVESTIGATION.

Although the naval bill directing the Secretary of the Navy to make "a thorough inquiry" as to the "cost of armor plate and armor plant" was approved and became a law on March 3, 1905, the matter was pigeonholed at the Navy Department by officials in charge, who evidently felt friendly inclined to the armor ring and did not desire an investigation.

For more than a year nothing was done. Forced by congressional activity, the first step toward an investigation was taken on May 11, 1906, when Acting Secretary of the Navy Newberry issued an order appointing a board of experts, composed of Kossuth Niles, captain, United States Navy; Walter McLean, commander, United States Navy; and Edward Simpson, lieutenant commander, United States Navy; to proceed with the investigation. The action of the Navy Department in attempting to sidetrack the investigation duly ordered by law amounted to a public scandal. The House of Representatives, on June 5, 1906, passed a resolution directing the Secretary of the Navy to report as to what action had been taken in response to the specific direction of Congress of more than a year previous.

The matter was never satisfactorily explained. Secretary of the Navy Charles J. Bonaparte, in making his official report, simply stated that the matter had been originally placed in the hands of the preceding Secretary of the Navy, Paul Morton, and that "for reasons of which the department is not informed, no further steps were taken in the premises," and that "the subject seems then to have escaped attention."

This incident was distinctly armoresque. With only one or two exceptions, the Secretaries of the Navy have been very friendly to the armor concerns. One Secretary of the Navy—B. F. Tracy, 1889–1893—made contracts with the Carnegie Co. and the Harvey Steel Co. worth large sums to them, and was criticized for not having properly protected the interests of the Government in his transactions with these two armor concerns. After his term as Secretary of the Navy expired, he became counsel for both companies; but a close scrutiny of his dealings with the Harvey and Carnegie companies while he was Secretary of the Navy develops grave doubts as to whether his legal services to the Carnegie and Harvey companies could have been one-half as valuable to these concerns as his official acts as Secretary of the Navy had been.

INVESTIGATION OF 1906 WAS VERY THOROUGH.

With the 43-page report of the investigation of 1906 in existence, there is no excuse for another investigation, as provided for in the pending naval bill, except for the purpose to delay or prevent the construction of a Government armor plant. Although the investigators of 1906 took pains in making their report to eulogize the armor companies, and although their policy throughout their calculations as to the cost of an armor plant and the cost of armor plate seems to have been to resolve all doubts in favor of the ring, yet they appear to have covered every conceivable step in the manufacture of armor, and have worked out their estimates in the most minute detail. It is doubtful if the Government could obtain much additional information, so far as the various elements of cost in the manufacture of a ton of armor plate are concerned, if it was to authorize a dozen investigations.

COST OF ARMOR PLANT.

As to the cost of an armor plant, the report, on page 31, states:

Of the estimates submitted by the inspectors of ordnance, one gives without detail $3,500,000 as a conservative cost of an armor plant of about 10,000 tons yearly capacity.

A second estimate, given in considerable detail, places the cost of a similar plant at $3,875,000.

The report of the armor factory board estimates the cost of its proposed plant—6,000 tons capacity—at $3,747,912. * * * This board believes that the total cost of an armor plant, as estimated upon by the armor factory board, should, to-day, be, in round numbers, $3,750,000.

ESTIMATES AS TO COST OF ARMOR PLATE.

After resolving all doubts and uncertainties on the side of the manufacturers, the investigating board of 1906 reported that the production cost of class A armor is $244.27 per ton, and of class B armor $221.76 per ton. This figure is about $3 per ton less than the average estimates of the four naval investigators of 1896. The fact that two boards, the one of 1896 and the one of 1906, came to almost the same conclusions after having spent months investigating the matter, would appear to add weight to the findings of each. Each investigation in a general way proved the estimates of the other.

In addition to reporting on the "production cost" per ton of armor, both boards also reported estimates as to "full cost." The "production cost" is equivalent to what may be accepted as the cost in a Government plant, while the "full cost" is the production cost with such items as taxes, insurance, and profits added, which a private manufacturer would be required to figure on, but nearly all of which would not properly be chargeable to any estimate as to the cost of manufacture in a Government plant. The Government would not have to pay interest, taxes, or insurance or figure on profits. In determining the "full cost" allowance was made for such items as office supplies, telephone service, telegraph and postage charges, travel, general expenses, a contingent fund, legal services, experimental work and investigations, an accident fund, hospital fund, and even "the periodic replacement of existing equipment" and the "possible total abandonment of a private works in so special a line as armor-plate manufacture, due to the cessation of any demand for its product." The board allowed a depreciation charge of $43.75 to every ton of armor. Much of the administration charge, even in the "production-cost" estimate, would be eliminated in a Government plant, because this work could be performed by naval officers, who would receive

their salaries from the Government whether their services were utilized in an armor plant or not.

Both the "production-cost" and the "full-cost" estimates are based on a plant of only 6,000-ton capacity. All investigators agree that the larger the capacity of a plant the cheaper the output. A two-battleship a year program calls for about 16,000 tons of armor annually. Therefore it is obvious that if the Government should build a 10,000 or 15,000 ton plant the estimates as to the cost per ton would need to be considerably reduced.

ESTIMATES COST AT $314 PER TON.

The highest estimate ever given by a Government official, so far as I have been able to learn by searching the records, is that of Rear Admiral Joseph Strauss, the present Chief of the Bureau of Ordnance, who is only lukewarm for a Government plant. Testifying before the Naval Affairs Committee on January 22, 1914, he said:

An armor-plate factory of 20,000 tons capacity with an output per year up to its full capacity, can produce armor at a cost of $279 per ton.
If it worked half capacity, the estimate is $349 a ton; and if the output were 5,000 tons, the estimated cost is $400 a ton.
If we build an armor-plate factory with a capacity of 10,000 tons, and work it to full capacity, the cost is estimated at $314 a ton, and at half capacity—that is, 5,000 tons—$394 a ton.
If we build a 5,000-ton plant and work it to full capacity—that is, 5,000 tons per annum—the cost is estimate at $354.
The cost of building 20,000, 10,000, and 5,000 ton plants are, respectively, $11,288,431, $8,466,000, and $6,300,000.

If these figures are correct, and Admiral Strauss is correct in his assumption that it is more expensive to manufacture armor in a plant of small capacity than in one of a large capacity, and that it is much more expensive still to manufacture only a portion of the capacity of the plant, it can be demonstrated by any school boy arithmetician that the armor ring on numerous years has manufactured armor for the Government at such low prices as to lose millions of dollars.

For instance, in 1906 the Bethlehem, Carnegie, and Midvale Cos. were awarded contracts for 1,824, 1,865, and 3,690 tons of armor, respectively, at $345 per ton. If Admiral Strauss's estimates are correct, this armor cost the manufacturers at least $394 a ton; and when the armor manufacturers sold their product to Russia at $249 a ton they were acting in the capacity of philanthropists, if Admiral Strauss is correct. The answer is that the estimates of this admiral are excessive; either that or the estimates of eight other Government experts who have inquired into the subject are too low.

But although Admiral Strauss's estimates are the highest ever given, the Government could save $161.16 per ton with an armor plant of 20,000 tons capacity, $136 per ton with a plant of 10,000 tons capacity, and $86 per ton with a plant of 5,000 tons capacity, even though his unusually high estimates are correct.

AVERAGE ESTIMATE IS $247.17.

Here is a table showing the official estimated cost of armor by the investigating boards of 1896 and 1906, by various naval experts, by former Secretary of the Navy Herbert, and Rear Admiral Strauss, Chief of Ordnance:

Year.	Estimator.	Estimated cost.	
		"Production cost," or cost in a Government plant	"Full cost," or cost in private plant.
1896	Lieut. Commander Rodgers	$207.54	$301.85
	Ensign McVay	243.73	337.23
	Rohrer Board	223.43	324.35
	Secretary of Navy Herbert	224.42	324.41
	Average	247.28	344.48
1906	Commander Rohrbacher	193.08	223.16
	Commander Dieffenbach	241.76	277.73
	Lieut. Galbraith	242.33	298.77
	Investigating board of 1906	244.27	296.89
	Average	230.36	273.89
1914	Rear Admiral Joseph Strauss	[1] 314.00	[1] 349.25
	General average	247.17	322.54

[1] Estimate based on cost in plant 10,000 tons yearly capacity. Other estimates based on cost in plant of 6,000 tons capacity.

Admiral Strauss, Chief of Ordnance, estimates that in a Government plant of 20,000 tons capacity armor can be manufactured at a cost of $279 per ton. This is $31.83 per ton higher than the average estimate of nine estimators, who based their estimates on plants of 10,000 tons capacity.

Here is a table which shows the amount the Government could have saved if it could have purchased all the armor it has used at $279 per ton:

Year.	Company.	Tons.	Average charge.	Total charged.	$279 per ton, reasonable cost to manufacturer.	Overcharge or annual tribute collected off of taxpayer.
1887	Bethlehem	6,891	$604.85	$4,168,000	$1,819,589	$2,348,411
1890	Carnegie	6,054	671.15	3,475,000	1,688,066	1,786,934
1893	Bethlehem	3,882				
	Carnegie	3,120				
	Total	7,002	658.72	4,604,000	1,953,558	2,650,442
1896	Bethlehem	2,800				
	Carnegie	3,073				
	Total	5,873	550.23	3,232,080	1,637,567	1,594,513
1898	Bethlehem	3,965				
	Carnegie	3,712				
	Total	7,677	400.00	3,074,800	2,241,883	832,917
1899	Bethlehem	1,142				
	Carnegie	1,134				
	Total	2,276	400.00	910,400	635,004	275,396
1900	Bethlehem	18,588				
	Carnegie	18,588				
	Total	37,176	413.42	15,369,400	10,372,104	4,997,296
1903	Bethlehem	5,798				
	Carnegie	5,666				
	Midvale [1]	6,180				
	Total	17,644	406.82	7,173,502	4,922,676	2,250,826
1904	Carnegie	5,258	417.28	2,194,040	1,466,982	727,058
1905	Bethlehem	4,959				
	Carnegie	1,921				
	Midvale	1,041				
	Total	7,921	403.03	3,223,412	2,109,959	1,113,461
1906	Bethlehem	1,824				
	Carnegie	1,865				
	Midvale	3,690				
	Total	7,379	345.92	2,552,382	2,058,741	493,641
1907	Bethlehem	3,579				
	Carnegie	3,538				
	Midvale	2,259				
	Total	9,376	416.90	3,919,400	2,615,904	1,303,496
1909	Bethlehem	7,731				
	Carnegie	7,757				
	Midvale	6,914				
	Total	22,402	422.29	9,463,767	6,241,832	3,221,935

	Carnegie	4,530				
	Midvale	4,476				
	Total	13,475	430.58	5,801,508	3,759,525	2,041,983
1912	Bethlehem	5,022				
	Carnegie	5,132				
	Midvale	5,189				
	Total	15,343	428.26	6,573,612	4,280,697	2,292,915
1913	Bethlehem	2,669				
	Carnegie	2,684				
	Midvale	10,462				
	Carbon Steel Co. [1]	61				
	Total	15,876	457.50	7,204,977	4,429,404	2,802,901
	Total	192,995	[2] 441.42	85,193,248	54,459,123	30,734,125

[1] New company. [2] Average per ton.

The above total is the tribute levied upon this Government and collected from the American taxpayers during the last 25 years upon the one item of armor plate alone, and which could have been saved to the people by the Government manufacturing its own armor plate.

NAVAL BILL IS REACTIONARY.

The policy embraced in the naval bill as regards Government manufacture of munitions of war is decidedly reactionary as compared to the policy embraced in the fortifications bill and the Army bill which were passed this session.

For the first time in the history of the Government the fortifications bill and the Army bill this year require practically complete Government manufacture of munitions of war, which will mean a saving of millions to the Government, because of the

fact the Government can manufacture and is manufacturing such munitions in the Government arsenals on an average of 35 per cent below the prices of the ammunition ring.

In other words, the Appropriation Committee and the Military Affairs Committee have done for the Army what Secretary Daniels asked the Congress to do for the Navy; that is to make it independent of the greed of the private manufacturers.

Here is the new provision in the fortifications bill which requires henceforth the Government manufacture of war munitions:

Of each of the sums appropriated by this act, after deducting any amounts required to meet obligations authorized in previous acts to be entered into by contract, not more than 10 per cent may be used to purchase not exceeding 10 per cent in quantity or value of any article or material herein appropriated for that can be manufactured at the arsenals of the Ordnance Department, except when contract costs are less than arsenal manufacturing costs.

In explanation of this limitation the report accompanying the fortifications bill, prepared by Hon. SWAGAR SHERLEY, of Kentucky, said, in part:

The purpose of this limitation is to require practically the entire matériel for seacoast defense and for the Field Artillery, together with the ammunition for the same, to be manufactured at the arsenals.

As to the saving that will result from the policy of Government manufacture, the report contained the following:

In making the ammunition for these guns it has been found that the arsenal cost is approximately 39 per cent less than the purchase cost from private manufacturers.

The policy of manufacturing practically all the powder needed will, as indicated, be continued. Powder for the Army, now manufactured at the Picatinny Arsenal, is costing the Government 40 cents per pound, whereas a few years ago, prior to the placing of a limitation upon the price, the Government was paying for this character of powder 67 cents a pound and is now paying for such powder for the Navy 53 cents a pound.

MILITARY AFFAIRS COMMITTEE DESERVES GREATEST CREDIT.

Now, as to the Army bill. Let us take the paragraph dealing with Field Artillery ammunition for an illustration. In the Army bill for 1913 the wording of the act was as follows:

Ammunition for Field Artillery for Organized Militia: For procuring reserve ammunition for field artillery for the Organized Militia of the several States, Territories, and the District of Columbia, $500,000.

The effect of the words "for procuring reserve ammunition" was to give the Chief of Ordnance of the Army the privilege of either manufacturing the ammunition in the arsenals, or of buying it from the ammunition ring at prices of from 20 to 60 per cent in excess of the cost of manufacture in the Government arsenals. Under this language, large contracts have been awarded to the private manufacturers by the Chief of Ordnance, notwithstanding an average saving of 35 per cent to the people would have resulted on all work done in the Government arsenals. This wording was therefore satisfactory to the ammunition manufacturers. It in fact was worth hundreds and hundreds of thousands of dollars to the private manufacturers.

But in the Army bill for this year, approved April 27, 1914, and framed by the Military Affairs Committee, of which Hon. JAMES HAY, of Virginia, is chairman, the wording was so changed as to compel Government manufacture of war munitions, as follows:

Ammunition for field artillery for Organized Militia: For manufacturing reserve ammunition for field artillery for the Organized Militia of the several States, Territories, and the District of Columbia, $3,000,000.

Of course the change will not be satisfactory to the ammunition manufacturers who have been grossly overcharging the Government, but it will save millions annually to the taxpayers.

The words "for manufacturing reserve ammunition," instead of "for procuring reserve ammunition," mean that the appropriation can be lawfully expended only to manufacture this ammunition in the Government arsenals, and that the ammunition ring is going to lose some contracts that have been exceedingly fat. This change in the wording of the Army bill was made in the interests of a long overcharged public. The naval bill will be searched in vain for a like provision in the interests of the taxpayers relative to armor plate.

GOVERNMENT MANUFACTURE A BIG SUCCESS.

The question now to be answered is: Were the Appropriation and Military Affairs Committees justified in placing a limitation on appropriations for ammunition, etc., requiring complete Government manufacture? Will this policy result in sufficient economies to justify it? What are the facts? Can the Government really manufacture the various articles used in warfare and preparation for war cheaper than it can purchase them from outside mnufacturers, or is the supposition that it can merely an hallucination in the minds of those demanding that the profit be taken out of war?

Here is the answer to these queries:

Col. George Montgomery, commandant of Frankford Arsenal, Philadelphia, recently compiled a table showing the cost of articles now being manufactured at this Government arsenal as compared with the lowest prices of the ammunition ring for the same articles.

This table shows that on an order of $1,900,064 worth of field-artillery ammunition given to the arsenal instead of outside manufacturers, the Government is saving $979,840, or a saving in round numbers of $1,000,000 on a $2,000,000 contract.

Another table shows that on an order of $800,120 worth of artillery ammunition now under manufacture by the private manufacturers, the Government is losing $312,214, based on what it would cost to have duplicated the order in the Government arsenals. In other words, practically one-half of the entire amount of the order could have been saved had this work been done in the Government arsenals.

Here are a few typical comparisons shown in the report of Col. Montgomery that constitute an unanswerable argument why the Government should enlarge its arsenals, navy yards, and shops and manufacture a larger proportion of its ammunition and other munitions of war:

Article.	Total arsenal cost.	Total contract cost.	Saving by Government manufacture.
3-inch finished shrapnel case	$1.75	$3.15	$1.40
3-inch common shrapnel	3.55	5.96	2.41
3.8-inch common shrapnel	7.94	18.03	10.09
3-inch common steel shell	2.39	5.02	2.63
3.8-inch common steel shell	4.81	9.45	4.64
31-second combination fuses	2.92	7.21	4.29

TOTAL ARSENAL COSTS INCLUDE ALL OVERHEAD CHARGES.

The total arsenal costs include 15 per cent to cover administration, depreciation, insurance, and interest on money invested.

GOVERNMENT MANUFACTURE BENEFITS WORKINGMEN.

A striking feature of the comparisons of Government cost of manufacture as compared to the private contractors' prices is that the Government works its employees but 8 hours a day, while the private contractors work their men 9 and 10 hours a day, and in some known instances 12 hours a day and 7 days a week. Government employees also receive higher wages for the shorter day. Nor is that all. Uncle Sam pays his men for 15 days' annual leave of absence, for 7 national holidays, and for 13 Saturday afternoons in the summer time, during which periods he receives no labor in return; yet the Government cost of manufacture, including an added 15 per cent for depreciation and interest, is from 20 to 60 per cent below the prices of the ammunition ring. These facts and figures prove beyond successful contradiction that the ammunition ring is making extortionate profits out of Uncle Sam.

ADDITIONAL ARGUMENTS FOR GOVERNMENT MANUFACTURE OF WAR MUNITIONS.

Field artillery ammunition is not by any means the only article of warfare that the Government can manufacture and is manufacturing at a great saving to the Government. Anyone in search of arguments against Government ownership or operation will do well to give the various Government arsenals a wide berth.

The Government is manufacturing the service rifles used in the Army for about $11, and has never been able to purchase them for less than $20.

The Government is paying private manufacturers $1,708 for a 3-inch caisson, when it is manufacturing the identical article at the Rock Island Arsenal for $1,081, all overhead charges included.

The Government is paying private manufacturers $3,268 for a 3-inch gun carriage when it is manufacturing the same thing at the Rock Island Arsenal for $2,341.

Ball cartridges, caliber .30, for the regulation service rifles, were made at the Frankford Arsenal in 1912 for $26.95 per 1,000, all overhead charges included. For the same cartridge the ammunition ring is receiving $38.04.

When it is considered that the Government appropriates millions and millions of dollars for ammunition and supplies of this character annually, it becomes obvious that the saving that would result from a policy of complete Government manufacture of all munitions of war would be something enormous.

It is worthy of passing mention that the ammunition ring and the armor ring are composed of practically the same concerns which for a good many years have had a strangle hold on both Army and Navy.

There was a time not many years ago when we did not have powder and gun factories. We were at the mercy of the Powder

Trust for our supplies of ammunition, and we had to get our guns from private shops in foreign countries. We established these factories, and they have been of great benefit to our people. The powder factory has reduced the cost of powder to the Government from 80 cents a pound in 1901 to 53 cents per pound in 1913. A statement prepared by the Secretary of the Navy shows that smokeless powder manufactured at the naval powder factory, at Indianhead, Md., since the date of the completion of that plant, has varied from 30 cents to 48 cents per pound. Taking into consideration that we use in this one arm of the service over 44,000,000 pounds annually, it can be plainly seen that the establishment of these factories to manufacture its own powder was well worth while.

ENTER MR. ANDREW CARNEGIE, PATRIOT.

One of the strongest arguments in favor of a policy of complete Government manufacture of all munitions of war is that such a policy will remove all incentive for the defrauding of the Government by private manufacturers. The war trust has never hesitated to cheat the Government when it found an opportunity to do so, and it has managed to find such opportunities. It is probable that the exact extent of the frauds that have been perpetrated upon the Government by the war trust will never be known, because it has been only by sheer accident that such frauds have become public in a few instances. There is little doubt but that the Government has paid high prices for inferior and "doctored" and defective armor plates, guns, and gun forgings in scores of instances without the same being detected.

Any discussion as to armor frauds necessitates the mention of one of our prominent millionaires who travels about the country posing as a great patriot—Mr. Andrew Carnegie.

On January 7, 1911, Mr. Carnegie made a speech before the Republican Club in New York City, in which he told how he came to go into the armor-plate business.

I was coaching in Scotland—

He said—

when I got a cablegram from Secretary Tracy—

This is the same Secretary of the Navy Tracy who, after leaving the Government service, became the attorney for the Carnegie Co.—

saying in effect, "the President says he understands it to be your duty to enter into the manufacture of armor and save the ships from waiting on the stocks for want of it."

Mr. Carnegie proceeded then to say:

That telegram settled it, for whenever the public calls on me for anything I can do, unless I fall dead, it is my glory to respond.

That is what I did, because the President asked me to do it, and if the President thinks it is my duty to do anything or to go anywhere for my country, I consider it the voice of God.

Mr. Carnegie went into the armor business as a result of listening to the "voice of God," but there is a sufficiently large amount of documentary evidence to indicate that once in the armor business, with Uncle Sam as a customer, his hearing must have become defective.

INVESTIGATION REVEALED WHOLESALE FRAUDS.

There was an extensive investigation in 1894 of the frauds perpetrated upon the Government by Mr. Carnegie's company. Representative HENRY T. RAINEY, of Illinois, one of the best-known and most courageous Members of the House, discussed this investigation in a speech delivered in the Sixty-first Congress. I quote from Mr. RAINEY's remarks:

In 1894 we had an investigation into the frauds perpetrated upon this Government by Mr. Carnegie's company. I can not be charged with unfairness if I simply call attention to those frauds perpetrated by Mr. Carnegie's company, which were admitted by his representatives, some of whom are now among the 43 Carnegie-made millionaires. The document which contains all this evidence is House of Representatives Report No. 1468, Fifty-third Congress, second session.

FRAUDS PERPETRATED BY MR. CARNEGIE'S COMPANY.

C. M. Schwab, who was at that time a stockholder in the Carnegie Co., and who was the superintendent of the company, and who is now the president of the Bethlehem Steel Co., admitted that armor plates manufactured by the Carnegie Co. did not receive the "uniform" treatment required by the contract of the company with the Government.

Another one of Mr. Carnegie's superintendents, Mr. W. A. Cline, admitted that almost invariably after the day's work was over he changed the figures so that false reports of the treatment of the plates were systematically made to the Government inspectors.

I have so far called attention to the admissions of Mr. Carnegie's executive officers. The testimony, however, of employees was particularly damaging. T. F. Farley testified that he had seen blowholes large enough for a person to run three fingers in plugged by taking cuttings from the same plate, which were driven into the blowholes with hammers; he also testified that he himself had run flexible wires into blowholes to the depth of 18 inches. These blowholes were afterwards plugged up on the surface. The blowholes might, according to his testimony, have extended into the plates a much greater distance than this. These blowholes, it appears from the testimony, follow a sinuous course, so as to make it difficult to ascertain the extent of them, even by inserting flexible wires. J. W. Kounts, another employee, testified that he had known holes from 4 to 6 inches in diameter plugged in order to deceive Government inspectors.

In discussing this matter I have kept well within the record and have been conservative. I have principally called attention only to the admissions of fraud brazenly made by Mr. Carnegie's executive officers. It is only fair to them to say, however, that the admissions were made in the face of overpowering evidence as to the truth of all these charges. Many things were proven by the evidence more damaging than I have called attention to, which, however, were not admitted by Mr. Carnegie's superintendents.

THESE FRAUDS CONTINUED TO PRESENT TIME.

The fact of the continuance of these frauds is evidenced by the frequency with which guns explode on our battleships and on land, killing and maiming men; by the frequency with which boilers on our ships blow up, with such awful results to human life.

Guns while being tested by other great nations of the world do not explode with disastrous results. We do not read in the papers that boilers frequently explode on the war vessels of England or Germany or any other nation. The very large number of these accidents in our own Navy and in tests made by our Army officers leads to the irresistible conclusion that there are defects in the castings of the guns and in the castings for the steel tubes and boilers furnished by our steel companies. I desire to insert here in my speech a few of the more important accidents of this character as recorded in the news items of our metropolitan papers.

DISASTERS CAUSED BY EXPLOSIONS, BURSTING GUNS, FAULTY BREECH BLOCKS, ETC.

1902, February 2. Battleship *Kearsarge*, West Indian waters; gun burst, killing 5.

1903, January 17 Battleship *Massachusetts;* gun explosion off Culebra Islands; 6 killed.

1903, April 9. Battleship *Iowa;* explosion of gun; 3 killed, 5 wounded.

1904, April 13. Battleship *Missouri*, off Pensacola, Fla.; explosion; 32 killed.

1904, December 14. Battleship *Massachusetts*, at Philadelphia; explosion in firerooms; 3 killed, 4 scalded.

1905, July 21. Gunboat *Bennington*, San Diego, Cal.; boiler explosion; 34 killed, 66 injured.

1906, January 10. Battleship *Massachusetts;* gun explosion; 9 killed.

1906, April 13. Battleship *Kearsarge*, in Caribbean Sea; explosion; 6 killed.

1907, July 15. Battleship *Georgia*, Massachusetts Bay; explosion; 6 killed, 15 injured.

1908, June 5. In California waters, cruiser *Tennessee;* bursting of boiler tube; 6 killed.

————. Torpedo-boat destroyer *Hopkins*, California waters; exploding boiler; 1 killed, 5 wounded.

1910, March 28. Cruiser *Charleston*, in Philippine waters; gun explosion, alleged faulty breech block; 8 killed, 7 or 8 wounded.

1910, July 21. Explosion of gun, Fort Monroe; 12 killed.

1910, September 9. Battleship *North Dakota;* explosion, Hampton Roads; 3 killed.

1910, November 19. Explosion of gun, Indianhead; 4 killed.

1911, January 13. Cruiser *Washington;* cylinder head blown out. Also about this time 3 similar accidents to vessels in Admiral Schroeder's fleet; no one killed.

1911, January 17. Battleship *Delaware;* boilers exploded; 9 killed; just outside Hampton Roads.

Total killed in nine years, 147.

Total maimed in nine years, 102.

As a result of the accidents I have enumerated, and there have been others, in nine years 147 men have been killed and 102 maimed for life. In other words, by these accidents, in nine years of profound peace, we have killed or maimed for life more of our men than were killed in action in the Spanish-American War.

In order to show that the frauds continue to this day, I have original affidavits, made within the last few months up here at Bethlehem.

WORKMEN TESTIFY HOW GOVERNMENT IS CHEATED.

I will insert affidavits of workmen at the Bethlehem plant:

SOUTH BETHLEHEM, PA., *April 29, 1910.*

This is to certify that I know there was work done in No. 2 machine shop for the United States Government that was not up to specifications. I myself have deceived the inspector many a time.

On the last lot of 5-inch mounts that were made here a number of patches were placed on the brackets, to cover up a mistake in machining. These were put on in such a way so that under ordinary inspection they could not be detected.

I know of a slide for a 12-inch gun that was being machined when a blowhole was discovered. The yoke was taken off the machine and at night the hole was filled up with metal and the yoke put back on the machine, the inspector not discovering the trick. I know of a track for a 12-inch turret which, while being machined, was found to be cracked. I closed the crack by hammering the crack shut and finished machining it.

—

SOUTH BETHLEHEM, *April 29, 1910.*

In a brief submitted to President Taft on April 6 by the committee of striking employees of the Bethlehem Steel Co. we charged that during the night, when Government inspectors were not present, workmen were compelled to treat, patch, and weld inferior work so that work could be forced to be accepted by the Government.

In a letter from Mr. G. v. L. Meyer, Secretary of the Navy, to the President, under date of April 21, 1910, of which I have a copy, he states that our charge has been investigated. In his letter he states that "it appears that no evidence in support of this can be obtained, and the inspectors claim that should defective work be treated in this manner it would subsequently be detected on inspection and test, and reports indicate that at the Government is fully safeguarded by the daily routine inspection."

He also states: "In general, it is believed that the character of the work accepted upon inspection by the Government fully meets the re-

quirements of the Government, and through the system of inspection now in vogue the interests of the Government are well protected."

Regardless of this report, work was treated at night, and men were not allowed to tell the inspector, and after the work was treated if there was any chance of the inspector being deceived into accepting the work as being up to specifications, it was submitted to him. I know that on an order of 5-inch sights for the Navy, about three years ago, that some of these sights were found out of alignment during the company shop test, and that the steel castings were hammered with a sledge to bend them so they would line up. The recoil of the guns, when these sights were used, must have sprung these castings back to their old shape, and thereby made it impossible for our sailors to shoot straight. I offer as witnesses Horace Klinesmith and Robert Johnson, former employees of No. 4 machine shop.

During the building of the 12-inch ammunition hoists for the battleships *North Dakota* and *Delaware* a number of buffers, to be used as cushions to take the weight off the lower cars, were found to be not strong enough. The inspector (J. C. Farrall) refused to accept them on the ground that the springs were not firm enough. The foreman (Harry Lynn) promised to put new springs in. The real trouble was that the bore was out of round in the bottom of the castings, and when inspector was home to dinner these buffers were taken apart and filled with thick vaseline, which stopped up the leak and made it appear as though new springs had been put in, and were accepted by the inspector

I was working as assistant to the inspector, and know this to be a fact. On the same job there were several levers welded by electricity to fill up dirt holes and were in bad shape, and I put the inspector next to it, and was asked by Foreman George Meyer, of the second floor: "Who the hell told him that?" These levers were thrown out by Inspector Farrall. At the present time there are under construction twenty-four 6-inch howitzer gun carriages and twenty-four 6-inch howitzer limbers upon which much inferior work was done, and up to the time of strike was hid from the inspector. Parts have been broken in flanging and welded with acetylene gas; axles have been machined wrong and patched; other parts machined wrong and doctored up to make it pass inspection. In fact, the idea in the shop is to make the work "appear" as though it is up to specifications, or, in other words, get it past the inspector by fair or foul means. I offer as witnesses Horace Klinesmith, George Stegmair, George Miller, Robert Johnson, Ralph Otto, John Wendling, Henry Doyle, and William Everett. Also, on shells for the Navy, if the center has been drilled too deep, leaving a hole in the nose of the shell instead of a point, the hole is drilled deeper and a pointed plug put in. As this was done when inspector was home, I am sure it was not allowed by inspector. This shell job was kept very secret in shop, and should be thoroughly investigated, as there was a large bonus paid for getting these shells out in a certain time, which acted as an incentive for the men to deceive the inspector. In fact, in No. 4 machine shop the practice of treating inferior workmanship was so common that nothing was thought of it. An investigation where men could be placed on oath would bring to light a great many things which I haven't mentioned. I do not blame the inspectors for this, as it would be impossible for an inspector to detect some of these operations. When it is known that Mr. Everett, a skilled jeweler, is used on some of this work the impossibility of detecting these things by ordinary inspection is apparent.

DAVID WILLIAMS.

COUNTY OF NORTHAMPTON, *State of Pennsylvania, ss:*

Personally appeared before me, a justice of the peace in and for the aforesaid county, David Williams, who, being duly sworn, deposes and says that the foregoing statements are true and correct, as he verily believes.

Sworn to before me this 29th day of April, A. D. 1910.

Justice of the Peace.

My commission expires first Monday in May, 1912.

Address of Hon. Julius Kahn in the Rotunda of the Capitol, Before the Statue of Gen. Ulysses Simpson Grant, May 31, 1914.

EXTENSION OF REMARKS
OF
HON. CHARLES F. CURRY,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 1, 1914.

Mr. CURRY. Mr. Speaker, I ask unanimous consent to extend my remarks and have printed in the RECORD a tribute to the veterans of the Civil War, delivered yesterday by my colleague, Hon. JULIUS KAHN, at the memorial services held by U. S. Grant Circle, Ladies of the Grand Army of the Republic.

Mr. KAHN said:

Yesterday a mighty Nation laid aside its mad quest for material aggrandizement and gave itself up to deeds of pure sentiment. In every city, town, village, and hamlet in the United States, loving hearts and gentle hands placed upon the graves of our patriot dead beautiful tokens of affection and reverence. Even those heroes of the Republic who had been denied by Fate interment in its hallowed soil, the sailors and marines who found a last resting place beneath the waves of old Ocean, were not forgotten. For from our seaboard cities on the Atlantic and the Pacific rafts laden with fragrant flowers were launched upon the bosom of the deep so that the outgoing tide might bear them across the depths of waters where many a noble, patriotic heart sleeps the sleep that knows no waking.

It is a beautiful custom—this celebration of decorating the graves of the honored dead. It is constantly growing in impressiveness. It is being observed more generally with the passing of every year. The deeds of valor which were performed by our soldiers and sailors who responded to their country's call in its hour of need will always prove an inspiration to the youth of the land. It is therefore eminently proper on Decoration Day and on occasions like this which we are here celebrating that we pause long enough in our fleeting journey through life to learn a lesson or draw a moral from the lives and deeds of those heroes who have preceded us into the unknown land from whose bourne no traveler returns.

And so, speaking at the base of this superb marble effigy of the great hero of the Civil War, in the presence of this devoted organization of women, I want to speak frankly of some of the thoughts that have occurred to me during the present observance of this solemn festival. How beautiful are the blossoms we have placed upon the graves of our dead. How sublime and soul stirring are the dirges that were played or sung in the hundreds of God's acres where fitting exercises were held in honor of our departed heroes. What tender words of encomium fell from the lips of the eloquent living in praise of those who sleep beneath the sod. How the beautiful sentiments chiseled on shafts of granite or marble struck a responsive chord in our throbbing hearts. How deeply our emotions were touched by all these outward evidences of kindness, of sympathy, of appreciation. How the tears rolled down our cheeks when we thought of some dear friend whose familiar voice is now silent, whose well-remembered form is removed from us forever.

Yes; Decoration Day brings its beautiful tributes to the dead. But it should do more than that. It should inspire us with a determination to act kindlier toward the living. The flowers we strew upon the graves of the departed bring no joy to the silent hearts that lie cold in death. Have you ever thought how happy we could make the living by bestowing nature's fragrant blossoms upon those who are unfortunate, depressed, and sore of heart? The eulogies spoken in the national cemeteries are all unheard by those who are the subject of the inspiring orations; but the words of kindness, of fellowship, of affection, if spoken of and to the living, could bring joy, and sunshine, and hope, and cheer to many a stricken soul. It is well to remember the dead. But let us not forget our duty to the living. And especially to those living soldiers and sailors who in the years of their youth were ready to sacrifice their lives, if need be, upon the altar of a united country.

Their number is diminishing rapidly. Most of them have lived far beyond man's allotted period of threescore years and 10. Comparatively few of them have been able to draw substantial prizes in the lottery of life. This is especially true of the rank and file. Many of them were mere boys when they enlisted. But they had the hearts of men within their breasts. They were ready to perform and often did perform the valorous deeds of bearded men. Their age was not deemed an obstacle to the faithful and honest performance of duty to their country. Their services were welcomed gladly by a great and grateful Government. Some of these, after they had grown to man's estate, after they had laid aside the implements of war, after they had been honorably discharged from the military service, decided to serve their country still in its civil service. Just as they had performed their duty faithfully and honestly on the tented field, so they performed their duty faithfully and honestly in the executive departments of this Government.

True, they have grown weary and old in that service. Is that a fault? Has old age grown to be a crime? Some men clothed with a little brief authority would make it so. But their actions will be resented, as they should be, by the citizens of this Government. The proverbial ingratitude of Republics must not apply to these veterans. The compensation they received while in the very heyday of their lives, while in the fullest vigor of their faculties, was not a princely fortune. Many of them had families to rear. Many of them have not been able to save much from their meager compensation for the almost inevitable rainy day. Some of them have been discharged recently from the Government service on the ground that they have become superannuated. To my mind it is a disgrace to our country that they have been thus thrust out, at an advanced age, on the very threshold of the grave, to fight anew the battle of life in competition with their fellow men. At best, their years will be few. Even if they were totally incapacitated, which they are not, it would be a fitting recognition of their past services to continue them in the public service until they peacefully close their eyes in death.

The few dollars that will be saved as the result of the discharge of these aged men probably will be squandered in some less deserving cause. But how can you assuage the sorrow, the grief, the pain, the anguish that must come to these old veterans when they are told that this great American Commonwealth which they helped to save must throw them adrift in their declining days in order to make room for younger men?

My friends, in all likelihood many of them will have crossed over to the silent majority by the time the next Decoration Day shall roll around. Then we will place flowers upon the little mounds of earth which cover them. Oh, for the love of our country, for the love of humanity, for the love of God Himself, let us promptly undo the wrong that has been done them. Let us keep them at work so long as they are willing to work. Let us make their closing years happy, for once they are gone we will no longer have the opportunity to give them peace of mind and contentment of spirit. Let us assure them by our acts and deeds that we are neither unmindful of nor ungrateful for their services to our country in its hours of peril.

We have met to-day in this historic Rotunda, before this statue of Gen. U. S. Grant, to honor his memory and show our gratitude, as citizens of a united country, for the life and character of this great American soldier and statesman. Nothing that we can say here can enhance his fame. He dwells among his country's immortals. But his life and character also carry their lessons and their morals to the great mass of his countrymen. As a soldier he taught us the value of perseverance, of determination, of constant watchfulness, of prompt decision, of dauntless courage, of modesty of demeanor, of steadfastness of purpose. He taught us, too, the value of magnanimity toward a defeated opponent. When on April 9, 1865, he met Gen. Lee at Appomattox and announced to the latter that the terms of surrender would allow every southern officer to retain his horse, side arms, and baggage, and that every private soldier who owned a horse would be allowed to take his animal home in order that he might begin without delay the work of spring planting, the southern leader promptly thanked his conqueror, and assured him of what a splendid effect this magnanimity would have upon those whom the fortunes of war had made the vanquished. Nor did Gen. Grant's magnanimity toward his former foes stop there. He frequently found opportunities to extend a helping hand to those who had worn the gray during the four long years of internecine strife. Bragg, Mosby, and scores of others have told of the goodness of heart of this rugged chieftain.

But it was at the close of his life that he loomed up giant-like, to teach his countrymen how an American citizen can live and die. He was never at any period of his life what we would call a money-maker. Prior to the Civil War, and after he had resigned from the Regular Army, he had not been oversuccessful in business matters. And later, after he had retired from the Presidency, he lost his all in the crash of a business house with which he had become associated through his sons. Burdened with debt and with an insidious disease drinking his life's blood, he commenced to work upon his Memoirs, so that he might be able to pay his creditors and leave something to his devoted wife to ease her declining years. With dogged determination he continued his literary labors until the completed manuscript was placed in the hands of his publishers. Shortly thereafter he died at Mount McGregor in the State of New York.

A united country spontaneously recognized his splendid qualities of head and heart. With the hand of death upon him none named him but to praise, though while living at times his life had been embittered by the virulent attacks of political opponents. These attacks transcended the level of fair, honest criticism. The muckrakers of his day and generation did not hesitate to endeavor to bespatter his fame and to besmirch his good name. Perhaps much of this abuse that was heaped upon him was due to his devotion to those whom he considered his friends. His loyalty to the latter was proverbial. That some of these friends, in their endeavors to build up their own fortunes, took advantage of the greatness of heart of this splendid soldier and statesman, is probably undeniable. But, after all, who shall say that friendship is but an ephemeral status—that must be destroyed by every rude wind that may blow the dust of suspicion upon the head of this or that individual. To his everlasting credit be it said that to the close of his life he loyally believed in his friends. It may have been a grievous fault in some few instances, but as a general rule the man who remembers those who helped him mount the heights of success, who does not neglect the bridge that carried him safely across, is of a higher, nobler nature than is he who simply uses men to serve his temporary purposes, and then ruthlessly casts them adrift the moment he can find no further use for their activities in his own behalf.

Ah, my friends, it were infinitely better for the world at large if men were to err in overappreciation of the deeds of loyalty performed in friendship's name. Neglect and forgetfulness have caused many an aching wound, have occasioned many a bleeding, broken heart. Gen. Grant was never accused of ingratitude. His whole life is a lesson of devotion to the cause of true friendship. We can well afford to emulate his example, and we honor ourselves in honoring his memory.

Conference Report on Currency Bill.

SPEECH
OF
HON. CARTER GLASS,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 22, 1913.

The House had under consideration the conference report on the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. GLASS. Mr. Speaker, on the 18th day of last September this House, by a vote of 286 to 85, passed H. R. 7837, known as the currency bill. The conferees on the part of the House to reconcile the differences with the Senate now have the pleasure of reporting the bill back without one single fundamental alteration of its structure.

I had purposed making a detailed explanation of the changes in the bill, but in the limited time remaining I can only indicate to the House just what was done in conference concerning the Senate amendment to the House bill, which was in the nature of a substitute.

ORGANIZATION COMMITTEE.

The House bill provided for an organization committee vested with the power of putting the new regional reserve bank system in practical operation, the said committee to be composed of the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency. The Senate altered this provision by eliminating the Secretary of Agriculture and the Comptroller of the Currency and substituting two members of the Federal Reserve Board to be designated by the President. In conference the House provision was restored. The House conferees regarded it as exceedingly important that the Comptroller of the Currency, having intimate knowledge of all the details of banking, should be a member of the organization committee; and also the Secretary of Agriculture, who, at this time, happens to be experienced in economics. Moreover, it was objected that the Senate amendment would indefinitely delay the organization of the system by reason of the fact that the work of organization could not proceed until the President should first designate at least two members of the Federal Reserve Board, which could not intelligently be done until the boundary lines of the various regions could first be established. Thus the alteration by the Senate was regarded by the House conferees as impracticable; and the organization of the system will, consequently, devolve upon the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, as provided originally in the House bill.

FEDERAL RESERVE BOARD.

The Senate amendment also eliminated from membership on the Federal Reserve Board the Secretary of Agriculture and the Comptroller of the Currency. This action by the Senate reflected the deliberate opinion of the Democratic Party caucus and apparently represented the unanimous conviction of the caucus and the Senate. The House conferees signified a willingness to yield with respect to the Secretary of Agriculture, but strenuously resisted the proposition to eliminate the Comptroller of the Currency. The conferees on the part of the Senate long persisted in the determination not to permit this official to hold membership on the Federal Reserve Board, but the House conferees, with equal pertinacity, insisted that the Comptroller of the Currency, already charged by law with the supervision and with a large power of control of the national banks of the country, was by virtue of his official duties peculiarly suited for membership on the board. The House conferees prevailed; so that the Federal Reserve Board will be composed of the Secretary of the Treasury, the Comptroller of the Currency, and five members to be appointed by the President for terms of 10 years each, instead of 6 years, as originally provided in the House bill, and with salaries of $12,000 per annum, instead of $10,000 per annum, as provided in the House bill.

NUMBER OF BANKS.

Concerning the number of regional reserve banks to be established, the House bill, as you know, provided that there should not be less than 12, leaving subsequent increase in the number of banks to the judgment of the Federal Reserve Board. The Senate amended the bill in that particular so as to provide that the number of banks should not be less than 8 nor more than 12. On that point the House conferees yielded.

VOTING FOR DIRECTORS.

In this connection, the House bill provided that the directors of classes A and B of the regional reserve banks—the first class peculiarly representative of the banking interest and the second class representative of the business community—should be selected from approved lists to be supplied by the stock-holding banks. The Senate so amended this provision as to extend the field of choice, permitting the electors to vote for any individual in the regional reserve district. Regarding this as an utterly impracticable, if not interminable, process, the House conferees stood firm and the Senate yielded. The House accepted the Senate modification concerning a preferential ballot, so as to prevent the possibility of a tie vote for directors.

QUALIFICATIONS OF DIRECTORS.

Concerning the qualification of directors of regional reserve banks, the House bill provided that directors of class B could not be officers, directors, or employees of member banks. The Senate so amended the provision as to prohibit stockholders of member banks from being directors of class B in the regional reserve banks; but on this point the Senate receded.

CAPITALIZATION.

The House bill provided that the capital of the regional reserve banks should be in amount equal to 20 per cent of the capital of member banks, one half to be paid in, and the other half subject to call, being in the nature of a double liability. The Senate so altered this provision as to provide that the aggregate capital of a regional reserve bank should be in amount equal to 6 per cent of the capital and surplus of member banks. The House provision was based upon the theory that a bank's capital stock is less liable to variation than its surplus. Nevertheless, the House yielded on this point, not regarding it as at all vital. Indeed, the aggregate capital under the one provision will be approximately the same as that provided by the other plan.

EARNINGS.

In the matter of distribution of the earnings of the proposed regional reserve bank system there was quite a wide difference in the Senate amendment from the House bill. The House bill, as you will recall, provided a cumulative dividend of 5 per cent to be paid to the stockholding banks, after which a surplus fund of 20 per cent was required to be established by the regional reserve banks. The excess earnings above the cumulative 5 per cent dividend and the 20 per cent surplus were to be divided between the Government and the stockholding banks in a ratio of 60 per cent to the Government and 40 per cent to the banks. The Government's earnings were to be applied to the extinction of the bonded indebtedness of the United States. The Senate so amended this provision as to allow the banks a 6 per cent cumulative dividend and required the regional reserve banks to provide a surplus of 40 per cent, the entire net earnings in excess of the dividend and surplus to go to the United States Government. However, one half of the Government's earnings was to constitute a franchise tax and the other half was to be appropriated to an insurance fund for the protection of the individual depositors of national banks.

SO-CALLED DEPOSIT INSURANCE.

This Senate amendment was bitterly contested by the House conferees as being a mere pretense of a deposit guaranty. It was, indeed, neither a deposit guaranty nor a potent insurance fund, in the judgment of the conferees on the part of the House. Therefore the House conferees insisted upon the modification of the Senate amendment by striking out this alleged deposit insurance, but permitting the cumulative dividend to remain at 6 per cent, as fixed by the Senate, the balance of the excess earnings of the system to go to the United States Government. The view of the House conferees was that when we have, if ever we shall have, a deposit guaranty law, the tax should be assessed against the banks; that the banks, in that event, should be required to guarantee their own depositors; and that not a dollar of the funds of the United States Government should be applied to that purpose. [Applause.]

The conferees on the part of the House felt, regardless of the merits of the proposition to insure or guarantee bank deposits, that the incorporation of this Senate amendment here would delay indefinitely, if not defeat, the proposition for a real deposit guaranty law. For this reason the House conferees stood firm and the Senate conferees yielded; so that in the bill as reported back there is no provision for an alleged deposit insurance.

POWERS OF RESERVE BOARD.

The powers of the Federal Reserve Board were in some minor particulars and in one or two material aspects altered by the Senate amendment, notably where the House authorized the Federal Reserve Board to compel one Federal reserve bank to rediscount the discounted paper of another Federal reserve bank under certain restrictions. Such authority could only be exercised in time of emergency and only by the affirmative action of five of the seven members of the Federal Reserve Board. The Senate amendment swept away every one of the restrictions imposed by the House bill and vested the Federal Reserve Board with plenary power to order the rediscount at its pleasure and by a majority vote. The House conferees insisted upon a restoration of the requirement that at least five members of the Federal Reserve Board must concur in the proposed action.

REDISCOUNTS.

In the matter of rediscount operations the only material change made by the Senate amendment to the House bill relates to the time limit of certain agricultural credits. This, you will recall, was an item of the bill which provoked considerable controversy in the House Democratic caucus and in the House itself. In the judgment of some of us the difference is more apparent than real, and certainly more political than economic. The House bill, keeping constantly in view the capital purpose of establishing regional reserve banks with quick and liquid assets, promptly and certainly responsive to the commercial, agricultural, and industrial requirements of the country, provided a 90-day maturity for paper subject to discount, making no discrimination whatsoever for or against the merchant, the manufacturer, or the farmer. The Senate amendment, in the case of agricultural credits, extended the period of maturity to six months. The House having reversed itself on this particular proposition and having instructed the House conferees to yield on the Senate amendment, the conferees acquiesced.

In this connection, Mr. Speaker, I wish to say that while the House conferees would have, in any event, implicitly followed the instruction of the House, we did so the more readily in this case from the conviction that sound banking instinct and universal banking experience will take care of the situation presented by this change in the House bill. In short, we are perfectly confident that those to whom shall be confided the power and responsibility of administering this new banking and currency system will have the wisdom and courage to maintain it in the most efficient state possible.

RESERVES.

In dealing with the reserve requirements, the Senate amendment to the House bill somewhat strengthened the reserve by advancing the minimum requirement from 33⅓ to 40 per cent of gold or lawful money, prescribing a flat penalty of 1 per cent on all impairment of the reserve behind the notes between 40 per cent and 32½ per cent, and authorizing the Federal Reserve Board to assess a graduated tax of 1½ per cent per annum upon each 2½ per cent or fraction thereof that such reserve falls below 32½ per cent.

The reserve requirements for individual banks was very materially reduced by the Senate amendment; indeed, it was loosened up to an alarming extent, making inflation dangerously probable. The Senate amendment did not require a dollar of reserve to be kept in the vaults of individual banks, but made it possible for every dollar of the reserve to be kept in the regional reserve banks, thus frustrating the purpose of the House to put a stop to the vicious practice of pyramiding reserves under which the tendency to inflation is always possible and inviting. The House conferees adjusted this point of difference not entirely to their satisfaction, but vastly to the betterment of the provision, so that while the reserve requirements as to individual banks are somewhat less exacting than they were in the House bill they are very much more exacting than they were in the Senate amendment to the House bill.

BOND REFUNDING.

The Senate radically altered the bond provision of the House bill. The pivotal point of banking and currency reform in this country around which controversy has raged for a quarter of a century has been the rigid and inelastic nature of a currency based on Government bonds. The demand of the banker, the textbook writer, the business man, and other currency experts has been for the abrogation of the bond-secured currency system and the gradual substitution therefor of a currency based on commercial assets and immediately responsive to business requirements. That has been the universal contention of all persons who have a clear comprehension of the question. It has been the declared policy of the Democratic Party for years, the declaration having appeared in specific terms in three of its recent national platforms. Nevertheless, the Senate in its wisdom radically altered that provision of the House bill so as to make an appreciable retirement of the bond-secured currency unlikely, if not impossible. The House conferees gained a measure of advantage by so modifying the Senate amendment as to make probable the retirement of at

least $300,000,000 of the bond-secured currency within a period of 20 years, and the possible retirement of $500,000,000 of that currency, based upon a gold reserve and commercial assets, expanding and contracting automatically with the business requirements of the country.

NO CHARGE FOR EXCHANGE.

One of the most important provisions of the currency bill passed by this House was that which sought to put an end to the flagrant abuse involved in excessive charges by banks throughout the country for collections and exchanges. The House bill provided that exchanges should be made at par and that charges for collections should not exceed the actual cost to the banks. This item of the bill, as most of you remember, was bitterly controverted in the Democratic caucus, and also in the House. Naturally thousands of banks deriving large profits from the practice of charging constructive interest upon checks in transit and very arbitrary charges for collections and for exchanges exhibited great distaste to this provision of the bill. They vigorously protested to members against the inclusion of this prohibition, and thus the effort to remove this tax burden upon the business of the country was contested with the utmost pertinacity. However, those of us in the House who sought to tear down these tollgates upon the highways of commerce prevailed. The fight was renewed in the Senate, and that body so modified the House provision as to leave it solely within the discretion of the Federal Reserve Board to diminish or abolish the evil complained of, as it might please. The House conferees declined to yield on this point. They insisted upon such a modification of the Senate amendment as will exact exchanges at par and restrict charges for collections to the actual cost of such transactions to the banks. In brief, as the bill now is reported to the House the banks can not make exchange and collection charges a source of profit; they can not any longer charge constructive interest; they can not exact a tax for a theoretical transfer of funds from point to point when no transfer is actually made, but only an entry on the books. They can no longer harass the commerce of the country nor penalize the business men of the Nation by an unjust tax. While the House conferees did not succeed in entirely restoring the provision as it left this Chamber, they vastly improved the amendment made by the Senate. The provision, as it stands, will result in an immense saving to the tradespeople of the United States. It will eliminate the amazing wastefulness incident to many independent collection organizations by substituting one compact collection system. It will abolish the exchange charges altogether and appreciably reduce charges against collections. I speak thus confidently only in anticipation of wise action by the Federal Reserve Board when appointed. If the board will have the wisdom and courage to establish immediately a comprehensive and economical plan of bank clearings, it will be difficult to compute the advantages that this section of the currency bill will secure. While some banks will have their profits diminished, it will be profits to which they are not fairly entitled and for the loss of which they will be more than compensated by the better and speedier facilities afforded for the transaction of business.

GOVERNMENT DEPOSITS.

In the matter of Government deposits the House bill required that the regional reserve banks should be constituted fiscal agents of the United States Government and required the Secretary of the Treasury to deposit all of the current funds of the Government in these banks, omitting, of course, the Treasury trust funds. The Senate so altered this provision of the House bill as to make it optional with the Secretary of the Treasury to so deposit the Government funds and to place it within the discretion of that official to constitute the regional reserve banks fiscal agents of the United States Government. I have been unable to get any clear perception of the reason for this alteration of the House bill further than that I a little suspect that it was done for tactical purposes, perhaps to enable the Secretary of the Treasury to combat the schemes of intractable bankers, should there be such. The object of the framers of the House bill in making the provision mandatory instead of discretionary was to furnish the regional reserve banks with the idle funds of the Government as a basis for active business transactions, and at the same time to correct the unscientific and senseless process of withdrawing these funds from business channels and impounding them in the Treasury and subtreasuries. It is scarcely thinkable that we shall ever have a Secretary of the Treasury who would not so exercise the discretion conferred upon him by the bill, as now reported, as to carry out the real purpose which the House had in view when it made this provision mandatory; hence, the House conferees reluctantly yielded the point about 3 o'clock this morning.

BANK EXAMINATIONS.

In the matter of bank examinations some minor alterations were made by the Senate amendment and some technical changes also, which were modified in conference so that there is little practical difference between the Senate amendment and the original House bill. One notable change made by the Senate was an authorization of inquisitorial investigations by committees of the House upon their own initiative; but the House conferees insisted upon so altering this amendment as to permit inquisitorial action by the Senate and House jointly, or by either House acting through a committee directly authorized to exercise inquisitorial powers.

THE NOTE ISSUES.

The note provision of the House bill has been bitterly assailed, both in the other branch of Congress and by certain men of large experience and influence in banking. The president of the largest banking institution in the Western Hemisphere went all over the country recently, charging that the Federal reserve notes provided by the House bill and by the Senate amendment to the House bill, substantially now reported from the conference committee, constitute "fiat money." This charge was vehemently echoed, without investigation or reflection, as I am obliged to believe, in the other branch of Congress. Mr. Speaker, the characterization is not only inaccurate, is not only untrue, is not only amazing, but is positively wanton.

I have said in speeches elsewhere what I shall now repeat here. There is not in this country and there has never been in any country of the civilized world a government issue or a bank-note issue comparable in security to the Federal reserve notes provided by the bill which you are now asked to enact into law. [Applause.]

NOT AN ELEMENT OF FIATISM.

Fiat money! Why, sir, never since the world began was there such a perversion of terms; and a month ago I stood before a brilliant audience of 700 bankers and business men in New York City, and there challenged the president of the National City Bank to name a single lexicographer on the face of the earth to whom he might appeal to justify his characterization of these notes. I twitted him with the fact that not 1 per cent of the intelligent bankers of America could be induced to agree with his definition of these notes, and asked him to name a single financial writer of the metropolitan press of his own town, to whom he might confidently appeal to justify his absurd charge. "Fiat money" is an irredeemable paper money with no specie basis, with no gold reserve, but the value of which depends solely upon the taxing power of the Government emitting it. This Federal reserve note has 40 per cent gold reserve behind it; has 100 per cent short-term, gilt-edge commercial paper behind it, which must pass the scrutiny, first, of the individual bank, next of the regional reserve bank, and finally of the Federal Reserve Board. In addition to this, it constitutes a first and paramount lien on all the assets of the regional reserve bank, including the double liability of the member banks; and, superadded to this, it has behind it the taxing power, the credit, and the honor of a Nation of 95,000,000 of free people. There is not a semblance of fiatism about these notes; and at the very moment that Mr. Vanderlip, of the National City Bank of New York, was in Chicago recklessly characterizing these notes as "fiat"—meaning without sufficient security—Paul M. Warburg, perhaps the greatest international banker in America, was here in Washington protesting to me that the security behind the notes was entirely too exacting!

Mr. Vanderlip misses the mark a mile, while Mr. Warburg is not far from being right; but we have thought it better to err on the side of prudence rather than incur the risks of insecurity.

DANGEROUS TALK.

No man with the prestige or influence which identification with one of the greatest banking institutions in the world gives him should fail to appreciate the importance of his public utterances. He should not fail to understand that his responsibility to society transcends that of a mere individual; and I predict with great confidence that when the president of the National City Bank of New York comes to realize how inconsiderate was his characterization of these Federal reserve notes, as well as how dangerous, he will regret ever having given utterance to such an ill-conceived opinion. When the institution which he heads shall have become a part of and a factor in the system which this bill provides Mr. Vanderlip will be ashamed to

remember that he made such a bitter and utterly unfair assault on the measure.

And, Mr. Speaker, if this be true of a great bank officer, with a manifest self-interest at stake, with how much greater force may this reproach for a like offense be directed at a Member of Congress of the United States, with only his country to serve. I said awhile ago that this charge of "fiatism" was vehemently echoed in the other branch of Congress. It could not have been frankly done upon an intelligent analysis of the provisions of the bill, and it should not have been done without such an examination. But the criticism was made with such fervor and such absence of qualification as to make the charge especially alarming to foreign investors in American securities. Indeed, it was made in such rank fashion as to put in jeopardy abroad the credit of our entire banking and currency system as proposed in this measure.

I desire here to enter indignant protest against such criticism. The constitutional duty of a Congressman to warn his country of perils which he may foresee is not greater than the moral obligation to sound no false alarm. And, in either event, the obligation assumes the nature of a grave responsibility when the Congressman speaking adds to the reputation of a great lawyer the fame of an international statesman. No man of this type, with such responsibilities, should for party advantage or for any purpose trifle with the credit of his country, either at home or abroad.

AS TO INFLATION.

This bill, in its House form, has likewise been subjected to the criticism of providing a wide range of "inflation." On this point I have been more amused than exasperated, because the startling inconsistencies of the critics have been simply ludicrous. On the very day that Mr. Forgan, a great banker, was asserting before the Senate committee that the bill "immensely contracted commercial credits," his fellow townsman, Mr. Dawes, ex-Comptroller of the Currency, was proclaiming out West that the bill "enormously inflated commercial credits." Surely it could not do both things at the same time; nor will it ever do either at any time. It will afford a large expansion of credits, when needed, upon a perfectly sound basis and insure certain contraction of credits at the end of legitimate commercial transactions. This was what it was designed to do, and without the power to do which the bill would be manifestly deficient.

This charge of "inflation," like the criticism in regard to the "fiat" nature of the notes, was echoed in the Senate; and yet the bill came back from the Senate with the possibilities of inflation vastly increased. The only thing done in the other body to diminish the possibilities of overexpansion was slightly to increase the gold reserve; but at the same time the bill was so amended in the other body as to permit the banks to count the Federal reserve notes as reserve; the reserve requirements were appreciably reduced; banks were accorded the dangerous privilege of unrestricted "acceptances," and other things were done that made the bill, for the first time, amenable to the charge that it provided "inflation."

But the House conferees insisted upon a restoration of safeguards. As the bill now stands we have provided against inflation in almost every conceivable way—by the requirement of a substantial gold reserve; by the requirement of a secondary reserve of short-time commercial paper; by restricting the power of the reserve board to issue notes except upon application from the banks; by the interposition of banking instinct and experience applied in a threefold degree—that is to say, banking discretion is applied in the original discount operation of the individual bank; banking discretion is applied in the rediscount operation of the regional reserve bank; banking discretion is applied when the Federal Reserve Board passes upon the application of the regional reserve bank for additional currency. Thus inflation is held in check, first, by the limited supply of gold; second, by the limited amount of short-time commercial paper; third, by the banking discretion of the individual bank; fourth, by the banking discretion of the regional reserve bank; fifth, by the banking discretion of the Federal Reserve Board, with a broad view of conditions not in a single district, but throughout the entire country.

CHANGES SUMMARIZED.

Without desiring to prolong this review of the questions discussed and determined by the Senate and House conferees, I may briefly summarize them as follows:

1. The House conferees restored the Secretary of Agriculture and Comptroller of the Currency to the organization committee.

2. The House conferees restored the Comptroller of the Currency to the Federal Reserve Board, giving the President power to appoint five members with 10-year terms instead of six with 6-year terms.

3. The House conferees struck out the provision from the Senate bill authorizing domestic acceptances.

4. The House conferees threw out the so-called "insurance of deposits" provision.

5. The House conferees threw out the Senate provision permitting Federal reserve notes to be used as reserves in the individual banks.

6. The House inserted a provision requiring that the net earnings going to the Government should be applied to the gold redemption fund or to the reduction of the bonded indebtedness of the United States.

7. The House inserted a provision requiring that branch banks shall be operated by a board of seven directors, having the same qualifications as directors of the Federal reserve banks, four to be appointed by the parent bank and three by the Federal Reserve Board.

8. The House altered the Senate reserve features so as to extend the transition period from two to three years, as was provided in the House bill.

9. The House so altered the Senate reserve provision as to require that at least one-third of the reserves of country banks should be held in the vaults of the local banks, whereas the Senate provision permitted all the reserves to be held in the vaults of the reserve bank.

10. The House conferees practically restored the collection at par of checks and exchanges.

11. A new section on bank examinations was written, omitting some of the objectionable provisions put in by the Senate.

12. The House conferees so amended the Senate bond provision as to require the retirement over a period of 20 years of about $300,000,000 of the bond-secured national-bank notes, whereas the Senate amendment did not provide for the retirement of more than $125,000,000.

13. The House conferees threw out the provision prohibiting directors of the Federal reserve banks, class B, from being stockholders of any bank, and practically restored the House provision requiring directors of this class to be selected from a list supplied by the member banks.

14. The House conferees practically restored the House restrictions in the matter of requiring one Federal reserve bank to rediscount for another Federal reserve bank.

15. The House conferees limited the denominations of the notes to be issued to $5 minimum, striking out the $1 and $2 provision of the Senate, which, it was contended, would cause inflation.

16. The Senate provision fixing a number of banks at not less than 8 or more than 12 stands, as against the House provision making the number not less than 12.

17. There was a compromise on the minimum capital, the Senate bill requiring $3,000,000 and the House bill $5,000,000. The capital was finally fixed to $4,000,000.

18. The Senate provision striking the Secretary of Agriculture off the Federal Reserve Board stands.

19. The Senate method of balloting for directors was retained.

20. The Senate increase of gold reserve behind the note issues to 40 per cent, with a graduated tax for falling below that amount, stands.

21. The method of raising the capital of the Federal reserve banks on capital and surplus of member banks instead of on capital alone was retained in the Senate amendment.

22. The Senate increase of salaries of members of the Federal Reserve Board from $10,000 to $12,000 is retained, as is the alteration in the term of service from 6 to 10 years.

23. There were several hundred alterations of the text of the Senate amendment.

ESSENTIALLY THE HOUSE BILL.

There are, Mr. Speaker, many minor alterations in the text of the House bill, but there is none in its essential features. There also are many changes in the details of the Senate amendment, and in matters of phraseology there are numerous alterations of both the House bill and the Senate amendment. But, in the last analysis, the measure here presented as the conference report upon the disagreeing votes of the two Houses is in all fundamental respects the House currency bill. The report is presented with the confident hope and expectation that it will be adopted and that Congress will have thus written upon the statute books legislation that has been sorely needed and insistently demanded by the banking and business interests of the country for many years.

Antitrust Legislation.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 2, 1914.

On the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. BORLAND. Mr. Speaker, in view of the interesting debate which has occurred on this bill in regard to the various forms of organization among skilled employees and the good that is done by such organizations, both to their members and to the public, I desire to call attention to a meeting of the Brotherhood of Railroad Trainmen that was held in Kansas City, Mo., recently. The subject of the meeting was "Safety on railroads," and to show the scope of the subject and the interest shown in it by railroad employees I submit herewith the address I made on that occasion.

NATIONAL LEGISLATION FOR THE GREATER SAFETY OF EMPLOYEES AND THE PUBLIC.

(By Hon. William P. Borland, Representative in Congress from the fifth district of Missouri, before the union meeting of the Brotherhood of Railroad Trainmen at Kansas City, Mo., March 29, 1914.)

This is a gathering of practical railroad men to consider one of the most urgent and important subjects connected with the whole business of railroading. I am glad to be able to contribute, in so far as I am able, to the deliberations of this meeting. The efforts which you are making to secure greater safety to railroad employees and to the traveling public is of great general interest. The subject is one upon which you, with the aid of your practical knowledge and experience, can furnish the necessary assistance to members of legislative bodies. It is upon your experience and practical knowledge that sound legislation along these lines must be framed. You are fully aware that in your deliberations you are serving the highest interests of yourself and your families.

I am a strong believer in legislation for the protection of life and limb. We have arrived at the stage in our complex modern civilization when the individual can not look out for his own safety even by the exercise of unusual intelligence and vigilance. We are operating powerful agencies of various kinds, and every hour of our life we must depend for our personal safety upon the proper management and control of these agencies. If they are not operated with reasonable care and according to a uniform and safe plan, the individual is caught by forces over which he has no control, but from which he suffers a permanent personal injury. He may be mangled and crippled for life; his earning power may be reduced or destroyed; his opportunities for usefulness cut off; his family may lose its breadwinner and the community at large be deprived of an efficient and productive citizen.

In the simpler and ruder ages of the law, it was a legal presumption that every employee assumed the risk of the business in which he was engaged. He was supposed to have fully as much knowledge of conditions surrounding his employment as his employer. He was also presumed to know as much about the efficiency and carefulness of his fellow employees. We have learned at last how empty this legal fiction is, as applied to complicated modern business. Laws have been passed very generally abolishing this absurd assumption. Manifestly, if the employee who is engaged in the business can not protect himself against the dangers incident thereto, the outsider, or member of the public which is served by the business, has even less chance. The latter must depend entirely for his safety upon rigid rules, born of experience, for the safe conduct of the business. This affects even the men of the highest skill and experience. It applies with all the greater force to that vast element of the population which can not be expected to have either skill or experience. The railroad business is a striking example of this great revolution of modern thought. It operates the most powerful engines known; it is the most complex organization; its employees can not be familiar with even a small part of its business; and the entire public, from the intelligent business man to the helpless child, must depend upon its service. It is highly necessary that, as experience demonstrates the possibility of safety appliances and means of preventing accidents and injuries to employees and others, legislation to compel their adoption should be passed, and these laws should be justly and firmly enforced. The honest and humane manager who desires to conduct his business in accordance with the law and the highest demands of the public should not be subjected to unreasonable competition from the indifferent or careless manager who is willing to take chances. You are not unfamiliar with the course of national legislation in the direction of safety appliances. Soon after the Interstate Commerce Commission was formed, this subject received the attention of Congress. In 1893 the first safety-appliance act was passed, providing for automatic couplers, standard height of drawbars, for grab irons on cars, and for power brakes attached to the cars and locomotives. It was made unlawful, after January 1, 1898, to operate in interstate commerce cars and locomotives not properly equipped. The time was twice extended, and the law did not become fully operative until August 1, 1904. On March 3, 1903, the law was amended to require a minimum of 50 per cent of the cars in a train to be properly equipped, instead of simply a sufficient number, as the law had formerly read. On September 1, 1910, the minimum was raised to 85 per cent, where it remains at present. Under the humane operation of this law, the number of deaths and accidents traceable to such defects has decreased nearly 75 per cent. Think how many good men have thus been saved to continue a career of usefulness to their country, their families, and themselves. To secure the enforcement of this act, the first inspector was appointed in 1899. To-day there is a force of 31 inspectors engaged in this work.

In 1904, the first year for which the commission has made a complete report to Congress of the results of inspection, there were found defective 311 cars out of every 1,000. At the present time there are only about 40 defective cars in each 1,000 inspected. On March 4, 1910, Congress passed a law limiting the hours of labor of trainmen and telegraph operators. It was found that a large number of accidents to employees and to the traveling public were due to failure at a critical moment of the human element. Wherever the operation of a dangerous business depends upon the constant vigilance, care, and skill of a human being there is bound to be a certain percentage of failures. These failures increase as the employee is overtaxed by long hours of continuous service. The danger from this course can be greatly reduced and should be reduced by limiting the hours of service to those within which the employee can reasonably center his whole attention upon the business. Cases have occurred of disastrous wrecks snuffing out the lives of scores of people due to the failure at a critical time of a boy telegraph operator who had long hours of duty at a remote station. These causes of accidents are now regarded as preventable to a great degree, and Congress insists upon their prevention as far as possible.

On May 6, 1910, we passed a bill empowering the Interstate Commerce Commission to investigate the causes of all collisions, derailments, and other accidents on railroads resulting in serious injuries to persons or property in interstate commerce. This law requires the railroads to make monthly reports of all accidents, and these reports have been supplemented by the report of a special investigator from the Interstate Commerce Commission. Congress also, since I have been a Member of it, has passed the act of February 17, 1911, requiring the inspection of locomotive boilers. This law has been enforced by an efficient corps of inspectors. A similar result has followed the enforcement of this law as followed the early enforcement of the safety-appliance law. The Interstate Commerce Commission reports to Congress that during the past year they have inspected 90,346 locomotives. Out of this number 54,522 were found defective. These defects were, of course, of a minor character, because only 4,676 locomotives were ordered out of service.

The act providing for the report and investigation of all train accidents has developed some interesting information, upon which some further legislation can be based. It is found that a large number of these accidents are due to mistakes in train orders or failures to obey the rules. This is where the human element comes in strong. It is argued that a certain number of acts of carelessness or infraction of rules are unavoidable in any business of the magnitude of railroading. There is a belief on the part of Congress that this element can be greatly reduced in two ways: First, by the adoption of standard and uniform rules throughout the United States, so that trainmen going from one part of the country to another will not be obliged to learn a new set of rules on each road on which they work. Second, in the careful training of the men in the rules and their inflexible enforcement. On this subject the last report of the Interstate Commerce Commission makes a curious comparison between the lax enforcement of the rules relating to safety and the rigid enforcement of the rules relating to the collection of the companies' revenues. The commission seems to be of the opinion that if managers were as careful to enforce the rules relating to safety as they are to enforce those made to secure the honesty of their employees in handling its money and prop-

erty the public would be much better protected and there would be less accidents. I quote a paragraph of their report:

This lack of supervision and inspection with respect to matters affecting the safety of trains is unexplainable when the careful supervision of all matters directly affecting the revenue of the roads is considered. The auditing and checking systems used for detecting the dishonesty of employees are marvels of ingenuity and careful attention to detail, but means of determining whether trains are operated in accordance with the requirements of safety and in conformity with the rules are almost entirely lacking. Road foremen are employed to supervise the work of enginemen and to instruct them in their duties, but such supervision and instruction pertain mainly to matters affecting the proper working of engines so as to economize in the use of fuel, oil, and other supplies; instruction on the rules is either entirely neglected or made secondary to matters of economy. Instruction in the use of the air brake is quite general, but this, again, is mainly for the purpose of improving practice in the direction of economy by eliminating shocks and break-in-twos in the handling of trains, thus reducing the money loss caused by damaged equipment and lading. The prevention of accidents by a strict observance of operating rules means not only the saving of human life but of large sums of money as well. It would seem, therefore, that adequate inspection and supervision of the work of employees to insure safety in operation would be amply justified from the standpoint of economy alone.

I might give you some information as to further legislation which is now contemplated by Congress. We found from the reports of the commission that a frequent cause of railroad accidents was the breaking of steel rails under the tremendous weight put upon them. The growing volume of railroad business has necessitated heavier trains, larger cars, and more powerful engines. The railroads tried to meet this with heavier bridges and heavier rails. There has been no adequate standard established of the amount of tensile strength of steel rails. Engineers can tell you pretty accurately the tensile strength of a steel bridge or of the steel frame of a building, and they should be able to tell within a reasonable degree the tensile strength of steel rails. We have now designated the Bureau of Standards at Washington to assist the Interstate Commerce Commission by a scientific investigation into this subject, and the committee on which I serve has recently provided special appropriation for the Bureau of Standards to do this work. I have seen in the Bureau of Standards steel rails that had given away under the weight of a moving train and which showed plainly imperfections in the construction of the rails.

Congress is also considering the requirement of a more extensive use of steel cars. We all know that the old-fashioned wooden coaches were frequently crushed in a derailment or collision and sometimes actually burn up with the mangled bodies of the passengers. Where the train consists partly of steel cars, such as Pullmans, and between these cars and the engine are light wooden cars the passengers in the wooden cars stand even less chance of escaping in case of a derailment or collision than they did before the steel cars were in use. When the requirement is made for the adoption of steel cars it will provide for their gradual introduction on certain trains, as was done in the case of the safety-appliance law, and so that the railroads can provide to meet the requirements of the law.

Other bills relate to the headlights upon engines and to the gradual adoption of the block signal system. The most comprehensive bill of all is one by Mr. STEVENS of New Hampshire—H. R. 10518—which gives to the Interstate Commerce Commission the power to make safety requirements on all interstate railroads, including service, ways, structures, equipment facilities, and operating methods. This law would permit classification to be made of the different kinds of railroad service, such as way freight, through freight, suburban passenger, local passenger, and express, and to adjust the requirements to each class of service. It has the practical effect of extending the safety-appliance law which now applies only to engines and cars, to depot terminals, yards, roundhouses, shops, bridges, and tunnels. I am inclined to think that some such law will be passed putting the matter of regulation into the hands of the Interstate Commerce Commission. It is very difficult for Congress to legislate in detail about a scientific and technical subject such as practical railroading.

In conclusion, permit me to say that, so far as the legislative powers of Congress can be exercised, I believe they should be applied to secure the safety of men engaged in the railroad business and of the public which must use the railroads. A nation owes it to its citizens to exercise the highest care in the protection of their lives and limbs. This is a duty which must be assumed, either by the individual, by the employer, or by the State. We have long ago outgrown the notion that it could be assumed by the individual, and we have practically outgrown the notion that it can be assumed by the employer, for all employers are not alike in their desire or ability to conduct their business in a safe and humane way. It is inevitable that this high duty should be assumed by the State. The greatest asset that any nation can have is the skill and intelligence of its citizens. I will not quote from the statistics you have so often heard of the violent deaths occurring among railroad employees. This industrial warfare has been more deadly than the bloodiest fields of battle. When great economic changes are in an experimental stage we can not be held accountable for not exercising a degree of diligence which comes only from experience. In the early days of any great enterprise like railroading, death takes a terrible toll as the price of progress and success. It is our duty, however, to discover ways to prevent loss of life, and as fast as experience teaches us the way we ought to enforce the rules of safety. Every human life is precious to its owner and to those dependent upon him, and in the broadest views of statesmanship it is precious also to the State. There is no money value which can be put upon the life of a skilled and intelligent man of good character and high ambition. The possibilities of his usefulness can not be measured. It is the most terrible thing in the railroad business that death always chooses a shining mark. It is always a highly skilled man who is mangled or killed.

I have some personal knowledge of railroading in the old days when railroads were small, individual companies, and when they were built principally to sell and not to operate. The railroad companies of the country are handling to-day a vast increase over the business that was handled in those days. Railroading has become more of a business and less of an incident to frenzied finance. Railroad management is now a profession to which the ablest minds of the country are devoting themselves and their life work. The present type of railroad manager has long since abandoned the "public be damned" attitude and works to-day in harmony with public opinion. I am a great believer in conservation of national resources, but the highest conservation I know is the conservation of men. This is the high purpose which has brought you here to-day, and in this purpose you may command my most earnest cooperation.

Antitrust Legislation.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 1, 1914,

On the bill (H. R 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. BAILEY. Mr. Speaker, would the exception of labor unions from the provisions of this bill confer a special privilege?

If that indeed were the effect, then I should most emphatically and unequivocally oppose the exception.

But I am far from being persuaded that labor unions can be classed with industrial combinations and so brought properly within the purview of a law intended to regulate such combinations.

It should be observed that those most vehement in denouncing the creation of a special privilege for labor unions through their exception from the provisions of antitrust legislation are at least relatively quiet with respect to special privilege in general. They are not much concerned about the special privileges which saturate the whole fabric of our industrial system. Their denunciation of special privilege as it is supposed to affect labor unions, therefore, falls a little short of carrying conviction.

There is no proposition in this bill or in any other bill which this House has been asked to consider which even remotely involves the withdrawal or the destruction of the powerful elemental privileges which vitalize business trusts. The only thing aimed at is the regulation of these trusts. We leave their privileges unchallenged. But we say to those possessing them that they must be moderate; they must not be indecent in their greed; they must not push their advantage over the rest of us too far.

This being true—and who is there to challenge the fact—is it necessary to be so scrupulously consistent as to insist for the mere sake of consistency on classifying the labor union with the business trust? They surely differ in fundamental character, as I think I shall be able to show presently. And if they do thus differ, then the contention that labor union and industrial trust should be statutorily bundled together is without merit. It is designed to destroy the labor union without greatly

impairing the power or even sharply limiting the greed of the business trust.

Those on the other side of this question proceed on the theory that business combinations are essentially the same as labor combinations. Is this true? I think not.

The better to examine the issue involved, let us for the moment lay aside the fact of combination and look at labor and at business in their naked form.

No man on this floor or in this country, Mr. Speaker, will deny that any wage earner has a right as an individual to refuse to work for any other person. Yet there is not one on this floor, and perhaps not in this country, who would not deny the right of any owner of railroads, stores, or factories, of ships, pipe lines, or coal operations, to close them down arbitrarily. The difference is instinctively and universally recognized. What is the nature of this difference?

It does not lie in any discrimination against the property owner or in favor of the wage earner. There is no discrimination as to the faculty common to both—their individual working power. The property owner has precisely the same right to refuse to work on his railroad, his steamship, his pipe line, or in his store, his factory, or his mine as the wage earner would have to refuse to work for him. Within the limits of their labor power either would have the right to sell or to withhold it as he pleased and on the terms he pleased. But the property owner possesses something which the wage earner does not. It is the possession of this that puts the property owner in a different class from the wage earner as far as the responsibilities of that position are concerned.

It can not make any difference to you whether I work or not. The public is not concerned in what I do or fail to do so long as I do not become an actual charge or otherwise a burden on or a threat against it. It is very different in the case of a railroad, a mine, a store, or a factory. All these, for one thing, monopolize public rights—rights of way, terminal sites, dock sites, building sites, and other valuable privileges. For another, they assume, and indeed possess, the function of public servants, thus creating a public interest in their business. The difference of obligation between mere wage earners and owners of businesses charged with a public interest is bound up in the fact that the latter own businesses of that kind.

Mr. Speaker, it is my contention that inasmuch as owners of businesses charged with a public interest must not individually be allowed to prevent the best utilization of such businesses, any combination among those owners for preventing or regulating that utilization is properly subject to statutory adjustment or prohibition. On the other hand, inasmuch as wage earners may individually refuse to work for other persons no combination among wage earners to refuse such work is in itself properly subject to any statutory prohibition or even regulation that would not be applicable to an individual wageworker.

To prohibit or to regulate combinations of property owners, whose property is charged with a public interest, to the exclusion of combinations of wage earners would be both consistent and sound. The inconsistent and unsound thing to do—yea, and the impolitic—would be to treat wage-earning combinations as though they were identical in character with combinations of businesses charged with a public use. Subjecting both kinds of combination to the same statute or to the same regulatory commission would be widely and not unreasonably regarded as an attack on labor organizations in the interest of combinations controlling property privileges, rights of way, building sites, dock sites, mining opportunities, water power and timber holdings.

And this brings me, Mr. Speaker, to a consideration of the political aspects of this case. Is any political party prepared to assume the responsibility for what labor organizations are bound to interpret as an attack on labor organizations in the interest of combinations controlling property privileges? Our party for years has professed itself the friend of the toiler. It has strongly defended him against the aggressions of organized greed. In many platforms it has placed itself on record as the proponent of policies designed to secure the emancipation of labor from its thralldom to monopolistic combination. Yet there have been those who seriously proposed that the Democratic Party should bundle combinations of wage earners together with combinations of monopolistic privilege and subject both alike to a common statutory regulation. Happily this proposal has been flatly rejected.

Labor combinations can not be regulated as we are proposing to regulate business combinations without provoking organized labor hostility toward our party. Can anyone doubt this? Or can anyone be surprised that it should be so?

In all probability such regulation would bring about a practical paralysis of labor organization—indubitably to the advantage of monopolistic combinations of business. To subject all combinations, whether of labor or of monopolistic privilege, to an administrative commission having a genuine sympathy with organized labor would be out of the question, as most will say it ought to be. To subject labor organizations to a commission in which a majority was out of sympathy with them would be to divest wage earners of their only bulwark of defense against the automatic pressure upon their interests of an industrial system wherein the labor supply is in constant excess of the effective demand. To subject labor organizations to an impartial commission would be objectionable for at least two reasons: (1) That the commission would be forced to conform in its decisions to wage-earning standards which the unfair competition already noted tends to produce—the competition of 10 men for 9 jobs; and (2) that at best the commission's action would be compulsory arbitration under a different name—and compulsion of wage earners flies in the face of the wholesome doctrine that no one should be compelled to work save as a punishment for crime.

District of Columbia Affairs.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 2, 1914.

Mr. CARY. Mr. Speaker, in the spring of the year 1910 Commissioner John A. Johnston was fully advised that large overpayments had been made to certain contractors doing business with the District of Columbia. On March 1 of that year the superintendent of street cleaning informed the commissioner in writing that—

> Out of the 1,052 alleys on the schedules the remeasurements showed that the areas were wrong in 792 instances. There is no doubt in my mind—

Said the superintendent—

> that when the accounts are gone over, during the life of the contract, from July 1, 1906, to August 24, 1909, the date the correct schedules were put into effect, it will show a large overpayment to the contractors.

Mr. Speaker, the improper payments made to machine-sweeping and alley-cleaning contractors, it has been carefully estimated, would amount to between $60,000 and $80,000. The superintendent of street cleaning had requested Commissioner Johnston to permit him to use the auditor's schedules in order that he might ascertain by careful calculation the actual amounts of the overpayments, but the commissioner instructed the auditor not to permit him to so use the schedules. As the result of this order of Commissioner Johnston the Government was swindled out of $50,000 to $80,000. This man, Mr. Speaker, can offer no valid excuse for the course he pursued. He was appealed to in behalf of the Government of the United States and the taxpayers of the District of Columbia. He knew, because he had been fully advised as to the matter, that this robbery had been perpetrated, and that the money paid out unjustly to the contractors should be recovered and turned into the Treasury; but in spite of all this information he persisted in seeking to cover up the wrong. Shall such things be allowed to pass unnoticed by Congress? Is it not the duty of this body to see to it that men who have committed such wrongs against the people while serving them in the capacity of public officials shall be called to account? We talk about good government for the District, but close our eyes to outrages which, had they been committed against a private establishment would have sent the perpetrator to the penitentiary for a long term of years.

STOLE CONTRACTOR'S PLANS.

A good insight of the character of this man Johnston may be gained from a little trickery practiced by him upon Contractor R. V. Rusk, who, up to June 30, 1911, had held the contract for sweeping the streets of the city with machines. Johnston had succeeded by surreptitous means in buying 16 machines, which he paid for with money specifically set apart by Congress for another purpose—one of the many acts of dishonesty of which he was guilty while serving as a Commissioner of the District.

In order to secure the plans by which the brooms for the sweeping machines were made, he directed the superintendent of

machinery of the fire department, the official under whose direction his yacht was being built, to go to the stables of Mr. Rusk and steal them. This the superintendent of machinery did, although it is but fair to him to say that he complied with the order reluctantly. For this bit of trickery there was absolutely no necessity, as Mr. Ruck would willingly have given the plans to the Government had he been asked for them. It is also worthy of mention in this connection that Johnston sent the superintendent of machinery to New York, shortly before he made the illegal and dishonest purchase of street-sweeping machines referred to, the alleged purpose of the visit being to examine and report upon the machines. Here, again, the superintendent of machinery reluctantly complied. Think of it, Mr. Speaker, a man wearing the title of "general," conferred upon him by the Senate of the United States, and holding the high office of Commissioner of the District of Columbia, condescending to disreputable methods in making purchases of machinery for the street-cleaning department. Why, instead of sending a member of the fire department to New York, did he not send the superintendent of street cleaning, who knew all about the kind of machinery needed in the District and who could buy it to the best advantage? The fireman, in a voluntary statement, confessed that he knew nothing about street-sweeping machinery and expressed surprise that Commissioner Johnston should start him out on such a mission. Johnston knew and had been advised that the superintendent of street cleaning would not stand for the dishonest things he had planned to do and therefore was afraid to advise with him. Johnston knew that that official would have opposed buying machinery of any kind until authority had been obtained from Congress, and that when he did buy his purchases would show that there had been a clean and honest transaction. Hence he took a man from another department, a man who was confessedly unfamiliar with the needs of the street-cleaning department, and used him as a scapegoat to shield himself in his dirty work.

Mr. Speaker, it was this make-believe general, this small-bore official, whose greatest achievement was that of deceiving Members of this House into giving him money to make good dishonest transactions which he had conceived and in the carrying out of which he was aided by his civil associate, Cuno H. Rudolph, and that illustrious braggart, William V. Judson, the Engineer Commissioner. I should have stated, Mr. Speaker, in my reference to the use of the schedules by the superintendent of street cleaning in correcting the overpayments made to contractors, that the records of the street-cleaning department had been destroyed, all having been dumped into the furnace in order to get rid of the evidence in connection with the crookedness I have described. Keep this in mind, you men who accept without question every statement made to you by a District Commissioner—you men who are ready to believe that the present board is composed of seraphic individuals, who only lack the wings on which to soar away from earth to the Elysian fields of a greater and a grander world.

LYING ABOUT HIS PLACE OF RESIDENCE.

Of course no Member of this House knows where Johnston lives. Since his forced retirement from the Board of Commissioners he has not been heard from. But if you will take the city directory and turn to the J's you will find that that document says the "general" abides at No. 2111 Massachusetts Avenue NW., where his wife owns property and generously provides for him. The statement of the directory, however, is not true. Johnston does not live on Massachusetts Avenue, but at No. 2111 Q Street, some distance from the point at which those two thoroughfares intersect. It happens there is a small triangular public park in front of Mrs. Johnston's property, the park lying between Q Street and Massachusetts Avenue. As the park prevents the erection of houses opposite the Johnston residence, and as Massachusetts Avenue is a fashionable thoroughfare, the "general" either lied to the directory man or bribed him to say that the Johnston residence is on Massachusetts Avenue. This may not be a matter of much importance, but I mention it merely for the purpose of showing that Johnston is as willing to lie to keep up appearances as he was to use the money of the Government and the District illegally while he was a member of the District Commission. Mr. Speaker, it is the small things that men do that enable us to accurately estimate their character. Johnston, in order to create the impression that he dwells among the high social class of Washington, caused this false entry to be made in the city directory. This was in perfect harmony with his course as a District Commissioner. In that office he deceived the Appropriations Committees of Congress and misused the money of the people.

Mr. Speaker, while this particular "general" is engaging my attention, permit me to lay before the House a few choice crumbs of information gleaned from the martial triumphs of which he proudly boasts, from his career as a sighing lover with an eye to business, with some further reference to his career as a District Commissioner. He was a captain, of that I am quite sure; but whether, like the famous Capt. Jinks, he won his spurs as a captain of the Horse Marines, I do not know. I have always thought of Capt. Johnston as a noncombatant belligerent, a modern but diminutive Sir John Falstaff, with a penchant for martial visions, a man in whose eyes a bloodless skirmish would appear as a bloody battle. I think of Capt. Johnston when I read the words of Petruchio in the "Taming of the Shrew," in his suit for the hand of the rich and beautiful but ill-tempered Katharine:

> Have I not in my time heard lions roar?
> Have I not heard the sea puff'd up with winds
> Rage like an angry boar chafed with sweat?
> Have I not heard great ordnance in the field,
> And heaven's artillery thunder in the skies?
> Have I not in a pitched battle heard
> Loud 'larums, neighing steeds, and trumpets' clang?

Having in his opinion served his country a sufficient length of time to warrant retirement, the captain, as I understand the story of his life, decided to turn his sword into a pruning hook. And so it fell out that one day, to the great delight of the men over whom he had ruled, he resigned. Then, with his salary in his sock, he betook himself to Pittsburgh, where in the course of time the newspapers announced that he had been adopted by a well-known lady of wealth of that city.

The smoke-laden atmosphere of the industrial metropolis not being the proper place for a peaceful genius, the doughty captain was packed up and brought to Washington, where, coming like a ruby from the "dark, unfathomed caves" of earth, his wife's wealth admitted him to the inner circle of the highest social set. But he was still a captain—just a common captain; a very common captain, indeed. That would not do. He must go higher. He must be a "general." So his wife's female friends got busy. Mr. Roosevelt was appealed to. The Rough Rider listened with sympathetic interest to the story poured into his ears by tender-hearted and tearful dames from the ranks of the city's four hundred. Mr. Roosevelt yielded. The captain's name was sent to the Senate with the recommendation that he be metamorphosed into a brevet brigadier general upon condition that he resign the office simultaneously with the President's approval of the legislative action. Thus, in a single day—yea, in a moment's time—the captain came forth a blooming "general." Later, President Taft, assisted by society, discovered Johnston. Why, the "general," wearing a flaming sash and having his trusty sword at his side, had ridden in the Roosevelt inaugural parade. And so Mr. Taft, in order to please his friend Roosevelt, ignored men of brains and ability and appointed the "general" a District commissioner.

But to touch again upon Johnston's record at the District Building. Had he been called to account for the manner in which he spent thousands of dollars voted to the District by this House, he would now be serving a sentence behind the strong steel bars of a Federal penitentiary. Congress furnished the money, took it out of the pockets of the people, and turned it over to the Board of Commissioners of which this fellow was a member to be used for certain specific purposes, but it was, in fact, used by him and his incompetent civil associate, aided, of course, in their dishonest plans and purposes by the engineer commissioner, William V. Judson, as might seem best to them. And this, Mr. Speaker, all happened in this "best governed city in the world"! In my humble judgment it would be well for us to carefully scrutinize every request and act of the Board of Commissioners while they are in office, and if this were done there would be less to criticize after they got out of office.

Mr. Speaker, I think I am safe in saying that the Board of Commissioners appointed by President Taft—the board which immediately preceded the present one—was about the weakest combination of driveling humanity with official authority that ever ruled and reigned in Washington. Having at its head a hardware merchant, whose knowledge of District affairs of real interest to the people was limited to his feeble ability to grasp public questions of importance, assisted by an obscure Army officer, who had by some means unknown to me succeeded in capturing the title of captain, and an unscrupulous appointee from the Corps of Engineers, there is little cause for wonder that the board was regarded as the instrument of the jobbers. Mr. Speaker, these men succeeded in securing enormous appropriations, thousands of dollars of which were applied to purposes of which no mention was made in their estimates. I am sure, sir, that gentlemen here—members of the Committee on Appropriations which passed upon the demands of Rudolph, Johnston, and Judson for Government funds, and Members who cast their votes for the District bill when it came before the House for consideration—I am sure, sir, that they are unaware

of the fact that five or six thousand dollars—I am not attempting to give the figures accurately—were spent in the construction of a private launch for Capt. John A. Johnston, and that the boat is still used on the Potomac and other waters by that illustrious official "jayjack." The work was done under the direction of the superintendent of machinery of the fire department, who was compensated for his zeal in the commissioner's behalf by advances in salary. You may ask: "What right had Johnston to use the public money in that way?" Answer the question for yourselves. My answer is that his right to so use it was at par with his right to squander the District's funds in other ways to which your attention has been called.

EXTRAVAGANCE OF THE PRESENT BOARD.

Mr. Speaker, the gentlemen composing the present board have come to us for large sums of money with which to meet the expenses of the local government. To what extent these requests are reasonable, viewed in connection with the obligations of the Government to the District of Columbia, we do not know. I do not say that Messrs. Newman, Siddons, and Harding would come here with deliberate misrepresentations as to local needs; but I do say, with all the emphasis I am able to impart to my words, that for months they have knowingly permitted wanton extravagance under the roof that shelters their official heads. There is, therefore, it seems to me, good reason for looking askance at their suggestions touching expenditures in the District. We have heard a good deal recently about the half-and-half plan. The gentleman from Kentucky [Mr. JOHNSON] and other Members of this House, prompted by a sense of justice to their constituents, to the Government, and to those citizens of Washington who believe in a square deal, have ventured to suggest that the half-and-half plan has more than outlived its usefulness. For this they have been held up in the local press as enemies of the National Capital. Not long ago a committee backed and engineered by local jobbers, who for years have had their hands in the National Treasury, was formed for the purpose of intimidating Members of Congress by appeals to the people of their districts. Circulars with hardly a grain of truth in them have been scattered broadcast, and pamphlets laboriously written by the hirelings of the grafters have been spread from Dan to Beersheba in the hope that the voters will accept their reckless statements and call a halt on Members who are standing for clean and honest government in Washington.

Thomas Jefferson, the Great Progressive.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 3, 1914,

On the bill (H. R. 15578) to codify, revise, and amend the laws relating to the judiciary.

Mr. BORLAND. Mr. Speaker, the life and career of Thomas Jefferson are rich in material for the orator, the statesman, and the historian. It is scarcely necessary at this time to review his long and busy life. Of the many biographies of him which have appeared few have been written in either a candid or sympathetic vein. The greater part of the literature relating to Jefferson is evidently the work of men who are politically out of sympathy with, if not actually hostile to, his teachings. In spite of this, the world has been filled with detailed and minute accounts of his appearance, life, words, and acts, such as betoken the tremendous force of his personality and its indelible impression upon the history and institutions of his country. To show that much of it is not in a sympathetic vein, we have only to instance "The Life of Washington," by HENRY CABOT LODGE, and the recent address on "Jefferson, the American Welshman," by Whitelaw Reid.

The truth is, Jefferson was a great progressive—the first great constructive progressive in American politics. His mind was so vast, his mental energy so tremendous, his ideals and aims so altruistic that an age of sordid selfishness and materialism like that from which we are just emerging is little likely to do justice to his fame. For 50 years the ideals of Jefferson have been pushed aside in favor of those of Hamilton, the reactionary. Hamilton, with his doctrine of the sacredness of the dollar, with his theories of protective tariff and special privilege, with his care for the bondholder and the financial interests, has appealed more strongly to the dominant force in American politics than Jefferson, who regarded only the rights of men. At each crisis of our country's affairs an awakening public conscience brings public thought back to the doctrines of Jefferson.

When the Republican Party was born, in 1856, with all the semireligious fervor of a crusade for human rights, it adopted a platform the opening clause of which declared that it intended to bring American politics back once more to the doctrines of Washington and Jefferson. Its first successful candidate for President, Abraham Lincoln, in a letter to the Jefferson Society of New York, three years before his nomination, pledged himself to the doctrines of Jefferson as the guide for his political life. When the Republican Party died, in 1912, it went down under the banner of Hamilton, protective tariff, and special privilege, like its predecessor, the Federalist Party, a hundred years before.

I have said that Jefferson was a constructive progressive. This is the key note of his wonderful dominion over public thought. One of his unfriendly commentators has said of him:

> So far was his temperament removed from the conservatism of the Anglo-Saxon race that he seemed to take the fact that a thing had never been done before as a sufficient reason for doing it.

Though strangely devoid of any appreciation of fiction in literature, yet he had a powerful imagination which ranged wholly in the unromantic domain of the useful and ran riot in schemes for conferring practical benefits on mankind. He betrayed the same traits in agriculture and in politics. In both he was often a dreamer, but his dreams concerned the daily affairs of his fellow men, and his life was devoted to reducing his ideals to realities.

Jefferson was born April 13, 1743, of a family which in any age and any country would be called the middle class. He entered William and Mary College in 1760 at the beginning of his seventeenth year. His eager mind pursued the best classical studies which were available to the youth of the Colonies, including a course in English law. Sir William Blackstone, who is regarded now as an old fogy, but who was the greatest progressive of his time, had just published his remarkable Commentaries, which became the mental food of American lawyers. Blackstone set forth clearly the limitations of royal power and the functions of government in language which would have been revolutionary in that age had it not been so temperate, sane, logical, and polished. As every American lawyer knows, he filtered the violent doctrines of Rousseau through his sane, capable, and constructive mind. His work was the dominating force in the creation of American institutions of government, and is transcribed in every line of the Federal Constitution and of the constitution of every State.

While Jefferson was in college his room at Williamsburg was shared during the session of the Virginia House of Burgesses by that firey—if somewhat unbalanced—patriot, Patrick Henry. When Henry went from that room on the memorable day in 1765 to the house of burgesses to utter that ringing speech against taxation without representation, which has made him the foremost figure in the history of American oratory, Jefferson accompanied him and stood in the doorway of the crowded hall. Jefferson was never a speaker. He was a thinker and a writer; but how much of that speech was Henry's and how much Jefferson's no man has been able to say.

In 1767 Jefferson entered upon the practice of law, which he pursued for seven years with such success that his average professional earnings were $3,000 a year. This was a remarkable sum in that day and indicates a high order of professional ability and diligence. In 1768 he was elected a member of the Virginia House of Burgesses. According to the custom of the age he did not scruple to keep open house and entertain the voters liberally before the election. On election day he stayed close by the polls and bowed gravely his thanks to every voter who cast a ballot for him. In the simplicity of the times this was regarded fully as honorable a method of election as the more modern way of a candidate being nominated by a secret ring of bosses locked in a back room. His entrance upon public life stamped him as a man of the highest honor. He announced that he maintained a resolve not to better his fortunes while in public life. How well he kept this resolve history has fully attested. When on his death bed, after a long and useful public career, he said that if death did not come to him soon he must end his days in the cabin of a negro ex-slave. He never turned his fame or public career to any purpose of selfish gain. He never sold either his voice or his pen, but all his work was public property.

When Jefferson entered the house of burgesses that body was just beginning to show an independent temper against the tyranny of the royal governor. So strong was this temper that the governor dissolved the chamber on account of the spirited reply made by its members to the governor's opening address.

This reply was originally drafted by Jefferson, but was tempered and moderated very largely by the older and cooler heads among the burgesses. In spite of its modified character it seems to have been regarded as unduly independent by the royal governor. When in indignation he dissolved the assembly 88 of the members, including Jefferson, met in a tavern and organized a nonimportation league against British merchandise. All of the members of this league were promptly reelected by their constituents, and, in March, 1773, when the burgesses reassembled, Jefferson took the lead in the progressive movement of the times. "Not thinking," as he himself has said, "our old and leading members up to the point of forwardness and zeal which the times required." This was insurgency with a vengeance, especially in view of the deference to age and leadership which characterized the Virginia Assembly. In the spring of 1774 Jefferson and half a dozen other members took the unequivocal stand in line with Massachusetts in her resistance to the British commerce act, thus breaking down the barriers of mutual jealousy which stood in the way of colonial union. Jefferson said that he felt that "The lead in the house of burgesses on these subjects should no longer be left with the leading members." At this time also he wrote the celebrated Summary View of the Rights of British America. This very revolutionary document found its way to England, where it was largely used by Burke in his celebrated speeches. Jefferson was sent to the Continental Congress in 1775. He had a poor voice and an awkward manner and was no debater, but he brought with him the original draft of his reply to the royal governor of Virginia and had the pleasure of seeing its doctrines become the groundwork of the resolutions of the Continental Congress. In June, 1776, he had climbed to the height of political power and public confidence from which he could stretch forth his hand and seize the imperishable crown of fame. He wrote the Declaration of Independence, the one great act of his career which is familiar to every American schoolboy. The original document in Jefferson's handwriting, with a few verbal changes by Franklin and Adams, is still preserved in the State Department at Washington. Adams, the powerful debater, led the fight for the document on the floor and Jefferson sat by silent, awkward, and disturbed under the bitter attacks which were made upon its language by the reactionaries. The old guard tried to filibuster against the adoption of the Declaration. They waged a long and bitter parliamentary contest, although they knew that it expressed in the highest and purest form the universal sentiment of all the colonists from the backwoods of Maine to the swamps of Carolina. It is said that a curious circumstance aided in its adoption. Late on that July afternoon, which has since become so famous, the weather was very hot, and as the meeting place of the Continental Congress was near a large stable the horseflies came in in swarms and bit the legs of the delegates through their thin silk stockings, making it impossible for the reactionaries to prolong their filibuster.

In June, 1776, Jefferson was reelected to the Continental Congress, but he declined to serve, preferring to return to his legislative work in Virginia. On October 7 of that year he took his seat again in the Virginia House of Burgesses. Here was work indeed for the progressive and for the constructive statesman. The young Nation had been born by a union of Colonies, but the Colonies themselves, which had just graduated into States, were still under their colonial institutions. Jefferson was so little of a demagogue and so much of a statesman that he left the national stage, where fame and personal ambition might have beckoned to him, and returned to his own Commonwealth to begin that wondrous work of reconstruction by which an American State should be erected upon the ruins of a royal colony. The colonial or State governments after the Revolution were republican in name but aristocratic and monarchical in fact. This was especially true of Virginia, where the dominant force in social, intellectual, and political life was aristocratic. Virginia had a limited number of old families which were feudal in their feelings and aims. Virginia had an established church, supported by public taxation, which possessed and sometimes exercised the power of punishing dissenters. Virginia had a criminal code reflecting the somewhat inhuman spirit of the age toward the hapless offender, especially if he were a poor and friendless man and the crime one against property. Extreme severity, retaliation and bodily mutilation, imprisonment for debt, intolerance of opinion, religious and political, and the brand of treason upon all criticisms upon public authority were elements in that code. The rights of man had found no place in its construction, but the rights of property, the rights of privilege, and the rights of power were written large upon every page. All this did not affect Jefferson's private fortunes, for he was a man of wealth and social standing. He had no need to feel its oppression, except as he felt by a wonderful telepathy the heartbeat of the humblest citizen of his State. Strange to say he did not take the stump and abuse wealth and power with all the arts of the demagogue. His work was deeper, broader, and more permanent. A study of this period of his life is not only necessary to a full understanding of Jefferson's character, but it bears the richest lesson for statesmen of the present time. It exemplifies the impassible abyss that separates the demagogue from the progressive. Jefferson's severest critics have never called him an iconoclast. He never tore down unless he was confident he could build upon a better and firmer foundation. He never attacked an unpopular class of citizens solely for public applause or political promotion. Much of his work was slow in bearing fruit, but all of it was strong and sure.

The first bill which he brought into the House of Delegates, which was the new American name for the former House of Burgesses, was a bill to abolish the entail of real property. These entails prevented the free alienation of land and tended to keep the landed property for successive generations in the same family by virtue of deeds and wills drawn by hands long since crumbled into dust. The land of the living, which the Creator had once given in common to all men, was fettered by the hands of the dead. No growth of democracy, industrial independence, or commercial prosperity was possible under such conditions. Jefferson succeeded in having his law passed, and he immediately followed it up with a bill to abolish primogeniture. Primogeniture means that all of the landed estate of the ancestor shall descend to the oldest son, to the exclusion of the younger sons and the daughters. It is the very keystone of the arch of feudalism and aristocracy. It made petty tyrants and feudal despots of the oldest son and worthless vagabonds and gambling rakes of the other sons who had been trained to be above any useful form of labor. Jefferson saw clearly that it must be abolished on the very threshhold of the life of the new American Republic. He attacked it in his own State of Virginia, where it had reached the most perfect flower. He met, of course, the bitter and uncompromising resistance of the social leaders and landed classes. "At least," implored Pendleton, "if the eldest son may no longer inherit all the lands and slaves of his father, let him at least take a double share." "Not," said Jefferson, the leveler, "until he can eat a double allowance of food or do a double allowance of work." His brilliant triumph cost him a price, says his biographer:

> That distinguished class, whose existence as a social caste had been forever destroyed, reviled the destroyer from this time forth with relentless animosity; and even to the second and third generation of descendants many of these patrician families cursed the statesman who had placed them on a level with the rest of their countrymen.

In 1778, at the first session of the Virginia House of Delegates under Republican rule, Jefferson introduced and secured the passage of a bill to stop the importation of slaves. At this time his great intellect busied itself with plans of legal and social reform, which from time to time bore fruit. He passed a bill to promote the prompt naturalization of foreigners; he drafted a code containing a milder form of punishment for crimes; he constructed an entirely new judicial system and code of procedure for the courts; he planned a public school system, but the narrow prejudice of the planters prevented it from being adopted. In 1786 Virginia finally passed what he regarded as one of the most important works of his life—the bill to establish religious freedom. It abolished the established church and still further inflamed against Jefferson the social and religious prejudices of the upper classes. By 1787 the statute books of Virginia bore upon every page the fruition of his work of reform. He even tried to get the assembly to pass an act for the gradual emancipation of slaves, but failed to bring public opinion up to the required standpoint.

In 1779 Jefferson was elected governor of Virginia and served for one year, which was the length of term at that time. This service, brief as it was, has been the occasion of more criticism of Jefferson than any other part of his long public career. It seems that if a man, however great, desires his fame to suffer an eclipse the easiest way is to be elected governor of an American State. Most governors go into office amid the resounding applause of their friends and go out of office completely obscured by the hail of brickbats from their enemies. The worst that can be said about Jefferson's career as governor is that he was not adapted by nature to be a war governor. He had too much innate respect for private rights and was too thoughtful and constructive in his temperament to successfully administer the affairs when the needs of the times called for a dictator. In Rome of old when an invading army threatened the city the citizens suspended the Republic and placed their power in the hands of a dictator. They would never have chosen under such circumstances a man of Jefferson's temperament. He could not seize private rights and property in defiance of law, nor trample

upon the liberties of individual citizens in the relentless spirit of a military leader. It is no disparagement of his greatness to say that it did not lie in those lines. His administration, in fact, seems to have been no worse under the stress of the British invasion and the hopeless poverty of the American Colonies at that trying time than the administration of the other American Colonies, but it seems that more was expected of Jefferson. He put every Virginia volunteer into the field to drive Cornwallis out of Carolina. He even sent supplies with teams and wagons drawn from his own farm, for which he was never compensated. The threatened invasion was not checked, and the British finally reached the defenseless Virginia and overran it, as they had overrun New York, New Jersey, and Pennsylvania. On June 6, 1783, Jefferson was again elected to the National Congress, and presented there Virginia's deed ceding to the United States the territory west of the Ohio River. He was one of the committee to prepare a plan of government for that territory, which gave birth to the States of Ohio, Indiana, Michigan, and Illinois. In 1784 he was minister to France, and saw the beginning of the French Revolution, which was at first under the guidance of such pure patriots as the Marquis de La Fayette. In 1789 the Constitution of the United States was adopted and Washington was inaugurated President. Jefferson was made Secretary of State, and so great was the demand for him as the only man to fill that great place that Washington allowed John Jay to occupy the office temporarily until the spring of 1790, when Jefferson could return and assume the duties.

In Washington's Cabinet Jefferson came in close contact with Hamilton, the great reactionary, the leader of the Federalist Party. Hamilton's ideas were primarily monarchial. He believed in a limited monarchy and a Senate or Upper House elected for life. He had only agreed to the Federal Constitution as a necessary compromise with the democratic tendencies of the times. He regarded government as an institution designed primarily to protect property interests, and his whole public career was dominated by this thought. He was well placed in his position of Secretary of the Treasury, for his peculiar abilities would not have been serviceable in any other position. The conception of the rights of the individual citizen was foreign to his mind. The greatest work of his career was the establishment of public credit. As part of this he insisted that the struggling Government of the United States, which was not able even to pay its own troops, should assume the debts contracted by the individual States during the Revolutionary War. It is probable that these State debts were largely inflated and that very small value had been received originally in return for the obligations. It is certain that they had been bought up for a few cents on the dollar and were then held by the banks of New York City, who were the constituents and political supporters of Hamilton. Hamilton insisted that they should be assumed by the United States and redeemed at par, regardless of the amount which they had cost the holders. Historians seem to agree that this policy of Hamilton's was prudent and necessary in order to secure the loyalty of a powerful class whose resentment would be very injurious to the new Government. This is the most that can be said in favor of Hamilton's policy as a patriotic move. It seems to have been stamped with the same brand of local and partisan political influence which has affected many other pieces of legislation. Apparently Jefferson never was in sympathy with these doctrines, but his work as Secretary of State was so absorbing and important to the new Government that he could well devote himself entirely to it. Recent historians have never done justice to the service of Jefferson as Secretary of State. In my opinion his position was the most trying and the success of his work the most vital to the infant Government. Washington, great as a soldier and patriot, was not without the limitations of his environment and career. He was a provincial and had never been abroad. He knew no language but his own, and his education was rudimentary. He had no knowledge of foreign countries or of international politics. It is part of his wonderful greatness that he recognized his limitations in this respect and turned the conduct of foreign affairs over absolutely into Jefferson's keeping.

Jefferson so conducted the affairs of the young Government as to secure to it neutrality, peace, and freedom from the entanglements of the wars which were shaking Europe, so necessary to its well-being. He did this in the face of the fact that France, which had been the ally of the United States and which had aided it with men and money to secure its independence, was then engaged in a death struggle with England, and not only needed but demanded that the United States repay in part its obligations by assisting France. Jefferson's whole training and temperament led him to sympathize with France and lean toward its claims, and yet he sacrificed his personal feelings upon the altar of his country, and with rare tact and wisdom and with courage and patience in face of a strong French enthusiasm throughout the United States he held back from entangling alliances and saved our young country for all time from becoming a dependency of France. His diplomacy made the independence and dignity of the United States recognized abroad. He retired from the Cabinet July 31, 1793, after having performed a greater service for the Union than any man except Washington. He never concealed his disgust for the policies of Hamilton, which were not at all within the range of his ideas of patriotism. On June 16, 1792, he wrote to Lafayette:

> Too many of these stock jobbers and king jobbers have come into our legislature; or, rather, too many of our legislature have become stock jobbers and king jobbers.

Jefferson was elected President in 1801. It is unnecessary to recount the well-known facts of history that mark his administration. Suffice it to say that he came near to being embroiled in a war with France, the one country which he admired and respected more than all others. As an American patriot he resisted French aggression with the same dignity and force as that of England. He was probably the first American statesman to effectually discipline the judiciary and to insist upon a high standard of integrity. As President he sent a message to Congress urging the impeachment of Judge Pickering, of New Hampshire. Pickering was impeached and removed for ample cause. The crowning act of Jefferson's administration was the acquisition of Louisiana. This was the widest stretch of Federal power and the boldest step of progressive and constructive statesmanship. It fairly staggered the reactionaries of the Federalist school and brought prophecies of disunion and disaster.

As long before as 1790, when Jefferson was serving as Secretary of State, he saw the prospect of a rupture between England and Spain and attempted to take advantage of it by securing control of the Mississippi River. When the opportunity to acquire Louisiana presented itself, he acted with prompt vigor and carried out a cherished plan for the welfare and safety of his country by removing the danger of foreign neighbors. As soon as Louisiana was acquired he sent Lewis and Clark to explore the new territory and laid the foundation for the trans-Mississippi civilization and greatness. Not a single State in this trans-Mississippi country is named for Jefferson, and Missouri is the only State that has honored him by conferring his name upon its capital city.

When Jefferson retired from public life his restless activity and public services did not cease. He founded the great University of Virginia in the shadow of his beloved Monticello and watched over its growth to greatness. He wrote his own epitaph, which is carved upon a stone now in the possession of the University of Missouri, at Columbia, in these words:

> Here was buried Thomas Jefferson, author of the Declaration of American Independence, of the statute of Virginia for religious freedom, and father of the University of Virginia.

No boast here of the offices he had held or the honors and dignities which he bore. Here is written a man's estimate of his own greatness, the three imperishable monuments of his fame—human liberty, religious freedom, and public education. Truly a progressive record, never equaled by one man since the dawn of recorded history.

The Underwood Tariff Law and the American Sugar Industry.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 9, 1914.

Mr. AUSTIN. Mr. Speaker, I wish to call to the attention of the House and the country some facts and conditions relating to our domestic sugar industry and how it has been and will be affected by the Democratic tariff law.

I have selected the sugar industry as a fair illustration of the fallacy of free trade because I have no interest in it whatever, except as a consumer of sugar, such as we all are. So in talking about sugar I am as far away as it is possible to get from an industry in which I have any pecuniary interest or any sort of direct relationship. I am speaking on this particular

subject—the sugar industry—primarily from the standpoint of an American citizen who deplores the destruction of an American industry, and also as a consumer who was promised reduction in the cost of his living expenses. While watchfully waiting for the fulfillment of the promises made by our Democratic friends, I can not help but note with alarm for my country's welfare that not only are Democratic promises unreliable as to the things they would do, but as to the things they would not do. They promised by tariff revision to cheapen the cost of living. They promised by that same sign not to destroy any legitimate industry. Neither promise has been kept. Both are broken. Living cost is still high and going higher. Legitimate industries are halting, staggering, falling.

"Oh, but," our friends say, "Wait, business will adjust itself to the different conditions."

Yes; wait. We have heard that cry before. We heard and are still hearing it in regard to Mexican affairs. Wait! To-morrow. But to-morrow never comes. It is a period nowhere to be found in all the hoary registers of time, unless, perchance, in the fool's calendar.

> Wisdom disclaim the word,
> Nor holds society with those who own it.
> Go to, I will not hear it.
> 'Tis the sharper who stakes his penury against thy plenty,
> And pays thee naught, but wishes, hopes, and promises,
> The currency of idiots,
> Injurious bankrupt, that gulls the easy creditor.

Mr. Speaker, sugar is a product of universal taxation. Every nation in the world levies an import duty on sugar, either as a source of revenue or for the protection of its domestic sugar industry, or both. After May 1, 1916, the United States will be the only nation which does not levy an import duty on sugar, and to-day we are the only sugar country which admits sugar from its colonies free of duty. Except for a slight reduction granted by France, the domestic sugar industry of every foreign nation in the world receives the same protection from colonial sugar that it does from foreign sugar. The 1,345,230 tons of sugar produced annually by Dutch capital in Java, a Dutch colony, can not be marketed in the mother country, and even "free-trade England" levies an import duty of 40 cents per 100 on sugar, granting no preferential whatever to sugar imported from her colonial possessions. It is interesting to note that coincident with the passage of a free-sugar bill in the United States Congress—a measure which will destroy the domestic beet and cane sugar industries—the British Parliament passed an act granting a bounty of 11,000 pounds sterling ($55,000) to the first British beet-sugar factory located at Cantley, England, with the purpose in view of encouraging and aiding the establishment of the beet-sugar industry in that country.

From an economic point of view there absolutely was no excuse for the removal of the duty on sugar. It could not appreciably reduce the cost of living, for the net saving per capita only could amount to 14 cents per annum, providing the seaboard refiners allowed the full benefit to pass to the consumer. Sugar has not been a factor in increasing the cost of living, for while in the past decade the price of all other commodities has risen from 60 to 100 per cent, the price of sugar steadily has decreased, and to-day a pound of sugar can be purchased for less money than an equal quantity of almost any other commodity which goes upon the consumer's table. Sugar is cheaper in the United States to-day than in any other country in the world except Great Britain.

Mr. Speaker, for a great number of years the Bureau of Labor has been gathering statistics as to retail prices of 15 leading articles of food in 40 cities of the United States, in each of which cities they have had a number of correspondents who have reported the prices to them. The sources from which quotations have been furnished were neither fancy grocery houses nor were they the poorest houses, but the average stores from which workingmen would buy their supplies. On February 10, 1914, the bureau published a report on retail prices up to and including December, 1913, with a comparison of these prices, and the average prices during the decade 1890–1899. From a table appearing on page 7 of this document, which I quote, it will be seen that sugar is the only one of 15 commodities quoted which shows a decline in price from the former period as compared with the prices of November and December 15, 1913, the decline being 5.9 per cent. Of the other 14 commodities, wheat flour shows the smallest increase in price, being 26.4 per cent; fresh eggs showing the largest increase, amounting to 155.6 per cent; and the average increase of the 14 commodities is 81.1 per cent.

Per cent of increase or decrease in retail prices of the principal articles of food: Price on Nov. 15 and Dec. 15, 1913, compared with the average price for the 10-year period 1890 to 1899, by articles.

[From Bulletin 140, Bureau of Labor, "Retail Prices, 1890 to December, 1913," Feb. 10, 1914.]

Mr. Speaker, it is evident from what I have said, corroborated by the statistics gathered by the Bureau of Labor, that sugar is the only commodity entering into his daily diet from which the consumer has derived any consolation, as far as the increased cost of living is concerned. Contrary to the upward trend of prices of other commodities, the New York wholesale price of sugar has decreased from 13.51 cents per pound in 1870 to 4.74 cents in 1913, notwithstanding the fact that the per capita consumption has increased two and one-half times during that period. The per capita consumption of sugar in the United States has increased from 32.75 pounds in 1870 to 85.4 pounds in 1913, while the wholesale value of the amount of sugar consumed per capita in 1870 was $4.42 and in 1913 but $3.65, the consumer in 1913 thus securing 161 per cent more sugar for 17 per cent less money than did the consumer in 1870. At the 1870 price per pound our present annual per capita sugar consumption would cost the consumer $11.54 instead of $3.65.

The cry for free sugar has not come from the consumers of that product, Mr. Speaker. In the face of these facts, how could it? Who, then, besides the Democratic Party is responsible for the present law reducing the tariff on sugar 25 per cent on March 1, 1914, and placing that product on the free list in 1913? And what was the ultimate object sought to be gained? When we find the source from which this free-sugar campaign originated, the impelling motive is not difficult to ascertain.

Mr. Speaker, there are in the city of New York four great seaboard sugar-refining concerns, consisting of the American Sugar Refining Co., Arbuckle Bros., the Federal Sugar Refining Co., and the Warner Sugar Refining Co., and they control 76.53 per cent of the output of refined sugar. These concerns, whose interests are identical, fix the price which consumers have to pay for sugar, except when domestic beet sugar is on the market. Against this monopoly or trust 200 or more suits are pending in the United States courts under the antitrust laws filed by the State of Louisiana, through her attorney general, and by individual complainants of that State, in addition to the suit of the Government now pending in the Circuit Court of the United States for the Southern District of New York. The trust has steadfastly resisted efforts to consolidate these cases.

I will not attempt to go into the details of the nefarious methods practiced by these seaboard refiners in their dealings with the Government and with the public. The fact that some of them were found guilty of robbing the Government of millions of dollars through false weights, and were made to disgorge over $4,000,000 of their ill-gotten gains and turn it back to the United States Treasury, and that two of their officials and a number of their employees were sentenced to the penitentiary is still fresh in our memories.

But, Mr. Speaker, I feel it my duty to go into some detail in describing the part taken by these seaboard refiners in the passage of a free-sugar bill, and the cause of their activities in this respect.

With the exception of the 700 000 tons of domestic beet sugar, all of the 4,000,000 tons of sugar which we annually consume

passes through the seaboard refineries, where the 4 or 5 per cent of impurities are removed before placing the refined product on the market. The difference between the price at which they purchase their raw product and the price at which they sell refined sugar is called the "refiners' margin," which includes the cost of refining and the refiners' profit. The cost of refining varies little, if any, from time to time, and so, whenever the refiners are able to increase their margin, such increase means additional clear profit to them. A slight increase in this margin means millions of dollars of additional profit to the refiners. To illustrate: The refiners know that the individual expenditure for sugar is so small and the price so low that not one housewife in a thousand would give serious thought to the subject whether she secured 20 pounds or 22 pounds of sugar for a dollar, and yet, on our present consumption of 4,000,000 short tons, this little difference in price would add nearly $40,000,000 a year to the net profit of the refining combine. During the past 24 years the refiners' margin has ranged from 50 cents per hundred to $1.15, a difference of 65 cents per hundred pounds. To what extent the profits of the refiners have been multiplied by these various increases in their margin is easily to be imagined.

As stated before, with the exception of domestic beet sugar, all sugar consumed in this country passes through the hands of the seaboard refining combine and pays it toll. The American beet-sugar factories produce white refined sugar ready for the table, and during the three to five months of the year in which this produce is marketed it comes into direct competition with the product of the refineries. This competition, in conjunction with the competition of the various beet-sugar companies among themselves, so lowers the price of sugar that until the domestic product is exhausted the refineries are compelled to operate at very little profit, and usually they have to reduce their meltings or close down entirely until the domestic product is out of the way. If the domestic beet-sugar industry were allowed to expand to a point where its output could compete with that of the refineries for 12 months in the year, instead of from 3 to 5 months, then the consumer would receive the benefit of lower prices the year round.

When the domestic beet-sugar industry was producing but from 40,000 to 50,000 tons of sugar a year competition from this source had very little effect upon the domestic sugar market, which was controlled absolutely by the seaboard refiners. But even in its infancy the refiners realized the great possibilities for the expansion of the domestic beet-sugar industry and the competition which would result therefrom; and so when American capital began to flow into that industry it was urged by the refiners that the beet-sugar factories should manufacture only raw sugar, as is done in most of the beet-sugar factories of Europe; that this raw product be shipped to the seaboard refineries, where the impurities would be removed and the refiners be able to fix the sale price on the refined product and exact a profit on the domestic beet-sugar product as they do on imported raw sugar. If the beet-sugar manufacturers would adopt this course, they would have no quarrel with the refiners and no attempt would be made by the latter to throttle the domestic industry. This proposition, however, was not accepted by the beet-sugar manufacturers, and machinery was installed in all their factories to manufacture white refined sugar ready for the table.

Failing in their attempt to intimidate the industry, in order that they might continue their complete domination of the American sugar market, the largest of the sugar-refining corporations attempted to secure control of the beet-sugar industry by buying up stock in the various companies, and succeeded ultimately in acquiring stock in a number of these companies. But the industry grew too rapidly for the refiners. It began to increase at the rate of 100 per cent a year. Realizing that it would be impossible to secure a controlling interest in the rapidly increasing companies, the refiners ceased investing in the industry, and since have been disposing of the stock which they already possessed.

Then a new line of attack was inaugurated. If the refiners could not induce the beet-sugar manufacturers to produce only raw sugar upon which they—the refiners—could exact a toll in the process of refining, if they could not gain control of the industry through the purchase of sufficient stock in the various companies, then more drastic measures must be pursued. The competition must be removed; if in no other way, the industry must be wiped out of existence. The refiners decided that the most effective way of destroying this domestic competition was to secure the removal of the duty on sugar. They knew that if they could purchase their raw product at a cent and a third or a cent and a half cheaper than they had been paying, and the beet-sugar manufacturers were compelled to pay the same or higher prices to the farmers for their raw product, sugar beets, when beet sugar came onto the market in competition with their product, the refiners could reduce temporarily the price of sugar so far below the cost of producing the beet product that that industry soon would be destroyed. With this competition out of the way they then could raise the price to suit their will.

This object the refiners set out to accomplish some four or five years ago. But they did not come out in the open in their fight for free sugar. They well knew that the people were fully cognizant of their nefarious practices in robbing the Government of millions of dollars through false weights; the public was aware of the methods adopted by the refiners to stifle competition, and so if the people knew that this coterie of refiners was making a fight for free sugar, they naturally would oppose the proposition on general principles. Therefore some cloak must be found which would hide their identity. Whatever may be said of these people, they are resourceful; it may be in inventing "corset-steel springs" to make the Government scales weigh falsely; it may be the temporary selling of sugar at certain points at a loss in order to put a competitor out of business; it may be the spending of over a million dollars in one year to create sympathy for the "poor Cubans" and secure the granting of a tariff concession on sugar imported, as they did in 1902, from that island, in order that the refiners, who have millions of dollars invested in sugar plantations in Cuba, might reap the benefit.

When the recent fight for free sugar was inaugurated by these people, it was not difficult for them to find methods which would mislead the people. The high cost of living was a national issue. As stated before, during the past decade the prices of nearly all commodities had increased from 60 to 100 per cent. It mattered not that during this same period the price of sugar gradually had decreased instead of increasing along with other articles, the average person would not stop to think of this. It mattered not that the annual outlay for sugar in the average man's family amounted only to 5 per cent of his total expenditure for food; it mattered not that the net per capita saving under free sugar could not possibly amount to more than 14 cents per annum, the public generally did not give serious study to these details.

The course pursued by the refiners was to inaugurate a literary bureau, which they termed the "Committee of Wholesale Grocers, formed to assist in obtaining cheaper sugar for consumers through a reduction of duties on raw and refined sugar." Here was a name which would catch the people. No one ever would suspect the nefarious sugar refiners of doing anything to assist the consumer, and the "Committee of Wholesale Grocers" had a whole-soul ring to it. Of course this "committee" was a fictitious, mythical organization. Mr. Frank C. Lowry posed as secretary and treasurer of the "committee," and Mr. Lowry is the manager of the sales department of the Federal Sugar Refining Co., the leader in the fight for free sugar. He was made to admit before several congressional committees that no meetings of the "committee" ever had been held, and that not one dollar toward the expenses of the "committee" ever had been contributed by a wholesale grocer; but on the contrary, every dollar of the $25,000 to $30,000 which had been expended had been contributed by his employer, the Federal Sugar Refining Co.

Grossly misleading statements were sent broadcast throughout the country and millions of petitions, praying for free sugar, were circulated by this refiners' bureau, to be signed by individuals and forwarded to Congress.

As long as the Republican Party was in power in the legislative and executive branches of the Government the seaboard refiners made little headway in their fight for free sugar. The Republican Party stands for protection to home industries; it believes that our American farmers and American labor should be amply protected from competition with the low-wage labor of foreign countries. The Republican Members in Congress could not be fooled by the refiners' subterfuge that they desired free sugar simply to benefit the consumer. They knew that a coterie of men who would rob the Government of millions of dollars in customs through false weights and other nefarious methods must have a selfish end in view, and they were not willing that a great American industry such as the beet-sugar industry, in which a hundred millions of American capital had been invested, which pays many millions of dollars annually to American farmers for sugar beets, which gives employment to thousands of people in the seventy-odd factories, and which teaches and aids the farmer to produce 2 bushels of cereals where before he produced but 1, should be totally destroyed simply to allow a few New York sugar refiners to add millions of dollars yearly

to their already large profits. And so the subtle overtures of the refiners received scant recognition from the Republican Congress.

But when the Democratic Party, with its free-trade proclivities, came into power in 1912 the seaboard refiners seized the opportunity to push their free-sugar propaganda to the limit, and, naturally, their pleadings fell upon willing ears. The refiners had aligned themselves with the Democrats in the preceding presidential campaign; had, as I understand, contributed liberally to the Democratic campaign fund, and so through this unholy alliance a free-sugar bill was put through a Democratic Congress and now is on the statute books, although a "stay of execution" was granted the victim, and May 1, 1916, is set for the death of the domestic beet and cane sugar industries.

Mr. Speaker, the Democratic Party has designated its tariff law as a "competitive tariff." Generally speaking, the placing on the free list of any commodity, the price of which is controlled by a combine, naturally results in foreign competition. But, as will be noted from what has been said, sugar occupies a peculiar position in this respect. Instead of increasing competition the granting of free trade in sugar will have the opposite effect. The combine of New York refiners controls the price of that product except during the time they are thrown into competition with the domestic beet product.

The refiners themselves admit that they do not fear foreign competition under free trade, but free trade will destroy their home competitors, the beet-sugar industry, and place them in entire control of the sugar market. If, as stated before, the domestic beet-sugar industry is allowed to expand until it is able to compete with the New York combine during the entire year, then the object sought to be accomplished by free trade in sugar—the lowering of the price to the consumer—could be accomplished without the destruction of a great American industry, and this great combine would be unable to squeeze millions of dollars of additional profits out of the American people.

Now, Mr. Speaker, let us see what has been the effect of the 25 per cent reduction in the tariff which became effective March 1 of this year. It has not reduced the price of sugar to the consumer to any appreciable extent. On the other hand, it has increased enormously the refiners' profits. At the same time the Government is losing millions of dollars in revenue, the loss during the month of March, the first month the new sugar duties were in force, amounting to $2,479,358.62, which approximately represents the added profits of the refiners.

Instead of the consumer receiving the promised benefit of lower-priced sugar, he is paying the same that he paid before, and the seaboard refiners are reaping all of the benefit.

On February 26, a few days before the 25 per cent reduction in the sugar tariff became effective, the duty-paid price of raw sugar was 3.39 cents per pound, the wholesale price of granulated was 3.92 cents, and the refiners' margin between raw and refined 0.53 cent. The 25 per cent reduction—amounting to 34 cents per hundred pounds on Cuban centrifugals—went into effect on March 1, and on March 5 the price at which the refiners purchased their raw sugar dropped from 3.39 cents to 3.01 cents, a difference of 38 cents per hundred, or 4 cents more than the tariff reduction warranted. In other words, they paid the Cuban planter 4 cents per hundred less for sugar, and it costs them 34 cents less to get it through the customhouse. But this reduced price at which the refiners purchased their raw sugar was not reflected in the wholesale price at which they sold their refined sugar, for the price of refined still remained at 3.92 cents. In other words, the 34-cent reduction in the tariff was absorbed by the refiners, whose margin increased from 0.53 cent per pound on February 26 to 0.91 cent per pound on March 5, showing that none of the benefit of the reduction in the tariff was allowed to pass to the consumer. The refiners' margin of 53 cents per hundred which prevailed on February 26 represented the cost of refining and profit, so that the 38 cents which the refiners added to their margin after the 25 per cent reduction in the tariff became effective was an additional clear profit, as the cost of refining already was covered in the 53-cent margin. For the week ending March 12 the refiners' margin was 0.872 cent, which still enabled them to absorb the tariff reduction. It was 0.76 cent March 19 and 0.82 cent for the weeks ending March 26 and April 2, or 23 and 29 cents, respectively, above the 53-cent margin, or that much additional clear profit.

The following table, taken from the figures published in Willett & Gray's Weekly Statistical Sugar Trade Journal, shows the weekly prices from November 20, 1913, to May 7, 1914, at which the New York refiners purchased their raw sugars, the wholesale price of granulated sugar on the same date, and the margin between raw and refined, which represents the cost of refining and the refiners' profit:

Date.	New York price of 96° Centrifugal sugar (per pound).	Duty on Cuban 96° sugar (per pound).	New York wholesale price of granulated (per pound).	Refiner's margin between raw and refined (per pound).

Apr. 30	3.04	1.01	3.735	.695
May 7	3.14	1.01	3.832	.692

But this does not tell the whole story. It is only the beginning. Two years from now, on May 1, 1916, sugar will come in duty free. This is what the refiners want; this is what they worked so hard in the last Congress and in this Congress to get, and free raw sugar is what the Democratic Party decided to give them. The refiners were the only people who wanted free sugar, and if the reason is not already apparent it will be more fully revealed when sugar actually goes on the free list.

I have shown how the refiners manipulate their margin under a 25 per cent tariff reduction. What will they do under free sugar? They will do as they have done before. As an instance of how the refiners will be able to manipulate to their own advantage under free sugar, I will refer to the period from 1890 to 1894, when sugar was on the free list. The refiners increased their margin from 72 cents per hundred in 1890 to $1.15 in 1893, and the Sugar Trust increased its dividends from 4 per cent to 21½ per cent. During the seven-year period of free sugar and the ad valorem duty which followed, this one corporation not only paid out $48,500,000 in dividends but accumulated a surplus of $50,000,000. And there is no reason to doubt that history will repeat itself when sugar again is placed on the free list in 1916, as decreed by the Democratic Party.

Mr. Speaker, the history of legislation never recorded a more abject surrender of the people's interests than the surrender of the Democratic Party to the Sugar Trust, unless it was their surrender in this House the other day of our rights in the Panama Canal.

Not only has the Sugar Trust and the balance of the refining combine been enriched by the Democratic Party, but the present sugar schedule has laid the ax at the root of a great and legitimate domestic industry. Already its blighting and withering effect is felt.

Already has the great State of Louisiana and her people suffered unparalleled loss and depreciation of property.

Already have the sugar-beet farmers felt its disastrous influence in lower prices and diminished acreage.

Already have our insular wards—Porto Rico and Hawaii—where sugar production is the chief industry, been sacrificed to the god of free trade.

Already has this shortsighted economic policy deprived our Treasury of revenue without the slightest benefit to our people.

This unwise policy of the Democratic Party is a blow to the American producers of sugar, a blow to American farmers, a blow to American consumers of sugar, a blow to our National Treasury, and a blow to our insular possessions.

It is a betrayal of these American interests to the sugar-refining combine. It places the American people between the Scylla of the seaboard refiners, who regulate and control the price of sugar in the United States, and the Charybdis of the Brussels convention, which controls the European price.

We were told that the Democratic tariff law was a competitive law, that it would stimulate competition, and that this would result in blessings to the consumer flowing from lower prices. But, sir, bane and not blessing has followed the brief operation of the sugar schedule.

Domestic competition already has been curtailed, and a great home industry, which by its existence and steady growth created a competitive market, is doomed to annihilation, leaving the domestic field to be exploited by a merciless trust, from whose grasp consumers of sugar in this country were just beginning to be freed. Why did the Democratic Party do this great wrong in violation of its own party platform pledge, against the judgment of many of its ablest leaders, contrary to its historic policy regarding a sugar tariff, and at the behest and insistence of President Wilson? What was to be gained? Who was to be the gainer?

Was it done that sugar might be cheaper? Why, the price of sugar never was cheaper than when this law was passed.

The hope held out of a 2-cent a pound reduction was a delusion and a snare. Two cents a pound was greater than the duty. How, then, could there be such a reduction? This false cry of the trust, written by one of its paid agents into the Democratic campaign book, was seized upon by Democratic speakers who knew no better.

Did the Democratic Party, with all the facts before it—the Hardwick hearings, the hearings before the Ways and Means Committee, and the hearings before the lobby investigating committee of the Senate—allow itself to be betrayed into the hands of the refining combine?

Or, more excusable, but no more justifiable, was the sugar schedule adopted for the purpose of putting a free-trade theory into practice at the expense of an American industry—to butcher domestic competition in order to make a free-trade holiday? Whichever one of these reasons or excuses is accepted for this unjustifiable homicide of a competing industry, there is no escape from the fact that the Democratic Party, wittingly or unwittingly, of its own free volition or under duress of Executive demand, committed itself to a colossal blunder in statesmanship and economics which can be atoned for and corrected only by restoring effective rates of duty on raw sugars.

Mr. Speaker, the Democratic Party's recent treatment of sugar has been in utter disregard of our own and the economic policy of other nations. Sugar, as an agricultural product, has received the encouragement of all the continental Governments of Europe by protective tariffs and export bounties. We ourselves have been content for 125 years with tariff duties, except for the brief period between 1890 and 1894, when sugar went on the free list. At that time we had a surplus in the Treasury and did not need the revenue. But we protected our home producers with a bounty. Since then, under Democratic and Republican tariff laws, sugar production in this country has been stimulated by a revenue tariff. But the Democratic Party now, without rhyme or reason, has ruthlessly said that our home producers must go to the wall; that what has taken years of patience and industry to build up is not legitimate and must be destroyed; and that after May 1, 1916, we must depend upon the foreign supply of raw sugar and upon the seaboard combine to refine it. No consideration is given the cane producers of Louisiana, Texas, Hawaii, and Porto Rico, and the sugar-beet farmers and beet-sugar producers in 16 States of the Union.

Mr. Speaker, since 1897, when the Dingley tariff law was passed, we have increased the number of beet-sugar factories from 6 to 73, and but for Cuban reciprocity in 1902 the number of factories would now be 400 or more and we would be independent of other nations in sugar production.

In 1898 not enough beet sugar was produced in the three States of California, Utah, and Nebraska, then producing it, to supply that limited local market. The total amount was 36,000 short tons. During the past season the production reached over 700,000 short tons, and as long as this sugar is on the market we may expect the price to remain low to the consumer. But when the domestic beet-sugar season is over then look out for higher prices, for then the refiners will have the market to themselves. When there was a shortage of the world's crop in 1911, the sugar refiners ran up the price 2 cents a pound, but when beet sugar came on the market the refiners were forced to come down. During that year the New York wholesale price of granulated sugar rose from 5 cents per pound in June to 7¼ cents per pound in September, and within 10 weeks after the beet-sugar product came upon the market the price dropped 1¾ cents per pound. This competition saved American consumers anywhere from twenty to thirty millions of dollars. And yet the Democratic Party, through its distinguished leader in this House, said that the interest of the refiners "requires primary consideration."

Mr. Speaker, I have said that there are 73 beet-sugar factories. I should have said there were that many before the 1st of March, for since then the 25 per cent reduction in duty, with the prospect of free trade in 1916, already has driven 12 of these factories out of business. This many have definitely decided to close down. Other companies now have the matter under advisement, and it is probable that in the near future the number will be further augmented.

I have here a list of these 12 factories, having an aggregate daily slicing capacity of 6,500 tons, which have been forced out of business by the Democratic tariff law.

List of American beet-sugar factories which have been compelled to cease operations since the passage of the Underwood-Simmons tariff bill.

Name of company.	Location of factory.	Daily slicing capacity of beets.	Erected.
		Tons.	
Continental Sugar Co.	Fremont, Ohio.	500	1900
Rock County Sugar Co.	Janesville, Wis.	700	1904
Western Sugar Refining Co.	Marine City, Mich.	600	1900
Holly Sugar Co.	Holly, Colo.	600	1905
Sacramento Valley Sugar Co.	Hamilton City, Cal.	700	1906
Alameda Sugar Co.	Alvarado, Cal.	800	1870
Southwestern Sugar & Land Co.	Glendale, Ariz.	700	1903
Nevada Sugar Co.	Fallon, Nev.	500	1912
Iowa Sugar Co.	Waverly, Iowa.	500	1907
Ottawa Sugar Co.	Ottawa, Ohio.	600	1912
Las Animas Sugar Co.	Las Animas, Colo.	700	1907
American Beet Sugar Co.	Lamar, Colo.	400	1905

Mr. Speaker, the beet-sugar industry has "made good." It has illustrated the wisdom of and justified the encouragement it has received.

It has grown up under discouraging circumstances, but has met and overcome all obstacles. Now the sentence of death has been passed upon it by the Democratic Party. What is it that party is destroying? Why, sir, they are destroying an industry which from 1898 to 1913 increased its output from 38,000 tons to 715,000 tons, an increase of nearly 2,000 per cent; an industry that has spread from a few localities until it extends over 16 States, from Ohio to the Pacific coast; an industry with a daily slicing capacity in 1912–13 of 67,208 tons of beets, which paid out last year $62,700,000 in the operation of its factories, $30,000,000 to 57,021 farmers for beets; an industry which employed 31,752 operatives, with a pay roll of over $10,000,000, not including the 120,000 persons engaged in beet growing and field labor. Such, in general, are the dimensions of the sugar-beet industry which Democratic tariff legislation is stifling and putting to death.

What of the cane industry? In the Louisiana sugar industry there is, or was, a permanent investment of $100,000,000, represented in 650,000 acres of land, with buildings and field improvements, sugar factories, mules, implements, and plantation railroads and equipment, with annual disbursements for field and factory operations of $25,000,000, more than 50 per cent of which is paid to laborers during the cultivating and harvesting seasons.

The approximate investment in lands and factories in the cane-sugar industry of Texas amounts to several million dollars. The average production of Louisiana and Texas may be placed at 320,000 long tons.

In Louisiana there are upward of 200,000 people engaged in one way or another in the production of sugar. What will become of these people and their dependents? Their means of livelihood is gone. Where and how will they get other employment?

I am reliably informed that recently 2,500 families moved away from one section of the State to seek homes and occupations elsewhere, with little prospect of success, because of industrial depression everywhere existing. The fields of the cane planter of Louisiana are going to waste, his seed cane will be lost, the owners of mills are going into bankruptcy and their mills are being pulled down and sold for junk.

These same Louisiana planters, by the introduction of new and improved machinery, have lowered the cost of producing sugar from 13½ cents a pound to 3.5 cents in 50 years. And yet in the same tariff law which sounds the death knell of the Louisiana sugar industry its authors, adding insult to injury, ironically placed on the free list, paragraph 391, "Machinery for the manufacture of sugar."

Who in the United States will have any use for this kind of machinery when we are disposing of it as junk as fast as our sugar-grinding mills and beet-sugar factories are dismantled,

By the irony of fate much of this machinery will find its way to the tropics, there to be used in producing sugar for the trust, to be shipped here for refining and consumption, to displace the American product.

Ah, Mr. Speaker, the Democratic Party is a "friend indeed to a friend in need." It murders legitimate industry, but it is the first to appear at the bier to present flowers and offer consolation to the bereaved. Having passed a tariff law which will wipe out of existence $100,000,000 of capital invested in the Louisiana sugar industry and throw out of employment hundreds of thousands of laborers, it sheds a sympathetic tear and offers as a soothing balm a magnificent appropriation of $50,000 "for the inauguration of live-stock and crop demonstrations in the sugar-cane areas of Louisiana." It says to these people, "We have murdered your sugar industry, but we place upon its casket a floral offering—a broken column—as a manifestation of our love; we love you and therefore we chastise you; we will take away from you an industry which has supported your families for over a century, but you can begin all over again in a new and untried industry, and possibly in another hundred years you will have recouped your losses and again be where you were before we destroyed your sugar industry."

Additional sources of our domestic supply of sugar are Porto Rico, Hawaii, and, to some extent, the Philippines. Porto Rico and Hawaii are largely dependent upon sugar, their chief industry, which until now, since American control, has enjoyed the encouragement accorded our strictly domestic industry.

In the 1913–14 season, in long tons, there was produced in Porto Rico 300,000, in Hawaii 500,000, and in the Philippines 220,000. A considerable portion of the purchases of this raw sugar is paid for with the products of American mills and factories and of American farms and forests. Consequently, our trade with these possessions is being curtailed and will be seriously crippled by free sugar, thus inflicting injury upon them and upon us, besides still further limiting the domestic supply of sugar. The shortage of one and a half million tons arising from the destruction of the domestic industry, including Porto Rico and the damage to Hawaii, would naturally have a tendency to raise world prices, since in 1911 a shortage of about 2,000,000 tons in Europe raised prices nearly 2 cents per pound.

We increased our production in American territory from 954,272 long tons in 1901–2 to 1,943,635 long tons in 1913–14. The percentage of increase was therefore about 100. Our total consumption of sugar in 1913 was 3,743,139 long tons, or 1,799,504 more than our production, leaving out Cuba, with its partially protected sugar under the reciprocity 20 per cent preferential duty.

The following table, converted into short tons from the figures of Willett & Gray, shows the increase in consumption of domestic, insular, and foreign sugar and the sources from which derived:

	1901	1913
DOMESTIC.	*Tons of 2,000 lbs.*	*Tons of 2,000 lbs.*
Louisiana and Texas cane	327,208	322,633
Domestic beet	139,842	700,352
Maple sugar	5,600	10,080
Molasses sugar	20,134	11,704
Total domestic	492,784	954,769
INSULAR.		
Hawaii (cane)	346,138	567,342
Porto Rico (cane)	74,232	370,835
Philippine Islands (cane)	5,712	49,974
Total insular	426,102	988,151
Total insular and domestic	918,886	1,942,920
Cuba (cane), at 20 per cent tariff reduction since Dec. 27, 1903	626,976	2,229,731
FULL-DUTY PAYING.		
Foreign cane and beet, raw and refined (outside of Cuba)	1,111,131	19,666
Total consumption	2,656,993	4,192,317

Percentage of total consumption.

Derived from—	1901	1913
	Per cent.	*Per cent.*
Domestic sources	18.54	22.77
Insular possessions	16.04	23.57
Domestic and insular	34.58	46.34
Cuba	23.60	53.19
Full-duty paying	41.82	.47

At the same rate of growth shown in the past decade our American sugar industry would be able to reach and exceed the requirements of our own people in another 10 years if it were not for the asinine policy of the Democratic Party in putting sugar on the free list. This policy of "industrial treason" is not only wrong from a business standpoint, but morally wrong as well. You are doing a great injustice to our insular wards, which have prospered under the benign influence of our tariff laws and business methods. We are obligated before the world and are in duty bound to conserve their best interests. But now we make them the prey of other nations by withdrawing from their staple product the protection under which they have been blessed.

Mr. Speaker, the Democratic Party, in its theoretical way, has decreed that the Louisiana cane and domestic beet-sugar industry can live and thrive under free-sugar conditions in competition with the cheap-labor product of foreign countries. They paid no attention to the warnings of the domestic sugar industry that free sugar would drive them to the wall; they gave no heed to the arguments and figures presented to their congressional committees to prove this claim. Their pet theory of free trade must be put into practice, and sugar was singled out as the "dog" on which the theory should be tried. The physicians say, "The operation was successful, but the dog will die."

The Democratic Party cares nothing that a great American industry is to be destroyed through their free-trade policy. They have allied themselves with the seaboard sugar refiners, and it is the refiners' interests which they are subserving. The Committee on Ways and Means, in its report on the free-sugar bill dated March 5, 1912, says:

> The ability of the refiners to compete with other countries without the aid of tariff protection can not be successfully denied. This condition was attested by Mr. Claus Spreckles in his statement before the Ways and Means Committee in 1909.

This statement undoubtedly is true, Mr. Speaker. The seaboard refiners have nothing to fear from foreign competition under free sugar, for the reason that Cuba, which now supplies 53 per cent of our sugar consumption, always will be the source from which will be drawn the bulk of our sugar supply. The cost of producing sugar in that Republic is considerably below what it is in the great sugar-exporting countries of Continental Europe, and, being at our very door, she has a material advantage in freight rates. During the present year Cuban 96° sugar has been landed at the warehouse in New York without duty, but including freight and insurance, for $1.875 per hundred pounds. The average cost of producing raw sugar in Germany, the largest sugar-producing country of Europe, is about $2 per hundred, and adding freight and insurance, say, 15 cents a hundred, would bring the price laid down in New York, without duty, at $2.15 a hundred, a difference of 27.5 cents in favor of Cuba. Many of the seaboard refiners and those officially connected with these companies have large individual investments in sugar plantations and mills in Cuba. This is common knowledge and has been testified to before congressional committees by the gentlemen themselves. Mr. Atkins, acting president of the American Sugar Refining Co., has testified that he personally had $1,500,000 invested in the island. As practically all of Cuba's raw-sugar exports pass through our seaboard refineries, free sugar naturally would be of advantage to these gentlemen, for, in addition to increasing their profits through an increase of their refining business, they would increase their profits on their Cuban holdings. In the Daily Consular Report of June 10, 1912, Deputy Consul General Starratt at Habana states that a careful estimate of American capital invested in Cuban sugar plantations and mills gives a total of $54,000,000; that American-owned mills produce nearly 35 per cent of the total production of Cuba; and that on account of American mills then building and being planned this percentage would be still further increased within the next two years.

With these facts to enlighten our vision, Mr. Speaker, it is easily to be seen why the seaboard refiners do not fear foreign competition under free-trade conditions. They do not fear foreign competition under free trade and they do not fear domestic competition under the same conditions, for they know that with a cost of $2.42 per hundred pounds of raw sugar in the beet, before ever a wheel has been turned to extract and refine it, the domestic beet-sugar manufacturers can not compete with the product of Cuba, which, as I say, can and has recently been laid down in New York, without duty, for $1.875 per hundred. The possibilities for the production of sugar in Cuba are unlimited. Her production has increased from 636,000 long tons in 1902–3 to 2,500,000 tons in 1913–14. And Cuba, not satisfied with tropical wage rates, is awakening to the fact that by importing oriental labor she can greatly reduce her

cost of production, and rumor has it that 20,000 Japanese already have been engaged to work on Cuban plantations.

Mr. Speaker, with their ability to purchase their raw product, refine it, and place it in competition with domestic beet and cane sugar at a price below the cost of production of the latter, the seaboard refiners will reduce the price for a long enough time to undersell the home product and put it out of business. And then, having driven out competition, the refiners, with foreign duty-free sugar, will increase their margins and their profits to their heart's content at the expense of American consumers.

There is another serious phase to this question which must not be lost sight of—the indirect advantages to general agriculture which result from sugar-beet culture. The Democratic Party's blunder in surrendering to the sugar refiners' combine is bad enough, but it is as nothing compared to the injury to American agriculture which will result from the destruction of the domestic beet-sugar industry.

Indeed, this feature amounts to criminal negligence in the light of the possibilities under a system of sugar-beet cultivation.

Read what Mr. I. D. O'Donnell, of Billings, Mont., said before the Ways and Means Committee. Mr. O'Donnell has been an irrigation farmer for 31 years. He is an expert. He knows what he is talking about. He says:

> The sugar-beet business in our country has brought on diversified and intense farming, under which 40 acres produce more than 160 acres under the old order of business. It means crop rotation, diversified farming, and stock feeding. Rotation means better farming. On my own farm—I have a farm of 640 acres under irrigation—the rotation has increased my grain yield, alfalfa yield, and other yields fully 50 per cent. Where we used to grow 30 to 40 bushels of wheat to the acre we are now growing 50 to 60 bushels.
>
> * * * * * * *
>
> Every acre of beets, as a neighbor of mine puts it, when we grow 40 acres of beets, means a market for another 40 acres, making a home market for that much more. It is the only crop in which we have an assured market price.

It is here seen how closely related is the beet-sugar industry to that of agriculture, and also how dependent are our beet farmers upon the manufacture of sugar.

This gentleman is but one of hundreds of American farmers who have increased their acreage yields of cereal crops from 25 to 75 per cent through the injection of sugar beets into their cycle of rotation. The fact that sugar-beet culture improves the condition of the soil and increases the acreage yield of all other crops following on the same land for the next three years has been known to European farmers, agriculturists, and economists for many years. In fact, they regard it as the father of modern scientific agriculture, and European farmers grow sugar beets more for their indirect than for their direct value as a cash money crop. Our American farmers are just beginning to learn of this great indirect value of the sugar beet; and whereas a few years ago the principal difficulty encountered by our domestic beet-sugar factories was the lack of the farmer's interest in growing beets, to-day, since they have learned what their European brethren have known for years, their enthusiasm for beet culture has become so great that many of our beet-sugar factories have had to turn down contracts for thousands of acres of beets. Protection is primarily to our farmers and then to the sugar producers, both employing labor. In the season of 1912–13 the number of acres of beets harvested was 555,300, which produced 2,772 pounds of sugar to the acre. But this was but a scratching of the surface when we consider that from the Atlantic to the Pacific we have 274,000,000 acres of well-defined sugar-beet land, 14,000,000 acres of which, if planted to sugar beets, would produce enough sugar with which to supply the world, to say nothing of the tremendous increase in value to other crops raised in rotation with beets. Think of what it would mean to our farmers if, through the more general cultivation of sugar beets, they increase the yield of corn, wheat, oats, barley, rye, and potatoes 1 bushel per acre. It would mean an increase in the total value of these crops of $126,100,000; and based on the German increase for five principal crops in 25 years, due to rotation with sugar beets, the value of the surplus yield would be $1,798,200,000. A fabulous sum, but wholly within the realm of possibility.

But the Democratic Party, in putting sugar on the free list and thereby preventing the development of the beet-sugar industry, has disregarded the economic results within reach of our farmers by the general culture of sugar beets, and has turned a deaf ear to the facts and the experiences of our own farmers and those of other nations which have increased their wealth by this method, and have said to our sugar beet farmers, "You must go back to the old methods of general farming; your business is illegitimate."

The farmers already have suffered a cut in the price of their beets, and are thus sharing with the beet-sugar producers the loss of 88 cents per ton as a result of the 25 per cent tariff reduction.

To ascertain the facts from a reliable source, I inquired of Mr. E. D. Cowles, editor of the National Farmer, a paper devoted to the interests of diversified farming and sugar-beet culture, regarding the present and prospective condition of the beet-sugar industry as affected by the new tariff law.

In his reply, dated March 18, 1914, Mr. Cowles makes the following statement:

> The future of the beet-sugar industry in Michigan, as well as in 20 other States which produce sugar beets, is entirely dependent upon the action of Congress as regards the free-sugar clause in the new tariff law, which provides that sugar shall be placed on the free list May 1, 1916.
>
> So far as I can ascertain, only one sugar manufacturer in the United States has expressed the determination to operate his factory under the conditions which will exist May 1, 1916.
>
> The reduction of the tariff on sugar of 25 per cent March 1, 1914, made it necessary for beet-sugar manufacturers to readjust their terms with beet growers, as this reduction was equivalent to a loss of 88 cents per ton in sugar beets. In Michigan the manufacturers issued a new contract fixing the rate of $5 per ton to be paid for beets delivered at weigh stations and $5.60 a ton delivered at the factory for the present year. The beet grower, realizing that the manufacturers were not to blame for the action of Congress, have very generally accepted the proposition and are signing up acreage for this year's crop.
>
> One factory in Michigan will not be operated this year. Another factory at Mount Clemens will have a short run, and unless the law is changed, repealing the free-sugar clause, it will be shut down permanently at the end of the present year. Not a single Michigan manufacturer will guarantee to operate his plant next year under the existing law.
>
> In some other States a different form of contract has been submitted. Some factories will not be operated this year, among them one at Janesville, Wis.; one at Fremont, Ohio; one at Waverly, Iowa; two in Colorado; and a few others in the far West. The Great Western Sugar Co., operating numerous factories in the West, is paying on a basis of $4.75 a ton for beets testing 12 per cent and under 14½ per cent sugar and 12½ per cent for each additional 1½ per cent increase. On the basis of $4.75, the companies are asking the growers of beets to absorb 47 cents of the 88 cents reduction caused by the tariff.
>
> Every friend of this great industry hopes that such a pressure will be brought to bear upon the next Congress that the free-sugar clause will be repealed.
>
> The American Beet Sugar Co., in Colorado, has reduced its contract prices for beets to $5 a ton. A score of new factories which were projected and to have been erected this year have been abandoned. For two years past the country has been flooded with literature sent into every congressional district at the instance of the New York sugar importers and refiners, making the claim that if the tariff were removed the consumer would be able to obtain his sugar 2 cents a pound cheaper. While the wholesale price of sugar has dropped to the lowest point in years by reason of the competition of beet sugar thrown on the market, there has been very little reduction in the price to the consumer, and it is now stated that it is not at all likely that refined sugar will reach the consumer lower than at present for some time to come. The only grade of sugar on which the wholesale price has been reduced is standard granulated, with which beet sugar comes in competition.

Mr. Speaker, I have shown who it was that demanded free sugar. It was not the cane planters; not the beet farmers; not the beet-sugar producers; not the consumers. No, sir; none of these. Free sugar was demanded by the seaboard refiners, the sugar laundrymen, who are the middlemen in this business. They alone of all people concerned in furnishing sugar to the American people demanded this great and radical change in our economic and fiscal policy, and I defy anybody to find to the contrary from official records. Their motives have been uncovered. They saw that beet farming, if encouraged and extended, would stimulate the production of beet sugar and bring it more and more into competition with the product of the refineries. And on the specious and pharisaical plea of cheaper sugar to the people they instituted and successfully carried on a campaign under this guise. The interest of the farmers, the interest of the cane planters, the interest of the domestic producers, and the real interest of the consumers were disregarded by the Democratic Party, and now we are beginning to reap the results which were easily foreseen. In the words of a former Member of this House, now a distinguished Democratic Senator from the State of Louisiana, Hon. JOSEPH E. RANSDELL, uttered in the Senate September 8, 1913, as a final warning to his party:

> Without claiming the gift of prophecy, I say unhesitatingly that, in my judgment, before the three years have rolled around which will place sugar upon the free list, dismantle the factories in Louisiana, condemn thousands of people there who are now in easy circumstances to poverty and distress, and bring ruin upon a great many engaged in sugar production in our Western States, Hawaii, and Porto Rico, the Democratic Party will hear from the people of this Nation in no uncertain tones.

In a speech delivered in the Senate on July 27, 1912, Senator JOHN SHARP WILLIAMS, in speaking on the free-sugar bill then before that body, said:

> There is not the slightest anticipation in the mind of any intelligent man that it (sugar) will be placed upon the free list, not even if a Democratic Senate and a Democratic House and a Democratic President come into power.

Mr. Speaker, here is the statement of a man high in the councils of the Democratic Party, made two years ago. Since that time we have had and now have a Democratic Senate, a Democratic House, and a Democratic President, and under this régime we will have free sugar. The Senator's prophecy has not come true, but his failure as a prophet is explained in a speech recently made on the floor of the Senate, in which he said:

The poor, dear old foolish Democratic Party is going through the same game that she can be generally trusted to go through soon after she gets into power.

That is the Democratic Party, true enough. That is its history. That is what led Speaker Tom Reed to say in 1894 and 1895: "You can't last long, because you are not accustomed to governing anybody or anything; you can not govern the country, because you can not govern yourselves. You are incompetent."

Trade Commission Bill.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 3, 1914.

Mr. MOORE. Mr. Speaker, so much law has already been put upon the statute books that almost every new bill affecting trade or commerce is now looked upon by the average business man as a trouble breeder. Between agitation and enactment during the last few years it would seem that those who are honestly striving to go forward in the business world have been well nigh surfeited. But we are to have more law and more regulation and more unrest in order that political platforms may have some show of justification. Business men generally are praying to be let alone. They are appealing for a rest and for the right to live and prove their efficiency. They would be grateful if Congress would adjourn and go home. But Congress is not to adjourn, as we are advised by the administration, until the three antitrust bills now being considered under a special rule are passed in form and substance to suit the President. In former discussions I have submitted the views of certain leading Philadelphia business men with reference to the so-called antitrust bill, the reading of which has just been concluded. Their comments upon that bill and its effects upon legitimate business were not favorable. Under leave to extend I now submit the views of the business men who are represented in the Philadelphia Board of Trade in opposition to the interstate trade commission bill. These views are worthy the careful consideration of Congress. They are as follows:

PHILADELPHIA BOARD OF TRADE,
Philadelphia, May 18, 1914.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

Your memorialist, the Philadelphia Board of Trade, respectfully represents that there has been introduced in the House of Representatives a bill (entitled H. R. 14361) providing for the creation of an interstate trade commission.

Your memorialist is opposed to the proposed legislation for the following reasons:

PURPOSE OF THE COMMISSION.
